The report showed only a small percentage of the land banks' assets was tied up in real estate, the carrying value of it being only 1.4 per cent of the total assests. Reserves set up against this further reduced the percentage to nine-tenths of 1 per cent.

PLANNING FOR THE CROPS

At this season of the year every farmer has about planned for the year's crops. Those who have been keeping up with farming events in section are very much encouraged by the present system in practice by our farmers and the improved manner of conducting affairs. It is also pleasing to traverse the sections where they are located and note these improvements not alone the preparation of the land but the many modern homes and other buildings. It is true that there are many farms that do not reflect credit on the owners, but they too, in time, will be aroused and will join the vanguard of their progressive neighbors. It is particularly regretted that so many of our people have abandoned their valuable holdings. They should be induced to return and make good. It is distressing to note that many of these holdings, especially well located, are sold to the whites. This is noted in Liberty county along the main highways. Should this continue, when the colored man awakes, he will be unable to make a purchase. The call is now being made for the open county, especially in localities where there are improved schools and good roads accessible to the purchasing centers. A diversion from the subject of crops was made to say this much which is deemend very necessary. The outlook for a good year seems bright, which will be made more successful by close applicaation and constant planning.—Norfolk Journal Guide.

THE MOULTRIE PLAN

Georgia Rotarians from Albany, Americus, Atlanta, Athens, Griffin, Macon and Moultrie met in joint session yesterday to hear the story of the inner workings of what has become widely known as the "Moultrie plan," a plan which has brought prosperity to the community of which Moultrie is the capital.

We should like to have been present and we wish that Moultrie's story could be made known throughout the South Atlantic States. It is the story, as we understand it, of a larger and sounder and more successful system of agriculture built upon the ruins of a system that had been destroyed by the boll weevil and the effects of financial deflation a decade ago.

When cotton farming was rendered unprofitable in a considerable part of Georgia, so unprofitable that today 60,000 farms are said to be lying idle. Moultrie set to work to find something else to take the place of cotton. A packing plant was established. The hog market at Moultrie then amounted to about 30,000 head of hogs a year. Today it is stated the Moultrie plant is purchasing a quarter of a million hogs a year.

So successful has been the effort to establish a balanced farm program in the country contiguous to Moultrie, a program based on livestock that today we are told "there is not a vacant house in the city of Moultrie nor an idle acre of farm land in Colquit county, and the annual sale of farm products reached $21,650,000 laast year."

That is a real achievement. It is proof of what can be accomplished as a result of intelligent leadership. It is an inspiration to other communities to seek such leadership and to work diligently to discover and put through programs of their own which will hold out for them the same promise of salvation which Moultrie has won through diligent perserverance in a well-conceived and ably-directed plan.—Atlanta Constitution.

WHAT DO WE KNOW ABOUT HARD TIMES?

By Kathleen Norris

Everyone is talking of hard times. Persons who are living in cotton-wool, who have never earned a cent and never wanted a dollar, are much agitated over the employment situation, and the breadline, and the jobless multitude.

As a matter of fact, in America, we don't know what hard times are. Certainly these times are not hard, except for the utterly improvident, the idle, and the shiftless—and all times are hard for them.

The theaters and movies are booming.

One person out of every five has an automobile.

Every town has its five-and-ten cent stores. And what do they sell? The bare necessities of living? No. By far the greater part of their business is done in luxuries.

Take our houses. Not in the history of the world has a nation been housed in the luxury we know. Rich or poor, we take for granted wooden floors and glass windows, private kitchens, telephones, milk in bottles, bread in wrappers, daily papers, gas stoves, electric light baths, running water, steam heat. Rich or poor, our girls wear silk stockings and buy cosmetics and think two new hats a year a short allowance.

In Europe, where there is real poverty, even without the spur of occasional hard times, thousands of women live all their lives long in small dark rooms with earthen floors. They cook in the one big living room in winter, at a charcoal stove, and at the doorway in the hot summers. Some of them live and die without ever buying a dress, or having a hat at all.

Hard times! They know them. But what do we know of conditions like that? America treats her poorest, her least educations people, better than that.

In Europe families lives in the same houses, the same neighborhoods, for generations. But in America every family moves constantly—and moving is a luxury. too. Every family wants the newest and best sort of houses.

Where there is caste, and monopoly, and absentee landlordism, there will always be hard times

But not in America. Our fortunes change too quickley; today's rich are tomorrow's poor.—Exchange.

FARM EDITORIAL
REAL COST OF TAXATION

Thinking of paying taxes in other than dollars and cents rarely occurs to the average farmer as he is faced annually with the necessity of digging up the wherewithal which must be paid on or before.

One Wayne county farmer who in common with his coworkers is feeling the pressure of the increased taxation of recent years has given his attention of late to the demands of the government in other that monetary values.

This particular farmer has 130 acres of land and some personal property and in giving the matter of tax paying careful attention and the value of farm products in particular he finds that at the present market prices that he annually drives to market 50 good sheep to pay his year's taxes. If he did not have the sheep he sees the price of some 400 bushels of corn or wheat go towards paying for the privilege of owning some good Wayne county soil. Had he used oats, it would take an annual drain of 865 bushels to pay the treasurer yearly and in the absence of grain and stocks he would have to have a flock of hens large enough to lay at least 18,000 eggs during 365 days.

That he must drive 50 sheep into the treasurer's office for his year's taxes, brings the cost of the government more clearly before the farmer than just to measure it in dollars and cents paid in money or by check. He could see the cost more clearly could he observe eight wagons, eight drivers, and 16 horses lined up with loads of corn or wheat and headed for the court house. The oats too would make an impressive amount when measured in cost of keeping up current expenses of the government. The amount becomes all the more appalling when he realizes that his hens must cackle truthfully 18,000 times annually that he may continue to own the land that he bought and paid for years ago.

Farmers as a rule are patriotic and look upon tax paying as a duty they owe to good government. They also realize that they have brought some of the excess upon themselves by being too free in signing for improvements that add to the burden of taxation but when they see in terms of well known farm commodities that taxes are mounting towards confiscation, they cannot be blamed for remonstrating and calling for a readjustment of an antiquated system.

The measure will no doubt be threshed out during the next state legislature but few really hope for the relief needed yet the matter will be given greater consideration than ever before and possibly the road will be paved for better days ahead for the owners of real estate.—Richmond Ind., Item.

RACE BUSINESS FINDS NEWER, FINER MOTIVES, SAYS LOCKE

Cooperative methods and group improvement have ..become dominant motives of racial business leadership, and not made profit,—declared Dr. Alain Leroy Locke, in a lecture here Sunday under the auspices of the Phi Beta Sigma fraternity.

I have come out to Chicago to make a talk on the new trends in the economic life of the Negro," he said. "Though the comparative volume of Negro business is still pitifully small in comparison with the huge capital and organization of American trade and productive industry, still the economic gains of the Negro in the last ten years have been phenomenal.

"This is true especially in insurance and banking, and recently under the anspices of the National Negro Business League, in the organization of cooperative chain retail trading. Prejudice, though it has handicapped the Negro's advance, has forced Negro business to adopt original tactics, and strike out toward objectives generally in advance of the common business practice.

Organize Buying Power

"One specially promising recent move has been the Negro's use of his organized buying power to force new avenues of employment. These tactics are spreading with considerable success from city to city, west, east, and even in the South.

"Cooperative methods and group improvement, rather than mere profit are becoming the dominant motives of Negro business leadership. That is one of the main objectives of the "Bigger and Better Business" program of the Phi Peta Sigma fraternity under whose asupices I am speaking.

Trade A Pivot.

"Most Negro leaders realize that today the advance of the Negro pivots on the rapid improvement of his economic position in trade and industry. New York has been the center of the Negro's cultural and artistic advance, but Chicago and Durham, N. C., compete for the leadership of Negro business. But taking business and labor and economic enterprise together, Chicago is the real center of the Negro's economic advance.

"But the Negro's considerable economic gains through the twelve post-war years are critically at stake in the present economic depression. On his behavior during this crisis and the intelligent community support he can call to his aid depends the issue whether these gains will be substantially held as a foundation for future progress or lost in an economic backwash toward industrial dependency and labor serfdom. Chicago, in my judgment, will be the pivot of this struggle, and can be made the rallying point at this critical stage. Intelligent self-help skillful leadership and farsighted cooperation about Chicago as a center can do a constructive service of almost equal importance to the Negro and the nation at large,

—Chicago Bee

PINEAPPLES GROW HIGHER NOW ON HAWAIIAN ISLAND

In agriculture generally, cropping systems follow lines of climatic difference. Corn grows north of cotton and wheat north of corn. In Hawaii, too, climate determines agricultural systems, but the climate changes not according to the relative distances from the Equator and the pole, but rather according to distance above sea level. This explains the significance of the fact reported by the Hawaii experiment station of the United States Department of Agriculture that as a result of its investigations on the island of Maui, "pineapple planting has been extended more than 500 feet in elevation beyond what was formerly thought to be the limit." On a small scale this resembles somewhat the work of many experimenters in discovering and developing hardy strains of various crops and thus extending northward the area where they will grow.

NATIONAL FEDERATION TO AWARD VALUABLE PRIZES

(Special)

The National Federation of Colored Farmers and the Modern Farmer announce that valuable prizes will be given this year to members and subscribers for diligent efforts made to increase and improve the yield of various farm products and livestock. These prizes have been contributed by public-spirited corporations, manufacturers and individuals and will be distributed to the deserving next fall. Complete information will be given in our next issue. Join, subscribe and get in line for these prizes.

NORTH CAROLINA BACKWARD AND FORWARD

(Continued from Page 1).

cotton are the money-crops. Diversified farming is practiced more than in any other section. Most of the farmers produce their own milk, meat, eggs and vegetables. There are excellent near-by markets for food products and most anything eatable can be sold.

THE "TENANT JUNGLE"

There are numerous Negro landowners in the Tenant Jungle and some have large, well-stocked farms. Here, however, you see so plainly the curse of "absentee landlordism" that the sight is sickening. Cotton, tobacco and peanuts are the money-crops. The other crops raised are of little importance. These money-crops alone must feed and clothe the tenant farmers and their families, and these crops fail in quantity and in price there is hardly a bare chance for the producers to exist.

THE FOOD AND CROP REGION

This region, stretching from north to south along and near the coast, is inhabited by hundreds of Negro farmers, gardeners and farm laborers. They are making some progress, but not much. As a class, they are fairly industrious and law-abiding. They would do if they could. At the present time, however, they are the slaves of the track-buyers, big producers, and small merchants. Many carlots of vegetables, fruits, sweet potatoes and watermelons are produced for the northern and eastern markets but little profit from sales eventually reaches the pockets of the Negro producers.

SCHOOLS AND CHURCHES

Rural schools are getting better. We found better Negro rural schools in North Carolina than in any state we have visited We should be very grateful to Mr. Rosenwald and also to many thousands of white North Carolinians who have been willing to assist. . We met many faithful, conscientious teachers. They deserve our sympathy and our prayers. In many sections however, not enough emphasis is placed upon teaching scientific and practical agriculture. We saw few school garden plots although plenty of land was available.

Rural churches are not keeping pace with the schools. They are going backward and unless a radical change is quickly made they will soon be as dead as the white churches in rural new England. The cause?—mainly poverty, uneducated preachers and the automobile. The rural churches should consolidate as they have the rural schools.

PERSECUTION

The Negro farmers of North Carolina are their own worst persecutors. They persecute themselves. I found plenty of strong backs but not enough willing minds. I found plenty of hand workers but not enough head workers. I visited a certain section in the Piedmont where there were as many colored independent landowners as there were white. The white landowners depended little upon any special money-crop. They were close to good markets. They had a a good local farm organization and all of them had telephones. Practically everything these white farmers had to sell they sold "over the phone" before they took it to town. They kept posted on market prices and produced what they knew they could sell profitably.

On the other hand, there was not a Negro telephone in the township. All the Negro farmers were "peddlers." When they took anything to town to sell they peddled it out for what they could get for it. The Negro farmers were satisfied if they raised food products to live on. The white farmers raised twice as much. What they could not use at home, they sold. They had twice as many chickens, sows and hogs as had the Negro farmers. They were fairly prosperous. The Negro farmers were in debt.

I inquired at a meeting held in the "tenant jungle" how many farmers present subscribed to a farm paper or magazine. Not one. A brother informed me that he hadn't read a paper in 5 years and appeared insulted because I asked him how he managed to keep informed. Truly no one is so ignorant as the man who does not know he is ignorant. This man was perfectly satisfied because, as he said: "I am out of debt and am making a living." The truth was that he was only existing. What a little it takes to satisfy some people!

The Negro farmers also persecute themselves because they believe in the six-hour-day-five-day-week labor schedule. They do not work as hard for their own selves as they do for the other fellow. This may be natural but at the present time it is unprofitable. The industrious farmers everywhere had the best property, the best crops, the most money. Those who spent the most time in the towns and cities and depended on their Elizas and Georges — their wives and sons—to perform the necessary work, were the ones I found to be the most poverty stricken. Farmers who expect their crops to "turn out" must themselves "turn out," the effort and labor required. A lazy, thoughtless and dumb farmer, black or white, can't succeed in North Carolina nor anywhere else.

Negro tenants in the "jungle region" are often persecuted by the overseers of their absent landlords. Tho condition of somel met was pitiful indeed. One old lady informed me that her overseer granted her permission to raise half an acre of sweet potatoes. She was a widowed grandmother. She purchased the seed and fertilizer herself,—produced a bountiful crop, and then along came the overseer and clamed half of it and took it. Of course, none of these sweet potatoes ever got to the landlord. They became a portion of the overseer's 'rake-down." Another tenant farmer told me he had to sell his hogs after he had agreed to crop because the overseer wouldn't let him grow any corn on the place. Another told me he was forbidden to put in a garden because all of his time was needed to cultivate his cotton tobacco and peanuts. I visited a section where there was not a milk cow— hardly a hog—and not a garden of vegetables in the entire territory. The tenants had not had their hands on a dollar for two years. All mere deeply in debt to their landlords and merchants — their crops were bringing practically nothing— they had nothing to hope for and hardly to live for. I advised the whole bunch to take what little they could carry, leave the country, and let their debts go hang! Short-sighted landlords and overseers were responsible to for such conditions and suffering. In this section Negroes have never an opportunity to purchase farms or homes of their own. They have been gouged and persecuted and robbed for years. Why shouldn't they move away?

I found out also that the large producers and the track-buyers have a nice way of gouging the small Negro food crop producer. A farmer-gardener informed me that the truck buyers would always purchase the large crops first—when the prices were the highest. They would not see the Negro producer's crops until they were on the verge of spoiling in the fields, then they would pounce upon them suddenly and gobble them up at ridiculous prices. The colored producer had to sell his crop for what he was offered or see it perish in his field.

PROSPERITY

There are some prosperous Negro farmers in North Carolina and some fine Negro farm communities. In one community I saw three peanut threshers in operation in one day. All three were owned by Negro farmers — all the crews were colored— and the farms on which they were operating were owned by Negroes. I also saw some fine hogs and dairy cows in this community. Negro farmers havo an excellent opportunity to build up communities of their own, especially in the Piedmont. Land can be purchased reasonably— and there is little race prejudice. Many such communities should be established during the next decade.

I met a one horse tenant farmer in the Piedmont who, with no help except his good wife, had produced, cured and sold fourteen barns of tobacco. Besides, he had killed a four hundred pound hog, had a crib full of corn, forty bushels of Irish potatoes, pumpkins and canned vegetables a plenty and money in the bank. His tobacco brought a better price than any sold in his community because he knew how to cure and grade it right. He was known as a hard worker but I coundn't see that it had hurt him any. He seemed to have plenty of time for recreation and church. He succeeded because he worked his head so well. He was very far-sighted and a good manager.

ORGANIZATION

I found the Negro farmers in North Carolina interested in organization and in communities where the MODERN FARMER has been circulating and where they were acquainted with the program of the N. F. C. F. to a certain extent they were ready to organize. I organized three lively Units while in the state, one in each of the sections mentioned,— formed three other Clubs, and preached our gospel of cooperative buying, producing and selling in many places where it had never been heard before. This missionary effort was well worthwhile. A vast majority of our farmers in North Carolina are naturally progressive. North Carolina is a progressive state. Our farmers there do not intend to lag behind. They can see all around them the benefits their white neighbor farmers are getting through organization and they would be dumb indeed to fail to take advantage of the opportunity offered them through the N. F. C. F.

In one county where the colored and white farmers are about equal in number, the white farmers have a cooperative poultry association and are shipping several carlots of poultry to the north each year. Much of this poultry comes from Negro farms. One old colored farmer expressed it thus:—"We fool Negroes could be shipping out our own stuff if we had sense enough to get together." The white members of this organization are getting a good price for their produce and are making a profit off what they get from the Negroes. The colored farmers, if they were organized, could be getting equal prices and profits.

I know that North Carolina will not disappoint us. I bade our good and friendly farmers "Farewell" regretting that I could not stay longer. A new day is dawning for them. I am thankful that the National Federation of Colored Farmers is able to help them grasp and enjoy the new day's opportunities.

NO DISCRIMINATION ALLOWED

(Continued from Page 1).

that in all probability he might get a conference with the President and give to Mr. Hoover some first-hand information relative to certain conditions that confront the Negro farmers.

The president of the National Federation of Colored Farmers would not state definitely all the things that he contemplates starting while in Washington. He said he was expected back in his office in Chicago within the next ten days.

SWEET POTATOES ARE RICH IN FOOD VALUES

Possess 48 Per Cent More Calories Than Irish Potatoes. Much Carbohydrates.

KIN TO MORNING GLORY

By Guy A. Cardwell
(Agricultural and Industrial Agent)
(Atlantic Coast Line Railroad).

The sweet potato is related to the morning glory, moon flower and cypress vine not to the potato nor to the yam; though often called a yam. A well baked, disease and frost free Porto Rico or Nancy Hall sweet potato is delicious it melts in the mouth; it satisfies hunger and at the same time caters to the sweet tooth.

Sweet potatoes are a cheap and substantial food. One pound of sweet potatoes is said to furnish the human body with 447 calories. Its fuel or heating value is 48 per cent greater than the Irish potato, which furnishes the human body with only 302 calories per pound. But the food value of sweet potatoes lies largely in the carbohydrates or the starch and sugar, contain 21.9 per cent of carhobydrates.

Recently chemists of the United States department of agriculture discovered that sweet potatoes are a good source of vitamins. This vegetable contains as much vitamin A as leafy vegetables. It contains more vitamin B than many other root crops. As a source of vitamin C. sweet potato juice has an antiscorbutic value equal to about one-third that of orange juice and one-half that of peach or pineapple juice.

It is a well known historical fact that General Francis Marion, the "Swamp Fox" of Revolutionary fame, and his valiant men sustained life by eating sweet potatoes baked in the ashes of the camp fire and served on the bark of trees. They had them for breakfast, dinner and supper, when they were not too busy to eat three meals a day. They not only sustained life with sweet potatoes, but became s filled with strength and courage after eating them that they came out of the Carolina swamps and made things lively for King George more grossly fed men.

In many of the island of the Pacific especially in the Phillippines, the sweet potato is the principal vegetable food, at certain seasons being almost the only food available.

If these aborigines can sustain life and maintain themselves in good physical condition on a sweet potato diet, what might this delightful food mean to the average southern family when served as a part of a balanced ration?

Many people residing in eastern cities of the Piedmont and Appalachain regions are learning to prefer the moist sweet potato to the dry potato of the Jersey type, but sweet potatoes are still primarily grown in our territory for home consumption.

While sweet potatoes are a staple article of food in the rural districts, increased consumption of this home grown vegetable in the cities and towns of the south, in place of imported foods, will keep a lot of dollars circulating needs, for the balance of trade is too largely against us at present to make for satisfactory economic conditions.

Application for Membership
NATIONAL FEDERATION OF COLORED FARMERS
Vincennes Hotel, Chicago

As a farmer, I believe the time has arrived when the Colored Farmers should form a National Organization devoted to diversified production, grading, packing, shipping and marketing of farm products and to the purchase of needed farm supplies through co-operative methods, to the end that a more prosperous financial condition may result from their efforts as producers.
I hereby subscribe $5.00 for membership in the National Federation of Colored Farmers for a period of 12 months from date. Also $1.00 for an Annual Subscription to the Modern Farmer.

THE MODERN FARMER

Vol. II. Nashville, Tenn., and Chicago, Illinois, February 16, 1931. No. 12.

Dr. C. W. Warburton Sec'y of the National Drought Committee's Address

Poultry Raising In Yadkin County North Carolina - -

Women Play Important Part on the Farm

WAS ONCE CONSIDERED DOMESTIC PASTIME BUT NOW A MODERN METHOD

Elkin, N. C.—Poultry raising in Yadkin county no longer is looked upon as a mere domestic pastime for the farm woman who would, by means of a small flock of chickens, provide herself with a mite of pin money for an occasional small luxury.

As a matter of fact, poultry growing in Yadkin, within the few years that L. F. Brumfield has served as county farm agent, has developed into a thriving industry, and farmers, in large number are becoming more and more impressed with the profit to be derived from this phase of farm work, which, though exacting is work of a fascinating and comparatively easy nature.

It has been left for County Agent Brumfield to introduce the method by which the common barnyard rooster is converted into a fowl [illegible] regularly by the discriminating and which is eagerly sought by dealers on the city markets at lofty prices every day in the year. While the eyes of many farmers are now wide open to the opportunities afforded in the production of capons for special markets, the task of impressing Yadkin farmers with the value of this line of product has not been the accomplishment in a week, a month or even a year.

Caponizing Studied

In the initial demonstrations of the caponizing operation, Agent Brumfield gained the interest of the younger men and boys of the farm, and occasionally that of a farm woman, more particulaly after observation was made of the change of habit and appearance of the bird following the simple operation the rapidity with which a young bird would grow and the surprising difference of flavor of the fowl after it was prepared for the table.

Interest became more keen when capons shipped to northern markets or even to the more important cities of this state, readily brought 50 cents per pound, when roosters of identical age could command no more than one-fourth of such a price. Agent Brumfield's work has attracted the attention of the poultry department of North Carolina State College to the extent that during a special short course conducted at the college, he was invited to give a lecture and demonstration for the benefit of the farmers attending.

State-Wide Experiment.

Dr B. S. Dearstyne, head of the State college poultry extension department, has drafted a tentative outline to be used by the county agents in demonstrations for farmers. Seventeen farms, having a total of 466 capons, were selected for

FACTS ABOUT NEGRO FARMERS OF U. S. A.

FARM RELIEF OUTLINED

PLANS SUBMITTED BY WILLIAM G. HOLMAN

William G. Holman Thinks Grading Service Should Be Given Growers Free of Charge By Government—Calls Attention to Heavy Damage From Hail

Setting forth his own views, and also what he terms the views of many farmers in North Carolina, William G. Holman, prominent in the fertilizer industry of this section, yesterday sent to Frank Hancock, Fifth district representative, a letter in which he outlined what he deemed proper relief measures to help eliminate suffering among the farmers, particularly those who depended upon tobacco for their money crop the past summer.

Mr. Holman emphasized strongly the need of free grading service for the tobacco growers on behalf of the government. He said that the federal authorities should furnish such service, and take the cost out of the tax on tobacco.

Another retarding factor in the tobacco crop was the severe hail storms of the summer. Mr. Holman said that he knew of one farmer who lost a million plants from this factor alone. He suggested in his letter to Mr. Hancock that the government take steps to place hail and wind insurance within the reach of all farmers, as present commercial rates are prohibitive.

Mr. Holman's letter to Mr. Hancock follows:

"In behalf of the farmers of Stokes and Surry counties—and at the request of numbers of them—may I ask that in drafting the farm relief appropriation bill you will

Virginians Own Quarter Of Million Acres

BILL TO PENSION EX-SLAVES INTRODUCED BY ROBERT L. HOGG

According to a statement issued by Prof. L. B. Tate of the University of Virginia the Negroes in Virginia own 12 per cent of its farm lands, or in other words, two million two hundred thirty-six thousand acres. In Charles City section the Negro farmers own over 69 per cent of the farm lands. With all of this wealth they are not organized and are asleep at the switch, so to speak.

Negro Employment in Auto Factories

The Ford plants in Detroit employ over five thousand Negroes, some holding high positions. Dodge Bros. rank second, using something around two thousand, and the Packard Co., third, with something like one thousand.

[illegible] 1910, Negroes in Detroit were used only as porters and domestics, but by applying themselves and demonstrating their ability they have been advanced very materially during the past five or ten years.

Bill to Pension Ex-Slaves

Washington, D. C.—Hon. Robert L. Hogg, Republican Congressman from West Virginia, introduced a bill in Congress to pension all former slaves. The bill as introduced would direct the administrator of veterans' affairs to place on the pension roll the name of every person who can prove satisfactorily that he or she were held as slaves and to pay such persons the sum twenty-five dollars per month the rest of their lives.

Paid for Home Selling Home-Made Soap

Mrs. Harriett Linder, a former slave now one hundred and two years of age paid the last penny due on her little three room house in Cowpen, South Carolina. Mrs. Linder is still in good health. She says it is never too late to try to get a home. Mrs. Linder is the mother of 14 children and grandmother of 51.

THREE WEEKLY BULLETINS

NATIONAL FEDERATION SENDS MEMBERSHIP INFORMATION

Chicago, Ill., Jan. 16, 1931—The President of the Federation made a special trip to Washington, D. C., this week to have a conference with the Secretary of Agriculture relative to the forty-five million dollar drouth relief fund. The Secretary assured him that Colored farmers would receive the same consideration as any other farmers. Application blanks will be available in the next few days and the Chairman of each Unit is hereby instructed to notify all farmers of our group in his community.

Field Officers for handling loans to farmers in drouth and storm areas for the purchase of seed, fertilizer, feed for stock and fuel and oil for tractors used in crop production have been established by the Department of Agriculture at St. Louis, Mo., and Memphis, Tenn.

The office of the Department of Agriculture in Washington, will make loans to farmers in Virginia, Maryland, West Virginia, Ohio, Southern Pennsylvania, South Central Michigan, Northwestern North Carolina, and Northwestern Georgia.

The office at Memphis, Tenn., will make loans in the state of Ark-

Farm Information Over National Broadcasting

EMERGENCY RELIEF FOR AGRICULTURE OUTLINED FROM WASHINGTON, D. C.

Washington, D. C.—Emergency Relief for Agriculture was discussed by Dr. Warburton here, he said: "For a long time to come, we will look back on 1930 and refer to it as the year of the great drought. Never before in our history has a drought been so severe and wide spread, particularly in those sections of the United States in which extended periods of light rainfall are uncommon. In some States the lack of moisture became serious as early as May, July and August generally east of the Rocky Mountains were unusually hot, with rainfall far below normal. In the Mississippi Valley rains in September and October gave general relief, but here in the East it is still extremely dry. In fact, it was not until last Friday that we had a real rain in the vicinity of Washington, the heaviest since July.

The drought and heat of the summer reduced crop production over a wide area. The crops most seriously affected were hay and corn, although locally many other crops were reduced in quantity. Generally wheat, oats and barley matured before the dry weather became severe, and production of these crops was about normal. Our hay crop was about 11 per cent or some 10,000,000 tons less than the average crop of recent years, and our corn crop was reduced by about 20 per cent, being about two billion bushels as compared with an average crop of 2,600,000,000 bushels. Less readily measurable but equally serious so far as the farmer was concerned was the effect on pasture and range. Serious inconvenience was also caused, not only on farms, but in many cities and towns, by a shortage of water, an inconvenience which is still being suffered in many localities.

The area of most severe drought extended from the Atlantic Coast of Maryland and Virginia westward through West Virginia, Kentucky, Tennessee, southern Missouri, Arkansas, and northern Louisiana, through Oklahoma into Texas and southeastern New Mexico. Drought injury was somewhat less severe over a wide strip both to the north and south of these States. Serious crop damage also occurred in Montana and eastern Washington, and locally in several of the other northern and western States, although generally crops west of the Rocky Mountains were good.

We are not so much concerned tonight, however with the results of the drought as with the efforts which are being made to aid farmers to recoup their losses through crop production in 1931. Thousands of farmers throughout the area I have described to not have seed to plant their next crop, fertilizer to insure adequate production, nor feed for the horses and

(Continued on Page 8)

VEGETABLE MARKET NEWS

During the second week in February, the following prices to the retail grocer prevailed in Chicago territory.

Black Valentine Beans from Florida, 6.50 per bushel hamper.

Beets from Texas packed in Lettuce crates, 2.25 to 2.50 per crt.

Broccolli from Texas in bushel baskets, 1.00 to 1.25 per bushel.

Eggplant from Texas in pepper crates, 5.00 to 5.50 per crate.

Mustard Greens from Texas, 1.15 to 1.25 per bushel.

Parsley from Texas, curly and plain bunched, 1.50 per bu.

Peppers from Florida, 2.25 to 3.50 per crate.

Shallots from Louisiana, 7.00 per barrel.

Strawberries from Florida, 30 to 35 cents per quart.

Turnips from Illinois and Indiana, 50 to 60c per bu.

Spinach from Texas, 45 to 50c per bu.

Sweet Potatoes from Tenn., Nancy Halls 1.00 to 1.25 per bu.

Jersey Varieties from Oklahoma, 2.25 per bu.

New Cabbage now coming in from Texas points and bringing 75 to 85 cents for the round type.

Chicago, Ill., Jan 24, 1931—The blanks for applying for dronth loans are now available, and farmers who are in a position to give a first lien on their 1931 crops, are eligible to apply.

The interest is 5 per cent per year. When crops are harvested then the borrower pays the Government his loan with interest.

The County Agent and also the Extension Agent in your county can supply you with these application blanks. If for any reason you cannot locate these men, then all farmers living in Arkansas, Tennessee, Louisiana, Mississippi and Alabama, write Mr. John H. Lynch, Corner Third and Jefferson Streets, Memphis, Tennessee, for blanks.

Farmers living in Kentucky, Southern Indiana, Southern Illinois and Missouri, write Mr. T. Weed Harvey, 315 North Tenth St., St. Louis, Mo.

Farmers living in Virginia, Maryland, West Virginia, Ohio, Southern Pennsylvania, South Central Michigan, Northwestern North Carolina and Northwestern Georgia write the Department of Agriculture, Seed Loan Office, Washington, D. C., for blanks.

If you experience any trouble in applying for loans, write the nature of the trouble to this office AT ONCE. The secretary of Agriculture, Hon. Arthur M. Hyde, says Colored farmers will not be discriminated against. The Drouth Loan Fund, as we understand it, is for loaning farmers money for seed, fertilizer, feed for stock and fuel and oil for tractors and producing your crop. Do not be misled by any other statements to the contrary.

Units are urged to buy their seed, potato slips and fertilizer co-operatively—the same as they are now buying their groceries and feed at wholesale prices.

Overalls

We are enclosing new prices on overalls. These quotations are subject to a discount of 15 per cent, or in other words, 15 cents less on the dollar than the prices named in the circular.

Groceries

Flour and meal continue at low prices. There is nothing to indicate any higher prices in the general grocery line.

Feed

Grey shorts at 1.25 per hundred pound sack and mixed oats at 39 cents per bushel are attractive prices.

Seed

Yellow and red onions sets in 2 bushel bags at 1.75 per bushel figures about 5 1-2 cents per quart.

Units can buy these sets co-operatively at a considerable saving.

Genuine Triumph Seed Irish Potatoes are now priced at 1:45 per bushel or about 32 cents per pack.

Field Peas

Geo. Bradfield Star Route, Vaughn, Mississippi, has several varieties of peas for sale. They are in good sound condition and Units can write him at once for prices.

Red Cross Aid

Farmers who are in a suffering condition for food and clothing, should apply AT ONCE, to the Red Cross Headquarters nearest them. If they are refused, then write the American Red Cross Society, Washington, D. C.

Write this office on any matters you do not fully understand.

ORGANIZATION IS YOUR ONLY SALVATION.

FARM LANDS

Chicago, Feb. 3, 1931—The Federal Land Bank of New Orleans announces that they have been forced to take over a number of farms, ranging in size from 40 to several hundred acres.

These farms can be bought on long time payment and practically all the time you would wish to pay for them. The prices are low, a small down payment is necessary. Write the Federal Land Bank, New Orleans, for application blank, location of the farms and price. Now is your chance to get some farm land at low interest and long time from the Government.

Drouth Loans

Members can apply to their County Agent for Drouth Loan Blanks. All farmers who can give first lien on their crops are eligible to apply. If you cannot get blanks from your county Agent, write this office. These loans will be made promptly so we have been advised.

Red Cross

All farmers who are in need of food and clothing and unable to get credit or work, should go at once to the Red Cross and apply for aid. If refused, write this office.

The American Red Cross Headquarters in Washington, D. C., says there shall be no discrimination on account of color or race.

Officers of Units are urged to see that none but the needy apply for this aid.

Groceries and Feed

All food prices continue to decline. Corn meal now about 80 cents per bushel; the best white patent flour from 4.50 to 5.50 per barrel. Sugar 4.75 per hundred. Fifties Compound Lard 4.19 and Pure Lard 5.25; Cracked Rice 1.95 and whole Grain 2.95 per hundred. Feed Oats 38c per bushel. White Shorts 1.20 per hundred. Hen Feed 1.75 per hundred. Corn 88c per bushel. Horse and Mule Mixed Feeds 50 per cent grain 1.40 per hundred pound sack.

Dry Goods

Prices change very fast.

At this time we have a large house in Chicago who offers the following

Boys' Pants, all sizes—$9.00 per dozen.

Women's Slips—$2.25 per dozen.

Rayon Undies—$2.75 per dozen.

Children's Waist Suits—$4.35 per dozen.

Rayon Striped Underwear—50c.

Sweaters, cotton and wool—40c each.

Boys' Caps—10c each.

Sateen Bloomers—21c each.

Men's White Stiff Collars—2 for a nickel.

Women's Rayon Hose, 10c pair and 19c pair.

Men's Work Shirts—29c each.

Part Wool Blankets—$1.85.

Ladies' Pongee Dresses—69c each.

Men's Common Socks—5c pair.

Bed Spreads—75c each.

Percale—11 1-2c per yard.

Outing—10c per yard.

One Lot of Ladies' Rayon and Flat Crepe Dresses Assorted sizes and colors, $1.25 each. These dresses are well made and good quality.

We give approximate Seed requirements per acre, for planting:

Potatoes, Irish—9 to 10 bushels.
Sweet Potatoes—10 bushels.
English Peas—2 Bushel.
Okra—20 pounds.
String Beans—1 Bushel.
Turnips—1 to 3 pounds.
Onion Seed—4 to 5 pounds.
Sets—8 to 10 Bushel.
Beets in drills—3 to 4 pounds.
Spinach in drills—5 to 6 pounds.
Pole Beans—8 to 10 quarts.
Bunch Beans—12 to 14 quarts.

Units can approximate their needs on this basis and buy cooperatively and divide among them. Market agent will handle.

Copies of our Anniversary Program will be sent the Office of each Unit.

Be sure to make all arrangements for Farmers' Sunday, March 29th, 5th Sunday.

All Chairmen are clothed with power to select Committees for this work.

Hold your meetings once per week during February and March.

READ THIS BULLETIN AT EACH MEETING SO MEMBERS CAN UNDERSTAND.

INTERESTING FARM NEWS

John Tiger, Clay county farmer, harvested 18 tons of red clover from two cuttings on six acres.

Ellis Broyles, 16, of Alma, Ark., spent 64 hours planting and cultivating an acre of sorghum cane. He made a net profit of $167.35

Farm movies by the United States department of agriculture are being shown in Cuban rural communities.

More than 500 head of cattle were exhibited by 240 junior and adult farmers of 25 counties at the show in Nashville, Tenn.

Farm dairying has made a big increase in west Florida during the past two years.

A recent survey shows an increased acreage of nearly all truck crops in Florida this year.

Kentucky's tobacco crop of all types this year is estimated at $321,850,000 pounds.

Ed. J. Stanger of Johnson City, Tenn, won the national prize for growth of the finest mastodon strawberries. There were 16,000 competitors.

A sweet potato grown by Alberta Martin, Tennessee truck farmer, weighed 12 pounds and measured about 12 inches in length.

Five farmers in Edgecombe county, have owned and operated a co-operative threshing machine for seven years at a profit.

Farmers in Jackson county, Fla., sold 504 hogs in four co-operative sales for a total of $7,442.89.

Of 16,123 head of cattle in 2,456 herds tuberculin tested in Alabama during October, only two reacted.

A by-law providing for street improvement in Burnaby, B. C., received the necessary number of votes at election but was defeated because an elector had written favorable comment on a ballot.

A large herd of wild elk destroyed a corn field at Asotin, Wash.

A single navy bean vine in Falls City, Ore., had 126 pods, yielding 506 beans.

IDAHO COW PRODUCES 31,241 POUNDS MILK

Owned By the University of Idaho —Her Production Equals 3,600 Gallons

HOLDS STATE'S RECORD

Chicago, Ill.—By producing 31,241 pounds (3,600 gallons) of milk containing 948 pounds of butterfat in one year, Idaho Matador Faney, owned by the University of Idaho, of Moscow, becomes the third Holstein in Idaho and the 110th on the national Holstein milk list to exceed 30,000 pounds of milk in one year.

She is the third Holstein in the university herd and the fifth bred in the state to make this mark and establishes a new state record for milk production boosting the mark set a month ago by her sister, Idaho Piebe Priscilla by 545 pounds and exceeds the total of her dam, Idaho Segis Lily by 1,225 pounds of milk.

This remarkable trio of a dam and two daughters, all bred and owned in the same herd, has held the state milk production record for the last six years and is one of the rare combinations of dam and two daughters that have all exceeded 30,000 pounds of milk that are now on record. The University of Idaho herd is one of the 5 herds in the United States that have bred three or more cows with records exceeding 15 tons of milk and only two of these herds exceed three such cows.

FRANCE AND UNITED STATES TO HONOR MEMORY OF WASHINGTON AT PARIS EXPOSITION

France and the United States will join in honoring the memory of the patriots of other countries who helped to win independence for the American Colonies, and especially in paying homage to the memory of George Washington, during the six months of the International Colonial and Overseas Exposition, sponsored by the French Government, which will open near Paris May 1. The American exhibits at the exposition will help to bring the world-wide Celebration of the Two Hundredth Anniversary of the Birth of George Washington in 1932 to the attention of all nations.

To emphasize and cement the long-standing friendship of the United States and France, which began during the America Revolution, an exact and full-size reproduction of Mount Vernon, home of George Washington, is being constructed on the banks of the River Seine to serve as the administration building for the American exhibit.

C. Bascom Slemp, of Virginia, who is Commissioner-General of the United States to the French exposition, is also a member of the executive committee of the George Washington Bicentennial Commission. He has just returned from Paris and is now busily engaged in arranging to have appropriate furnishings and other material sent from this country to be placed in the duplicate of Mount Vernon on the Seine, and to have the overseas possessions of the United States represented by appropriate exhibit at the exposition.

The executive committee of the George Washington Bicentennial Commission has adopted a resolution officially endorsing the reproduction of Mount Vernon in France. The building, in addition to being the headquarters of the American Commission to the French exposition, will be used as a museum in which will be placed articles connected with Washington and his time, loaned by the French and American Governments and citizens of both countries.

The George Washington Bicentennial Commission is urging Americans to "join i this patriotic endeavor" by contributing Washingtoniana to be exhibited in the Mount Vernon building.

Among the many articles which the French government is lending to the United States Commission in Paris are an original miniature of Washington and one of Martha Washington, a large topographic map of Yorktown painted in 1830 the spot y order of Lonis Phillppe, a series of medals and documents pertaining to American-French friendship, an l original bust of Lafayette, taken from Versailles and very little known, autographed documents of Rochambeau, Louis XVI and Marie Antionette and numerous other articles of historic interest.

The official hostess at the Mount Vernon building will be Miss Ane Madison Washington, a descendent of John Augustine Washington nephew of George Washington. The building will be furnished as early as possible like Washington's home Among the things which Mr. Slemp is taking to Paris to place in the building are a key to the Bastille and a copy of a picture of Louis XVI, both given to Washington by Lafayette; reproductions of silverware used at Mount Veron, letters and portraits of famous Frenchmen and American colonists and other articles appropriate to the time.

RABBIT ESCAPES HUNTERS BY LOCATING DEN BENEATH SNOW

Stalesville, N. C.,—O. L. Lippard, game warden for Iredell county, tells a freakish yarn which indicates that an ordinary rabbit either possesses remarkable reasoning faculties or is endowed with a high degree of instinct.

The game warden and Rockwell Woodside tried their hand at rabbit hunting in the snow yesterday afternoon on Walter Morrison's farm north of town. The white blanket which had covered the country for several days, at this time being softened by the general rise in temperature and having an average depth of 10 to 12 inches after 75 hours, created a condition favorable for bagging rabbits and the hunters in short order captured one of the five "cotton tails."

The escaped rabbit was the wonder worker. Tracing his footprints in the snow from the stream up to the hill, the hunters found the hare peacefully sitting in a crevice under the snow bank. When Mr. Woodside reached his hand down into the cavity to pick him up the little animal bored under the snow for four or five feet and then came up to the surface running, taking his course up the hill, with Mr. Woodside in pursuit. Becoming entangled in a barbed wire fence, the hunter was forced to let the rabbit get about 100 feet ahead The race was over the soft snow across a pine field and then over a narrow neck of cleared land. On the opposite side of this cleared spot, in the edge of the general woodland, the rabbit ducked his head and bored through the 12-inch snow covering, making a hole through the snow directly over his hole in the earth which he had previously burrowed for at least five or six feet under the surface.

The thing which dumbfounded and bewildered the hunters was how the rabbit, with no mark or track of any kind on top of the snow to indicate where his den was, could locate it with absolute accuracy on the surface of 12 inches of snow.

THE NEW DAY IN AGRICULTURE

Tennessee's "new day in agriculture" is largely the dairyman's day. No part of the farmer's interests have increased so rapidly as that which is bound up with his dairy cattle. The reasons for this are the coming Southward of the great milk plants, the increase in legumes grown for feed, and the gradual swing from two or three crops—corn, cotton and tobacco—to a system of diversified farming.

Tennessee is logically a region of diversified farming from the fact that it has all sorts of soils from the mountains to the low riverlands at the west; with a corresponding range of temperatures from the varying altitudes. This tendency toward crop diversity is rapidly growing, and the successful farmer of the future must know how to grow profitably every crop that he can produce. This also makes agriculture stable, since it scatters the farm income over most of the year instead of concentrating it into two or three fall months.

Tractors and other power machinery are also in Tennessee's agriculture future, since more and more it becomes necessary to farm in as rapid and economical a fashion as possible. There is less help, and yet more must be produced, at least more per acre, and at less cost. This will naturally force the farmers of the state to use larger machinery. Power farming, in certain phases, also follows the phenomenal development of electric power systems, and the transmission of this force to every part of the state.

With better transportation, more markets become available for such products as must be moved quickly. This will encourage truck farming in suitable sections; and will also be a factor in encouraging poultry and egg production.

Since 80 per cent of Tennessee's population is rural, it is logical to suppose that farming will continue to be the greatest industry of the stato for a good long time to come.

—Southern Agriculturist

SPENCER ENGINEER IS RAISER OF FINE HOGS

Al Chandler Produces Two Porkers That Weigh 600 Pounds Each —Fed Twice Daily

Spencer, N. C.,—The laurels wil have to be handed to Engineer Al Chandler for having the largest porkers in this part of the state, having on Monday killed two hogs weighing 600 pounds each, or 1,200 pounds for the pair. This is no big hog tale either, for Mr. Chandler had the porkers hanging up right in his own back yard on Newton Heights, Spencer, after a hard day's work slaughtering nader the direction of Charlie Hoover veteran butcher.

It was a sight almost unbelieveable. The hogs were about the same size, were just 14 months old, and Mr. Chandler states he had been fattening them just six weeks. He declares that after keeping a close account of the cost feeding stale light bread and other products, that the 1,200 pounds of the finest meat in the state, cost him just $100, or considerably less than one cent per pound.

He fed the hogs twice a day with great success. They measured about eight feet long, two feet across the back, and the joles measnred 16 inches across. They were of the Big Bone Poland China strain.

NEW BATTERY WILL RUN FARMER'S RADIO FOR ENTIRE YEAR WITHOUT RECHARGING

By Volney D. Hurd
(Special to the Christian Science Monitor.)

New York —As farm relief has held the center of the political stage this year, so does the farmer score again as the object of the radio engineer's attention. At the World's Radio Fair which opened in Madison Square Garden Sept. 22 definite trends were shown toward developing the farm radio market.

The last few years have seen radio successfully operating its received from alterating current, thereby eliminating the need of batteries among the city and suburban dwellers. With success attending this effort, the long neglected farmer, who has been using battery sets of several years ago, finds the first step to fill his needs is new tubes and batteries.

It is said that a market for 4,000,000 sets exist in the country in places where regular electric current is not available. This means using batteries. Ordinary tubes take so much current they make battery replacements expensive. So the first step was the development by the R. C. A. of tubes which gave good results with little battery drain.

Today comes the announcement of the latest step in this direction, a new battery for the small current tubes, a battery with "lungs" for breathing in air for replenishment. The National Carbon Company has perfected this new battery, which, selling for around $8, will run a seven-tube set using the new tubes for one year without needing a new battery. It is a two-volt battery and two-tubes are available for it.

Ordinary batteries have certain elements in them, including oxygen-roducting units. When the oxygen is taken in by the battery is finished. In this new battery two porous patches can be seen and through these "lungs" oxygen is taken in by the battery Thus a ready supply of this important element makes the battery hold its voltage for 100 hours of operation on a seven-tube set.

This opens up the way for good sets for the farmers and doubtless many manufacturers will produce these in the next few months. In the meantime, many a critical city dweller who likes the silence of battery operation and its freedom from noises, will find in this new battery the answer to his need as well.

TO THE NEGRO TENANT

From whom did they this Atlas strength obtain?
These strange and langhing men, who in this land,
Forever work and till, in sun and rain,
The broad and swelling field, where Nature's hand
Heap yield on richer yield these dusky men
Relieve their burning toil by singing slow
And savage songs; they give to earth again
The surging strength that she made to grow.
They hear the silver trumpets of the Spring
As but a call to furrow and prepare,
And Autumn's gold and crimson altos sing
In unheard beauty on the hazy air
Their beauty is the evening's cool release,
Their Paradise the body stretched in peace.

N. C. J. R. Covington.
—Exchange

DAKOTA CONGRESSMAN TO AID RACE FARMERS

SIOUX FALLS, S. D.,—Representative C A. Christopherson of South Dakota has agreed to investigate the farm relief, if any, which cotton farmers of the Race have received since the frederal farm board has been in operation. The investigator was asked by the South Dakota branch of the N. A. A. C. P.

Representative Christopherson, a Republican, informed W. F. Reden, representing the N. A. A. C. P., that he would be glad to receive from every section of the South, any information tending to show what relief had been extended or whether Race farmers had been granted any assistance as outlined in the farmer act.

The congressman's address is Hon. C. A. Christopherson, M. C., Washington, D. C.—Chicago Defender.

FARMERS WILL RAISE BEANS

FACTORY MAN EXPLAINS NEW PROJECT AT WEST LIBERTY

WEST LIBERTY—Production of green wax beans was the subject of discussion at a meeting sponsored by the J LeRoy Farmer Canning Co., of Cedar Rapids Friday afternoon in the Masonic dining room, attended by 85 persons. The company's representatives explained its plan to secure local acreage for the raising of bean crops in this locality next season. Twelve farmers signed contracts for one-half acre to two acres each. To give some idea of the production of green wax beans the statement was made that one acre near Cedar Rapids averaged three tons of beans over a period of five years. The amount of production depends upon the soil quality and also upon the care on cultivating. The price paid for beans per ton is $45, when picked and cut for canning purposes.

The United States Forest Service is sending congratulations to the Forest School at Eberwalde, Germany, on the school's one-hundreth anniversary. These congratulations are in the form of an illuminated parchment with gold colored hand-down letters and design bearing the message: "The Foster Service of the United States Department of Agriculture congratulates Forstliche Hochschule, Ebersualde, Germany, upon the occasion of its one-hundreth anniversary."

GROWS LARGE TURNIP

Sanford, N. C.—N. A. Stone one of Lee county's well known farmers, recently brought to the city a turnip grown on his farm which weighed 5 pounds and 4 ounces. This serves to demonstrate that Lee county soil not only produces excellent cotton and tobacco, but fine garden products as well.

A National NEWSPAPER For Churchgoers

Read the National Baptist Union-Review published every week, subscription price $2.00 a year. This newspaper is the oldest religious publication under the auspices of the National Baptist Convention of America. It is eight pages in size, eight columns to the page, and is brimful of denominational information every week. It contains a Woman's Page, spicy editorial matter, and circulates in practically every state in the Union.

Advertising rates and sworn circulation figures presented upon application.

"OUR SLOGAN"

STAY ON THE FARM IF YOU'RE ON IT! GO BACK TO THE FARM IF YOU'RE OFF IT!

THE LAW

"It is hereby declared to be the policy of Congress to promote the effective merchandising of agricultural commodities by encouraging the organization of producers into effective association under their own control.

The Board is authorized and directed—to promote education in the principles and practices of co-operative marketing—to encourage the organization, improvement in methods, and development of effective cooperative associations." (Public—No. 10—71st Congress. Sec. 1-5.)

THE GOSPEL

"This law is predicated upon the ability of the farmer to manage his own business, once he is organized to do so. Cooperation is the key to it and only in exceptional cases can the Federal Farm Board have any dealings with a farmer who is not a member of a producer-owned and producer-controlled marketing unit." Hon. Sam'l R. McKelvie, Member, Federal Farm Board.

The National Federation of Colored Farmers believes that the Colored Farmers of America should own and control their own co-operative associations.

"Co-operation With All—Affiliation With None."

THE NATIONAL FEDERATION OF COLORED FARMERS

A prominent member of the N. F. C. F. sends us a clipping from a leading southern daily newspaper which is a statement alleged to have been made by an official of the Association for the Advancement of Negro County Life. This official states that the agricultural depression has thrown millions of acres of good land on the market at low price and on easy terms—that Negroes are offered a rare opportunity now to become landowners and ultimately achieve economic independence. He further states that a number of federal and state agencies are prepared to offer trained advice and assistance in efficient farming and marketing methods and etc.

Our informant asks: "If state and federal agencies can do so much for us now, why haven't they been doing all the time what the N. F. C. F. is doing? Why haven't they helped us save all the way from 25 to 40 per cent on the cost of our farm and home supplies? Why haven't they helped us organize some Agricultural Credit corporations, so we could borrow money from the government at six or seven per cent. instead of having to pay as high as 37 per cent on what we did borrow? Why haven't they helped us get fertilizer, at one-third less the local prices charged for it, like the N. F. C. F. did last spring? Why haven't they told us where we could sell our products at the best market prices? Why haven't they helped us make and save money? That's the real sure enough help we have been needing and a precious little of it we got until we joined the N. F. C. F."

As we have said before, so we say again: "There are many agencies attempting to help the colored farmer improve his condition. The National Federation of Colored Farmers is helping him get something to improve it with."

THE MAIN RURAL PROBLEM

"The difficulty of land ownership is the main rural problem." We quote this sentence from a letter recently received from Dr. J. H. Dillard, president of the Jeanes Fund.

Dr. Dillard has traveled extensively through the rural districts of the south—he is a close student of conditions effecting the welfare of farmers—and we believe he is right. He tells of meeting a colored tenant farmer who paid four dollars rent per acre for seventy-five acres of land. This land was assessed for taxation at six dollars an acre and the actual tax paid by the owner was fourteen cents an acre. This land was thought to be worth around one-hundred dollars an acre.

The man who rents and cultivates this land should own it. All farm owners are not farmers by any means. The only successful farming is done by the men who own the land they cultivate and cultivate the land they own. Tenant farming has never been successful farming and never will be.

There are too many "big farm owners" in the United States. This is one reason why we have so much poverty, unemployment and misery. There is little poverty and unemployment in France and Denmark. In these two countries more people own the land they cultivate than in any others. Since 1899, Denmark has loaned more than thirty million dollars in self-financing loans to farmers. This has made Denmark a country of land-owners and one of the happiest and most prosperous nations in the world.

Again we advocate the "Directed Colony Plan" as one solution of this rural problem. This is a farm relief project that will bring more real relief for colored farmers than any other.

DON'T KNOW—OR CAN'T TALK?

Not long ago we wrote to a prominent leader of our group in Florida and requested some information about the condition of our farmers in that state. It has been several years since we have visited Florida, —we wanted some late information —and we thought this particular person could furnish it. We informed him that what we wanted was not for publication—that we only wanted it for our own enlightenment. To date—our letter has gone unanswered.

A prominent white newspaper correspondent, writing to a large metropolitan daily, has given to the whole big world probably the facts we were requesting. We will quote some of his interesting copy:

"A kind of modified peonage exists throughout the agricultural section which keeps the Negro farm hand in financial bondage from the time he is old enough to shoulder a hoe until he's buried "on credit!"

"A Negro farmer hires out on 'shares' to a landowner. He agrees to work the farm and harvest the crop, the owner in the meantime 'running him'—that is, arranging credit for him at a local store, which is often owned by the landowner, who sets the prices and charges interest on the account. At the end of the season the Negro is to pay his debts out of his share of the profits. He never sees any cash and is allowed only a nominal amount to buy food. When the time comes to divide the profits and pay up, the Negro finds he still is on the red side of the ledger and each year finds himself getting deeper in debt."

"Farming conditions down in south Florida are even more wretched. The workers live in squalid one-room shacks set back behind sagging barbed wire fences. Flies and mosquitoes swarm in and out the holes cut in the shanties for windows and naked children play in the sand on the shady side of the house while their parents are at work in the fields."

"The condition of the Negro in the farming communities of Florida is anything but happy, but the landowner will tell you they are better trusted than up in Alabama or Georgia."

Now there it is and that is that. Do the leaders of our group in Florida know of these conditions? How can they help but know? Then why are they silent? Why is it that a disinterested person of another racial group sees fit to talk about them?

One thing is certain. The light of publicity must shine on some of the burdens the great masses of our group are bearing in this Nation, or else—they will never be free of them. One of the main reasons why Negro farmers are persecuted and kept in a condition of slavery, peonage and degradation is because their supposed-to-be defenders are so silent. Silence may be golden sometimes but at other times it is muddy, filthy and rotten. Race leaders have no right to be mute and mum when they know that the very people who are supporting them and depending on them are crying for mercy and freedom every day of their lives.

The immortal Lincoln wrote the Emancipation Proclamation nearly seventy years ago. Fourteen years ago we fought a war which was supposed to make the world safe for democracy. Its about time for the Negro racial group in America to speak,—and speak with a loud voice. Why are the leaders silent? Yes, WHY?

GIFTS FOR THE FARMER

Chairman Legg of the federal farm board is authority for the statement that of all recorded gifts and donations given by American millionaires and philanthropists during the past few years, only about a million was directed to help the farming population of the country. These gifts total nearly twenty billion dollars! To get any benefit, even from gifts and donations, the farmer has to leave the farm and move to the city.

People who have money to give away have a perfect right to give as they desire. It is more or less a personal matter and we are sure they endure more suffering trying to give than they ever did trying to earn. It is a hard job.

Probably the reason why philanthropists have given so little directly to aid the rural population is because they have not been shown how such gifts, except to rural schools, could possibly be of any service. But we have in mind right now another way by which the colored rural population in particular may be benefited and the philanthropist who first expresses a willingness to assist in this effort will endure himself in the hearts of colored farmers forever. We suggest the establishment of "directed farm colonies of colord farmers"

The Simmons-Whittington bill, now before Congress, may become a law, but even if it does we doubt that it will ever benefit the farmers of our group. Laws have a way of punishing US first but assisting US last. This bill provides that one directed colony be established in each of the southern states. If it provided for TWO—then we would have something to crow about. Here is an opportunity for some good philanthropist to come to our rescue We hope he will.

PLANT AN ORCHARD

A farm on which no orchard is growing is a pretty poor farm. Now, while all of us have decided to raise our food and feed on our farms, let us not forget the orchard.

There is nothing more beneficial than a thrifty orchard in bloom and no food is more beneficial than lucious fruit. A great doctor once said: "A child who lives in the orchard will live long." He meant that the child who has access to plenty of good, ripe fruit in season, would develop a rugged constitution and would be able to resist and overcome diseases.

Too many of us plant orchards and then forget all about them. We fail to cultivate and nurture them. This will not do. About half of the insects in the world try to make their homes in orchards. We must battle them all the time—fight them every month in the year—if we would overcome.

Study your orchard and study about your orchard. Don't become discouraged if some insect or disease attacks your trees. Fight that much harder. Find out from your state experiment station or agricultural department what the pest is and the remedy. They either know or they are trying to find out. Don't be afraid to ask for information.

Be sure and plant an orchard and be sure and take care of it after you plant it It will pay you well.

AN ACRE FOR YOUR CHURCH

Don't forget to plant an acre for your church this year It is an easy, sensible way to obtain your church dues and you will enjoy the effort. The whole family will gladly assist in cultivating the church patch or "God's Acre," and the children will be getting a habit that will prove beneficial throughout their lives.

Our rural churches are not keeping pace with our schools. This should not be. A community is disgraced that has a dilapidated, unpainted, sickly looking church, no matter how progressive it claims to be.

Plant an acre for your church. The effort will not trouble you much and it will pay you ten-fold. Do a little more for the Lord and he will do more for you.

We wish to thank the many who have commended the last few issues of the MODERN FARMER. Our friends are growing in number and we believe your paper is growing in influence. We are here to serve you and we are serving you as well as we can. The paper will get better as it gets bigger. It will get bigger if you will continue to support it. For two years the colored farmers of America have had a paper of their own. If you will continue boosting you will have, ere long, the best farm paper published in America.

We urge our farmers to organize Units of the N. F. C. F. now! Don't let the question of dues worry you or cause you to hesitate. Write to the main office of the organization—Vincennes Hotel, Chicago, Illinois, and arrangements will be made so you can pay your dues as you can. Your organization cannot exist without money but we also know that you cannot exist long without your organization. So organize! You have no excuse.

We advise all who can to arrange to attend the Fiftieth Anniversary of the founding of Tuskegee Institute, which will be celebrated beginning April 12th and continuing through April 15th, 1931. Tuskegee has done much for our farmers. No one ever heard a Tuskegeean belittle agriculture as a vocation. Tuskegee knows how to honor the farmers. She has been doing so for fifty years. Go if you can—visit her farms and experiment station, and you will enjoy as profitable a vacation as you have ever enjoyed in your life.

ILLINOIS FARMERS START WORK FOR SUMMER MONTHS

Cambridge, Feb. 3. —. Henry county farmers who attended the annua meeting of the Illinois Agricultural association in Springfield last week were surprised to see farmers plowing discing and burning cornstalks between Pekin and Springfield. Henry county is quite fortunate for moisture was received from the last snow but farmers in the southern part of the state have had no moisture all winter. Many farmers are hauling water for their stock.

ATTENTION COLORED FARMERS

The National Federation of Colored Farmers is receiving hundreds of letters from Colored farmers requesting all kinds of aid and information. We are willing to do everything we can for all the Colored farmers of America. It costs money, however, to maintain offices and our expenses are becoming so heavy that we are compelled to discontinue supplying information to those who request it who are not members of the Federation. If you have faith enough in the organization to believe that it can aid you, then you should be willing to join it and help support it. Isn't that so?

Several County units have organized and elected officers but have not sent in their membership dues. These units are eligible to membership in the Federation until dues are paid. Be helpful. Co-operate. Pay up. "All for each and each for all"

POULTRY RAISING IN YADKIN COUNTY

(Continued from page 1)

the work. These farms were chosen to secure varied conditions for capon production. Problems bearing upon economical production were attacked, and at regular intervals, data secured on each project concerning the growth of the capon and treatment given by the farmer.

The birds are prepared for caponizing by being penned the previous night and refused food until after the operation. Wind puffs which are noted the second day after the operation, may be remedied by clipping a small piece of skin with scissors or tieing a waxed thread through the puffed skin.

A factor in favor of starting capons in June is that they enjoy a much longer ranging period reducing cost of production. Even with good grazing, however, feeding should consist of corn and wheat at night, supplemented with mineral in the form of sour milk. This balanced feeding increases development of bones and tissue and gives a normal increase in body weight.

A five pound capon should gain one and one fourth pounds in 30 days according to records. Alfalfa, cow feed and soy beans make good summer and fall range and winter grass and rye for the cold season.

The birds should have dry warm quarters in winter.

Should Study Birds

In determing when to caponize, it is well to know that the younger bird will recover more rapidly and attain larger size in bone and body. On an average, a cockerel one and one-half or two pounds is most suitable. Heavy breeds require a longer period to mature so should be caponized early. After a poultry farmer has duly considered factors involved in capon production, he may wisely adopt it as a source of annual farm income. In this way a cheap product can be converted into one which brings a fancy price.

Poultry raising is fascinating work and rewards conscientious effort abundantly. It is doubtful if a more profitable way to market grain can be found than in the form of marketable fowls, particularly the finer quality for the table such as the capon, which is demanded constantly by the epicure. Capons make excellent "mothers" for baby chicks and by turning a young brood into the care of a mature capon, the hens may be kept for laying without wasting time in rearing of the growing brood.

FARM RELIEF OUTLINED

(Continued from page 1)

take into consideration the fact that most of the tobacco in Stokes county—and a large part of that in Surry county—is selling for $2 to $4 per 100.

"The condition of the farmers in these two counties, because of this situation, is very distressing, but these conditions have been made much worse in the case of Stokes county by the recent closing of four banks in that county.

"These farmers cannot pay the time merchants tor 1930 supplies and fertilizer and the time merchants are not in a position to carry many of them through 1931.

"Unless some relief is afforded these drought-stricken farmers by the government in the way of supplies and fertilizer—just as is done in the case of sufferers from floods and storms—then many of them will not be able to provide for their families this winter and hundreds of them would not be able to secure seed, supplies and fertilizer with which to plant a crop in 1931.

"Some people have advocated a reduction in the tax on tobacco as a means of relief to the farmer with the hope that this would result in higher prices on tobacco, but as the tax on tobacco is paid by the consumer and there is no assurance that a reduction in the tax on the manufactured product would be reflected in the price of the raw material, I believe a better plan would be to use a part of the enormous revenues received by the government in taxes, in fostering the industry and in enabling the growers to at least get a little more than the cost of production.

"To this end I suggest that the government furnish the tobacco growers free grading service at the warehouses to be paid out of the amount received by the government from the tax on tobacco.

"In addition to this, and because of the risk that the farmer has to take in losing his crop from hail, a risk which the farmer usually takes himself because of the present high rate of hail insurance—I think that the government ought to provide the farmer with hail and wind insurance at a rate so reasonable as to enable all tobacco growers to avail of it.

"These are matters of simple justice, to which the farmers are justly entitled, and any fair-minded Representative will so recognize it, if you will bring this to his attention.

The N. F. C. F. has been advocating government graders for tobacco for two years. They are needed.

BABSON PREDICTS BEST FARM YEAR IN ALL SECTIONS

Expert Says Agriculture First to Go to Business Hospital Will Be First Out.

The year 1931 will be the best farming year that the United States has known for a decade, declares Roger W. Babson, who has been traveling the middlewest studying the agricultural situation.

"The farmer was almost the first victim to go into the business hospital," Mr. Babson says in The Country Home," and he will be the first one to come out.

"It is the history of bad times that those industries which are hit first are the first to recover. It is also part of this history that the farm is one of the first business groups to emerge from a depression. This, of course is because the farm is among the first to feel it. Some day we will learn how to deal with these up-and-down swings in business. In the meantime we are under the dominion of certain inevitable laws of trade. When we push business up too in pressing it down again."

Saving Farmers

Mr. Babson is convinced that the farmer's present state is not nearly so bad as has been pictured. "Politicians are always saving the farmer," he notes. "But when you use the word farmer in Washington everybody things of the grain farmer. The Department of Agriculture is always issuing bulletins and reports about the farmer. Of course they always mean the grain farmer. I can go to that telephone now and call up Washington and ask any one of a hundred questions about the wheat crop and they can answer immediately. But if I ask them about spinach they will not know what I am talking about."

"Down in Pennsylvania I saw a farmer who had formerly raised corn. He had abandoned corn and planted his whole farm to spinach. He sends twenty truck-loads of spinach to market and is making money. But that spinach farmer does not come within the range of Washington's eyes.

"The president of one of the great Western railroads told me that his road was hauling four trainloads of lettuce a day. I daresay his road is hauling more lettuce than wheat. We have estimated that the American family spends about two dollars a day for food-stuffs. Of this two dollars only about five cents goes for wheat and corn. Wheat and corn are still important, but they are becoming proportionately smaller in the whole farm picture. When we talk about the farm and the farm market, therefore, we had better be sure that we are including all the farmers and the whole farm market.

"When we talk about the conditions of the farmer, therefore, we must give more emphasis to this vast collection of farmers who do not raise grain at all. When I say that the farmer is about out of the woods and that America is going to have a greater year of farm prosperity in 1931 than in a decade, I refer to all the farms. However, the grain farmer too is going to get his share of this approaching prosperity.

Speculators Rush

"I have just traveled through the middlewest. I was there when there was a brief furry upward in wheat prices in the fall. Stories about crop shortage got into the papers and the speculators rushed in and pushed prices up. They pushed them up too high as usual, and, in accordance with the simple law of gravity, the prices came down again. The rumor of crop shortage proved to be untrue. Then, as prices had gone too high on the strength of the rumor, they went too low when the rumor fell flat. But that low point marks the end of the grain slump. Farm prices should begin to strengthen now, as the beginning of the recovery I predict for 1931.

"There is another item on the side of the farmer. His dollar is worth more and will be a wise man to use it while it has a high purchasing power. Prices have been failing in the cities for many months. Low prices do not reach the farm as soon as they reach the city, but they now are rolling toward the farm — price reductions which mean hundreds of millions of dollars to farm purchasing power. A big mail-order house writes four million dollars off the value of its inventory. That is literally four million dollars contributed to the farmer. Sugar is cheaper; coffee is cheaper. The farmer who uses gasoline gets it at the lowest price since 1915. Tires are cheaper. Paint, wire fencing, nails, lumber and hardware begin to reflect the lower prices. All this is grist to the farmer's mill and will aid his recovery."

ELECTRIC FAN IS UTILIZED TO CURE SWEET POTATOES

Okemah, Okla. — Electric fans play an important part in producing sweet potatoes on the Camp brothers' ranch near here.

After the potatoes have been grown in irrigated, terraced fields they are cured in specially constructed sheds, the walls of which are packed with sawdust. To keep in good condition the potatoes must be as dry as possible, so the air in the sheds is warmed by stoves while large fans maintain a constant circulation.

Twenty-five thousand bushels of sweet potatoes can be placed in the shells at once for the fanning process.

MAN SHOWS LARGE RANGE NOT NEEDED TO RAISE TURKEYS

Hooppole. — Gerald Fritz, living about four miles south of Hooppole, raised about 150 turkeys during 1930, which he recently sold to private customers at an average of 40 cents a pound. They were of the Bronze breed and weighed 20 pounds each when sold.

They were hatched from eggs placed in an incubator and the usual poultry brooder equipment was used by Mr. Fritz in raising them. The brooder houses were of portable type and the young turkeys were not allowed to roam except on clean ground, mostly clover pasture. They were fed a commercial feed during the first few weeks and corn was used as the principal feed during the fattening period. The birds were of did the turkeys wander far from eggs purchased from a Nebraska breeder.

Mr. Fritz states that at no time did the turkeys wander far from the brooder houses in which they were raisd, nor did they have a very extensive range.

The turkeys were not allowed to run with chickens as it has been found that turkeys do better when not allowed to run with other poultry.

Fritz is keeping no breeding stock for this year, but will repeat the incubator and brooder method which proved successful in 1930. His experiment apparently disproves the theory that a wide range is necessary for turkey raising.

MILLIONS OF TREES WILL BE SET OUT TO HONOR WASHINGTON

Ten million memorial trees are to be the feature of the 1932 bicentennial of the birth of George Washington, who was himself one of the earliest and most ardent of tree lovers and tree planters.

The commemorative planting began last autumn, when the first tree was set out in the grounds of the capitol at Richmond, Va., by Governor Pollard, with ceremonies attended by representatives of the original thirteen colonies. This spring millions of trees will take their places as memorials, many of them singly, others in splendid memorial avenues and in groves and forest plantings.

The American Tree association is urging that so far as possible all memorial trees shall be set out and registered this spring, so that living and growing trees may be dedicated in February 1932. By setting the trees out this year, planters will discount the probability of any dead or dying trees being dedicated, because where losses occur replacements next fall will be possible.

Civic organizations on Long Island are planting a memorial tree at every spot Washington is known to have visited. In every state the patroitic societies, the boy and girl scouts, civic bodies and other organizations are carrying out group plans, and are urging every citizen to plant individually a memorial tree.

It is urged that every such tree shall be registered with the American Tree association. Each tree will be recorded and the records filed for permanent preservation with the existing records of other historic trees, in a nation honor roll of trees. A pamphlet giving information as to registeration and instructions for planting has been prepared and will be sent for return postage by Miss Grace Tabor, Thirteenth floor, 250 Park avenue, New York City.

"Every region of this continent has, or had, its characteristic trees," says Miss Tabor in the woman's Home Companion. "George Washington chose from his own forests practically all the trees which he disposed around the ground or park at Mount Vernon on the Potomac, having them dug up as young saplings and planted at the spot appointed by him. Later he added trees which came to him as souvenirs from friends in all parts of the world.

"There were also many specimen grown from seeds brought back by Washington from battlefields, since it was his custom to pick up as he strode along an acorn or two or a handful of beechnuts, hickories, walnuts, horsechesnuts and so on, and take these home and plant them. But nothing dominated the splendor of the trees originally brought from the forests, and Mount Vernon today is dominated by these.

Douglas Spruce Favored

"Certain civic organizations are recommending the planting of the Douglas spruce for Washington memorials. This is regarded as appropriate because it is evergreen tree that is at home the length and breadth of the land, even though it is native to the western regions. Moreover, it is recognized all over the world as characteristically American. It transplants well and is of exceptional beauty, alike in form, color of foliage and in the decorative quality of its ruddy cones."

Generally speaking, evergreen trees are not everwhere as suitable for memorial plantings as are deciduous trees. But where they can be appropriately used, they are recommended by the tree association as desirable. The pines have a special tradition associated with them, for it was the belief of primitive peoples that the first tree to rise from the bosom of the earth was the pine. Among many races it stands as the symbol of eternal life.

There is a rich and immensely interesting tree lore to which schools and women's clubs will direct attention during the period of the Washington memorial plantings. Among the trees to which special attention is being directed by the memorial committees are the black locust, the Lombardy poplar, the giant redwood, the white pine, the American elm, the sugar maple and the black walnut.

The delicate-leaved black walnut, it is noted, was the Americas tree which created the greatest furore in the old world when it was first introduced abroad, on account of its airy grace and penetrating fragrance. It is easy to transplant and quick to grow even in dry and meagre soils. The strength and durability of its wood are proverbial, and honey from its flowers is the sweetest of all honey.

Lombardy poplars are recommended for memorial groupings, having an astonishing vertical accent and an unusual significance of line. There is a touch of mystery in the Lombardy poplar, for it appeared spontaneously on the plains of Lombardy about 200 years ago. It has never reproduced itself, and all the trees of this variety in the world are literally wood of the wood, artificially propagated by cuttings, from the first solitary specimen.

MACHINE CUTTERS UNSATISFACTORY

The Southern Sugar Co. near Canal Point, Florida dismissed over four hundred laborers on their plantations and installed the new machine cutters. The machines did not work satisfactorily and the laborers have been put back to work.

CAROLINA WOMEN JOIN WAR ON JUDGE LYNCH

FIFTEEN IMPORTANT GROUPS REPRESENTED AT CHARLESTON MEETING

Charleston, S. C., Feb. 15:—Joining the women of other Southern states in a new offensive against lynching, a group of representative South Carolina women met here last week, went on record with a vigorous denunciation of mob violence, and requested all the women's organizations in the state to unite for the extirpation of lynching.

Nine religious denominations and six civic organizations were represented in the meeting, which was presided over by Mrs. C. P. McGowan, a member of one of Charleston's oldest families, and Chairman of the State Interracial Commission. A committee headed by Mrs. McGowan was appointed to extend the organization throughout the state. The resolutions adopted were as follows:

"1. We, as southern women representing churches and civic organizations, deeply deplore the rise in the tide of mob violence which has receded so notably since the beginning of the present century.

"2. We abhor and repudiate the use of the expression protection for the white women of the South, as a cloak for mob violence.

"3. We urge the adoption of some uniform methods by the southern states in the prevention of lynching; through the action of governors and other officials, through the passage of suitable laws, and through the upbuilding of public sentiment to remove this stain from our boasted civilization.

"4. We recommend that South Carolina women join the other southern states in a southwide movement of women for the extirpation of lynching, and request that these resolutions or others of similar import be presented for endorsement to all local and state groups of women, civic or religious."

Representing the Commission on Interracial Cooperation, Mrs. Jessie Daniel Ames was present and told of the new movement against lynching inaugurated by a Southwide group of women meeting in Atlanta on November 1. Following plans formulated at that meeting, representative women of Georgia, Tennessee, Alabama, Mississippi, and now South Carolina, have publicly pledged their support to the effort and are organizing for vigorous action. The women of the other states of the South will be enlisted as rapidly as possible.

—Nashville Globe.

PEONAGE IN LOUISIANA ACT TO FREE FIVE ON PEONAGE FARM

Shreveport, La., Jan. 27. — Action to expose a condition of peonage in Coushatta, Red River parish to liberate five men being held there is a state of involuntary servitude, was begun here this week.

A complaint against J. M. McLemore, a planter in Red River parish, has been filed by W. C. Robinson of the department of justice. The men in whose behalf the action was taken are John M. Batcher, John Garry, Joe Davis, Robert Jenkins and Lucky Hall.

They are supposed to be indebted to McLemore on this year's crop. The sum of their indebtedness, according to disclosure, ranges from $125 to $700. McLemore is said to go armed at all times and swears that he'll shoot the first man who attempts to run away.

From The Chicago Defender.

RACE RELATIONS LECTURE SERIES AT COLUMBIA

WEEKLY MEETINGS AT TEACHERS COLLEGE, FEBRUARY FOURTH TO APRIL FIFTEENTH

New York City, Feb.:—Teachers College of Columbia University is putting on again this year a series of ten weekly lectures on Negro education and race relations by as many white and colored authorities in their several fields.

This series, which began on February 4 and runs through April 15, will be under the direction of Miss Mabel Carney, associate professor of rural education in Teachers College, who has been conducting such a series annually for the past several years. The meetings will be held in Horace Mann Auditorium at eight o'clock on each Wednesday evening, with the exception of February 25 when no meeting will be held, and April 1 when the meeting will be in Milbank Chapel at 4:00 P. M.

The opening session was addressed by Miss Carney, who gave an introductory study of Negro education and racial progress in the United States. On February 11 the speaker was N. C. Newbold, director of Negro education in North Carolina, who spoke on "Public Education for Negroes in the South." The succeeding speakers and subjects are as follows:

February 18: Miss Rossa B. Cooley, who will tell of the work of Penn School, South Carolina, of which she is head.

March 4: Prof. D .O. W. Holmes, of Howard University, who will speak on federal responsibility for Negro education.

March 11: Dean Lucy D. Slowe, of Howard University, and Miss Rebecca E. Davis, field agent for the Jeanes Fund, who will talk on the education of Negro women and girls.

March 18: Dr. Gordon B. Hancock, of Virginia Union University; subject, "Our Common Captivity."

March 25: President B. F. Hubert, of Georgia State College; "Further Opportunity for Negroes in Agriculture and Country Life."

April 1: R. B. Eleazer, of the Commission on Interracial Cooperation, Atlanta, whose subject will be "An Adventure in Good Will."

April 8: Dr. George E. Haynes, of the Federal Council of Churches, New York, who will recount his recent observation in South Africa.

April 15: Dr. Charles S. Johnson, of Fisk University; "The Negro in American and World Civilization."

In previous years these addresses have been attended by audiences running as high as 1500 or 2,000, made up of teachers and educational administrators from all parts of the United States.

—Nashville Globe.

INTENSE INTEREST IS BEING DISPLAYED IN 1932 CELEBRATION.

That the people of the United States are rapidly awakening to the significance of the Nation-wide celebration of the observance of the Two Hundredth Anniversary of the Birth of George Washington in 1932 is indicated by the flood of requests which is pouring into the offices of the George Washington Bicentennial Commission for all types of material relating to the celebration.

The requests are from all sections of the country and include various civic, patriotic and fraternal organization such as D. A. R. Chapters, Parent-Teacher Associations, Daughters of the American Colonists, officers and members of the Federation of Women's Clubs, Soroptimist Clubs, Society of New England Women, G. A. R. Posts, Colonial Dames of America and many others.

During the past year a large number of national, state and district conventions passed resolutions endorsing the celebration, and pledged cooperation in the observance of the Bicentennial. From the officers of these organizations the purpose of the celebration has been spread to local units and individuals with the result that intense interest has been aroused and definite action is now taking place in the thousands of local communities.

ORDER YOUR

SUNDAY SCHOOL AND B. Y. P. U. LITERATURE

FROM THE

NATIONAL BAPTIST PUBLISHING BOARD

We can supply you with all religious Helps needed for your church and auxiliaries. We specialize in Sunday School Literature for Front Line Schools, B. Y. P. U. Literature or Organized Class Publications and Ministerial Helps, such as Pastor's Guides, Hiscox Directories, Minister's License, Ordination Certificates, Prayer Meeting Hymnals and 23 different Song Books.

Send all orders to the National Baptist Publishing Board, founded by the late R. H. Boyd. H. A. Boyd, Secretary.

523 - 2nd Avenue North, Nashville, Tenn.

THREE WEEKLY BULLETINS

(Continued from page 1.)

ansas, Tennessee, Louisiana, Mississippi and Alabama.

The office at St. Louis, Mo., will make loans in the state of Kentucky, Southern Indiana, Southern Illinois and in those areas which have no other means of financing their crop production in 1931 and which make application to one of these field officers for assistance Application blanks and other necessary forms are now being prepared by the Department and will be available for distribution in the next few days.

To secure the re-payment of this loan, each borrower will be required to give a first lien on his 1931 crops. The maximum amount which will be loaned to an individual farmer and the maximum rates per acre will be specified in regulations to be issued by the Secretary of Agriculture.

The interest rate on all loans will be 5 per cent per year. Notes given by borrowers will be payable next fall when the 1931 crops mature and are marketed, the date of payment varying according to the marketing season in the different sections.

In the event that any of our farmers who are desirous of filling an application are unable to secure a blank for this purpose, he can write the Department of Agriculture,Drouth Relief Fund, Washington, D. C.

Red Cross Relief

The American Red Cross Society, with headquarters at Washington. D. C., is now giving relief to all farmers in the drouth stricken section of the country, who are in need of food and clothing. Our farmers who are needy can apply to any Red Cross Committee in their community for this aid.

In event any farmer applies for this relief and is refused, they must write to: Mr. Dewitt Smith, American Red Cross Society, Washington, D. C., who will give their case immediate attention.

If there is no Red Cross Committee near you, then write American Red Cross Society, Washington, D. C., and state your condition.

Food Prices and Market Conditions.

Your wholesale price list shows Cracked Rice less than two cents per pound. This is as good as whole grain rice, so far as food value is concerned and very economical.

Good Holland Cabbage at less than one cent per pound is also another good buy.

Salmon in one pound tall cans, Chum grade, at 95 cents per dozen figures about 8 cents per can.

Flour continues at low prices and we see nothing to indicate any advantage. Corn meal will also likely remain around 3:40 per barrel or about 85 cents per bushel.

Feed

Your price list also shows good mixed feeding oats at 39 cents per bushel, and shorts 1.25 per hundred. Chicken feed, dollar eighty-nine per hundred pound sack.

ALWAYS BUY FROM HOUSES MAKING LOWEST PRICES—QUALITY CONSIDERED!!

Washington, D. C. Headquarters

We are making arrangements to open up a Washington headquarters in the Masonic Temple Building at You and T Sterets, North West, in order that we may keep the interests of our members actively before those who are in a position to aid us.

Members should write this office for any information they desire which is not obtainable thru the officers of their unit.

ONIONS PROVED IN THIS COUNTRY ARE BEST FOR GARDENS

Onions, big ones, are now a staple of ambitions gardeners for the purpose of exhibiting at neighborhood or club shows each fall. In addition, the young onion, to be pulled and eaten in its tender infancy is always one of the popular early spring vegetables.

To grow a "Bermuda" or "Spanish" onion is a real test of gardening art. It can be done only by sowing the seed early, transplanting and giving intensive culture. Some of the onions which will, under proper conditions, give the biggest and showiest bubs are not the most certain of doers. It is well to take the biggest varieties that are known to do well in your section and to avoid foreign varieties and select well tested and specialized American strains.

Prizetaker is one of the well known and more easily grown of the big onions. This is a yellow-skinned onion. The white skinned giants are most attractive but you are not ikely to get such uniform size onions as from the yellow. The medium to large-sized white skins, such as Southport. White Globe and American silverskin, will give fine-sized onions of attractive appearance and are fine general garden purpose onions as well.

Mammoth Silver King is another fine big onion, but it is not of the big globe type so popular at shows. It is a flat onion.

Sow seed for your "Bermuda" display onions not later than March in seed boxes Transplant them a foot apart when the weather is right and give them the richest soil you have. Use the surplus for young onions planted two inches apart. When transplanted the tops should be snipped about half way down.

For the later crop young onions, sow the seeds in drills or rows rather thinly and pull as needed.

For earliest of all young onions plant onion sets. The soil for prize or fine onions is exactly suited for the most popular flowering bulb of summer, the gladions, Plant your onion rows two feet apart and in the space midway between the rows plant a row of gladiolus and cultivate them the same as you do the onions. You will have a chance to take some prizes on the flower side of the show program with your gladiolus. Plant them in succession. For the biggest show flowers plant a foot apart. For ordinary home cutting purposes they may be set six inches apart.

BROWN LEGHORN 14 YEARS OLD; BOSS OF FLOCK

Sheffield, Feb. 9. — John G. Johnson has a brown Leghorn hen which will be 14 years old in April. She retired from active business when she was 12 years old, even that being an unusual age for a hen. Mr. Johnson says she is hale and harty, sees without glasses and is still boss of his flock.

LETTER FROM CRUGER, MISS.

Box 127, Cruger, Miss.

—To the Modern Farmer.—Please let me say through your columns that the Baldwin unit of the N. F. C. F. is yet on the upward trend with good Bro. Primas Jones as chairman. We are doing our bit to carry our unit to the top of the hill. Also we are glad to say that the good of our organization is being evidenced by the continual coming in of members. Also the whites are beginning to realize the good of the unit and one planter near us has advised all of his tenants to join, which advice has been heeded to, and all but two have joined with us. Now we are glad of this cooperation, and let us all get together and help our president convince all men that our organization stands for the good and betterment of all, and not against any one as some have thought. Now Brethren let us remember and stick to our president who has laid his life on the altar for our sake and don't be shaken by every wind that blows, but let us follow our own leader.

Now I believe we can climb the hill, if we will only try. Now those of us who are not leaders and can't do much in the work, we can do much good by keeping our heads cool and our tongues still and let us not go about tatling and babling. As we have done for sixty-five years as this is detrimental to any organization or people. But let us trust in the Lord and pray for Mr. Davis the Moses who is trying to lead us out from under the bondage of debt slavery to the land of prosperity and happiness.

Yours, truly,

W. W. Cooper,

GETS RED CROSS AID; HAS FOOD HOARDED IN HOME

Cabot, Ark., Feb. 1.— (Special). —When City Marshal Duckworth and Constable James of York township, equipped with a search warrant, invaded the home of E. E. Ray, Holliness preachers, they reported that they found a barrel of flour and a 45 pound can of lard unopened, 30 pounds of beans, and other food. Ray had been receiving supplies from the Red Cross, they said.

Ray was arrested on a charge of false pretense.

AFTER FORTY YEARS PLANT HAS BLOOMS

North Great River, Jan. 31. — After forty years of careful attention in the home here of Mrs. M. E. Norman, 72 years old, a night-blooming cereus rewarded its owner for lifetime of care by producing a bloom which remained in its prime for nearly three hours. Persons from a considerable distance around came to view the fragile lily-like blossom.

MARYLAND FARMER TRAINS HENS TO LAY BY ELECTRIC LIGHT

Upper Hill, Maryland. — Eight hundred hens owned by Joseph and Frank Waters have been trained to wake up in the middle of the night by an electric light and lay eggs after having done full duty during the day.

The fowls go to their roosts at the regular hour but aronnd 11 o'clock the lights are turned on, and in a short while the great volume of cackles denote that the hens have done their bit.

Joseph is a gradnate of Gammon Theological Seminary but laid down his Bible to train his hens. Frank completed the Princess Anne Academy, having studied printing there.

—Afro American.

HOME GARDENS YIELD CHOICEST VEGETABLES

Wholesome Products Easiest to Grow; Carrots and Corn Thrive; Rich in Vitamines

By Colvin C. Bowsfield

With scores of families and young people planning to raise vegetables next Summer there are a few simple things to learn which will help them on the road to success.

In the average home garden there is likely to be available for vegetable growing about ten rods square, or a tenth of an acre. Such a plot if nicely spaded and raked will produce an amount of choice food which will surprise any but the most experienced.

Vegetables Easy to Raise

Mother Nature may seem capricious at times, but on other occasions an amount of food which is literally beyond belief can be raised in the home garden. The most wholesome edibles are the easiest to raise. A moderate amount of fertilizer pays.

Carrots are one of the surest garden crops to produce and one of the most valuable for the family table.

A pound of fresh carrots contain 204 calories and vitamins A, B, C and D. Cooked in a variety of ways, it is at once a healthful and delicious food. The main crop should be started in the Spring, but a second crop will furnish an abundance of carrots in the Fall.

Sweet corn is the highest of all garden products as a health food, a pound yielding 459 calories and vitamines A, B, C and D. It is also one of the most polific crops.

A fertilizer carrying nitrogen and phosphoric acid should be used to give a quick growth and good yield. There is a ready sale for fresh-picked sweet corn. In fact, if surplus crops are to be sold, they need to be handled while fresh.

Celery Takes Experience

Celery is enjoyed by all families, but it takes experience to grow it profitably for market. It has the vitamins, but is light in calories. A similar health content is furnished by cucumbers, lettuce, peppers and tomatoes. Turnips have 178 calories per pound and vitamin A, B, C, and D.

Parsnips have these same vitamins and 294 calories per pound. It is a delicious food of rare value.

Fresh-picked peas rank close to sweet corn, having 454 carlories and vitamins A, B, C, and D. The wrinkled dwarf peas are the best growers and most edible. Start them early and get a Spring crop in May and a second crop in October.

Onions have 220 calories per pound and the same vitamins as given for these other crops. Cabbage and cauliflower are also among the best.

COTTON PICKER SAID TO BE PERFECTED

One Machine, If Found Efficient As Claimed Will Put 50 to 60 Out of Work.

Pittsburgh, — Announcement is made by the Cotton Harvester Corp. of American that the Hanauer-Gamble-Berry cotton picker, developed by that company, has passed federal tests at a Mississippi experimental station.

The harvester, viewed in some quarters as comparable to the cotton gin in respect to its importance to the industry, picked 90 per cent of the cotton from the plants without injuring them, it was announced.

The machine is the result of six years of experimental work in the laboratories of the harvester company. After the Mississippi tests the machine was pronounced "ready for production."

The machine is carried along the rows of cotton on comparatively high wheels which straddle the plants. The bottom of the machine, formed in an arch, contains revolving drums fitted with "pickers."

Two men, operating one of the harvesters, can do the work formerly assigned to from 40 to 60 hand pickers, it was said

LEGGE TELLS OF FARM AID

Universal Service

Urbana, Ill., Jan. 16. — The success of the government in its efforts to assist the farmers depends largely on the co-operation of the farmers, Alexander Legge, chairman of the Federal Farm Board, declared here today.

He was the principal speaker on the annual farm and home week program of the College of Agriculture, University of Illinois.

Job Is To Help Farmers

"Our job is to assist farmers in every way possible to make the cooperative program effective," he said. "Since ultimate success depends largely on the willingness of the farmers to cooperate, it is of utmost importance that the program be thoroughly understood by those the government is trying to help.

"It is necessary that the information be taken to them. State colleges, extension services and farm organizations are co-operating splendidly in this enormous task of education. However, the job is only begun."

He explained that the agricultural marketing act offers government assistance to the farmer "in obtaining what are his greatest and most immediate needs — a marketing system operating in his interest and adjustment of production to the probable consumer demand."

Organization Needed

"Attainment of both these objectives," "becomes reasonably easy through organization, but appears hopelss with the farmers acting individually and without regard to what their neighbors are doing."

The speaker explained the efforts of the farm board to bring about the handling of farm products through centralized agencies.

Chicago Herald and Examiner.

FARM BOARD RESULTS

The Federal Farm Board was created July 15, 1929.

It has constantly advised reduction of acreage to farmers.

It was supplied with $500,000,000 and has spent most of it.

It holds today millions of bushels of wheat aequired at higher than present prices.

NATIONAL FEDERATION TO AWARD VALUABLE PRIZES

(Special)

The National Federation of Colored Farmers and the Modern Farmer announce that valuable prizes will be given this year to members and subscribers for diligent efforts made to increase and improve the yield of various farm products and livestock. These prizes have been contributed by public-spirited corporations, manufacturers and individuals and will be distributed to the deserving next fall. Complete information will be given in our next issue. Join, subscribe and get in line for these prizes.

DR. C. W. WARBURTON

(Continued from page 1)

mules used in planting and cultivating. They not only do not have the seed, fertilizer, and feed, but they have neither money nor credit with which to purchase these supplies. The world wide depression naturally has made their situation more difficult, as it has reduced the credit available to them. Within recent years hundreds of country banks have failed, thus reducing still further the opportunities of farmers to finance their crop production.

In this emergency which is beyond the power of local agencies to meet, the Congress has made provision for relief and it is principally about this relief measure that I want to talk to you. On December 20 the President approved S. J. Res. 211, "for the relief of farmers in the drought and storm stricken areas," on which the House and the Senate had agreed the previous day. This joint resolution authorizes an appropriation of $45,000,000 for loans to farmers in drought, storm or hail stricken areas for the purchase of seed of suitable crops, fertilizer, feed for work stock, and fuel and oil for tractors used in crop production. Please remember that this measure authorizes **loans** to farmers, not gifts. The Secretary of Agriculture is authorized to make these loans in those localities where he finds that need for them exists and under such terms and conditions as he deems advisable.

Similar authorizations in much Loan Fund, as we understand it, is smaller amounts have been passed by Congress in six of the past ten years. While all of the details have not yet been decided, it is probable that the 1931 loans will be made in much the same way as loans have been made previously in drought and storm areas.

The Department of Agriculture is now engaged in preparing the regulations governing the making of these loans to farmers and is working out the necessary blanks for the applications, notes, and mortgages to be executed by borrowers. It is expected that these forms will be printed and ready for distribution very promptly after the Congress provides the necessary appropriation which will probably be shortly after that body reconvenes on January 5.

In the meantime, advisory committees are being set up by the Department in the counties in which it is expected that loans will be made. These committees usually consist of a leading banker and two prominent farmers. These are men of wide acquaintance and good judgment, who serve their neighbors and the Government without pay. As soon as the application blanks and other forms are available, supplies of these blanks will be sent to county agricultural agents in the drought stricken counties who will distribute them where they will be readily available to farmers throughout the country. Loans will be confined to those counties in which there was material drought or storm damage in 1930.

Each applicant for a loan will fill out an application blank and will sign a note in the amount of the loan he desires to obtain. At the same time in most States he will give a mortgage on his 1931 crop to secure the payment of his loan. The laws of a few States provide that a legal mortgage on crops can only be taken after the crop is actually planted and growing. In these states applicants for loans will be asked to sign an agreement to give a satisfactory crop mortgage to the Government at the proper time.

Each applicant for a loan will be required to state the amount he desires to obtain and to show how he proposes to spend the money which is advanced to him. He will show how much he desires for seed of the various crops he proposes to plant, how much for fertilizer, and how much for feed for his work stock, or for fuel and oil for tractors. He will state the acreage of the various crops grown by him in 1930. He report his outstanding indebtedness and the acreage and yield of crops grown by him in 1930. He will also be asked to show to what extent he incurred damage from drought or storms during the past season, as this is the principal basis on which his eligibility for a loan will be determined. He will agree to use the proceeds of the loans for the purchase of seed, fertilizer, feed for work stock and fuel and oil for tractors.

When an applicant has completed his application, note, and mortgage, these papers will be turned over to the County Advisory Committee, who will examine the application and make their recommendation to the field office of the Department of Agriculture. This committee will tell the department whether the applicant has the necessary power and machinery to produce the crops he proposes to plant, what his reputation is as a farmer, and whether he can be expected to use his best efforts to produce a crop and repay the loan. It will then make a definite recommendation as to whether or not a loan should be granted, and if so, in what amount. The Committee will then forward all the papers in connection with the application to one of the Department's field officers. These field officers will be located at several convenient points throughout the territory where there is need for loans.

When an application for a loan, with the accompanying papers, is received at the Department's field office, it will be examined promptly and decision as to the amount of the loan to be granted will be made by a person who is familiar with farming conditions in the State in which the applicant lives. The amount of the loan will be based on the needs of the individual for seed and fertilizer for the acreage and crops he proposes to plant and for feed for workstock necessary to tend these crops. Loans may be approved for an amount less than that which the applicant requests. The Government makes loans only to those who cannot obtain credit from other sources.

When a loan is approved, checks will be drawn to the borrower in the amount of the first installment of his loan. As expenditures by borrowers will in most cases spread over a period of several weeks or months, funds will be advanced as they are needed in two, three, or possibly more installments. Before a second installment is paid, the borrower will be asked to show how he has expended the first installment advanced to him.

I said a few minutes ago that Congress had provided for **loans** to farmers to assist them in producing crops in 1931 and that this money was not in any sense a gift. In this connection it is interesting to review what has happened with reference to loans that have been made under similar conditions in previous years. The first of these loans was made in 1921 to farmers in the spring wheat states, mostly in North Dakota and Montana. These were, in many cases, homesteaders who were heavily in debt following a series of poor crop years. Many of those to whom loans were made again experienced crop failures in 1921 and were forced to abandon their homes. Notwithstanding that fact, 70 per cent of the nearly $2,000,000 loaned that year was repaid. In 1922, $1,500,000 was loaned in the same States, out of which 78 per cent has been returned. In 1928, about five and three-quarter missions of dollars were loaned to farmers in the Southeastern States who suffered very heavily from wind, rain, and floods the previous August and September. Of these loans about 83 per cent have been paid. Of the more than $2,100,000 loaned in the State of Georgia that year, less than 7 per cent is still outstanding. When we remember that under these authorizations, the Federal Government makes loans only to those who can not obtain credit locally, who are financially in what we might call the last ditch, the percentage of repayment is surprisingly high. It is a fine tribute to the energy and honesty of the American farmer. For the most part, the loans in 1931 will be made in States where crop failure is unusual and where farmers can look forward with a reasonable degree of confidence to the production of good crops next year. There is every reason to expect, therefore, that with favorable conditions in 1931 a very large percentage of the money which is loaned will be repaid before the year is ended.

While direct relief to farmers in the drought area is provided for through the loans I have been describing for crop production purposes in 1931, assistance is being given by the Federal Government in other ways.

On December 20 the sum of $30,000,000 was appropriated to be apportioned among all the States as a temporary advance of funds with which to meet Federal aid road funds already provided. The States are thus relieved of the necessity of providing immediately funds of their own to match the regular Federal aid road funds that are available to them, and provision is made for the reimbursement of the sums advanced over a period of five years commencing with the fiscal year 1933, by making deductions from the regular Federal aid apportionments.

These advanced funds, together with the regular Federal aid funds already available, make possible an immediate expenditure for Federal aid road construction, supported entirely by the Federal Government, to the amount of $168,000,000.

Of this sum, the amount available for expenditure in the 21 States in the drought area is $85,000,000 and, to the extent that climatic conditions will permit, these States are thus enabled to begin at once road work totaling that amount.

In the National Forests the Forest Service is expanding its operations in the building of roads and trails, particularly in States like Virginia, West Virginia, and Arkansas, where work can be done during the winter months. For this work, many farmers living in the vicinity of the National Forests are being employed, thus providing an income for drought sufferers in sections where it is most needed. Special appropriations of $6,000,000 for forest roads and trails have just been voted. The Forest Service is also purchasing land in some of the eastern forest regions to add to the National Forests, thus distributing money locally, in many cases to owners of small tracts who suffered severely from drought.

In these ways, the Federal Government is supplementing the activities of State and local agencies in extending assistance to the hundreds of thousands of farm families who are in difficult straits because of adverse weather conditions in 1930. I am sure the radio audience will join with me in wishing for them success and prosperity in 1931."

HOOPPOLE FARMER HAS 1,200 CHICKS; SYSTEM IS NOVEL

Hooppole, Feb. 3.—Approximately 1200 white Wyandotte baby chicks, three weeks old, a supply for Easter markets, are owned by Gerald Fritz five miles south of Hooppole.

All chicks are in one building but separated in three compartments. Heat is furnished by a hot water furnace. Two hovers are provided by use of two large radiators about 16 inches from the floor. Space beneath the radiators is enclosed by sacks hanging from the edges. The floor is of board.

Commercial litter is used on the scratch space. Other space is covered with a fine mesh wire, which is so arranged that it can be removed in sections at cleaning time, thus preventing the chicks from working in filth. Two commercial feeds are being used as an experiment.

Loss has been light, according to Mr. Fritz. His heating arrangements is original. He also installed the system.

DOBBIN MAKING LAST STAND ON THE FARMS

Farm horses in the United States have been decreasing for the last five years while registration of tractors has increased. In 1929 there were a total of 13,905,000 horses on farms in this country; the number of tractors registered in that year was 846,162.

Oil production in Illinois dropped to 5,296,000 barrels during the first eleven months of 1930, a drop of more than 500,000 barrels from the same period in 1929.

COUNTY TRAINING SCHOOLS 1912-1929

Beginning with the Session 1911-12, at the request of four County Superintendents, the Slater Fund aided in establishing County Training Schools in these four counties. There was evident need for at least one good Central Public School in each county. The plan almost immediately met with the approval of State and County Superintendents. Fuller information about these schools will be found in the Annual Reports of the John F. Slater Fund, which will be sent on application. (Box 418, Charlottesville, Va.)

Many of these Schools have now become four year High Schools. Another interesting fact is that many private and denominational schools have voluntarily, by arrangement with the county school authorities, become County Training Schools.

The progress in 15 years is shown by the following figures:

In 1914 there were 8 schools: 1 in Ala.; 1 in Ark.; 1 in Ga.; 2 in La.; 2 in Miss.; and 1 in Va. These received for salaries $4,000 from the Slater Fund and $10,696 from public tax funds.

In 1928-29 there were 368 in 13 states. The amount contributed through the Slater Fund (largely aided by the General Education Board) for salaries and eqipment was $135,866, while public tax funds spent $1,886,852. The total expenditure in the 368 County Schools in 1928-29, including contributions from the Smith-Hughes Fund, the Rosenwald Fund and various local sources, was $2,201,407.

FARMER WOULD SWAP COW FOR AUTO LICENSE

Jefferson City, Mo. — Secretary of State Charles U. Beeker has received concrete evidence that times are hard in the drought area of southwest Missouri.

A farmer, stating that his only means of getting to town is by a 1919 model roaster, wrote to Becker asking if he could trade a couple of good cows for a 1931 automobile license, the cost of which is $10.50.

FINDS MISSING HOG BURIED IN HAYSTACK

Forest Grove, Ore., Jan. 31.—Mrs. E. M. Parrot missed a prize hog in early Fall. She dug in a hay stack recently and found the thin poker.

It had fainted in true ladylike style.

Application for Membership

NATIONAL FEDERATION OF COLORED FARMERS

Vincennes Hotel, Chicago

As a farmer, I believe the time has arrived when the Colored Farmers should form a National Organization devoted to diversified production, grading, packing, shipping and marketing of farm products and to the purchase of needed farm supplies through co-operative methods, to the end that a more prosperous financial condition may result from their efforts as producers.
I hereby subscribe $5.00 for membership in the National Federation of Colored Farmers for a period of 12 months from date. Also $1.00 for an Annual Subscription to the Modern Farmer.

Clarksdale, Miss.
Feb. 11, 1931.

James P. Davis,
Vincennes Hotel,
Chicago.

Grace acquitted upon direct verdict by court. Government unable to prove charge.

B. A. Green.

This is good news. The officers and members of the National Federation of Colored Farmers are thankful. "With malice toward none; with charity for all," said the immortal Lincoln, our emancipator, whose birthday we celebrate this month.

Reverend Silas Grace, a minister of high standing, a scion of one of Mississippi's best colored families, an authorized representative of the N. F. C. F., was arrested and lodged in jail in Leflore County, Miss. He was released on bond secured by your organization and your organization employed the lawyers who defended him and paid them. All debts and expenses of his trial are paid.

Rev. Grace, while working for your organization, has not been persecuted nor maligned anywhere except in Leflore County. We hate to

(Continued on Page 8)

OFFICIAL ANNIVERSARY PROGRAM ISSUED THIS MONTH

SUNDAY MARCH TWENTY-NINTH AUTHORIZED BY EXECUTIVE BOARD

By the Editor

Colored farmers who are in need should apply for funds from the drought loan and after they get the money they should make every effort to spend it wisely and in a way that will enable them to make it go as far as possible. Farmers who are members of Units of the N. F. C. F. should buy together at wholesale prices—particularly their food, feed, seed and fertilizer. Those who are not members of Units of the N. F. C. F. should join a Unit or should organize one at once.

If it took $300 last year to run a farmer he can get along as well this year on $200. He can save still more if he gets the benefit of wholesale prices. Cooperative buying is only good common sense buying. You have as much right to save a dollar as anyone else has. You are foolish to give ten cents a pound for rice when you can buy better rice at three cents a pound wholesale. If you belong to a cooperative organization of farmers you can buy at wholesale. Our Units are cooperative organizations of farmers. Join the N. F. C. F.

We are giving here some positive proof that our farmer-members are saving money by purchasing their supplies cooperatively. Here is a bill of goods recently ordered by a Mississippi Unit. The goods were ordered by the Market Agent of the Unit. Each member paid to the Market Agent his part of the bill. The goods were received by the Market Agent who distributed to each member just what he bought.

(Continued on Page 8)

DROUTH LOANS

"First—$45,000,000 to be loaned to farmers for the purchase of seed, feed, fertilizer, and fuel oil. Feed will include provisions for all live stock.

"Second—$2,000,000 for the purchase of medical supplies for rural sanitation.

"Third—$20,000,000 to be used, so far as necessary, in making loans of capital stock for the organization and enlargement of agricultural credit corporations, live stock loan companies, and similar organizations. This makes possible expansion of credit between $30,000,000 and $50,000,000.

"Fourth—The remainder of $20,000,000 may be used for loans to farmers, for purposes of crop production and agricultural rehabilitation, which includes food and other necessities of life.

"Fifth—It is expected that the $2,000,000 revolving fund for the use in the southeastern states will be retained.

"Thus the aggregate for drought relief will be $69,000,000."

NATIONAL FEDERATION OF COLORED FARMERS ISSUES BULLETIN

PRICES ON GROCERIES FEED, SEED AND OTHER SUPPLIES WITH SPECIAL NOTICE

Chicago, Ill.—(Special)—We again urge our farmers who can give first lien on their crops, to apply to the County Agent for Drouth Loans. Since our last Bulletin, February 3rd, the Government has added twenty million dollars more to the loan fund and we have been informed that farmers can borrow from this Loan Fund money to buy groceries, clothes, feed for their stock, seed fertilizer and oil for tractors—and the interest of 5 per cent to be taken out of the loan at the time it is made. When loans are granted you are given the money and can buy your needs at lowest prices. In order that all may fully understand we give as follows:

"First—$45,000,000 to be loaned to farmers for the purpose of seed, feed, fertilizer, and fuel oil. Feed will include provisions for all live stock.

"Second—$2,000,000 for the purchase of medical supplies for rural sanitation.

"Third—$20,000,000 to be used, so far as necessary, in making loans of capital stock for the organization and enlargement of agricultural credit corporations, live stock loan companies, and similar organizations. This makes possible expansion of credit between twenty million and fifty million.

"Fourth—The remainder of $20,000,000 may be used for loans to farmers, for purposes of crop production and agricultural rehabilitation, which includes food and other necessities of life.

"Fifth—It is expected that the $2,000,000 revolving fund for the use in the southeastern states will be retained.

Thus the aggregate for drought relief will be sixty-nine million.

Go to your County Agent and get drought loan blanks and fill it out. If you have any trouble write this office and give all facts and date, and we will report it to the Secretary of Agriculture at once, who says there shall be no discrimination on account of color.

RED CROSS AID

Lots of our farmers are complaining of not getting any aid. If all who have been refused will write the full information we will take it up with Red Cross Headquarters at Washington immediately. Be sure to give the town where you applied for aid and the date. Farmers in need of food do not have to sign a contract to work on a farm to get aid from Red Cross. Any farmers who are out of work and have no food can get Red Cross Aid if they will apply.

GROCERIES AND FEED

Markets continue to drag in all food prices. There has been a drop in flour since our last bulletin. Your this week's price list shows good Patent Flour in 24 pound sacks at $4.40 per barrell. This is exactly 55c per sack. Lard is also cheaper. Cracked Rice which has the same food value as whole grain, is now

Negro Farmers Will Get Drought Loans

DROUGHT LOANS MUST BE PAID SAYS EDITOR

USE THE MONEY CAREFULLY IF SECURED FROM THE SPECIAL GOVERNMENT FUND

THE PRESIDENT'S PROCLAMATION—Pursuant to the authority vested in me by the Executive Board of The National Federation of Colored Farmers, I, James P. Davis, president of said organization, do designate Sunday, March 29, 1931 as our annual "FARMERS' SUNDAY." All Local Units are hereby ordered to have appropriate religious exercises on that day.

We should remember the many blessings we have received the past year and that again we have the happy privilege of assembling together to render thanksgiving and praise. We realize that many afflictions have befallen us. We have been tried by drought and persecution. We have had the "hard row to hoe." But we are yet alive and standing on praying ground. The God of our fathers and mothers—that God still lives.

We should say as did the farmer, Job: "Though he slay me, yet will I trust Him." We should be thankful that our organization has stood the test—that it has grown and made progress. We should be thankful that we still have an opportunity to help others, for many are worse off than we are.

Today let us pray for more faith, for more knowledge, for more love. Let us pray for our organization, for its officers, for our brethren, and for the many thousands of our group who need our assistance but who know us not. Let us pray for our enemies. Let us pray for our native

LOANS HERE LEAD NATION

Amount Paid Thus Far to Farmers Near $400,000 Mark.

The Memphis Federal Seed loan office, one of the four distributing points for the $45,000,000 drouth relief appropriation, is setting the pace for the other offices.

At the close of business Tuesday night, loans had been approved for a total of $370,546. Offices at St. Louis, Washington, and Grand Forks, N. D., combined have issued loans totalling only $200,000, according to a report issued yesterday by Dr. C. W. Warburton, secretary of the national drouth relief committee.

But the Memphis office should be in the lead, according to J. H. Lynch, officer in charge. "More of the appropriation has been allotted to this district—between $15,000,000 and $18,000,000. Need is greater here and because of earlier planting,

(Continued on Page 3)

U. S. DEPARTMENT OF AGRICULTURE'S PROMISE

Officials Pledge Fair Dealings To Every Applicant Says President

Chicago, Ill.—Applications for loans from Negro farmers of the drouth area of the country will be given the same consideration by agricultural department officials in charge, as those coming from white farmers. Negro farmers should send to their county agents—colored or white, for their applications, make them out and file them. Colored farmers who can give first lien on their crops, livestock, or other security can get loans from this fund if they will ask for them.

Pres. J. P. Davis, of the National Federation of Colored Farmers, was in Washington a few days ago, and held conferences with Sec. of Agriculture Hyde, and with Dr. C. W. Warburton, who will have direct charge of the applications. Both of these officials assured Mr. Davis personally that colored farmers would be treated fairly and that no discrimination would be shown. Loans are being made now within 48 hours of receipt of applications. Colored farmers who need money for seed, fertilizer, feed, clothing or food for their families, and who can give the necessary security, should send in their applications at once.

Concerning these loans and the chances colored farmers have to secure them, a prominent official of the U. S. Department of Agriculture writes as follows:

"In the handling of our drought relief loans we expect to give the same attention to applications from Negroes that we give to applications from whites. In the handling of these loans in previous years we have given equal attention to all applications that came to us without regard to color, religion, or politics of the applicant. That is the way in which we expect to handle the applications for loans in 1931."

"County agents and the county seed loans advisory committees will be instructed to handle all applications for loans in the same manner whether the applicant is white or colored."

"The financing of farmers, both white and colored, is a single problem. In many cases, the financing of Negro tenants and Negro farm owners is in the hands of white farmers. It makes little difference whether the loans are made to the Negro tenants direct or to the white landlords. We expect to give particular attention, however, to farm owners, both white and colored, particularly small farmers who might otherwise have serious difficulty in financing their operations this year."

"I want to assure you that every safeguard will be used in making these loans to make certain that all who are in need will have full opportunity to apply."

The foregoing excerpts from the letter assures colored farmers that they will be able to get the loans if they apply for them.

FIRST:—Go to your County Agent, either colored or white, and get your application blank—fill it out

(Continued on Page 8)

DROUGHT LOANS MUST BE

(Continued from Page 1)

land, that we may have peace and prosperity and that every citizen may have an equal chance to live and grow therein.

For this purpose therefore, every Unit under the jurisdiction of The National Federation of Colored Farmers is instructed to assemble in some church on this day to render thanks unto Almighty God for the manifold blessings we have been permitted to enjoy and to pray for Divine guidance and assistance during the coming year. Every member is hereby instructed to take part in the exercises.

May the principles of co-operation and service and charity, fill every mind and heart on this day and united, may we go forth to advance the work and welfare of our Federation.

Given under my hand, this 20th day of January, 1931.

JAMES P. DAVIS, President

OFFICERS: James P. Davis President; Maj. R. A. Byrd, Vice President; Leon R. Harris, Secreretary; S. B. Wilson, Treasurer; C. R. Richardson, Chairman of Board of Directors.

"Every Unit under the jurisdiction of the National Federation of Colored Farmers is instructed to assemble in some church on this day to render thanks unto Almighty God for the manifold blessings we have been permitted to enjoy and to pray for Divine assistance and guidance during the coming year. Every member is hereby instructed to take part in the exercises."

PROGRAM

Behold, how good and how pleasant it is for brethren to dwell together in unity. 133rd Psalm.

Song—"Bringing In The Sheaves."

Prayer

Responsive Reading—Led by Master of Ceremonies (the Chairman of unit).

Master of Ceremonies:—"Praise waiteth for thee, O God, in Zion and unto thee shall the vow be performed.

Congregation:—"Thou visiteth the earth and watereth it thou greatly enricheth it with the river of God, which is full of water: thou prepareth them corn, when thou hast so provided for it.

Master of Ceremonies: "Thou watereth the ridges thereof: abundantly: thou settleth the furrows thereof: thou maketh it soft with showers: thou blesseth the springing thereof.

Congregation: "Thou crowneth the year with thy goodness and thy paths drop fatness.

Master of Ceremonies: "The pastures are clothed with flocks. The valleys also are covered over with corn; they shout for joy, they also sing.

Congregation: "He causeth grass to grow for the cattle and herb for the service of man; that he may bring forth food out of the earth.

All: "O Lord, how manifold are thy works: in wisdom hast thou made them all: the earth is full of thy riches.

Song—Selected.

ADDRESS OF WELCOME ON BEHALF OF CHURCH.

RESPONSE.

Song, "The Farmers' Hymn," Official Hymn National Federation of Colored Farmers. (Tune: "My Country Tis of thee.")

God bless us we who toil
Upon the goodly soil
Which thou hast made:
Uphold us by thy might,
Help us to know the right,
And every day and night
Be thou our aid.

Send plenteous sun and rain
On mountain, hill and plain,
And valley wide:
Grant us prosperity,
Increase our faith in thee,
O may we happy be
Whate'er betide.

Unite us heart and hand
In one fraternal band
Unto the end;
That we may praise thy name,
Lord of all men the same
Our God, whom we proclaim:
The farmer's Friend.

—Leon R. Harris

Address—"How Organization Helps Colored Farmers."

Song—Selected.

Introduction of 3 visitors, 2 officers and 1 minister.

Three minute talks by Secretary, Market Agent, Vice Chairman, Treasurer, Agent for Modern Farmer.

Sermon. Offering. Announcements. Benediction.

A MESSAGE FROM THE MODERN FARMER

No organization can succeed unless it is talked about. IT MUST BE KNOWN. People must be told just what it is, what it stands for, what it is trying to do. If you are a member of it you want to know what it is accomplishing and how fast it is progressing. If it is benefiting you, then you want others to know of it so it may benefit them, so all of us of the same group and engaged in the same work, may profit together.

The MODERN FARMER is the "tongue" of your organization. It talks for you and about you. It tells the whole world of your trials and troubles. It tells your fellow citizens how they may help you. It tells those of your group who are not members why they should become members and thus get the help you are getting. It preaches to Negro Farmers the gospel of co-operation of buying, producing and selling together that all of us may receive more for our efforts.

You owe the Modern Farmer a debt you should pay. Is it asking too much that on this "OUR DAY" you will do what you can to pay it? Tell your friends about the Modern Farmer. Insist that they subscribe for it. Wont you help it by paying your subscription and by getting others to subscribe?

STATE OF ALABAMA SHOWS GREAT GAINS IN NEGRO SCHOOLS

THOUSAND PER CENT INCREASE IN HIGH SCHOOL

Birmingham, Ala., March—An increase of 339 per cent in the value of Negro public school property in Alabama in the last ten years and of one thousand per cent in colored high school enrollment in the state since 1917 were among the encouraging educational gains reported at the recent meeting in this city of the State Committee on Interracial Cooperation. These facts, which were brought out by Dr. C. B. Glenn, Superintendent of Birmingham City Schools, were embodied in printed form and distributed to the members.

It was shown that the number of Rosenwald school buildings, teachers' homes and vocational shops has grown from 197 in 1921 to 399 in 1930, an increase of 103 per cent. The average annual salaries of colored teachers increased 107 per cent in the eleven years ending with 1929, and the length of the school year increased in the same period 26.5 per cent. Enrollment in the elementary grades increased 19.3 per cent, while the number of teachers showed a gain of 54 per cent.

Prof. A. H. Parker, Principal of the Birmingham colored high school, made an interesting report on the work of that institution. A full four-year high school with industrial features, this institution is housed in a building costing $438,959. Started in 1900 with eighteen students and one teacher, it now has 2,732 students and 74 teachers. Individual cases of discipline, it was reported, do not require over twenty minutes a week.

Prof. Parker stated that free text books are furnished in the elementary schools and that the school board has adopted a number of history texts by Negro authors for use in the colored schools. Among these are Dr. Washington's "Up from Slavery" and Dr. Carter Woodson's "Brief History of the American Negro."

These reports were heard with great interest and satisfaction. While it was recognized that educational conditions in many sections of the state are still far from satisfactory, the members of the conference were surprised and encouraged to know that so great recent progress had been made in this field.

RACE RELATIONS MAJOR THEME AT BIG CHURCH MEET

IMPORTANT METHODIST BODY DECLARES WAR ON LYNCHING. DR. BELL SPEAKS FOR COLORED GROUP

New Orleans, La., Mar.:—Means of improving race relations in the South, and particularly of putting an end to lynching, were subjects of major consideration at the annual meeting here last week of the General Missionary Council of the Methodist Episcopal Church, South.

The increase in lynchings last year was earnestly decried. Mob violence was termed "a blot on our national life than which there is no greater obstacle to the effective ministry of the gospel at home and abroad." Ministers were urged to use their influence in combatting such crimes as persistently as they have fought against other great national sins.

Speaking for the colored group, Dr. W. Y. Bell, of Gammon Theological Seminary, Atlanta, told the Council that Negroes do not want "patronizing paternalism," but rather "the chance to develop racial pride, tempered by Christian virtues." He sounded a warning that "the communists are already inviting my people to make common cause with them in the United States." Christian education and simple justice, he said, are the best means of obviating this danger.

The M. E. Church, South, cooperates with the C. M. E. Church to the extent of $50,000 a year, and contributes also to the work of the Commission on Interracial Cooperation.

MY SAVIOR

O how precious is my Savior,
And how wonderful His Grace;
O how blessed is the season,
When He shows His smiling face.
O what joy and peace from heaven,
O what freedom from all care;
How He takes away our burden,
When we come to Him in prayer.

How our souls delight to worship,
And receive His bounteous store;
How delightful is Communion,
With our Lord whom we adore.
O how Jesus loves to comfort,
O how tenderly He cares,
And how patiently He listens,
To tho feeblest of our prayers.

Is your cross too heavy for you,
Is your soul borne down with grief
Jesus Christ our hearts dear refuge
Comes to bring you glad relief.
Will you not to that dear Savior,
All your secret soul lay bare,
He will give you sweetest comfort,
In the secret place of prayer.

J. J. Farmer.
Kissimmee, Fla.

NO BIG TASK TO MAKE A LIVING

Lexington, Miss.—(Special—When I became a man and started out in life as a farmer for myself one of the first resolutions I made was to grow all the food and feed for myself and stock. There is hardly any way to estimate the value of a good garden and orchard. Fresh vegetable fruit with enough canned to have a variety each day is a great help. It is not a big task to make a good living. There is something about it that appeals to me. I like to see things growing.

Live at home. Farming should be practised at all times and if it ever was a time it should be done it is now. With nearly all farm produce bringing a low price and not much prospect for better prices soon. No one is a farmer in a true sense if he asks his merchant to furnish feed and seed and all provisions for him with stock to make a crop.

To my brother farmers, let us take a stand for ourselves as men and stop depending on someone else for our support, then we can get recognition as men.

I am, yours,

C. C. Richardson,
Lexington, Miss.

ANNUAL ADDRESS OF THE PRESIDENT

"THE POWER OF THE PRESS" ABLY DISCUSSED BY BENJAMIN JEFFERSON DAVIS OF ATLANTA GA.

Quill Pushers, Managers, Editors and Members of the Fourth Estate Inspired by "Fighting Ben" in His Delivery

Nashville, Tenn., (Special)—Far-reaching in its import, direct in its application, and powerful in its appeal to Negro Journalism, were just some of the expressions by members of the National Negro Press Association who heard the annual address of Benjamin Jefferson Davis, delivered before them on Thursday morning, of last week.

"The Power Of The Press" was the subject of the address in which "Fighting Ben" displayed his ability that covers a period of a quarter of a century in journalism and twenty-five years as an outstanding editor of The Atlanta Independent. He was winding up his fifth year as president of the Association.

Known throughout the nation because of his connection with the Republican National Party as National Committeeman from Georgia, respected because of his constructive work in years gone by that culminates in Atlanta, where he has resided the better part of his life, President Davis addressed himself to the craft, and in his annual message said:

"Negro newspaper men do not seem to have any intelligent conception of the united power of the Press. We certainly have no intelligent conception of a united cooperative power of the Press. We do not realize our power in shaping public opinion. We are a selfish set without the wisdom of the benefits of organized cooperation. In our effort not to help our brother, we defeat our own interest.

Our Association has been a failure because every publication has undertaken to run it alone, without the regard of the other paper's interest. The strong has not undertaken to help the weak, but to fatten on those less fortunate.

DO NOT FOLLOW UP

We haven't even the genius to follow up. That is, we cannot outline an editorial policy and follow it up to a successful conclusion. We faint by the way before we reach the goal or impress the public that we are a factor to be dealt with. Who can tell the editorial policy of the average Negro paper in the country? We stand for nothing definite and nothing constructive.

The average Negro editor would rather be the lone star in the firmament than for all the Negro papers to have a share in the glory of newspaper achievement.

Henry Allen Boyd taking up where his distinguished father laid down has spent his money and worked his head nearly off trying to unite the Negro newspaper for racial uplift and their own economic gain. He has failed only because of selfishness and the blind desire of the average Negro newspaper man to star individually.

The white press of the country is cooperatively united for the common good of the profession but we have neither ethics nor common interest in one another. The press is an all powerful factor in moulding sentiment, but this giant power is largely wasted because it is not organized for cooperative mark.

We are organized by the other fellow for his personal gain and we hold no part in the profits accruing from the organization.

THE CHICAGO WHIP

The Chicago Whip put over a wonderful job in Chicago in 1930 by its follow up campaign single handed and alone. The Whip adopted the slogan, "Don't Spend Your Money Where You Can't Work." The Whip was not supported in its program my the Negro Press in the city. But single handed it put over the program for the race and gave it economic prestige in the Windy City. It made the white merchants sit up and take notice. It opened the door of opportunity to the Negro that had never been opened to him before. If other local papers had supported Joe Bibb in the fight for economic recognition, much more good would have been accomplished.

Our strength lies in union and cooperation. We must place our buying in such places where it will be demanded and appreciated.

Let us organize among ourselves for business and editorial policy. Let us shape the economic and political policy of the race by cooperation so as to build an economic background to support the race. All intellect progress and no economic and industrial progress will make us a race of consumers and not producers. We must produce as well as consume, if we would prove a potential factor in community building and be felt in the material welfare of our country among our neighbors.

There are two essentials underlying good journalism, both dependent upon organization of the forces that make for a lively progressive newspaper.

First, we must build up a definite editorial policy, that will give the paper character and prestige in the community where it circulates.

A newspaper like individuals must have some personality, and this future is built upon its editorial policy. The editorial policy is the soul of a newspaper.

Secondly, a newspaper must have a financial back ground. It must organize and develop resources from which it can get financial support This we can do as an Association if we'll pool our interest and make common cause.

Let our organize our papers editorially and financially for cooperative support.

PURPOSE

It is proposed that a syndicate composed of the leading Negro newspapers of this country, and as many others who wish to join, be formed for the purpose of establishing an advertising agency to corral and control all national advertising that comes to Negro newspapers at present through other agencies; and for the further purpose of soliciting additional advertising. The said advertising agency to be managed, owned, and controlled by the said syndicate, thereby giving the Negro newspapers a voice as to what rate shall be charged national advertisers and also the opportunity of participating in the profits derived from agency commissions charged for the procuring of said national advertising, which participation in said profits will be in addition to the regular revenue already derived from said national advertising. In other words, the Negro newspapers of this country will operate their own national advertising agency and benefits by the profits therefrom.

METHOD OF ORGANIZATION

It is proposed that a committee of two or three representative Negro newspaper men be selected to call upon the owners of Negro newspapers throughout the country and put the proposition up to them, gaining their assent or refusal. In most instances this contact to be made by personal visits to owners. After a sufficient number of assents from owners have been procured, a meeting of such owners to be calleed where the syndicate will be formed and plans and methods of operation will be discussed and formulated; and fixing of the amount of capital stock necessary for operation of business, said capital to be suscribed by syndicate members.

PROPOSED METHOD OF OPERATION

It will first be necessary to secure the cooperation in the effort of a sufficient number of Negro newspapers to assure the syndicate that they will be safe in saying that all Negro business can be reached only through them.

Second, the establishment of officers and selection of personnel to operate advertising agency; being careful to make overhead as low as possible.

Third, the withdrawal of support from advertising agencies now controlling national advertising given Negro newspapers by all the members of the syndicate; and at the same time making of contact with national advertisers and the firms handling their advertising copy and the securing of contracts from them for the various newspapers composing the syndicate and the selling of contracts to other newspapers not members of said syndicate.

Fourth, the consideration of the advisability of continuing the operation of the Illustrated Feature Section which is now patronized by Negro newspapers.

Fifth, the employment of experienced advertising salesmen to get contracts from national advertisers who have never before given Negro newspapers business: such as, leading tobacco firms, automobile concerns, food products, beverage manufacturers, etc."

A FRIEND TO THE FARMERS

HON. OSCAR DEPRIEST,

Member of the United States Congress from the First Congressional District of Chicago, Illinois, who visited the Modern Farmer's Office this month.

SOUTHERN EDUCATORS ISSUE LYNCHING MANIFESTO

Twenty-nine southern educators, including two St. Louisians, issued recently through the Fellowship of Reconciliation, a manifesto on lynching, asserting such crimes terbled in 1930.

"Lynching is more than a crime," the manifesto says. "It boldly thwarts the most elementary ends of justice, constitutes a complete denial of the right and responsibilities of citizenship and represents anarchy in its most vicious and insolent form. It flagrantly strikes at the foundation of all organized social life and outrages every ideal of liberty.

"Although in recent years the number of lynchings has been diminishing, 1930 has seen a resurgency of that unspeakably brutal thing and in crease in the number instances where officers have been unwilling or unable to protect alleged criminals from mob murder. We call upon press pulpit and school and every patriotic citizen to assist in arousing a resolute public opinion that will uphold the protecting arm of common justice and we insist upon the prosecution of every person who participates in any act of lynching and of every officer who in any manner condones it."

The signers of the manifesto were Fern Backcock and J. H. Hormann, St. Louis, Mo.; Albert E. Barnett, Scarritt College; Luanna J. Fowles, Fisk University; Thomas Elsa Jones, President of Fisk University; John Knox, Fisk University; J. J. Mullowney, president Meharry Medical College; Mrs. Alva Taylor, Nashville; Howard Kester, Vanderbilt University; Wilson Newman, Nashville; Geo. Hay, Medina, Texas; Frank Onderdonk, San Antonio, Tex.; A. B. Clarke, Hopewell, Va., Ida Sitler, Hollins College, Va.; Joe Connally, Paine College, Augusta, Georgia; B. E. Mays, Atlanta; H. W. Pope, Atlanta; Howard Thurman, Atlanta; Hazel North Carter, Columbus, Ga.; Paul Harris, Louisville; G. Barrett Rich, Lebanon, Ky.; L. H. King, New Orleans; Elizabeth Gilman, Baltimore; Charles A. Ellwood, Duke University, Durham, North Carolina; Elbert Russell, Duke University, Durham, North Carolina; C. H. Hamlin, Wilson, North Carolina; Wilhemina Hydrick, Durham, North Carolina Stau R. Pier, Stillwater, Oklahoma.

LOANS HERE LEAD NATION

(Continued From Page 1)

loans must be rushed out," he said.

Day by day applications are growing in volume and loans are being made within 48 hours of receipt. Tuesday, 600 loans were approved with the initial payments in excess of $40,000. Yesterday 639 were made with payments in excess of $40,000.

Loans are averaging less than $200 each and yesterday two were granted for $15 each, and another for $14. No loan for the maximum of $2,000 has been approved.

Total cost of administering the $45,000,000 appropriation will be approximately $1,000,000 or two per cent, according to Mr. Lynch.

(This clipping from Memphis Commercial Appeal).

THE MODERN FARMER

Official organ of the National Federation of Colored Farmers

Leon R. Harris - - Editor

Published Monthly by the Modern Farmer at Nashville, Tennessee, and Chicago, Ill.

Nashville, Tenn., Office. 447 4th Avenue, North.

Chicago, Ill., Office: Vincennes Hotel, 36th and Vincennes Avenue.

Devoted to the interests of the Farmer, Truck Gardener, Livestock and Poultry Breeder, the Home and the People.

Entered as Second Class Matter, April 10, 1929, at the Post Office at Nashville, Tenn., under act of March 3, 1879.

All contributions for publication in the Modern Farmer should be addressed to The Modern Farmer, 447 4th Avenue, North, Nashville, Tenn.

No libelous matter will be published. Unsigned articles or letters, and those written on both sides of the paper will not be used.

Subscription price $1.00 per year, payable in advance. Personal checks must be certified. Make all checks or money orders payable to The Modern Farmer.

Advertising rates and sworn circulation figures presented upon application.

"OUR SLOGAN"

STAY ON THE FARM IF YOU'RE ON IT! GO BACK TO THE FARM IF YOU'RE OFF IT!

THE LAW

"It is hereby declared to be the policy of Congress to promote the effective merchandising of agricultural commodities by encouraging the organization of producers into effective associations under their own control.

The Board is authorized and directed—to promote education in the principles and practices of co-operative marketing—to encourage the organization, improvement in methods, and development of effective cooperative associations." (Public—No. 10—71st Congress. Sec. 1-5.)

THE GOSPEL

"This law is predicated upon the ability of the farmer to manage his own business, once he is organized to do so. Cooperation is the key to it and only in exceptional cases can the Federal Farm Board have any dealings with a farmer who is not a member of a producer-owned and producer-controlled marketing unit." Hon. Sam'l R. McKelvie, Member, Federal Farm Board.

The National Federation of Colored Farmers believes that the Colored Farmers of America should own and control their own co-operative associations.

"Co-operation With All—Affiliation With None."

PROF. CARTER OF BUTLER COUNTY UNIT

Conduct Negro Rural Life Conference

Prof. A. B. Carter, the efficient secretary of the Butler County, Alabama Unit, conducted a Negro Rural Life Conference at Georgiana, Ala., February 12th.

Farmers and business men from all sections of the state were present and many instructive lectures and talks were given. Plans were perfected by members of this Unit for the marketing of this year's crops.

Secretary Carter is an educator of great ability and a farmer who has plenty of push and grit. His Unit is one of the best and most progressive in the Federation.

FROM THE

MANUFACTURER AND INDUSTRIAL NEWS BUREAU

By E. Hofer and Sons. Portland, Oregon.

THE TRANSPORTATION CINDERELLA

A dramatic struggle is being staged between the railroads and various forms of automotive transportation. As about one person out of five in the Uinted States owns an automobile and hundreds of millions of individuals use buses or trucks annually, this is a question of general interest which must have intelligent consideration.

The public has no desire to injure the railroad industry but it believes that it is entitled to every advance in transportation service. convenience and economy.

Commenting on transportation progress, Collier's Weekly recently said: "During the years in front of us somebody must discover ways of using the marvelous resources which invention has made available. and truck lines, air transport, private automobiles, pipelines for gas and oil these are the toolrs we have to use....We must learn how to adjust the great facilities one to the other so that the maximum service may be had and so that nothing valuable may be lost."

C. E. Wickman, President of a large motor transport system said recently. "The automobile industry gives the railroads directly over 3,000,000, carloads of freight annually. The railroads handle twice the freight tonnage they did twenty years ago. Would the railroads be better off if automobiles, buses and trucks were entirely eliminated? The size of the automobile industry and the history of railroad transportation in the last generation is a sufficient answer to this question.

"In many States, the proportion of gross income paid for taxes by the motor buses is twice as large as the proportion paid by the railroads. On the basis of the value of property used in transportation, the motor buses pay from five to ten times as much for taxes as do the railroads.

"Instead of receiving a subsidy from the public, the motor bus gives to that public which does not own cars the use of highways which the public owns.

"The motor bus industry does not object to paying its fair share of the cost of construction and upkeep of the highways. It is willing to submit to all fair and reasonable regulation. It believes. however that in the interest of millions of people who utilize the motor bus, bus that taxation and regulation should be imposed strictly in the public interest and not in the interest of a competing form of transportation. The public is entitled to all the advantages which highway transportation, private or commercial offers to the growing needs of the nation."

Progressive transportation systems are giving the public the best rails, highways and air. Nothing will be gained by one of these branches of transportation fighting for each service as useful purpose, in the public interest.

"OBJECT LESSON FROM DOWN UNDER"

To those who like to play with the idea of government ownership and operation of all public utilities we commend a study of the plight of Australia. Almost half the wage earners are government employes. A score of enterprises from railroads to local lighting services are wholly run by the government.

In order to pay maturing obligations amounting to four billions of dollars, annual interest charges of $150,000,000 and heavy deficits ....Australia has an income tax so high that it takes ten per cent of even moderate incomes of $3,000 a year, a sales tax on everything bought and sold and burdensome direct taxes of many kinds. The average Australian citizen pays.....more than a fifth of his income in taxes..Malden, Massachusetts News.

THE UTILITY FUTURE

unprecedented progress and development is looked for within the public utility industry during the next ten years.

During the last ten years the power and light companies of the nation alone invested almost $7,000,0000,000 in new plants and equipment, bringing the valuo of their holdings to $12,000,000,000, at the end of 1930. Now it is conservatively stimated that about $11,500,000,000 more must be added by 1940. the largest portion of which will probably be used to extend distributing equipment. During 1931 construction plans call for an $894,000,000 expenditure.

Probably the average city dweller is of the opinion that we are approaching a saturation point in electrical use. However, only about 70 per cent of homes are even wired for electricity, and only about one home out of three uses electrical appliances. Farm electrification is in its infancy, and only about 2 per cent of railroad mileage is electrified. Industry in general is far from being completely motorized and the aviation industry still young, will call for tremendous electrical developments. And there are many more fields, large and small, where electricity is just beginning to find it.

The lectrical future is bright.... and it should be remembered that the principal beneficiaries will be the general public, to which electricity means greater living, comfort, greater earning power, greater leisure.

A WHALE OF A DIFFERENCE!

Only a definite revolt on the part of the motoring public can stop the trend toward higher gasoline taxes.

The record of past years is illuminating. The tax was first introduced in Oregon in 1919, with a rate of one cent a gallon. New Moxico established the two cent tax in 1920, and by 1923 seven states had a three cent rate. Arkansas introduced the four cent levy the following year and in 1926 Kentucky and South Carolina raised the anto to five cents. Then in 1929, three states joined to establish the present pak rate of six cents. Now rumblings are being heard of tax rates of eight or ten cents or more, to be levied in the future. A large percentage of the legislatures meeting this year aro giving consideration to increases.

No other tax has ever increased so fast, and no other commodity, with the possibile exception of a few luxuries, such as cigarettes, has ever had so great a tax levied against it. And high rates are not the end of the motorist's grievance. In various states his money has been used for sea walls schools and government buildings waterways, general tax reduction and even oyster conservation. All of these purposes may be laudable but they certainly should not be paid for out of money spent by citizens for gasoline.

No relief will ever come from our legislators of their own volition. They are thoroughly impressed with the idea that the motorist will stand for almost anything. It is up to the public to paraphrase a well-known advertisement, to show their officials what a whale of a difference just a few cents make.

INSURANCE FOR THE CROOK

"Taking the gun from the citizen is giving an insurance policy to the crook," said United States Senator Harry B. Hawes of Missouri recently. Amplifying his remarks, he stated that the only danger to the red-blooded American comes from "the sissies and the spinisters."

Senator Hawes may seem a little harsh, but what he says has logic behind it. Agitation for anti-gun laws almost never ceases, and stringent restrictions are being proposed in various state legislatures this year. Yet in all the communities where such laws have been passed, there is no record that they have ever been a success. The criminal class, as ever, finds no difficulty in arming itself, and tho good citizen is defenseless. The crook could ask for no better insurance than that.

Still another side to the question was recently brought out by Congressman M. J. Mass of Minnesota, who said that "this country needs civilians trained in handling and use of firearms." The ..efficiency of American troops, in the late war was undoubtedly largely due to the fact that thousand s of them were accustomed to using guns for sport and amusement.

An ever-increasing army of authorities is going on record as being opposed to laws which would deprivee honest citizens of guns. It may be that eventually the only persons to favor them will be the professional reformers whose enthusiasm leads them to disregard the facts established by experience and the criminals, who want the insurance such laws give them at the expense of society.

FAIR PLAY FOR THE RAILROADS

What may be a start toward a policy of "fair play" for the railroads is found in the last annual report of the Interstate Commerce Commission which contains a number of constructive suggestions. Now the Commission offers to Congress bills embodying some of those suggestions.

One of the bills would repeal the provision of the Transportation Act, under which one-half of any railroad's earnings in excess of 6 per cent must be paid into the public treasury. This provision, it is said, has proved a source of expense and litigation, and has produced little cash.

Another bill would allow railroads to earn more than 5 1-2 per cent profit....now held a "Fair Return".....if they can do so by more efficient and economical management. Another would modify rate making methods so that general economic and industrial conditions would be taken into account in the setting of rates by the commission. Under the existing law it is sometimes necesary to reduce rates in prosperous times, when no reductions are called for, and to raise them in times of depression

These suggestions, while they are a long way from completely covering the present crucial railroad situation, should be given favorable consideration. As the Chicago Daily News says, "It is an encouraging sign that the Interstate Commerce Commission, of its own motion, pleads for fair play to the railroads and advises Congress how to remedy ills of the transportation without sacrificing any principle dictated on behalf of the public welfare."

NARROW ROADS MENACE THE MOTORIST

The model rural roadway will have a paved surface at least eighteen feet is the minimum safe and will be usable at all times of the year and under all weather conditions.

The National Conference on Street and Highway Safety is authority for the statement that teen feet wide, will be waterproof, width. In many farming sections there is a good deal of traffic, moving at fairly high speeds. Under such circumstances, narrow roads become a menace to the life and property of all who use them. Going off the pavement of a country road may mean an overturned car, as road shoulders, particularly in rainy seasons, are often untrustworthy.

Those communities which are building narrow farm-to-market roads in order to "save" money have a mistaken idea of economy Full width, long-lived roads, of modern asphaltic materials, can be built cheaply and maintenance costs are likewise low. Every improved farm road should be designed with a view to accommodating not only the traffic of the immediato present, but that of the future. Any other course of procedure causes waste and needless expense in the long run.

ATTENTION COLORED FARMERS

The National Federation of Colored Farmers is receiving hundreds of letters from Colored farmers requesting all kinds of aid and information. We are willing to do everything we can for all the Colored farmers of America. It costs money, however, to maintain offices and our expenses are becoming so heavy that we are compelled to discontinue supplying information to those who request it who are not members of the Federation. If you have faith enough in the organization to believe that it can aid you then you should be willing to join it and help support it Isn't that so?

Several County units have organized and elected officers but have not sent in their membership dues. These units are eligible to membership in the Federation until dues are paid. Be helpful. Co-operate. Pay up. "All for each and each for all."

THE GRAVEYARD OF LOST BUILDINGS

In an article on "The Graveyard of Lost Buildings," Safeguarding America Against Fire states that if all the structures that have been destroyed by fire could be gathered together they would create the largest city in the world. It would go on for uncountable miles..... street after street of ruin and desolation.

If it were possible to create this city, it would provide an object lesson in the menace of fire that would never be forgotten. It would show vividly the tragedy of a waste that destroys almost half a billion dollars worth of property and ten thousand lives each year.

It may be that one reason for the carelessness most Americans show to fire is the protection afforded by insurance. There is a mistaken notion that insurance can replace in the absolute sense. what is wasted by carelessness or ignorance. As a matter of fact, nothing can compensate for the indirect results of fire.....loss of time, business and employment, tax increases, etc. Nor can a fire insurance policy bring back ruined property any more than life insurance can bring baek the dead.

Every fire means that the world is so much poorer in raw materials.

Perhaps the greatest aid to successful fire prevention is better building eonstruction. In many eommunities building laws fail to take consideration of new hazards that have appeared in recent years. It should be remembered that the standards are, in the long run, alway the cheapest.

"What we call 'politics' and what some others call bolshevism are much the same in origin and are often not far apart in techniquc.. The true remedy for both is direct participation on the part of the better equipped.....eitizens in the task of government....Politics is as bad for the United States as bolshevism is for Russia....." New York Journal of Commerce.

EXPLANATION WANTED

During the last few years we have heard a great deal of criticism of our electric utilities, eoupled with agitation for state or federal ownership and operation of the power industry.

Now it is time these critics and agitators did some explaining. They have claimed that private utilities chargo high rates.....yet statistics show that the cost of the cost of almost everything else .....especially that of government..... has gone up. They have stated that regulation has broken down, which amounts to a eriticism of all state public service eommissioners. This has never been substantiated.

They have not shown how publiely owned plants could provide cheaper service. The govenment cannot get men to work longer hours or for less money; it can hire no better engineering or exeeutive talent; it cannot get appreciably better prices for supplies than the great modern electrie systems. It can, of course, obtain tax freedom for its plants which would merely mean passing some of the cost of power development onto the taxpayer. Our private plants would be very glad to still further reduce rates if the government made that possiblo by exempting them from taxes.

Even under Utopian circumstances....disregarding the elements of politics, of favoritism, of inefficiency, that often enter into governmental activities.....socialism could offer little. It might maintain present standards of service.. and in exchange for this the public would have to stand behind gigantic bond issues for purchasing existing electrical properties or building new. It might slightly lower electric rates.....and to do this we would sacrifice individualism for paternalism, and subscribe to an alien governmental theory diametricllly opposed to fundamental American principles.

BEWARE OF DRASTIC MEASURES

All manner of schemes are proposed in our states to rid the highways of reckless drivers, reduce automobile accidents and provide financial compensation for innocent victims. These problems must be solved, according to the Baltimore Sun, "through adoption of moderate measures. Drastic enactments.....do not work out satisfactorily.....There is agreement that a way should be found to compensate victims of reckless automobilists, but there is widespread diversity of opinion how best to do it. Compulsory insurance has been tried and found unworkable. In consequence, attention is being directed in many States to the possibility of meeting the situation gradually by strengthening laws aimed at motorists who are responsible for accidents."

The law to revoke the licenses of financially irresponsible and reckless drivers is receiving much support, as is the law requiring rigid examinations of all motorists. This last is believed to be of especial value in promoting safety. During the past two years out of each 100,000 population 25 have been killed and 815 injured by automobiles, and in most states the accident rate is rising. At the same time estimates show that states now requiring strict drivers' examinations have reduced their death rates 29 per cent, which means that this single precaution results in saving the lives of seven out of each 100,00 of our people.

In many states the automobile accident problem is being approached from the right angle.... that of impartial investigation. Officials should get the faets and then act. The reckless and incompetent must be outlawed from the highways.

ECONOMICAL GOVERNMENT

In a recent talking news reel, exhibited at theatres throughout the country, Governor Roosevelt of New York is shown announcing that taxes will be held down in his state in order to assist business reeovery.

He then asks the publie to turn its attention to municipal and county governments, which, he says have been the principal promoters of high taxes in recent years.

Governor Roosevelt has elected one of the best possible ways of of reaching a wide and varied audience, and it is to be hoped that his remark will be taken to the public heart. Every state executive should give every effort to holding down government expense, in the interest of employment, industrial progress, home building and property ownership. There is no better way to impede progress than to constantly increase taxes.

Colored Farmers of North Carolina Hold Conference

Bricks, N. C., (CNS)—The farmers of the state of North Carolina met in conferenee here last week at Brick Junior College.

One of the most significant features was President Wright's address of welcome, upon which J. W. Mitchell, of the State Department of Agriculture made the comment that Brick College through its president, was keeping faith with the farmes of Eastern North Carolina.

C. R. Hudson, of the State Department of Agriculture, opened the discussion with a survey of the Live-at-Home Program for 1930 and the outlook for 1931." S. J. Kirby, also of the State Department of Agriculture, gave a valuable and interesting talk on "The Value of Good Pastures and How to Procure Them."

President Wright presided over the conference, which was attended by fully 500 farmers and their wives and children. During intermission an exhibit of farm products, under Mrs. Young's leadership, and a health exhibit, under the direction of Nurse Neeley, attracted considerable attention. Barbecue was served during intermission.

NEGRO SCHOOLS MAKING STEADY GAINS IN TEXAS

HIGH SCHOOL ENROLLMENT NEARLY DOUBLED IN SEVEN YEARS—STANDARD OF TEACHERS RAISED

Austin, Tex., March:—Notable improvement in the educational conditions of Negroes in Texas is revealed in a report just issued by D. B. Taylor of the State Department of Education, covering the last seven years.

The greatest gain noted is in the number of accredited high schools for Negroes, which increased from seven in 1925 to a total of fifty-one in 1930. Meantime the high school enrollment went up steadily from 10,743 in 1923 24 to 19,136 in 1929-30, or a gain of 78 per cent. In the tenth and eleventh grades the enrollment increased reached 126 per cent. As against 700 graduates in 1925, there were 1901 last year.

The elementary grades showed an increase for the period of about seven per cent, the total enrollment in these grades being 172,388 in 1924 and 184,354 in 1930, a gain which about keeps up with the increase in Negro population. Meantime the number of colored teachers employed increased from 4347 to 5141 Their scholastic preparation also showed decided improvement, the number of college trained teachers increasing from 502 to 1179, while the number of those not graduates of any school decreased from 1325 to 627.

A discouraging phase of the situation is the fact that year after year the second grade enrollment is less than half that of the first, indicating that a large proportion of Negro children never advance beyond the first grade. Considerably more than half of the total elementary enrollment is in the first three grades.

TEN D. C. SCHOOL DIRECTORS $52,000 BACK PAY

Washington—(CNS)—The payment of $52,635 in back pay to ten directors of the colored division of the District public schools was provided for in a bill passed by the House of Representatives late Friday afternoon.

The bills is designed, Representative Palmer of the District committee of the House, said, to eliminate injustices done directors in the Colored public schools through a legal interpretation of an act of Congress in which the colored directors were designated as assistant directors and therefore were not given the same pay as were directors at white schools doing the same sort of work.

Representative Oscar DePriest, who figured in the passage of the bill said, "I wish to state that from 1906 to 1924 the Negro directors of the schools in Washington were paid one salary and the white directors another salary. Under the law they are entitled to equal salaries. This bill equalizes the salaries as they should have been during that time. Upon the hearings the Distirct of Columbia Committee made every investigation and reported the bill favorably. I am sure the gentleman (Ross A. Collins, Democrat of Mississippi) would not keep these people from their just pay. If the gentlemen will read the report thoroughly, I am sure he would not object. It goes back several years.

Representative Blanton, Democrat of Texas, also offered objection to the bill, while Representative Albert Hall, Republican of Indiana was with Mr. DePriest on the issue.

Those to get the back salary are Miss E. F. G. Merritt, retired supervisor and director of primary instruction, $11,330; A. J. Turner, former director of Physical education, $7,360; O. W. McDonald, supervisor of manual training $7,185; Mrs. T. W. Hunster, widow of T. W. Hunster, director of drawing, $6,460; J. W. Shaw, director of domestic science, $5,810; Mrs. Eva Wilson Clair, director of domestic art, $4,210; Mrs. N. T. Jackson Myers, $3,650; Miss Corrine Martin, director of penmanship, $2,860; J. E Wormley, director of music, $2,360! and I. Wormley, director of kindergarten, $1,500.

Urban League Announces Vocational Campaign

New York (CNS)—The National Urban League announces its second VOCATIONAL OPPORTUNITY CAMPAIGN to be celebrated from April 19 to 26. The campaign is to be conducted in all cities in which the Urban League movement operates and in as many other cities as core to join in the effort

This year's program is designed to focus the Negro's attention on his own economic problems. Taking advantage of the interest unemployment has generated in the practical questions of life, the campaign will endeavor to awaken further interest and point out appropriate directions this interest might take. The campaign will also be projeeted into the realm of white public opinion in an attempt to show how limited the opportunities are for varied talents of Negro workers.

ELEVEN CENT EGGS IN ILLINOIS

Centralia, Ill.—(Special to Modern Farmer)—The wholesale price on eggs in this territory the week of Feb. 9-15 was eleven cents per dozen. This is the lowest prices in this section for the past sixty-five years. The weather is unusually warm and the hens have stepped on the gas.

DID YOU GIVE HIM A LIFT?

Did you give him a lift? He's a brother man,
And bearing about all the burden he can.
Did you give him a smile? He was downcast and blue,
And the smile would have helped him to battle it through.
Did you give him your hand? He was slipping downhill.
And tho world, so fancied, was using him ill.
Did you give him a word? Did you show him the road?
Or did you just let him go on with his load?
Do you know what it means to be losing the fight,
When just a lift in time might set everything right?
Do you know what it means—just a clasp of the hand,
When a man's borne about all a man ought to stand?
Did you ask what it was — was the quivering lip?
Why the half-suppressed sob, and the scalding tear's drip?
Were you brother of his when the time came of need?
Did you offer to help him, or didn't you heed?

—Anon.

(Plutie Carrol singing, "Old Kentucky Home" on a public program. Peter Clarks breaks down in tears.)

Margaret: Pete dear, are you a Kentuckian

Pete: No Marg, I am a musician.

Teacher: Willie, why don't you wash your face, I can tell what you had for breakfast.

Willie: What did I have?

Teacher: Eggs.

Willie: Wrong teacher, that was yesterday morning.

GIVE US A CHANCE

We started from the bottom from the very lowest round,
And we reached, and clung, and tussled, till we felt our feet on ground.
And we looked and watched the darkness,—'twas the time of a nation's night,
And we gleaned each dusky shadow for a glance or hope of light.
Long seemed the night and weary, for 'twas o'er two hundred years,
Many were the days that were prayerful, many our sighs and tears.
But alas, one, drear morning, the answer of the prayers had come,
The days of cruel slavery were o'er, —Ah 'twas done.
Up from the mire of bondage, —up to a place among men.
We answered the question of progress and marked the past with a pen.
Equal to every nation, equal with time and tide,
We are now far up the pathway, where the road is broad and wide.
God from the midst of darkness, from our ignorance and despair
Give us the boon of freedom and we need but his loving care.
We expect no gain without losses, on every side is the fight,
We hold up our heads and swim through it, some time 'twill be alright.
Each nation in turn made the music, and each in turn did the dance.
We know we are just like the others and we urge you to give us a chance.

—Selected.

NEGRO PRESS ELECTS OFFICERS

B. J. DAVIS RE-ELECTED AS EXECUTIVE HEAD TO SUCCEED HIMSELF FOR THE SIXTH TIME

Nashville, Tenn.—(Special)—After three days of deliberations, during which time matters of vital moment were under consideration, the National Negro Press Association closed its Annual Convention in this city, Friday February 27th., Ten recipes for the weal of the members of the fourth estate, were discussed as principal themes. The merits and demerits of these passed, as it were, under the scrutinizing eyes, or were diagnosed as a physician would his case, or operated upon as a surgeon might his patient, and then submitted, with their recommendations, for those who will as well as those who do not care to entertain them. The following are the recommendations after they had been considered for three days:

1. The establishment of officers and selection of personnel to operate advertising agency, being careful to make overhead as low as possible.

2. Withdrawal of support from advertising agencies now controlling national advertising given Negro newspapers by all the members of the syndicate; and at the same time making of contact with national advertisers and the firms handling their advertising copy and the securing of contracts from them for the various newspapers composing the syndicate and the selling of contracts to other newspapers not members of said syndicate.

3. The consideration of the advisability of continuing the operation of the Illustrated Feature Section which is now patronized by Negro newspapers.

4. The employment of experienced advertising salesmen to get contracts from national advertisers who have never before given Negro newspapers business, such as leading tobacco firms, automobile concerns, food products, beverage manufacturers, etc.

5. The Negro Press adhere to the 12 em and agate line measurement in their columns weekly.

6. All newspapers are urged and encouraged to undertake to establish Reciprocal News Service.

7. Encourage the syndication of news among the members of the Press.

8. The working out of a Code Service to be used by members of the Association.

9. That some steps be taken to place the weekly newspapers on a paying basis in their respective communities.

10. The standardization of advertising.

The report of the officers submitted on the first day of the meeting told of their activities, and even entered into a pathetic vein for the future of the organization that has "For the highest development of Negro Journalism" as its motto.

Benjamin Jefferson Davis of Atlanta, Ga., sounded the key note of all the addresses in his annual message to the organization, which, after consideration, was adopted, with its recommendations.

The corresponding secretary-treasurer made a full and concise report, while the chairman of the executive committee, J. E. Mitchell. editor of The St. Louis Argus, sounded optimism by his presentation to the Association in the form of a survey for future operation.

The following officers were elected for the ensuing year: B. J. Davis, Editor, The Atlanta Independent, Atlanta, Ga., President; Jos. Bass, Editor, California Eagle, Los Angeles, Calif, 1st Vice-President; Ira T. Bryant, Editor, The Young Allenite, Nashville, Tenn., 2nd Vice-President; Henry Allen Boyd, Nashville, Tenn., Secretary-Treasurer; Mrs. M. W. Tittle, Nashville, Tenn., Recording Secretary; Rev. W. H. Davenport, Editor, The Star of Zion, Charlotte, N. C., Rev. R. C. Barbour, Editor, The National Baptist Voice, Nashville, Tenn., Auditors; J. E. Mitchell, Editor, The St. Louis Argus, St. Louis, Mo., Chairman, Executive committee.

The cities offering invitation for the 1932 Convention were all distanced and faded away by the message from Jos. B. Bass, 1st Vice-President, of Los Angeles, who insisted that the city of roses, out in the golden west, be nominated for the meeting place of 1932. While no direct action was taken and the matter was referred to the executive committee with power to act, such stalwart editor as W. H. Davenport of The Star of Zion, representing the A. M. E. Zion Church, Russell C. Barbour, of The National Baptist Voice, G. W. Allen, representing The Southern Christian Recorder, of the A. M. E. Church, J. E. Mitchell, of The St. Louis Argus, with Miss Mayme E. Osby, representing The Louisville Leader, are known to have favored Los Angeles, and predict its election.

Nashville's entertainment captivated every visitor, but the Association's highest achievement was reached and another epoch made in the National Exhibit and Exposition that was arranged by the local members as an educational feature, as well as an inspirational attempt, in the variety of the display of publications, whether they be newspapers, magazines or standing books. Ninety-two weekly newspapers with twelve magazines were on exhibition in bound volumes.

Each volume was made up and bound by the National Baptist Publishing Board's Plant. The exhibit stayed in place five days. Every college and every one of the city high schools from president or principal down to those of the primary grades had an opportunity to view the exhibit. It was the first time in the history of the Association that such an exhibit had been made, of purely Negro publications.

—Nashville Globe

FOOD STANDARDIZING TO BE AIM OF KROGER FOUNDATION

Cincinnati, Jan. 19.—Establishment of a fund of $1,000,000 for the maintenance of what is considered the biggest institutional undertaking in the history of the food industry—to be known as the Kroger Food Foundation—was made public here today by Albert H. Morrill, president of the Kroger Grocery and Baking Company.

The objective of the foundation is to establish food standards, a public service which has never been performed by any food distributor. These standards will be based upon research and study by a group of scientists and laboratory technicians of the food values of meats, fruits and vegetables and the form in which they are offered for consumption.

It will be the function of the foundation also to set up standards for the growing, packing distributing and cooking of foods—all with the definite purpose of assuring better food to the families of America.

There will be no connection between the scientific activities of the Kroger Food Foundation and the operations of the Kroger Grocery and Baking Company, Mr. Morrill said. It will function as a detached and individual organization.

HOW TO CLOSE THE JAIL

Of 4,000 boys who passed before a New York judge on their way to jail, reformatory or parole, only three had belonged to a Sunday School.

This fact is recited as powerful testimony for religious training of the young.

In a letter to Dr. George William Carter, general secretary of the New York Bible Society, Judge Lewis L. Fawcett, of the State Supreme Court, gives his experience of twenty-three years on the bench:

"Permit me to state that my experience during twenty-three years on the bench, in which time over 4,000 boys under the age of twenty-one years were convicted of crime before me, of whom but three were members of a Sabbath School, has satisfied me of the value of Sabbath Schools to the community, in helping safeguard it, to the extent to which Sabbath Schools exist, from the growth of criminals.

"My experience also satisfies me of their value to the individual

"In 1,902 cases of suspended criminal sentences, in each of which a minister, priest or rabbi became interested at my request, only sixty-two of the boys were brought back for violation of the conditions in parole. I believe the reform in the remaining cases was prompt and permanent.

"In fact, I regard our Sabbath School, including those of all faiths, as the only effective means to stem the rising tide of vice and crime among our youth. Society carries the heavy burden of criminality, chiefly because of the lack of religious training of the youth.

"If all the children could be kept under the influence of the Sabbath School, and the grown-ups were active in some church, we could close our prisons and jails, instead of being compelled to enlarge and increase their number.

"The problem of youth is the problem of humanity.

"With such unquestioned evidence before them of the value of religious training," comments The Christian Observer "is it not strange that parents are willing to neglect this vital feature of home and church training." Literary Digest.

Exchange.

LETTER FROM J. W. NELSON

Keeling, Tenn.
Mar. 2, 1931

The Modern Farmer,
Nashville, Tenn.

Gentlemen:

I've just had the pleasure of reading your issue of Feb. 16th and I want to commend you for such an edition. It is brim full of good and wholesome advice and couragcously edited. Your paper has been much inspiration as well as information to us. Although we were very hard hit by the drought we are yet fighting for the principle of co-operation. We have an organization numbering more than one hundred members, and I am very prond indeed to say, without a single exception and in spite of the many obstacles we find in our road we are determined to follow through. Although we are not affiliated with the "National Farmers" we feel that we are working toward the same goal and wishing toward the same goal and wish them much success in their labors. We read your item on the "Colored farmers of Fla." and couldn't help but sympathize with you for them and we can't help but ask why is it that people will content themselves living under those conditions? And search as we may, we can give but one answer and that is, ignorance. No person with any intelligence would attempt to live and rear a family under like conditions. Do you not agree with me that education is the most essential element in our success as a race, not religiously speaking, but from an economic standpoint. And will you not also agree with me that these people and others that are in the same predicament can only be helped by organization and fearless leaders? It is a pity and a shame that such things are allowed to exist in this the world's greatest "democracy." Let us hope that the writer of the item referred to is mistaken or else just drew on his imagination.

Hoping you will continue your good work, I beg to remain,

Yours truly,

J. W. Nelson.

Miss Parks says love is an insane desire on the part of a chump to pay a woman's board bill for life.

NATIONAL ADVISORY COMMITTEE ON THE EDUCATION OF NEGROES MEETS

The National Advisory Committee on the Education of Negro met in Detroit, on Monday and Tuesday, February 23 and 24 in connection with the Department of Superintendence of the National Education Association for the purpose of advising Dr. Ambrose Caliver, Specialist in the Education of Negroes concerning problems of the Secondary Education Survey. The meeting on Monday was opened by Dr Caliver and was devoted to a discussion of the outline and checking list which will be used in the survey. It also was concerned with certain major policies of the survey. After exlaining the importance of the Committee and describing its relationship to the Advisory Committees of the General Survys of Secondary Education and Teacher Education, Dr. Caliver requested Superintendent Garnet C. Wilkinson, Assistant Superintendent of Schools in the District of Columbia to meside. At this time the members continued to discuss in detail the various phases of the Survey and answer questions.

On Tuesday, President H. Council Trenholm presided during the first part of the meeting during which time resolutions were passed expressing appreciation for the interest shown by the Federal Government in undertaking the surveys, and calling upon the school officials, administators and teachers throughout the country to cooperate to the end that an accurate picture of the status of secondary education among Negroes might be obtained. During the second part of the Tuesday afternoon meeting addresses were made by Dr. William John Cooper, United States Commissioner of Education, Dr. E. S. Evenden, Associate Director of the Teacher Education Survey and Dr. Willis A. Sutton, President of the National Educational association. These gentlemen, who were presented to the group by Dr. Caliver, discussed the various phases of the surveys and expresed their interest in receiving the full cooperation of the members of the Committee as well as of the persons throughout the country whom they represented. Dr. Sutton, in addition, brought a word of greeting from the National Association and expressed his interest in the entire problem of the educational and economic development of the Negro.

A large representation of the Committee was present from all parts of the country. Those in attendance were: Miss Fannie C. Williams, Principal, Valena C. Jones Elementary School, New Orleans, Louisiana, and President of the National Association of Teachers in Colored Schools; Mr. Fred McCuiston, Associate Director, Julius Rosenwald Fund, Cotton States Building, Nashville, Tennessee; Dr. J. H. Dillard, President, John F. Slater Fund and Anna T. Jeanes Fund, Charlottesville, Virginia; Mr. H. Council Trenholm, President, State Teachers College, Montgomery, Alabama, and Chairman of the High School Division of the National Association of Teachers in Colored Schools; Mr. Garnet C. Wilkinson, First Assistant Superintendent of Schools, Washington, D. C.; Mr. W. A. Robinson, Principal, Austin High School, Knoxville, Tenn.; Professor H. O. Cook, Principal of the Lincoln High School Kansas City, Mo.; Mr. Harry W. Green, Professor of Education, The West Virginia State College, Institute, West Virginia; Mr. N. C. Newbold, Director of the Division of Negro Education, Raleigh, North Carolina; Dean D O W. Holmes, College of Education, Howard University, Washington, D. C., and Prsident of the Association of Colleges for Negro Youth; President W. J. Hale, Agricultural and Industrial State College, Nashville, Tennessee, and Retiring President of the Conference of Negro Land-Grant Colleges; President John M. Gandy, Virginia State College, Petersburg, Virginia; Dr. W. A. Daniel, Associate Executive Secretary of the American Missionary Association, New York, N. Y.; Mr. W. R. Valentine, Principal, Manual Training and Industrial School, Bordentown, New Jersey; Dean W. T. B. Williams, Tuskegee Institute, Alabama; Mr. Leo M. Favort, Field Agent for the General Education Board, Baton Rouge, La. Members who have been added to the Committee since its first annauncement are: Mr. W. R. Valentine, Principal, Manual Training and Industrial School, Bordentown, New Jersey; President J. J. Rhoads, Bishop College, Marshall, Texas; Dean W. T. B. Williams, Tuskegee Institute, Alabama; and Mr. Leo H. Field Agent for the General Education Board, Baton Rogue, La. These additions make the personnel of the Committee complete.

The following are the resolutions which were adopted by the Committee: "We the Committee on Resolutions of the National Advisory Committee on the Education of Negroes present the following resoltions.

First: That we extend to the Office of Education our deep appreciation for undertaking this comprehensivo survey under the efficient leadership of Dr. Ambrose Caliver, Specialist in the Education of Negroes.

Second: We further express the hope that this survey will include all types of secondary schools, private, parochial and public.

Third: We urge the hearty cooperation of all state, county and city departments of education and encourage the support of the Parent Teacher organizations and of the state and city teachers associations.

Fourth: We submit the suggestion that the Office of Education use its inpuence to make effective the findings of the survey to the end that high school conditions for Negroes may be improved.

Fifth: The Advisory Committee welcome the opportunity of Parti-

Submitted:

John M. Gandy, Chairman.
W. R. Valentine.
W. T. B. Williams.
J. H. Dillard.
Fannie C. Williams.
N. C. Newbold.

In addition to the members of the Adivory Committee many of the Negro delegates who were in attendanco upon the Convention attended the meetings of the Committee and manifested keen interest in its work.

A BUSHEL OF OATS FOR A HAIRCUT

Barbers in Minnesota are cutting hair for a bushel of oats. Heretofore they charged two bushels of oats for a haircut. The local elevator is paying the farmers 25 cents per bushel for oats.

HOG WEIGHS ONE THOUSAND POUNDS

Clyde C. Neidigh, farmer living near Carlisle, Pennsylvania, butchered a pure bred Poland China hog weighing 1,015 pounds dressed. The hog weighed 1,104 pounds alive. One of the hams weighed exactly one hundred and five pounds and a slab of the bacon forty-two pounds.

REV. SILAS GRACE

(Continued from Page 1)

believe that those responsible for this persecution are enemies of the N. F. C. F. and of the Negro farmers of Mississippi. We will not judge them as such. We would rather believe that they were poor, mistaken, misguided souls who "know not what they do." For the N. F. C. F. is working for the best interests of Mississippi and of Mississippi's farmers. It is trying to help—not hinder, save—not destroy, build—not wreck. We are trying to make friends—not enemies.

The N. F. C. F. does not fear prosecution because it is breaking no statutes. Your organization is legally organized, and is doing practically the same work the other national farm organizations are doing. No one could prove that Rev. Grace had done anything wrong and no one can prove that the N. F. C. F. has done anything wrong. We are sure we are right before we go ahead.

The N. F. C. F. does not fear **PERSECUTION** because its leaders believe that the Negro farmers who have joined it—in this day and time—cannot be INTIMIDATED, THREATENED, FRIGHTENED OR BOUGHT! They are true-blue Americans. They are qualifying to become eligible for farm relief the same as other farmers have done. They are getting together—are organizing—for their own benefit, for the benefit of their children—for the benefit of their racial group. Now who can stop them? Who should desire to stop them? "No man can keep another man down in a ditch without staying down in the ditch with him." Who is fool enough to want to stay down in a ditch in this age of progress and enlightenment?

Reverend Silas Grace—first martyr of the N. F. C. F.—is free! Brothers, give thanks! Brothers, Forward, March! Times are too hard for us to have to spend several hundred dollars for protection—but the money was spent. There is more where that came from. You,—and our influential friends—both white and Negro—will not let us fall. The God of our fathers and mothers—the God who freed them from the shackles of slavery—will free us,—their sons and daughters, from the shackles of peonage, tenancy, debt-slavery and persecution. "The earth is the Lord's." God reigns, and the National Federation of Colored Farmers still lives! Brothers, Forward, March!

NATIONAL FEDERATION OF

(Continued from Page 1)

$1.75 per hundred an a very good buy.

FEED AND SUPPLIES

Horse and mule feed 50 per cent gain, still $1.40 per hundred. Shorts $1.20 per hundred. Feed oats 39c bushel and chicken wheat $1.75 sack.

Cotton Rope 16½ per pound

Back bands with buckles $2.30 dozen.

Plow lines $2.25 dozen pair.

SEED

Onions sets Red and yellow $1.65 per bushel or a little over 5c per quart. Onion Plants (Bermudas) 6000 plants to crate, $3.25 per crate.

Seed potatoes. Genuine Northern Triumphs $1.20 per bushel or about 30c peck.

Early Burt Seed oats 55c bushel.

MEMBERS ATTENTION: IF THERE IS ANYTHING YOU DON'T UNDERSTAND—WRITE THE OFFICE!

SPECIAL TO CHAIRMEN

Officers and members of Local Units should strive diligently to make this "FARMERS' SUNDAY" a great event for the cause of Organization of Colored Farmers throughout the nation. Appoint a Special Committee for this day. Invite the public to attend. Send notices to all the Churches in your community. Invite your city friends. Have special music. The Chairman of each Unit will be the Master of Ceremonies. Secure your best talent for the address on "How Organization Helps Colored Farmers." The program may be lengthened or revised if desired. The Chairman will select the Minister for the sermon. Remember this is "FARMERS' SUNDAY" and an all-day meeting would not be out of place. Let the public know that you are proud of your Organization and that the NATIONAL FEDERATION OF COLORED FARMERS merits any assistance given it.

SPECIAL NOTICE!

Officers of Local Units are instructed to send one-half of the general offering collected on this day to the NATIONAL FEDERATION OF COLORED FARMERS, VINCENNES HOTEL, CHICAGO, ILLINOIS. The remaining half is to be kept by the Units for the expense of the Anniversary Exercises. This money will be used to carry the gospel of organization and cooperation to the many thousands of American Negro Farmers yet not organized. This offering will be handled by the Chairman, Secretary, Treasurer and Market Agent. Be liberal. It is a great work and we must "carry on." "As ye have received, freely give."

Official buttons can be had at 5 cents each. The Units can sell them at 15c each and put ten cents in their local treasury. Send in your orders early for these buttons will have to be made up. Send money order with your orders.

September 22nd, 1930 at Greenwood, Mississippi, the Sheriff of LeFlore County arrested Rev. S. Grace, one of our Organizers, and had him held by the Federal authorities.

He was placed under a $500 bond. His trial was set for hearing at Clarksdale, Mississippi, in United States Court last week. The Judge of the United States Court directed a verdict of acquittal—freeing Rev. Grace of all charges on account of lack of evidence against him. Hon. B. A. Green, Mound Bayou and Hon. J. Cook, Clarksdale, were his attorneys.

This act on the part of the Sheriff at Greenwood was, in our opinion, nothing more than persecution and an attempt to block our farmers from organizing.

Our Campaign for new units is now on and we hope soon to have every County in Mississippi organized.

OFFICIAL ANNIVERSARY

(Continued from page 1.)

Simple, isn't it? The Secretary of this Unit informs us that the members saved between 35 and 40 cents on the dollar. Here is the bill:

19 sacks of White oats, 5 bu. to sack, 45c bu.	$42.75
21 sacks Sweet Feed, 50 per cent grain, $1.60	33.60
3—fifties cans Compound lard $4.19 each	12.57
2 barrells Patent flour at $4.75 brl.	9.50
3½ barrells Patent flour at $4.50 brl.	15.75
½ barrell Self Rising flour Highest grade	3.30
1 case gallon cans Molasses 6 to case	3.80
1 barrell corn meal—4—96s...	3.15
2 sacks granulated sugar, $4.75	9.50
2 sacks seed potatoes, $1.25 per bushel	6.25
1 sack Fancy Rice 100 lbs.....	2.95
3 boxes P and G Soap, $2.99 per box	8.97
1 twenty-five pound sack sugar	1.28
1 case 12-6 ounce Garretts Snuff	3.73
1 box Blood Hound Tobacco 5 pounds	2.73
1 case of Whole Black Pepper	1.75
7 sides Plate meat 10½c pound	3.68
1 side Belly meat 12c pound...	5.02
Total bill	$173.43

Another unit with about 60 members ordered on Feb. 9th as follows:

3 barrells Patent flour, $4.80 brl.	$14.40
1½ barrells Patent flour, $4.30 brl.	6.45
4½ barrells corn meal $3.15 brl.	14.18
2 sacks Cracked Rice 100 lbs. each, $1.95 sack	3.90
2 sacks Whole Rice 100 lbs. each, $2.95 sack	5.90
1 sack granulated sugar 25 lbs.	1.28
1 can fifty compound lard.....	4.19
1 sack Hen feed 100 lbs.	1.75
1 sack Chicken Wheat 100 lbs.	1.75
1 sack seed oats, 5 bu. 54c. bu.	2.70
4 sacks seed Irish potatoes, $1.25 bu.	12.52
2 boxes P. and G. Soap, $2.99 box	5.98
5 sacks wheat shorts 100 lbs. each, $1.20 sack	6.00
1 case of 48 cans salman, 92c dozen	3.68
This bill totals	$84.77

The shipment arrived and the Market Agent delivered to each member his part of the order. They advise that they are saving between 30 and 35 cents on the dollar in buying together.

What the members of these Units are saving you too can save if you will try. Dollars don't grow on bushes or stalks. Somebody has to work for every one of them whether it is loaned to you or paid to you. So save them. Get in a Unit. Get in there quickly. Don't waste a penny of the money you borrow. You will have to pay every cent of it back. Nobody is giving you anything—not even the government, which is you and all the rest of us. Buy together. The national office of the N. F. C. F. will tell you where you can buy your supplies at decent prices.

NEGRO FARMERS

Application for Membership
NATIONAL FEDERATION OF COLORED FARMERS
Vincennes Hotel, Chicago

As a farmer, I believe the time has arrived when the Colored Farmers should form a National Organization devoted to diversified production, grading, packing, shipping and marketing of farm products and to the purchase of needed farm supplies through co-operative methods, to the end that a more prosperous financial condition may result from their efforts as producers.
I hereby subscribe $5.00 for membership in the National Federation of Colored Farmers for a period of 12 months from date. Also $1.00 for an Annual Subscription to the Modern Farmer.

Great Development Of Food Industries

GO HAND IN HAND WITH FARM IMPROVEMENTS

STATE HAS ADVANTAGES

By Paul Kelly

Chief, Division of Commerce and Industry Department of Conservation and Development

Washington, D. C.—The division of commerce and industry of the department of conservation and development launched a "made-in-North Carolina campaign" on a state-wide scale. While the department does not claim to have originated a new idea in this project, it did take a movement that had hitherto been largely sectional and bring it before the entire state.

The promotion of this campaign was centered in one week, the first of September, when by means of thousands of pieces of literature, through the press, by radio and personal appearances before various organizations, its purposes were brought before the people of the state. The movement was well received, but was emphasized more in some sections than in others.

The "live-at-home" and "made-in North Carolina" programs have brought out some interesting information about the agricultural and manufacturing industries. Important among these is the fact that North Carolinians import annually food and food products amounting to approximately $140,000,000. Analyzing this—while statistics are not available—approximately the following sums are expended in other states for food products that might as well be produced in North Carolina; Butter $4,000,000; cheese $4,500,000; condensed milk and evaporated milk $50,000,000; canned fruits and vegetables, $13,000,000; canned seafoods, $15,000,000; meat and meat products, $23,000,000; processed nuts $10,000,000;

American Woman in Mexico Starts Flapjacks Craze

Hot cakes, the real American article, are the craze in Guadalajara, the second largest city in Mexico. An American woman of German descent, named Catherine Schneider, taught the people of Guadalajara to demand hot cakes, says the New York Sun. She is making a good living in this unique one-woman business. Strange as it may seem, there is a great demand for the American cold-weather delicacy in this sunny city, for, with an elevation of 5100 feet, Guadalajara gets pretty chilly. There is never any snow, but a topcoat is always welcome, and so are hot cakes.

Mrs. Schneider's career in Mexico is interesting. She came to Guadalajara a few years ago for her health. She recovered health and strength here, but when that happened the visitor found herself con-

(Continued on Page 8)

VISITS SCENES OF HIS CHILDHOOD

LEON R. HARRIS, EDITOR, PAYS VISIT TO CAMBRIDGE FRIENDS

Leon R. Harris, colored, editor of the Modern Farmer and secretary of the National Federation of Colored Farmers with headquarters in Chicago, who was an inmate of the Guernsey County Children's Home for almost nine years, was in Cambridge Thursday greeting relatives and renewing the scenes of his childhood.

Mr. Harris' rise to success is remarkable. Apparently without a chance, his parents dead, he rose to a commanding place among colored people by sheer will power. While an inmate of the Guernsey County Home he attended the Cambridge schools until he was nine years of age. His later education was achieved at various schools and at the present time in addition to being editor of the Modern Farmer and secretary of the National Federation of Colored Farmers, he is an author and magazine contributor. He is considered an authority on Negro rural life.

His visit to Cambridge was a stopover to see friends and relatives while enroute to his home in Moline, Ill., from Washington, D. C., where he was a member of the committee on Negro Housing, a section of the larger committee of President Hoover on Home Building and Home Ownership, which has been in session for several days. Eighteen other prominent colored men and women comprise the committee on Negro Housing which is attempting to find methods of financing home construction and creating better living conditions for 10,000,000 colored people in this country.

Mr. Harris planned to continue his journey homeward Thursday evening. It was his first visit here for several years and he found many changes and improvements.

—Daily Jeffersonian.

Cotton Club Organized

An Association for the increased use of cotton has been formed. Hon. Harry D. Wilson, Commissioner of Agriculture for the state of Louisiana is President and Mr. Harold C. Booker of Columbia, S. C. is Secretary.

A Vice President from each of the southern states is to be named. The association has as its aims to increase the use of cotton in manufacture, and in fact the use of every product that originates in the cotton boll.

The association has set a goal for 250,000 members. The membership fee is one dollar per year. Hon. J. C. Holt, state Commissioner of Agriculture for Mississippi has called a meeting at Jackson to get Mississippi lined up. Another instance of the value of organization.

BANKS SHOULD EXTEND LOANS SAYS HOWELL

TENNESSEE BANKER SUGGESTS RELIEF TO FARMERS FINANCE

Union City, Tenn.—That banks should extend for five years all amortization installments and interest payments that come within a given 12 months in orders to give farmers a chance to regain losses sustained during the almost universal drouth, is the opinion of Walter Howell, president of the Fidelity Finance Company here. Mr. Howell is an astute banker and has given considerable time and thought to the problem of drouth relief.

In speaking of relief plans, he says:

"The examination of appraisal reports and the financial conditions of more than 35,000 farmers in Tennessee, Kentucky, Indiana, and Ohio gives me an insight into the general conditions of the agricultural population, which might indicate that the greatest distress due to the drouth conditions, will be among those farmers who have mortgaged their farms.

"Statistics tell us that more than 625,000 farmers in the United States, have borrowed from the federal land banks and joint stock land banks an amount in excess of $2,500,000,000. It would appear that approximately 550,000 of these farmers now owe these land banks a gross amount of about $2,000,000,000. The approximate amount of the gross loans and the number of these borrowers located in Tennessee is 11,500 farmers with $29,000,000 gross loans; in Arkansas, 16,000 farmers with $39,000,000 gross loans; in Mississippi, 25,000 farmers, with $60,000,000 in gross loans.

Within the next 12 months these farmers will be called upon to pay to these land banks amortization installments and interest payments of from $60 to $70 per $1,000 of their gross loans and in addition to this they must pay their taxes and fire insurance premiums. Not all of them will be able to do this.

Faced With Foreclosure.

"These so unfortunate not to have funds to meet these payments promptly will be faced with foreclosure proceedings, the loss of their home, and the probably acquiring of their farm by the land banks. This will cause a further depression. It will cause the home owners of today to become tenants of tomorrow.

"Because the home tie is severed, a part of the family, or perhaps all may go into the towns or larger cities seeking employment, where they will become day laborers and may sooner or later join the vast army of the unemployed.

"The view point of the banker who has been associated with the agricultural interest of the country differs greatly from the banker who has been associated entirely with the industrial interests of the country.

"The solution of the problem which now confronts the country is that the land banks should extend for a period of five years all amortization installments and interest payments that come due within a given 12 months period from Sept. 15, 1930, to Sept. 15,

(Continued on Page 8.)

One Hundred Thirty Three Thousand Cars

RECORD MOVEMENT OF FRUIT SHIPMENTS

The total number cars fruits and vegetables arriving in Chicago during the year 1930 amounted to 133,003. The total cars unloaded in Chicago during 1930 were 63,887, or an average of over 5,000 cars per month. The principal commodities shipped from southern and border states were as follows:

	Cars
Beets	286
Blackberries	17
Cabbage	2938
Carrots	2347
Green Corn	294
Cucumbers	1115
Kale and Greens	37
Mixed Vegetables	2871
Mustard	50
Okra	20
Parsley	54
Green Peas	1431
Peanuts	1570
Peppers	436
Peaches	2274
Irish Potatoes	30,708
Radishes	210
Shallots	89
Sweet Potatoes	1760
Tomatoes	4927
Watermelons	5040

It is surprising to find that Pacific coast states shipped thousands of these cars into Chicago, paying more than twice as much freight and icing charges than is charged from southern states, and yet they made a good margin of profit. This is proof that farmers in Alabama, Florida, Mississippi, Kentucky, Tennessee, Texas, Arkansas, Louisiana, North and South Carolina can leave off some acreage in cotton and put in vegetables to better advantage. Practically all the blackberries and dewberries shipped into the Chicago market come from California, Utah and other far western states. Throughout the south these berries grow wild so to speak and with a little effort they could be gathered and packed in crates and shipped to Chicago with less expense.

FARMER TOLD TO PLANT MORE STRAWBERRIES

AGENT OF AGRICULTURAL EXTENSION SUGGESTS PLANS

Farmers in Illinois as well as other so-called intermediate states might well capitalize on what is considered a shortage in strawberry acreage in Indiana, Illinois and Michigan, according to R. S. Marsh, horticulture extension of the college of agriculture, the University of Illinois.

In addition to figures showing that the present acreage of berries could be expanded, there is also a condition apparent this winter to indicate that there will be a shortage of Indiana and Illinois strawberries on the market this summer. The drought of last summer, field men report, has combined with the present mild winter conditions to raise havoc among beds counted on to bear heavily this year.

The Illinois agricultural outlook report just issued by the college shows that the production of strawberries in the intermediate states was 42 per cent less in 1930 than the peak yield of 1928. In 1931, with a larger acreage than the present one, strawberries sold for $4 to $6 a crate. In view of the present shortage, good prices should be had for the next two years, Marsh believes.

"Good plants can be had at $4 to $6 a thousand and plant orders should be placed for this year within the next 30 days. Varieties most profitable for marketing in Illinois are Premier, Dunlap, and Aroma.

"Success in getting high yields depends upon soil fertility. Five hundred pounds of commercial fertilizer that is high in superphosphate is not too much to use on each acre of berries where the soil is of average fertility. Strawberry plantings do exceptionally well when they follow a cultivated crop which has been preceded by sweet clover. A well drained fertile soil so located as not to be susceptible to frost injury should be chosen for the patch."

—Chicago Tribune.

Gnats Killing Live Stock in Miss.

Clarksdale, Miss., May 11th—(Special to the Modern Farmer)—Buffalo gnats swarmed this entire section of Mississippi during the past three days and hundreds of mules and cows and horses are lying in the fields, many of them dying within an hour or so after being attacked by the pests. The loss in livestock alone is said to be over one hundred thousand dollars.

Convicts in Coahoma County are being used to bury the stock. Aid from the Red Cross has been requested. Farmers are draining their automobiles of oil and mixing with kerosene and greasing the hides of their mules to keep off these insects.

Cottonseed to be Refined on the Farm

At the Bureau of Standards in Washington, D. C. a new and cheap method of refining cottonseed oil has been developed, and any farmer can refine the oil in his backyard or kitchen. The cost is practically nothing so to speak, and soap can be easily manufactured from the by-product.

It has always been thought that that refining cotton seed oil was very expensive, but the new process has proven that this is not true. The Agriculture Department has been asked to have its field agents demonstrate the new method.

This will be good news to the farmers, for on practically every farm in the south there are lots of cotton seed, and in some instances going to waste, and since the new process will enable farmers to turn this seed into refined cooking oil, and also manufacture their soap and other products, it will mean thousands of dollars saved, that have heretofore gone to waste.

MRS. BERNICE THOMPSON'S LETTER

Dear Editor:

Please allow space in our farm paper to say a few words for Cruger Unit. We have an extra large membership with a few joining from time to time. Our motto is: Where there is a unit there is strength. On the 29th of March our good president called us in union at our home church, Hyman Chapel M. B. C., pastored by Rev. E. L. Drew. 1st in order was a big program. This program was conducted by the officers of the unit and when the president called us into the house of God I want to tell you we were led by the Spirit for the Spirit was with us from the beginning to the ending. Our program was of the best that was ever held in the South by colored farmers. Everything said was concerning farm life. We feel proud of our Modern Farmer paper. We want to say that we feel like we will stand united together as one as long as we live. Then too we have a wonderful president at our side, a man that is well prepared for the job and other good officers acting well on their part.

Notice! Notice! A few brief remarks given by Mrs. Bennie Tinnson. Dear friend, we are living in a progressive age. Here we are in the evening of the 19th century with all of the modern inventions and discoveries of the telegraph, telephone and electricity. There is no reason why the race should remain any longer in the dark. In unity there is strength; and when the colored people stand shoulder to shoulder, advancing the standard of the race in all industries, then will the colored man's prospects in business be as bright as those of the Anglo Saxon. In order that progress in these lines be made it is necessary that the colored men everywhere encourage one another, and when a colored man progresses in business not to envy his prosperity, but rather to be proud of him and his success, throwing away envy, jealousy and race hatred. Race pride must be cultivated. As the different nationalities: Irish, Jews, Germans and other people are recognized and respected only as they are united and held together, so it is necessary that the Negroes should stand united in helping one another by their speech, by pen, by vote and money. Therefore I say every member of the old and young, great and small, poor and rich, learned and unlearned, lets start out with year of 1931 to do all in our power to better our condition morally, mentally, spiritually and financially. Let us acquire intellect, morality and wealth and in the meantime, let us not fail to lay up for ourselves treasures in the Kingdom of God.

WOMEN URGED TO CONSIDER IMPORTANT FACTORS IN HOUSE CONSTRUCTION AND DESIGN

The National Committee on Wood Utilization has recently issued a release with the above title in which the opening statement is to the effect that the purchase of a house is the most important investment of the average family. Quoting Mrs. John F. Sippel, President of the American Federation of Women's Clubs, "Unfortunately, it is not the construction, and at times not even design and plan, which is given primary consideration by our women."

Many statements pertaining to the important factors of choosing a house, are contained in the booklet recently issued by the above committee, entitled "HOW TO JUDGE A HOUSE." The new publication deals with the construction, design, plan and equipment of the average small house, costing not more than $15,000. For further details apply to the Memphis District Office.

GIANT GOLD NUGGET, WORTH $30,000 FOUND IN WESTERN AUSTRALIA

Discovery of a gold nugget weighing 1.123 ounces on an abandoned claim in Western Australia, said to be the largest ever found in that section was recently reported, according to information from Consul General Roger C. Treadwell, Sydney, made public by the Department of Commerce.

An offer of L6,000 (equal to about $30,000) is understood to have been made for the nugget which measures 26½ inches by 11½ inches by 2½ inches, and which has been named the "Golden Eagle" from its resemblance to that bird.

FARMERS' SUNDAY AT VAUGHN, MISS.

A Great Meeting Reported By A. J. Jones, Secretary New Zion Unit

Vaughn, Miss.—A large attendance was on hand, Sunday, March 29th, to observe Farmers' Sunday. Rev. J. W. Elam of Mt. Zion Unit, addressed the farmers and their families on the subject: "The Good of Cooperation." He told us that the farmers must co-operate in every line of business and said that co-operation should begin in the home.

He was followed by Rev. Bradley, a pastor of the A. M. E. Church, and a coming young man, who spoke on the same subject. Both of the speakers told the audience many things worth while.

Rev. Edward George, our Market Agent, reported that New Zion Unit had ordered approximately $500 worth of supplies during the past six months and had saved nearly forty per cent by purchasing co-operatively.

The Treasurer's place on the program was filled by Bro. Nero Jones. He informed us that on the very first little order he had sent in he had saved five cents more than the cost of his dues for six months.

Dinner was served at three p. m. Let it be said that no one would have thought that such a fine dinner could have been prepared during these tight times.

After dinner the Rev. S. H. McClinton, agent for the Modern Farmer spoke. He was followed by the pastor of New Zion Church, Rev. G. B. Byos, of Yazoo City, who preached the farmers' sermon from the text: "Behold how good and how pleasant it is for brethren to dwell together in unity." The pastor was at his best and the service will live long in the memory of those fortunate enough to be present.

A collection of $9.41 was raised, half of which was sent to the National Office to help spread the gospel of co-operation. We pray God's blessing on Pres. Davis and also on Congressman DePriest, that they may live long and continue to work for the benefit of our race.

Great Development of Food Industries

(Continued from Page 1)

pickles, preserves and other processed foods, $20,000,000.

The fact that the state imports from elsewhere such a tremendous volume of goods, for which her soil and climate is admirably suited to produce the raw materials, is the first premesis upon which efforts to encourage the development of plants to turn out such products rests. Nearby markets, in many respects, especially from the standpoint of savings in freight are certainly points in favor of the development of plants at least to fill as nearly as possible local needs, and to branch out as the markets are expanded.

Much has been heard of agricultural diversification which is after all the backbone of the "live-at-home" idea. Industrial diversification is just as necessary for a sound development of manufacturing to furnish a steady payroll in the case of canning particularly in an otherwise dull period. These two movements go hand in hand, because agricultural diversification furnishes a greater variety of raw materials for manufacturing. The development of additional food processing plants offers a possibility for diversification in both fields at the same time which commends the program to full consideration by all interests.

The development of food industries is truly a measure of farm relief that extends as far as the program is expanded. With an additional demand for truck, berries, nuts, meats and other commodities which the farmer can produce in far greater abundance than is now the case, naturally his efforts will be extended to meet these demands. Thus, he will be provided with an additional cash market for his products and will be encouraged to meet the demands of the plants for raw materials.

After considerable study, it is believed the canning industry offers possibilities of development, and, conducted along strictly business methods, affords an opportunity for profit.

One of the avenues through which the department believes that it can be of service to industries such as canneries is in the line of marketing. Its "made-in-North Carolina" campaign is placing the products made in the state before the people and encouraging them to use these products.

At this time a consumers' or buyers' list of food products manufactured in North Carolina is being prepared by the department and will be ready for distribution within a few days. It is intended that this list will be a directory for use by merchants and purchasing agents of grocery and food stores to show the articles produced in the state that may be obtained. This list will be particularly helpful in introducing new products to trade in each community and the state at large.

This is an important phase of the "made-in-North Carolina" program, since it ties in advantageously with the publicity which has blanketed the state during and since the special week in September in an effort to popularize the state's manufacturers with her own people. As young industries capture home markets, they can be expanded.

Going further, the department has addressed communications to canners outside the state to ascertain the number that would be interested in establishing branch plants in North Carolina, some of which express interest in the suggestion and say that they are ready to come to the state if conditions meet their requirements. If these manufacturers see opportunity here, surely it must exist.

Of course, there are a number of plans which could be followed in the establishment of a cannery, but this is a matter for local consideration. The primary objective being to encourage within reasonable bonds or within conservative hopes of success the establishment of as many enterprises as have an opportunity for financial success.

RUSSIAN BRIDE CARRIES CACTUS AT HER WEDDING

A cactus was carried by a bride instead of the more usual bouquet of orange blossom at a Warsaw wedding recently. It was stated, in reply to inquiries, that the cactus brought good luck.

It will come as a surprise to most people to know that the cactus is "lucky"—so far it hasn't usually been credited with producing either good or bad fortune. Carried by a bride, indeed, it rather suggests a warning to the bridegroom, because the average cactus is fairly well provided with the means of self-defense.

The cactus is hardly likely, therefore, to win general favor as a bridal bouquet. The more usual orange blossom can, after all, produce reason for its claim to be a luck-bringer. According to authorities on folklore, it is appropriate at a wedding because the orange tree bears flowers and fruit at the same time. So the bride's orange blossom means that she will have a family and keep her good looks.

—London Answers.

Thirty-eight new clubs joined the National associaton of young farmers' club in England last year, making the total 108.

DEMAND FOR SAUSAGE GROWS.

In former years the principal market for dry or "summer" sausage was in the large cities and in industrial sections where large groups of foreign born and foreign descent nationalities congregated. A new trend noticed is that these easily served meats and similar foods are being sold in increasing quantities in other sections of the country.

Some kinds of dry sausage are smoked, continuing the preparation process that was prevalent during their origin in northern Europe, including Germany and the Scandinavian countries where Goteborg, Holsteiner, Salami and Cervelat are preferred. The French, Italian and other Latin races prefer unsmoked types with high seasoning of pepper and garlic for their Frisses, Milano, Capicolli, Peperoni and Genoa. Genoa and Salami must be corded with many

THE AFRO FARMER LOAN SHARKS

By W. H. Craighead

Located in nearly every rural community, especially the towns and villages of Virginia, is the loan shark—the Shylock whose business is to loan money at a very high interest. These loan sharks may also be in other Southern states; but I know that they are in Virginia as they are in the cities.

It may be of some interest to know how these Shylocks succeed.

They usually advertise that they will lend money on easy terms. This information reaches the farmers and they become ready victims and easy prey.

Farmers who do not raise many money crops, as a rule, and are constantly looking for some place where they can borrow money easily; that is, without being bothered with renewing notes, such as they would have to do at any bank.

They regularly hunt places of credit or someone to "carry" them until the next crop is made. Here is where the loan shark steps in. He will let them have almost any amount of money if they can produce any kind of security.

Charges Made For Money.

If a man wants to borrow $100, he will charge him $10 for lending the money. If he borrows $300 or $500, a charge of $25 or $50 will be made, depending upon the amount borrowed. Then the interest of eight or ten per cent is added.

Many times these loan sharks, have a store where they carry a general supply of merchandise, such as most farmers need.

After a farmer has borrowed $200 or $300, he feels somewhat obligated to spend it with this loan shark, and is charged 25 to 75 per cent more than any other store would have charged.

Thus the farmers become entangled in the meshes of these loan sharks and seldom ever free themselves afterwards. In some communities farm after farm has passed from the farmers to these human vultures because they probably could not understand or realize that they were being financially tied.

Use The Banks

Whenever farmers want to borrow money, they can get it from the banks with the same security that they offer to the loan sharks with only a charge of six per cent interest. As a rule, the banks do a reliable and legitimate business, while the majority of the loan sharks carry on a cut-throat business.

From The Baltimore Afro-American

As a result of a survey in the states of Miss. and Ala., we find that conditions are even worse than Virginia. In one county in Mississippi a colored farmer was charged twenty-five per cent by one of these sharks to simply make arrangements to secure a loan, and then the borrower had to pay 25 per cent interest-making a total of 50 cents on the dollar. The shark owned a supply store and forced the farmer to purchase his groceries and supplies from him at prices that were fully 35 per cent higher than he could buy at elsewhere. These practices must be broken up.

WHAT MAKES HUBBIES ACT "COOL' TO WIVES

Any number of women worry themselves unnecessarily over the fear that they are losing the affection of their husbands. This is because the symptoms of loss of affection so closely resemble other characteristic symptoms of much less serious ailments. It may be worth while, therefore, to list a few of the common symptoms of loss of affection with the relatively unimportant causes which in all probability lie behind them:

Failure to kiss a wife on returning from the office. Cause—Husband has spied the plumber's bill on the desk and is impatient to discover how much he charged this time.

Irritability. Cause—Husband is painfully aware of the fact that he should never have combined fried oysters with lemon meringue pie at lunch.

Inattention to conversation. Cause—Husband is trying to remember whether he turned off the switch when he put the car away and if today is the 18th or 19th of the month.

Failure to comment on new dress. Cause—As a matter of fact, husband doesn't realize it is a new dress, and if he did be wouldn't quite know what appropriate remark to make.

Marked attention to other women. Cause—Husband is simply making a heroic effort to be polite to wife's friends and overdoes it.

Lack of enthusiasm over wife's proposal that they go out together and pay a call. Cause—Husband is thinking that this is his bath night and wondering if they will get back in time.

Coldness to her suggestion that he read aloud while she darns. Cause—Husband is asking himself how he can go a whole hour or two without smoking.

Sarcastic remarks. Cause—Husband, acting in accordance with the strange sense of humor that is common to all husbands, harbors the delusion that he is being very funny.

Indeed, too often a wife jumps to the conclusion that she has ceased to count in his life when all that is wrong with her husband is that he has lost his taste for codfish balls as a breakfast relish or can not get over the fact that he could have saved money if he had bought Amalgamated Enterprise comnon today instead of a week ago.—Baltimore Sun.

SCORZONERA, BLACK OYSTER PLANT

Many gardeners consider the black-rooted oyster plant, or salsify, superior to the white-rooted types. The black-rooted salsify is scorzonera, a near relative. It is claimed to have larger and better flavored roots than the white types. However, it is not as easy to grow as the older varieties but once started will flourish under good cultivation. The white varieties will be found more reliably satisfactory in the home garden and of those the best type is the Mammonth Sandwich Island, which makes the largest roots of uniform size and quality, which has a real oyster flavoriag when cooked although it is necessary for the roots to be frozen to bring out the flavor.

Whether the black or white oyster plant is grown, it is a very satisfactory vegetable to grow in the home garden as it takes little room to develop and the roots can be dug in the spring or during the winter, whenever there is a thaw, and furnish a decided change in the vegetable menu. A convenient way of handling this vegetable is to dig the roots and pack them in a box with earth in the fall. Leave the box outside until the roots have been well frozen and then bring indoors and let thaw and use the roots as desired.

The black salsify, or scorzonera, should be treated in precisely the same way. Salsify either black or white, should be cleaned and scraped in water which has been acidulated with vinegar. Otherwise the milky juice will turn black and give the vegetable an unpleasant, dirty appearance. It is cooked in the same manner as parsnips, steamed, boiled, creamed or fried, and is also excellent dipped in butter and fried in deep fat like eggplant. The cooked roots can be grated or chopped and made into balls or patties and fried like oysters to carry out the vegetable oyster idea.

Sow the seed as early as the ground can be worked and thin the plants to three inches. Then let them go until digging time in late fall, taking care only to keep down the weeds. As the roots are long and slender, the thinning process is particularly essential to get the largest growth possible out of the roots. Give them good rich soil.

Try both the black and the white and decide which you deem the superior flavored of the two. This vegetables deserves more general use in the garden as it is easy to grow and has a flavor different from other vegetables.

POTLIKKER QUARREL HAS ECHO IN BEST WAY TO COOK FOWL

Tho assembled Hoosiers who held up their dinner for a half-hour while their chicken a la Maryland was being converted into chicken a la Indiana may not rouse the nation as the potlikker controversy roused the south, but they raised a culinary question of importance. Chicken a la Maryland is chicken which is rubbed with pepper and salt, dipped first into egg and then into flour, before being fried. Chicken a la Indiana, it appears, is dipped in flour, but not in egg. The Hoosiers want no batter to bite through before reaching their chicken.

Both Hoosiers and Free Staters corrupt their chickens unnecessarily. The essence of good fried chicken is the chicken; and the fat in which it is fried is almost equally important. The Italians use olive oil, which is, in its way, excellent. The south uses pork drippings, which are superb. We do not know what the middlewest uses, but we suspect that it has taken into the evil way of using synthetic substitutes for butter and fresh pork drippings.

The old Cape Cod cooks put a sliver of onion and a big bay leaf in the pan along with the chicken. Sometimes they begin with a bit of water in the frying pan, but the essence of the process consisted of frying in the best butter, fresh from the churn. Even pork drippings are hardly an adequate substitute for that.

Lastly, as a matter of fact the wisest cooks never fry their chickens at all. If chickens are young and tender enough to be fried they should be broiled.—New York Herald-Tribune.

"ORGANIZE TO CURB ILLS" LEGGE TELLS FARMERS

The farmer's lack of an organization to battle on even economic terms with the collective organization of business is the basic trouble with agriculture in the United States, Alexander Legge said today. The president of the International Harvester Company, who recently relinquished his post as head of the federal farm board, spoke before the Junior Association of Commerce at the Hotel La Salle. He said:

"The farmers of the country can be regarded as 6,500,000 factories working individually, and help for them can come only through organization.

"Working individually, the farmer has failed to reckon of surpluses of certain farm products existing. He has gone on producing wheat, for instance, without realizing that there was more than enough wheat on hand. The income from wheat is only 8 per cent of the American farmer's income, yet he goes on producing it blindly."

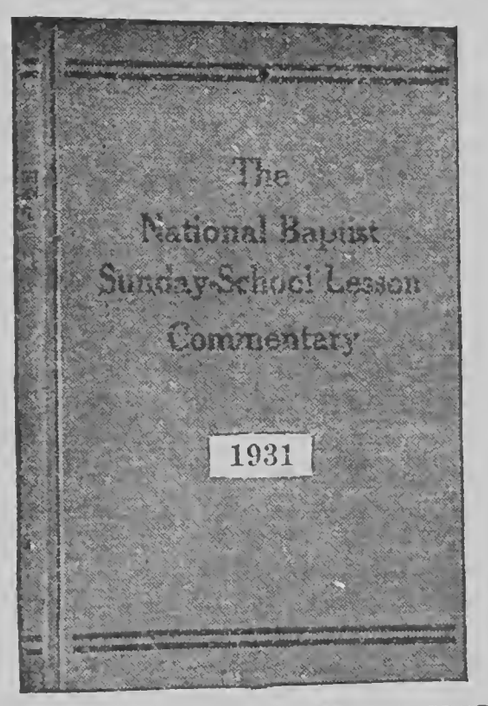
Solution of the farm problem, he declared, is a national and not a class problem, one in which every citizens must work for the salvation of the basic industry of agriculture.

Chicago Evening American

Mr. Legge continues to warn the farmers, and urges organization for their guidance and protection.

TOLE GETS COTTON GROWERS PRIZE

Mr. James Tole of Decaturville, Tennessee, was awarded a prize of twenty-five dollars for producing 2,660 pounds of seed cotton on one acre of ground. This amount turned out exactly 1040 pounds of lint cotton. This is said to be the record yield.



SUNDAY SCHOOL LESSON Commentary

For 1931

Every Sunday School Teacher Should Have It

SIX REASONS WHY YOU SHOULD USE IT:

First: It is the production of your own National Baptist Publishing Board which gives employment to more of our people than any similar concern in the United States.

Second: It is purely baptistic and orthodox in every particular.

Third: Its doctrines are unquestioned, and the Biblical requirements are stressed in a manner to make it absolutely dependable.

Fourth: None of the modern theories leading to skepticism are admitted.

Fifth: It aims to be true to the teachings of Jesus and whatever there is presented which has not the "Thus saith the Lord" is discarded as unsafe and destructive of the best interests of mankind.

Sixth: Thoroughly adapted to the uses of our Sunday school constituency, it stands as a beacon light to all those who would like to rise in the scale of intelligence and demonstrate the qualification necessary for the accomplishment of the "Great Work" devolving upon us as a people.

"OUR SLOGAN"

STAY ON THE FARM IF YOU'RE ON IT! GO BACK TO THE FARM IF YOU'RE OFF IT!

THE LAW

"It is hereby declared to be the policy of Congress to promote the effective merchandising of agricultural commodities by encouraging the organization of producers into effective associations under their own control.

The Board is authorized and directed—to promote education in the principles and practices of cooperative marketing—to encourage the organization, improvement in methods, and development of effective cooperative associations." (Public—No. 10—71st Congress. Sec. 1-5.)

THE GOSPEL

"This law is predicated upon the ability of the farmer to manage his own business, once he is organized to do so. Cooperation is the key to it and only in exceptional cases can the Federal Farm Board have any dealings with a farmer who is not a member of a producer-owned and producer-controlled marketing unit." Hon. Sam'l R. McKelvie, Member, Federal Farm Board.

The National Federation of Colored Farmers believes that the Colored Farmers of America should own and control their own co-operative associations.

"Co-operation With All—Affiliation With None."

EDITORIAL

COLORED FARM AGENTS TAKE NOTICE

We are publishing elsewhere in this issue an editorial from the Houston Informer and Texas Freeman about a bill recently introduced in the Texas Legislature which would legalize the holding of a county election every two years to determine whether or not the county desired to retain its farm and home demonstration agents. The Informer calls it a "dangerous bill for Negro agents." It is. If that bill becomes a law, Texas will have no colored county agents four years from now.

Texas is not the only state where some are endeavoring by hook or crook to dispose of Negro agents. We have recently heard from Mississippi. Bolivar County, in that state, has the largest Negro farm population of any county in the United States, yet the County Board of Supervisors failed to make an appropriation for the continuance of the colored extension work. This county has a white farm population of 5,716. It has a Negro farm population of 38,977. The wise Supervisors ignored the Negro population altogether. They appropriated the money to keep a white farm agent actively at work among the white farmers who number 1,559—three hundred and sixty-eight full owners,—but would not appropriate a dime to employ a Negro agent to work among the 11,314 colored farmers,—415 of whom own their farms in full. This is a sweet sample of justice the government knows about but can do nothing about. So there you are.

From now on it is going to be up to the agents to protect their own jobs. The most simple-minded know the agents are needed wherever employed, and in a thousand and one counties where they are not employed. But it is up to them to prove to the "powers that be" that they are not only NEEDED but that they are also WANTED. They must gain the respect and support of those they are working for—those they are helping. When they do this, it will not be so easy for the "powers" to make it hard for them and attempt to kick them out.

We are acquainted with some Negro farm agents who are too little and too narrow for their jobs. They figure ON the farmer instead of WITH the farmer—they TELL but never SHOW—they are good WRECKERS but poor BUILDERS. They do not know that the average Negro farmer, who is a successful farmer, has more good, old hard common sense than any TWO agents. Such demonstrators are hurting the business of farm demonstration and we are inclined to believe that they are the ones who are wholly responsible for the lack of support the work is receiving. Luckily, there are not many such in existence.

And in conclusion we will say this:—Negro farm and home demonstration agents will realize ere long that the National Federation of Colored Farmers is the best friend they can find. A hint to the wise should be sufficient.

A LETTER FROM GREENWOOD, MISS.

We publish the following letter received from Greenwood, Miss., home of the "Commonwealth", the paper which recently stated in an editorial that the Negro farmers of that vicinity were not "capable of handling any business of any kind" and that they had about as much need for a farmers' co-operative organization as they had for "swallow-tail coats and stove-pipe hats."

National Federation of Colored Farmers,
Vincennes Hotel, Chicago, Ill.

Dear Sirs:—If you please, send us price list of clothes, dry goods and shoes. And we will say that on the order which we, the Mt. Everett Unit sent for groceries, an order of $36.69, we SAVED $21.28 COMPARED WITH THE PRICES IN OUR TOWN after all expenses were paid. We also want you to send some application blanks. We can nearly double our membership.

Yours truly,.....

This letter is on file. Anyone can see it who wants to see it. This Unit has not only doubled its membership since the date of this letter. IT HAS INCREASED ITS MEMBERSHIP FOUR TIMES. These farmers may not know how to handle business but they certainly KNOW WHEN THEY ARE BEING "SKINNED."

THE "DESIRE" IS THE THING

Not long ago we read an advertisement which said among other good sentences that if you could get a man to desire—to want a certain thing badly enough you would find him willing to work his head off to obtain it. Nowadays most people want silverware instead of wooden spoons—they want tablecloths instead of oilcloth—they want lettuce-salad, fruit and canned goods instead of fatback and plain corn bread. They want new automobiles, radios and washing machines. They want electric power instead of so much muscle-power. They want—they desire Because we want and desire so much is the reason why here in America we work so efficiently, faithfully and swiftly.

American Negro farmers desire some of the good things of life too. They, also, have sense enough to know that they cannot obtain these things unless they work hard and think hard. What discourages them, is the fact that so many who claim to know them best—who claim to be their friends—are forever trying to prevent them from obtaining these good things they want and should have. They are told that some things are "too good for them." Is there anything in the world "too good" for a good man to want to have?

Not long ago a Negro farmer built a new barn. It was a good barn and he was very proud of it. He was showing it to his white neighbor who exclaimed: "That's a good barn all right, but it's too good for a n——— to own!" Was this jealousy or just plain meanness! This farmer desired to build a new house. He had money enough in the bank to pay for it. His children were all grown and he thought that his good wife and himself should enjoy, during their latter years, some comforts they had worked for and wanted so long. Luckily, he inquired in advance about insuring the new home. He was informed that it just couldn't be done. No insurance company would insure a house such as he proposed to build in his community. They would insure it if a white man owned it but they would not insure such a valuable house owned by a Negro! And then some wonder why the best Negro farmers often pick up bag and baggage and move from the communities where they were born!

No community, state or section will ever progress or prosper much unless all citizens have an equal opportunity to desire, to labor and to reap the rewards of their desires and labor. A Negro farmer who wants a radio, a telephone and a good auto is a better citizen than one who is satisfied with a banjo and a saddle-mule. A good American citizen will encourage his fellow-citizen to get something and to be somebody. The fittest is going to survive anyway.

(From Houston Informer and Texas Freeman)

A DANGEROUS BILL

Recently there was offered to the Texas Legislature a bill which has for its purpose the requirement that every two years there be conducted a county election to determine whether or not the farm and home demonstration agents in the county shall be continued. Practically this bill, if adopted, would require the nearly fifty colored agricultural and home demonstration agents in Texas to come up for election every two years. At the present time plans for the continuance or discontinuance of these agents are worked out by chambers of commerce, county commissioners' courts, the Negroes of the county, and the extension authorities, the head of the Negro work in Texas being Prof. C. H. Waller of Prairie View.

The Houston Informer and Texas Freeman believes that this is a dangerous bill for the Negro agents. In fact, we have grave fears that, if such a bill is adopted, it may mean ultimately the discontinuance of most of the colored agents. It is not always an easy task to convince the few men who make up the control of the chamber of commerce or the commissioners' court, as the case may be, of the importance and necessity of having well trained Negro men and women to work with the colored farmers in a particular county. It would be well nigh impossible to convince a majority of the white citizens of the county every two years of such importance and necessity. The difficulty would be increased in every case where any of the funds for maintaining the agent came out of the county treasury.

It seems to The Informer and Freeman that it would be far better to leave the matter as it now stands, and let the leaders of the two races in a particular county, in conjunction with the extension authorities, work out this question of whether these agents will be continued or discontinued. That these agents do improve the lot of the Negro farmers in counties where they work there can be no question; but the winning of popular approval at the polls every two years could not be counted upon merely because this is true. There are too many things besides merit which so often enter into our elections of all kinds.

Then, too, as such a procedure progressed it would be increasingly more difficult to get well trained and consecrated people to go into this extension work, if they knew that their continuance in the work depended upon a general election in the county every two years. Instead of the selection of the agents on a basis of pure merit, as is generally true at the present time, politics would more and more enter into the equation. The result would be a situation which would not be for the best interests of the Negro farmers of the state. And The Informer and Freeman feels that the bill in question ought not to pass.

FOLIAGE PLANT FOR FOOD

In old-time gardens and occasionally seen nowadays, although almost out of commerce, are the colored kales, which show pinks, reds, yellows and purples and hold their color in the garden all winter. They are, however, in their original state, a vegetable of the cabbage tribe and one of the few vegetables that may be gathered from the garden all winter as freezing doesn't harm them.

The ornamental-leaved kales are a little too coarse for the flower garden and not of as good eating quality as the green-leaved types so they have no well-established garden position except as curiosities but the green-leaved kales and some of the purple-leaved types are valuable winter vegetables which have attained a distinct place in vegetable stores during the winter months They are as easily grown as cabbages in the home garden.

They should be treated in the same manner as late cabbages and a packet of seed should be ordered for trial. They are ornamental with their huge leaves curled and frilled like parsley and of ferny texture. Handsomest of the garden sorts is the Tall Green Scotch Curled, which makes a three-foot stalk crowned with a palm-like effect of light green densely curled leaves. The dwarf green curled has much the same type of leaves but is deeper in color and lacking the stature of the tall sorts. The Jersey or Thousand Headed kale is valuable for poultry raisers as its offers a supply of green food for fowls during the cold months. This grows from six to eight feet tall with smooth leaves and is not of kitchen quality.

A few plants of the curled varieties will do much for the decoration of the vegetable garden during the summer and continue a bright spot during the winter months. They require exactly the same conditions of soil as the cabbage and cauliflower for success. They are cooked in the same manner as cabbage and have a delicate flavor of the cabbage type. They do not become as delicate in flavor as desired until after they have had a good frost and in the market they are usually found frozen solid, which does no harm. Try a few heads of curled kale for ornament and food value this year. It will be an attractive vegetable the year around.

HURD CHAPEL UNIT

Avalon, Miss.
May 2. 1931.

To the Modern Farmer:

We, the members of the Hurds Chapel Unit of Greenwood, Mississippi are glad to say that we had a great time Sunday March 29th in our Anniversary Program. Rev. D. W. Higgins, 111 Stone St., Greenwood, preached for us. He chose for a text John 5:39, from which he preached a strong sermon. Mrs. M. A. Redd read a paper on the Principles for which the N. F. C. F. Stand. Our hearts were made to burn while Rev. Higgins and Mrs. Redd talked to us by the way.

Respectfully,

R. W. Woodard, Chairman
George Blackmon, Vice Chr.
Gus Moore, Market Agent.
T. W. Woodard, Treasurer.

TREE-PLANTING PROGRAM BIG

Trees are to be planted on 9000 acres in Scotland this year, according to the program of the forestry commission for Scotland. Twelve thousand men are to be employed in the work, and at least 340 farms will be converted into extensive forests.

Building construction programs being started throughout the world will involve a total expenditure of $8.000,000,000.

ATTENTION COLORED FARMERS

The National Federation of Colored Farmers is receiving hundreds of letters from Colored farmers requesting all kinds of aid and information. We are willing to do everything we can for all the Colored farmers of America. It costs money, however, to maintain offices and our expenses are becoming so heavy that we are compelled to discontinue supplying information to those who request it who are not members of the Federation. If you have faith enough in the organization to believe that it can aid you then you should be willing to join it and help support it Isn't that so?

Several County units have organized and elected officers but have not sent in their membership dues. These units are eligible to membership in the Federation until dues are paid. Be helpful. Co-operate. Pay up. "All for each and each for all"

ROCK ISLAND SERVES NEW FARM OF 20,000 ACRES

From Rock Island Magazine

The story of Hollandale's rise from the bottom of the lake to a thriving, prospe ous farming community which, on September 4, will celebrate the advent of two rail lines, sounds very much like a fairy story. But it is far from that; it just shows what can be done when "will and dete mination" are put to work.

HOLLANDALE, MINN., the thriving farming community built on the muck land of a lake bottom, will come into its own on September 4, when it will celebrate with considerable ostentation the formal inauguration of a train service by two lines. The Rock Island and the Milwaukee have just completed lines into Hollandale, and the celebration on September 4 is to be a joint affair. Both roads will run special trains into Hollandale for the event and President J. E. Gorman will head the group of Rock Island officials in attendance The governor of Minnesota will be on hand to further dignify the occasion as well as the mayor of St. Paul. It will be just another case of "all roads lead to Rome," for it is predicted that 10,000 people will be there to witness the celebration.

Hollandale, which by the way derived its name from the fact that the intensive farming methods of Holland are being followed, and also because most of its farmers are of Dutch descent, has been built on the bed of old Rice Lake, nine miles east of Clarks Grove. The Rock Island started its line into Hollandale from Clarks Grove the latter part of July and it will be completed in time for the celebration, September 4.

Transformed in Seven Years.

Seven years ago the site of Hollandale was a swampy marsh covered with cattails and other marshy vegetation, where mosquitos and bull frogs held full sway and little dreamed that their choice breeding place would be transformed into a clean, dry, thrifty farming village. But, Hollandale, in the course of short seven years, is all of that.

Fifteen thousand acres of swamp land have been drained and made ready for the intensive crops which are increasing year by year. Over 6,000 acres of this land are now under cultivation and each month shows this acreage on the increase.

It was in 1922 that the Payne Investment Company of Omaha, Nebr., of which G. H. Payne is president, which company specializes in improving swamp land all over the county, put in a series of drainage ditches which successfully drained the water from the old lake bottom. As soon as the soil was dry enough cultivation was started. Two families appeared on the scene that year. The year after there were eleven families. Last spring, four years after opening up this tract of land, there were nearly 300 families living in the community that is known as Hollandale.

Intensive Farming Prevails.

Hollandale is chiefly an intensive farming community. The promoters of the settlement employ by the year two crop experts, one from the University of Illinois and the other from the University of Indiana, to analyze the soil and instruct the farmers in the best methods of crop production in Minnesota.

While there are a few miniature corn fields and strips of pasture land for the small blooded herds some of the farmers are raising, Hollandale farmers are specializing in potatoes, celery, onions, cabbage and beets, and the best experience of centuries of lowland farming from the old country, blends with the modern knowledge of America's agricultural colleges.

In 1923 the total production of produce approximated 500 cars; it doubled in 1924 and in 1925, 1,500 cars of choice celery, potatoes, onions, cabbage and beets came out of the former swamp and was shipped to the various produce centers of the middle west.

This year the harvest from the former swamp will total 3,300 cars; or, to be more specific, 200 cars of celery, 700 cars of onions, 400 cars of carrots, 400 cars of cabbage and 1,600 cars of seed potatoes will be shipped from the reclaimed lake bottom.

Hollandale is a community where every man takes a pride in his home and his farm. Each home is neat and well kept with its short clipped lawn and pretty flower beds. Behind and beside every house stretches the farm. These farms average about 23 acres.

There are three schools within a two-mile radius, a church, and the business square. Hollandale is organizing its own telephone exchange, and has its own co-operative marketing organization.

The farmers of Hollandale know the secret of lowland soil fertility. The alluvial deposit of the old lake bed, made fertile by hundreds of years of vegetable deposit, is almost identical with the rich bottom land of their native country. Hollandale is prospering, the spick and span condition which prevails around the homes, and the neat garden farms which yield in abundance, are the marvel of Southern Minnesota grain and dairy farmers who have come miles in the last two years to visit the community.

Farming is the business of the community. Every farmer is a member of the Hollandale Co-operative Marketing exchange, and every bit of his produce is sold through that organization.

Developed by G. H. Payne.

G. H. Payne of Omaha, Nebraska, president of the Payne Investment Company which has developed this tract has sold the farms comprising it largely to Danish, Swedish, German, Dutch, Irish and Yankee farmers, who have erected modern homes. The methods used in cultivating and producing are said to reflect the application of the most modern scientific agricultural principles. There is probably not another tract like it in the Middle West, if in the United States, and the products are shipped to all sections of the United States.

Yields from the Hollandale colony are estimated as follows: Potatoes, 300 to 500 bushels per acre; onions, 400 to 700 bushels per acre; cabbage, 10 to 20 tons per acre; and other vegetables in proportion.

All of the farming land has not yet been sold.

SAUSAGES HAVE BECOME STAPLE OF SUMMER DIET

VARIETY TO SATISFY NATIONAL TASTES.

Meat by-products and kindred foods ready to serve with little additional preparation in the home have become a standard part in the city diet of the United States. Proof of this is found in a statement by one of the leading United States packing houses which reports that a 1930 estimate places sausage manufacturing at approximately 1,000,000,000 pounds per year.

"Bologna," "Frankfurt," "Milano," "Genoa," "Roma," "Thuringer" and "Holsteiner" are typical American made sausages which have taken their names from the cities and localities where these kinds of meat by-products first were made. In addition the wrapping of pound packages of butter in four separate quarters, the merchandising of cheese in small tin-foil packages and glass jars and similar merchandising of salad dressings and sandwich fillers are all a part of food preparation methods popular in apartment modes of living.

Annual Consumption.

This billion pounds of sausage is the amount estimated as the production in meat packing plants that operate under federal meat inspection and does not include the large additional amount made and sold through farmers, retail meat shops and in small local sausage factories.

Fifteen pounds per person per year is the estimated sausage consumption annually in the United States. Fresh and cooked sausage, termed "domestic" sausage, form the bulk of the industry, although dry sausage is said to be growing in popularity. Frankfurts of what are often known to customer and retailer as wieners account for 30 per cent of production of sausage in inspected plants. Bologna is next in these packing houses and fresh sausage is third.

One Chicago packing house recognizes the particular tastes of various nationalities and satisfied them with a sausage line of nearly 150 different kinds. Some of those most popular in addition to those already listed include, Salami, Mortadella, Peperoni, Italia style ham, cottage roll, minced specialty, tongue and blood sausage, liver sausage, crystal pan souse, head cheese and jellied tongue.

BUSY COOSE DOES HER BIT WITH TWO EGGS IN ONE DAY

There is one resident of Moline, Ill., who is doing more than her share toward relieving the business depression. She is a goose owned by Otto Soelzer, 1009 Forty-eighth Street and her claim to fame is that she produced two eggs in a single day.

The Rock Island railroad has instructed its track workers not to destroy nests of quails or other birds during spring and summer cleanings of the railroad's right-of-way.

ILLINOIS STATE LEGISLATURE PAYS RESPECT TO CAREY

The House of Representatives in regular session assembled on April 2nd; adopted a resolution expressing its regrets at the death of Bishop A. J. Carey, and extending sympathy to the bishop's family. The resolution was introduced by Hon. William J. Warfield which motion was seconded by Hon. Harris B. Gaines. The house then adjourned in respect to the memory of the late bishop.

COLORED MAN LYNCHED NEAR REDWOOD, MISS.

Eli Johnson was lynched near Redwood, Miss., last Sunday, April 5th. Hundreds of families disgusted over the manner in which our race is treated, are now leaving Redwood section for points in the east and west. During 1930 the state of Mississippi held the record for the greatest number of Colored people lynched in the twelve month's period. Redwood is near Vicksburg.

PROMINENT COLORED FARMER HANGS HIMSELF

Mr. Rose Richardson, a prosperous farmer living near Whitaker, Michigan, hung himself early Saturday morning, April 4th, in a barn on his farm.

The family and friends of Mr. Richardson are unable to account for his act, as his affairs seemed to have been in a very satisfactory condition. Funeral services were held Tuesday, from the A. M. E. Church at Ypsilanti, Mich.

ARGENTINA'S RECORD CORN CROP

According to information contained in "Foreign Crops and Markets" of the Bureau of Agricultural Economics, Argentina appears to have the largest corn crop in the history of the country. The government has not issued the official data on the crop but the acreage is greater than usual, according to the "Times of Argentina," at Buenos Aires.

COAL-PIT PONY MAKES RECORD

"Tomy," a pet pony 27 years old, has just terminated what is believed to be the record for remaining underground. For fully twenty years he has worked in a coal mine at Patna, Scotland, at a depth of 1248 feet below the surface, and in that time has only twice been at the surface, during the shut-downs of 1921 and 1926.

HALF CENTURY OF PROGRESS AT TUSKEGEE IS RECOGNIZED

From Washington, D. C., Star.

Progress for the colored race in the half century whose close was celebrated recently by Tuskegee Institute in Alabama is a subject of praise by the country. A growing place in industry is found to have had at least a part of its origin in this institution, and the labors of Booker T. Washington and his associates are felt to have produced results.

"It was Dr. Washington's great genius for promoting interracial friendship and understanding, no less than his ability as an educator, that gave Tuskegee Institute its high character and purpose," in the opinion of the Birmingham News, which adds that "his worthy successor Maj. Moton, is an able, thoughtful man, and he has carried on successfully the work that was begun by his predecessor." Of the institution itself, that paper offers the estimate: "Tuskegee Institute is something more than a distinguished and successful educational institution. It is of a sense, a symbol. It is a symbol of the progress of the Negro race since it emerged from slavery, and in its purposes and its achievements it represents the highest ideals and the best thought of the leaders of the race. As such, it has a significance for the white race as well as for the Negro. For the best thought of the responsible leaders of the Negro race for its advancement and for its cooperation with the white people is not different, in the main, from the best thought of the white race on that score."

"How to find employment for the people, a niche doing what they can do best,'" according to the Topeka Daily Capital, "is a riddle which will not be solved in a day. Patience and sympathy are needed. But there can be no question of the immense service that Tuskegee Institute has rendered the South as well as the Negro in half a century, all of that time fortunate to be under the charge of two such men as Booker Washington and Robert R. Moton."

* * * *

"Tuskegee emphasizes three things," says the Rochester Times-Union, enumerating these as "training for industry, agricultural development and interracial goodwill." That paper points out that "more than 20,000 graduates and former students, in addition to literary training, have acquired a working knowledge of one of the 42 trades taught there." The St. Paul Dispatch holds that the institute "stands as a monument to the efforts of this remarkable teacher, Booker Washington whose aim was to give his people a practical education along the lines of industry and trade, leading to ultimate economic independence." The Providence Journal pays the tribute that "the extent to which his earnest effort attracted financial support was a notable achievement," and that "Tuskegee stands today as his monument"

"Tuskegee, in the beginning," states the Pittsburgh Post-Gazette, "represented the ideas and ideals of one man. Today it is firmly established as an institution of national importance. It can open its second half century with the assurance that it has the confidence of the country." The Montgomery Advertiser, feeling that "at the end of 50 years it finds itself very much less on the defensive than in the beginning," concludes that "it has developed a solid strength a ...re gth which is derived from the good-will and the good wishes of two fundamentally different races living side by side under the same Government and seeking life from the same soil and inspiration from a common national tradiction." The Detroit Free Press thinks that "while the material growth has been impressive, what is far more notable is the contribution the school has made to the education of the colored race in this country along practical lines, as well as to human relationships."

"Interracial relations and interracial problems," suggests the Roanoke Times, "deserve the best thought and careful attention of the ablest leaders of both races. Whatever tends to contribute to a sympathetic and friendly attitude is to be regarded as a useful and helpful attributo of citizenship and respected as such. There are many difficulties and serious problems yet to be solved before the Negro achieve that economic and social status of which he is capable. It will be a matter of years, possibly many years, before that is accomplished. But progress is being made and the Negro has a right to feel encouraged and inspired as he looks back upon the past and observes that he has come a long way in a comparatively short time"

* * * *

"Several thousand graduates, records the San Antonio Express, "have taken the Tuskegee idea to other communities; schools similar in aim have sprung up all over the land. As a result the Negro generally is afforded something approaching equally of educational opportunity. In recent years he has entered industry in unprecedented number and largely has made good. To a considerable degree he owes that success to Booker T. Washington. The Tuskegee experiment has succeeded beyond the founder's expectations, perhaps, though hardly beyond his dreams. The institute's civic and patriotic services through the past half century must be appraised equally high."

"Half a century of fruitful labor have shown the soundness of the lines on which it was founded." says the Philadelphia Evening Bulletin, while the Atlanta Constitution, linking with this school the institution in its own city, maintains that "to them the people of the South owe grateful acknowledgements of their sanity, industrial philosophy, educational methods and contributions to harmony and co-operation." The Kansas City Times believes that "it is but reasonable to expect that the advance in another half century will be comparable with, if not superior to, that in the last;" that "there is assurance in that condition for all America."

"The founding, half a century ago," according to the Youngstown Vindicator, "was a big undertaking which aroused general interest. It was looked upon as an experiment with a theory of adjustment between the races. Time has demonstarted the correctness of the theory, not in the education of the Negro, but in the number of movements started by the institute. Among these were the Farmers' Conference, the Farm Demonstration Service, now taken over by the United States Department of Agriculture, and the National Negro Business League, the president of which is Dr. Robert Moton, principal of the institute. The research work done by Tuskegee has made it an authority on all that pertains to the Negro race. The contribution made to better conditions of the race can never be estimated, but the changes that have come in the years since the institute was founded point to its influence and service."

Harmony Prevails As Alabama Pythians Re-organize

Birmingham, Ala., May 8—All is quiet in the Pythian Camp today and peace and harmony reign as Grand Chancellor Oscar W. Adams leads a delegation to Montgomery to receive the final disposition of the bill for services as submitted by the referee. The members of the organization are working together perfectly and much good is expected to be accomplished in the group now that matters are coming along nicely.

It is the opinion of those in charge that the fees, as set by the lawyer in charge of affairs in the interim are entirely too high for the short time that he has been handling their business. W. H. Carter, treasurer of Tuskegee Institute, who qualified as receiver is in charge of the general re-organization.

The Endowment Department has been turned over to H. S. Strawbridge, local man, who has been selected to act as secretary of that department. Practically all of the equipment has been moved from the capital city and it is expected that a the task of paying up a number of death claims will be completed within a few days.

Brother-in-Law Asks For Rent, Receives Knife Blade

Birmingham, Alabama, May 10—John A. Dixon, 351 Pittman place, is in the hospital in a grave condition due to a stab wound just over the heart. Dixon admits he had been drinking a little and asked his brother-in-law for a payment on rent for the several months that he had lived with them. His brother-in-law Roy Maddox cursed him. Whereupon Dixon walked away and as he stood in the door way his brother-in-law drove a knife first into his back and as he swerved around, into his chest.

BONUS AIDS MAN WHO WAS NEVER IN SERVICE

Cordele, Ga. (CNS)—John Henry Dixon, was on the chain gang, and the warm spring days began to bear on him mightily. He wanted liberty and wanted it bad. Then came the bonus and solved his problem, and this is how.

Before John Henry Dixon broke the law he had taken unto himself a common law wife, she returned to her legal husband, the man the minister had married her to, and won her way into favor. He entrusted to her several hundred dollars of his bonus money. Then she and John Henry Dixon's mother worked it out together and the sheriff's office was paid the necessary dollars to release John Henry. She purchased herself a hat, shoes and clothes and, together with John Henry, she caught a train. Today her husband is mourning the loss of his money and vowing vengeance on the pair.

And that's how the bonus served John Henry, who did not fight, but who may have to yet.

CAN'T READ NOR WRITE BUT KNOWS FIGURES

COLDWATER, Miss.—Although barely able to read and write, Gene Hoskins, regarded as a mathematical prodigy, is gifted with mental faculties that enable him to answer many questions of which he had no previous knowledge.

Almost any query as to dates is answered quickly and accurately by Howe. He also has gifts apparently which enable him to answer questions regarding nature that are unknown to most men. Scientists say that he apparently has unusual psychic gifts.

COW FINDS GOLD RING

Farmer Recovers Lost Jewelry In Strange Manner.

ASHLAND, Ky., March 28.—from Pine Bluff, Ark., have been lost a heavy gold ring which he prized as a family heirloom. Several days later he noticed a shining object in one of the front hoofs of the family cow. He investigated and found the ring caught in the cow's toe.

Harlem Upset Over Double Murder and Suicide

New York (CNS)—A double murder and suicide was perpetuated with three pistol shots by a jilted man, Samuel Gill, of 232 West 137th St., here Tuesday.

Declaring that Frank McKeever, should not eat pork chops off a table he had bought for Corrine Young, Gill walked into her apartment at 129 East 100th Street at 1:45 p. m.

Corrine talked back and Gill drew a revolver and killed her with one bullet in the back of the head. McKeever dashed for a revolver, but Gill winged him with a bullet thru the right arm and lung. Then he fired into his own throat, severing the jugular vein.

ECONOMICS AND THE RACE QUESTION

By James Oneal

(Editor's Note: This is the first installment of a new booklet, "The Next Emancipation," written by one of America's foremost historians, James Oneal. It has been published to sell at cost, 10c postpaid, by the Negro Labor News Service, P. O. Box 66, College Station, New York City, or 2653 Washington Blvd., Chicago.

To live a happy, free life, with abundance assured to all; to have education and leisure; to be free of the curse of debt; to know that our children's future is assured; to be comfortably housed; to have work in pleasant surroundings; to enjoy ample incomes with a few hours of useful labor each day; to live in peace with our fellows; to know that men are no longer beasts to torture and lynch the weak; to breathe the free air with human beings enjoying all these rights, is the task of the next emancipation.

The Negro was a slave and now is "free". The white worker was a slave and now is "free." How do we know? We should know from history. The Negro was torn from his home in Africa and sold to white masters in America. What the masters did they said was law. It was law, for they and their lawyers made the law. Their officials enforced the law. So for nearly 250 years the Negro and his children were the bondsmen of white slave owners.

But the white workman was also a slave for about 200 years in America. Thousands were brought to America as contract slaves. Thousands were political offenders sold for terms of service to American planters. Thouands were kidnapped in British ports, brought to America and sold. White workers born in the colonies were sold for terms of service for minor breaches of the law.

The Negro's servitude was known as chattel slavery. The white worker's servitude was known as "indentured service." In the American colonies laws for Negro slaves often applied to these white slaves. In the law codes both had the same lowly status. Both Negro and white could be parted from their families. Neither could marry without the consent of the master. Both could be whipped by the master. Both received the cast-off clothing of the masters. Both were crowded to suffocation in the ships bringing them to American ports. Thousands of Negroes and whites died in this traffic across the Atlantic, died of overcrowding, starvation and disease.

The white workers who were not "indentured servants" were wage workers. Yet their wages were generally fixed by law. For petty offenses they were sold into indentured service. Their terms could be increased for disobedience, for striking a brutal master, for trying to run away, or for some other reason. So that a man bound to serve three years or five years might serve ten years or twenty years or thirty years.

The laws to catch runaways applied to whites as well as Negroes. This was even put into the Constitution of the United States. Read Article IV, Section 3. It remains where the "fathers" of the government put it. It reads: "No person held to SERVICE or labor in one State, under the laws thereof, escaping into another shall, in consequence of any law or regulation therein, be discharged from such service or labor, but shall be delivered up on claim of the party to whom such SERVICE or labor may be due."

The word "service" was inserted in this clause to include white "indentured servants" who escaped from their masters. The word "labor" applies to the Negro. The word "persons" included both. whites as well as Negroes were regarded and treated as slaves. The only difference was that the "indentured servant" was not a slave for life.

We get one important lesson from these facts. The Negro question is not exclusively a color question. The white masters enslaved men and women of their own color as well as Negroes. What the masters wanted and what the masters got was cheap labor. It was a LABOR problem with them.

If we would understand the Negro question we must realize the fundamental fact that it is at bottom a LABOR question. It is not a matter of religion. Religious men have enslaved religious men. Infidels have ensalved infidels. Why? Again comes the answer, because they wanted cheap labor. The Puritan, Quaker, Catholic and Episcopal Church of England were established in the colonies. The Puritans held whites in bondage in New England. Even in Pennsylvania for a time William Penn's agents gathered "indentured servants" from Europe. The Episcopal Church ruled in Virginia, where whites and Negroes were enslaved. The Catholic Church in Maryland had its Catholic slave owners. In all these colonies masters owned men and women of their own religious faith.

Neither religion nor color drew a line betwen mastery and slavery. It was a LABOR question with the masters of both colors and all religions.

Nor was it matter of "good" men or of "bad" men. Many masters were brutal and some were kind. But both types owned slaves or "indentured servants." Color made no difference with them. Neither did religion. They were interested in having cheap LABOR that would keep them in ease and comfort. This they obtained from both whites and Negroes.

This fundamental fact not only underlies the Negro question, but the whole labor question of our time. It affects the white worker, the Negro worker, the Mexican, the German, the French and all other nationalities.

THE BASIS OF SERVITUDE

By James Oneal

(Editor's Note: This is the second installment of a new booklet, "The Next Emancipation," written by one of America's foremost historians, James Oneal. It has been published to sell at cost, 10c postpaid, by the Negro Labor News Service, P. O. Box 66, College Station, New York City, or 2653 Washington Blvd., Chicago.)

Rockefeller is an American capitalist. He is interested in important mines in Colorado. Some years ago a strike occurred in these mines. Some terrible massacres of men, women and children followed by hired gunmen.

The Rockefeller agents did not attack Greeks, or Poles or Negoes. Nor did they refain fom attacking American miners. All were attacked alike. The Rockefeller interests wanted cheap LABOR. They did not care whether Greek, Polish, Negro or white American workers supplied this labor power.

The masters do not draw the color line, or the religious line, or any lines of nationality. The masters of labor in all ages have acted the same way. The real division of humanity is between mastery and slavery. Color, religion and nationality are mere incidents. Masters will use the color line, or religious differences or differences of nationality, to divide workers. They will stir these prejudices for this purpose. But masters themselves do not divide along these lines when they face the toilers in a struggle.

The captitalist master is a capitalist master, whether his skin is black or white. The wage worker is a wage worker, whether his skin is black or white. If the black worker works for a white master he does not improve his lot by working for a black master. The white worker is not a free man because a white capitalist employs him. He is robbed just the same as the Negro worker is.

The great fact for both white and Negro workers to understand is that as wage workers they have common interests. WAGE LABOR unites them in the same class. Both sell their labor power for wages. Both must sell it to capitalist owners of mills, factories and mines. Masters want to purchase it at a low price, and workers want to sell it at a high price.

Another truth to remember is that the white worker has no interests bound up with the white capitalists. Because their color is the same is no proof that their interests are the same. Likewise, the black worker has no interests bound up with the black banker or capitalist. Their color is the same, but the way in which each gets his living makes all the difference in the world.

Having established the fact that, whether the master is white or black makes no difference to the workers, let us go a little farther. How does the Negro worker earn his living? By selling his labor power. The white worker gets his living the same way. No difference at all.

Now, then, to whom do they sell this labor power? To each other? Of course not. One wage worker does not purchase the labor power of another wage worker, not even if one is a Negro and the other is white. Not if both are Negroes or both are whites. Whether white or black, the worker must sell this labor power to a capitalist, the owner of a factory, a mine, machinery, buildings, etc.

However we look at this question we find that the wage worker has the same interests with all other wage workers, whether black or white. The Negro worker wants as good a price as he can get for his labor power. So does the white worker. The Negro wants what short hours he can get. So does the white worker. The Negro worker wants all the power he can obtain through organization to get good wages and shorter hours. So does the white worker.

Again we see that the interests of both are the same. Both do not always see it this way, but we do not always see or understand what is the truth. If we did there would be no poverty, no race prejudice, no robbery of labor. There would be no need of writing this pamphlet if the truth were evident to all workers of all colors.

Let us get back to that labor power which Negro and white workers both sell in order to live. Not being able to sell it to each other, they sell it to somebody else. The buyer is a capitalist owner of mills, factories, mines or plants, as the case may be. His plants and machinery are of no use to him unless he can purchase labor power. The labor power you sell him is used to transform raw materials into the finished product. Other wage workers sell labor power to other capitalists in extracting the raw materials from the earth. Still other workers sell labor power to other capitalists to transport the raw materials to the plant where you transform them into the finished product.

Without this labor power which Negro and white workers sell, all industrial society would be paralyzed. The owners of the raw materials, the transportation agencies and the plants of production might die, but industry would go on just the same. If wage workers all died the whole system would come to a standstill. You are essential; the owners are not.

Now, a worker might sell his labor power for generations, if he lived that long, and he would never become rich. But a capitalist can buy labor power for a few years and become comfortably wealthy. The reason for this is that the wage workers add extra values to the raw materials, and when the finished product is sold the capitalist owner gets the extra values. The wage worker reproduces his own value, wages. He receives these wages in payment for his labor power. But, in addition to reproducing his own wages, he produces something more, and this something more is taken by the capitalist owner. By taking it from hundreds or thousands of workers employed by him he is able to become wealthy.

(To be continued.)

Alabama A. and M. College Presents Program in Birmingham

May 8—The Alabama Agricultural and Mechanical College, Normal, Ala., offers to the music lovers of Birmingham an Octet in a musical recital at the 6th Avenue Baptist Church.

The program promises to be the best offered the citizens of Birmingham, and all are urged to witness it.

The Octet has won many favors and comments from various critics.

In the next week's issue of the Truth will be found a partial list of the program. Tickets are at popular prices of 25c for adults and 15c for children and may be purchased at the Temple Pharmacy, the Peoples' Drug Company, the Banner Printing Co., or from various parties authorized to sell them elsewhere.

Don't forget the date, Thursday evening, May 14th, at 8:00 o'clock.

CATHOLICS PURCHASE 580 ACRES FOR COLORED ORPHANAGE

580 acres of land seven miles from Pine Bluff, Ark., have been purchased by the Catholics for a Colored Orphanage. The plantation was known as the Begley place. Several large buildings are to be erected, and the promoters are planning to make the farm one of the best orphanage in the United States. It is for colored children only.

A National NEWSPAPER For Churchgoers

Read the National Baptist Union-Review published every week, subscription price $2.00 a year. This newspaper is the oldest religious publication under the auspices of the National Baptist Convention of America. It is eight pages in size, eight columns to the page, and is brimful of denominational information every week. It contains a Woman's Page, spicy editorial matter, and circulates in practically every state in the Union.

Send your Subscription to the

NATIONAL BAPTIST PUBLISHING BOARD

523 Second Avenue, North Nashville, Tenn.

Application for Membership
NATIONAL FEDERATION OF COLORED FARMERS
Vincennes Hotel, Chicago

As a farmer, I believe the time has arrived when the Colored Farmers should form a National Organization devoted to diversified production, grading, packing, shipping and marketing of farm products and to the purchase of needed farm supplies through co-operative methods, to the end that a more prosperous financial condition may result from their efforts as producers.
I hereby subscribe $5.00 for membership in the National Federation of Colored Farmers for a period of 12 months from date. Also $1.00 for an Annual Subscription to the Modern Farmer.

MYSTERY OF BLACK DUCK EGGS SOLVED BY SAGE; FOWLS DRANK FUEL OIL!

Ferriday, La., March 28—Solution of the mystery of the duck that lays jet black eggs up in the neighboring town of Waterproof has been made. At least, Colonel Tucker Gibson, naturalist, scientist, big game hunter, traveler and prognosticator has offered his answer to the puzzle.

When informed of the strange eggs, which are black outside as well as inside, Colonel Gibson, here on a visit from Baton Rouge, where he is connected with the Standard Oil Company on one of the large tow boats, answered the question by declaring "That's an easy one. Has Mr. Goldberger, the owner of the duck that produces the remarkable eggs looked around the riverfront? If he does he will discover the reason: the duck has been consuming fuel oil from the oil barges of the Standard Oil, which pass Waterproof."

"Down around Baton Rouge and below we have lots of ducks laying these black-colored eggs. In fact, even the catfish have been laying these dark eggs. It is not unusual below Baton Rouge because it is so common," the well known sage of Frogmore asserted.

For weeks the problem of the black duck eggs has been a perplexing one, and those who had inspected the eggs were unable to advance a reason for the strange color until Colonel Gibson came along and assured them that it was not anything out of the ordinary.

NEWS NOTES OF INTEREST AMONG OUR MEMBERS

Mrs. Florence Hooker one of the members of Bethel unit who lives near Tchula. Miss., rendered able service and aid to the farmers and their families during January and February. She deserves much credit for her activity to aid the suffering and needy.

Butler County, Ala., unit members planted a heavy acreage in radishes this winter. They were highly successful in getting a favorable growing season. The radishes are now ready for the market and the members are shipping daily at prices that will net them a real nice profit and at the same time give them some ready cash to aid them in preparing for the main crop. Rev. E. D. Womack, Prof. A. B. Carter and D. F. Hall are some of the officers of this unit.

Reports are coming in to the offices of the National Federation of Colored Farmers to the effect that colored farmers are getting their drouth loans.

These farmers who are members of their local units are buying their groceries and supplies at wholesale cooperatively and saving around 40 cents on the dollar. With favorable weather this season, our farmers will be able to farm this year for almost half than of the amount last season.

Four more new units in Mississippi during the last five weeks have organized.

Arrangements are now being made for new units also in Simpson Yalobusha and Hinds counties. Our farmers are just beginning to realize that organization is their salvation.

Col. C. R. Richardson, Chairman of the Board of Directors and Miss S. B. Wilson, Treasurer of the Federation were in Chicago the first week in April looking over matters and discussing conditions for betterment of the members. Secretary Harris will spend a couple of days in the offices on the 15th and 16th of April before leaving for Washington, D. C., where he will go to attend a meeting of the Committee on Negro Housing.

South Carolina farmers are beginning to open their eyes. Five counties in the state have held rousing meetings and plans laid for units of the Federation.

David L. Hunter is the owner of a large seed farm of over 100 acres near Dublin, Ga. Mr. Hunter is probably the only man of our race who is engaged in the growing of seeds, plants and bulbs and shrubbery. He has been in the business for about 17 years.

From 1920 to 1930 the State of Georgia lost in population. This was due mainly to the exodus of colored citizens living in the rural section to the east and west. On the other hand the State of Florida gained almost 50 per cent in population during this ten years period.

Sales of fertilizer in cotton growing states are running far behind last season according to figures received at the offices of the National Federation of Colored Farmers. Sales in six principal fertilizer buying states during March totaled 1,134,000 tons against 1,504,000 tons last March. In the four months up to and including March 31st, sales were 1,775,000 tons this season while last season there were, 2,577,000 tons sold.

A solid carload of groceries and feedstuffs was shipped into Leflore County, Miss., the last week in March to our members at a saving of about 30 cents on the dollar. The cost of the car was over six hundred dollars and the saving was around two hundred dollars. If members can save on their purchases and sell their farm product to better advantage they will soon be able to throw off that yoke of debt slavery which has been hovering around their necks for the past twenty-five years.

There has been a decline in the price of flour, sugar, coffee and some feeds, while wheat shorts have advanced to some extent. Our farmers should always get prices and buy from the houses that give lowest quotations, quality considered.

Sunday, March 29th was Farmers' Anniversary Sunday. Special exercises were held throughout all of the southern states and the attendance was very large. We hope to give complete report of the different units in our May issue.

Plans are well under way for the holding of our next Annual State Convention in Miss., next August. Committees will be selected and activity will begin in earnest during the first week in June. Several cities are bidding for the Convention. Last year it was held at Howard near Lexington, and the attendance was estimated at something over 5,000 for the two days.

This year with fully twenty-five more units, the attendance will easily reach ten thousand.

AMERICAN WOMAN IN MEXICO STARTS FLAPJACKS CRAZE

(Continued from page 1.)

fronted with a different problem. Her funds had dropped to centavos. Her command of Spanish was most limited. It was therefore next to impossible for her to find a salaried job. But with true Yankee enterprise Mrs. Schneider did not moan, but set herself up in business. She had always been able to please her late husband, a railroad engineer, with her hot cakes. So she felt that she could also please the people of this town in that respect and keep the wolf far from the door of her little cottage.

Began by Peddling

At first peddling hot cakes in public went very much against the grain of the good woman. She is not very young, and of refined disposition. But the job had to be done. One bright but chilly afternoon people who issued from the matinee of the Degollado theater, the largest playhouse in town, were surprised by an odd spectacle. To the side of the main entrance stood a tall, blonde, foreign-looking woman, neatly and cleanly but poorly dressed, wearing a spotless white apron, and superintending a little cart upon which were a small oil stove, enamelware jugs of mixture and an array of plates, knives, forks and spoons.

Somewhat self-consciously the strange woman cried "Hot cakes! Hot cakes!" There was great curiosity on the part of the theater patrons. Mrs. Schneider was soon surrounded by a crowd, who gaped at her with round eyes. They had never seen anything like that before. A well-dressed young man tipped his hat and politely asked:

"Qe son esas, senora? (What are those, madame?)"

"Hot cakes, hot cakes, zen-yore," answered Mrs. Schneider. "Cinco centavos (five centavos, or two and a half cents) cada uno (each)."

Cakes Make a Hit.

Those few words were, and are, the limit of her Spanish. The experiment was an unqualified success. Mrs. Schneider worked as hard as a chef in a logging camp boarding house at dinner time. But jugs of mixture were soon exhausted. Several women followed her part of the way home, asking how to make the good things. That gave the new business woman an idea. Thereafter she wheeled her cart from house to house in the better quarters and made hot cakes while the customers waited. Afternoons and evenings when there was a show at the Degollado she placed herself and hot cake cart at the main entrance Mornings she visited the homes. In no time she was able to settle accounts with the American merchants who had given her the cart, stove and utensils on credit.

Although she is now freed of financial worries, Mrs. Schneider still sells her hot cakes. But she now confines herself to house-to-house calls and has a boy to push her cart. She is well known and well liked throughout the city. People affectionately call her "Catita" (Little Katie). It is understood that she proposes to set herself up in a hot-cake shop.

Banks Should Extend Loans Says Howell

(Continued from Page 1)

1931. That the amortization installments and interest payments together with the interest thereon, be collected in 10 semi-annual payments. The first of these payments to become due on Dec. 1, 1931, and a payment to become due on June 1 and Dec. 1 of each successive year until the whole 10 payments have been paid.

"The terms of the original mortgage or trust deed provide that all interest payments as well as taxes and insurance premiums paid for the borrower becomes a part of the first mortgage on his farm. Therefore, in extending this installment or interest payment the farmer is using the security of his farm and is increasing his first mortgage only about 7 per cent of his original indebtedness. All these loans have been reduced by amortization payments and in many instances 10 to 15 per cent of the original loan. This security could be used in this way when in many instances he would not be able to give security that would be satisfactory to local banks and other lending institutions.

Owes Too Much Now.

"This extension should not be granted to any farmer who does not want to keep his farm for a home and who is not making an honest effort to meet his indebtedness. If such action was taken by the land banks which are operating under government supervision, the large life insurance companies who have many billions of dollars of farm loans would no doubt adopt a similar policy. Such action by the land banks and life insurance companies would be real farm relief.

"This plan would not be lending the farmer additional money. He owes too much now, but would be extending through another crop season his payments, which fall due within the next 12 months, and give him an opportunity to pay the same in small payments.

"We must not overlook the fact that these land banks have outstanding bonds almost equal in amount to their loans upon which the interest must be paid semi-annually and in order to pay this interest they must collect the amortization installments and interest due them. Therefore, should this extension be granted it will be necessary for the banks to obtain funds elsewhere to meet these payments.

"It would seem that some agency of the federal government could either lend or deposit with these banks at an agreed interest rate an amount equal to the amount of the loans upon which extension had been granted, this money to be repaid to such government agencies on the same terms and whenever collected.

"Unless some such policy is adopted, within the next year foreclosures are going to multiply many times; out tenant farmers will increase to a large extent and many people will be homeless. It would not be necessary to make any change in the original note or rewrite or change the original mortgage or trust deed in order to make this suggestion effective.

"In order to carry out these suggestions it would be necessary that certain rules and regulations should be adopted governing the method of granting this extension and to prevent the banks from making extensions where conditions would not justify it in so doing.

"To extend the payments as outlined would entail some additional work upon the banks; yet, the emergency that confronts them, demand such action."—Memphis Commercial Appeal.

THE NEGRO COMMUNITY—ITS SOCIAL NEEDS

Unemployment Relief Among Subjects to be Discussed

The subject of the Annual Conference of the Urban League which is to be held in St. Paul, Minnesota, Thursday to Saturday, June 11th to 17th, will be "The Negro Community—Its Social Needs." The topics for discussion will be The Changing American Scene, Programs and Techniques in Industry, Economic Problems of the Negro Community, Negro Family Life, Law Enforcement in the Negro Community, Juvenile Crime and The Negro. Among the speakers who will appear are William H. Stead, Executive Secretary, Employment Stabilization Research Institute, University of Minn. The Rev. Fred M. Elion, Minneapolis, Minn., E. Franklin Frazier, Fisk University of Nashville, Tenn. Louis E. Evans, Secretary Department of Child Placing, Joint Service Bureau Chicago, Ill.; and George W. Kirshway, Criminologist, New York School of Social Work. The Executive Secretary of the National Urban League, Eugene Kinckle Jones and the directors of the League's several departments—T. Arnold Hill, Ira DeA. Reid, Jesse O. Thomas and Elmer A. Carter—as well as a number of local Executive Secretaries and Board members will discuss subjects relating to Urban League's program in the field of community and economic improvement.

The League's conference ends on the day preceding the opening of the National Conference of Social Work and those planning to attend may arrange for a one-way and a half round trip fare by purchasing their railroad tickets on forms provided by the National Conference of Social Work.

For further information address the National Urban League, 1133 Broadway, New York City, and for accommodations in St. Paul or Minn. communicate with W. Robert Smalls Secretary, St. Paul Urban League, 419 Wabasha St., St. Paul, Minn.

NATIONAL URBAN LEAGUE TO STUDY SOCIAL ECONOMIC PROBLEMS OF NEGRO

Washington (CNS)—T. Arnold Hill, industrial secretary of the National Urban League was named as chairman of a sub-committee of a group to study the social and economic factors of the problems of the Negro in this country in connection with the President's National Committee on Negro Housing of which Miss Nannie H. Burroughs, president of the National Training School for Women and Girls is the national chairman, here last week.

Hill said that although the primary purpose will be the determination of housing influences on the health, education and delinquency of urban and Negro population, it was hoped to create a demand for new houses among the race, with a view to stimulating building instruction.

His only conclusions in connection with Negro Housing in New York City, he said, were that a great many Negroes in Harlem were paying more rent than they can afford and in a majority of cases, higher rents than white residents in that area.

While the committee was laying the plans for its study Joseph A. Hill assistant director of census, said there was an apparent movement of Negroes from their traditional sections of the South to the more industrially developed sections of the North.

The 1930 census returns showed he said, that in Virginia, Georgia, South Carolina, and Kentucky the Negro populations were less than a decade ago. In eight Southern States for which figures were available very slight increase over the Negro population of 1920 were shown.

On the other hand, the Northern States generally had larger Negro populations than in the preceding census. In Michigan alone the increases from 60,082 in 1920 was 169,453 last year.

MINK AND RABBIT ENTER SAME TRAP

Rockingham,—John Shepard, veteran fisherman living six miles west of Rockingham on Pee Dee River, had the unusual experience December 11, of catching a mink and a rabbit in the same "gum." For both to be caught at the same time, they had to enter the box together; undoubtedly the mink was chasing the rabbit. Mr Shepard had the rabbit for supper, and will now get $16 for the mink's hide. The rabbit box was made out of a hollow gum tree, with spring-tigger.

National Convention N. F. C. F., Mound Bayou In August; All Units To Be Represented

RESTORE FARM BUYING POWER SARGENT URGES

AGRICULTURAL CONDITIONS MUST BE IMPROVED TO BRING BACK NORMALCY

Real prosperity for the United States will return only when buying power of the American farmer has been restored, in the opinion of Fred W. Sargent, president of the Chicago & North Western Railway.

With nearly half of the nation's population directly dependent on agriculture plus those lines of business — the railroad, equipment manufacturers and others— who look to the farm for a considerable part of their business, full buying power is absolutely essential for prosperous times to again appear, he said yesterday.

Mr. Sargent asserted this condition can be restored only by the age-old law of supply and demand and that governmental attempts to create artificial prices are wrong in theory and thus far have never worked out.

EXPORT GAIN NEEDED

He believes that those farmers whose operating costs are uneconomically high will eventually disappear but that those who have proper diversification of grains and live stock will emerge from the present crisis in good shape.

An increase in export business is also necessary, he declared, both for farm and industry. To this end some solution of the silver problem must be reached to open up trade with the Orient and India.

Herald and Examiner Chicago.

Metalized Milk Is Proving of Benefit in Cure of Anemia

Hope for anemia sufferers through the use of "metalized milk" is one of the latest food predictions, based on work of J. L. McGhee of Emory university, Georgia. First progress of the milk treatment in anemia cases was announced about a year ago.

In one experiment with 140 mill workers in a Georgia cotton gin it was reported recently that all but 10 were found to have an increase in the amount of hemoglobin, or red corpuscles in the blood.

The "metalized milk" is raw or unpasteurized milk in which an alloy of copper and iron have been soaked until small quantities of the metal have been dissolved.

Peas For Cannery at Geneseo Well Along

Geneseo, Ill—Peas to be utilized in the output of the Geneseo cannery of the Midwest Foods corporation are well advanced. Some of the plants are three of four inches high.

Planting of seed corn for the cannery is expected to be started within a few days.

The concern is using a reduced acreage this year.

CERTAIN VARIETY OF RICE TO BE COOKED 25 MINUTES

MERCHANTS TELL WHY THIS IS TRUE

Some varieties of rice are best when cooked but 13 minutes while other kinds need to be boiled 25 minutes, according to the Houston Merchants' exchange which handles many thousands of tons of rice each week.

Early Polific Variety

With the early prolific brown variety, the boiling should consume 25 minutes, it is recommended, while with the American patna and the Japan rice the time should be but 13 minutes. Edith or fortuna variety needs 20 minutes; the Arkansas prolific, 19 minutes; the Lady Wright, 18 minutes; Texas or Louisiana early prolific, 17 minutes; blue rose brown, 22 mimutes; blue rose, 15 minutes, and rice screenings, 12 to 14 minutes.

Housewives are advised to find out the kind of rice they buy, or if this is impossible, to make a determination by taking several kernels from the pot, mashing it on the kitchen table or between the finger and thumb. This practice is the only test to make sure when cooking mixed varieties.

THEY GO INTO DETAIL

The Houston merchants even go into details on how to cook rice properly: "We use a three quart pot to cook a cup of rice. Fill the pot with water and let it come to a rapid boil. Add the rice, which has previously been washed, and add it slowly so as not to materially stop the boiling. The water should boil actively for the correct period of time. Then the pot should be removed from the stove and the water and rice emptied into a colander. After the surplus water is shaken from the colander and after salting to taste the rico is ready for the table."

Storage Apples Holdings Total 4,528,000 Bushels

Washington, D. C., May 15—Storage apple holdings are reported by Bureau of Agricultural Economics as of May as 4,528,000 bushels compared with 3,596,000 bushels on the May 1, 1930. Holdings of box apples total 3,684,000 boxes compared with 2,446,000 boxes a year ago and with five-year average May 1 holdings of 2,553,000 boxes: 583,000 bushel baskets compared with 763,000 and 535,000 bushels for May 1, 1930, and the five-year May 1 average, respectively; and 87,000 barrels compared with 229,000 barrels a year ago and the five year May 1 average of 415,000 barrels.

Box pear stocks are shown as 219,000 boxes compared with 27,000 boxes a year ago and with a five-year average May 1 holdings of pears of 82,000 boxes.

PROMINENT SPEAKER TO ADDRESS ASSEMBLY

MANY PRIZES WILL BE GIVEN AWAY TO THOSE WHO GATHER IN THIS MEETING

Chicago, Ill. — The executive board of the National Federation of Colored Farmers announced that the annual convention of the Federation will be held in Mound Bayou Miss., during the latter part of August. The exact date will be announced in the July MODERN FARMER.

This meeting promises to be the largest gathering of colored farmers ever held Bolivar county, in which Mound Bayou is located, boasts of the largest number of colored farmers in any one county in the United States. It produces more cotton than any other county in the United States. Its citizens are progressive and independent and are also renowned for their hospitality. The executive board realized that when Mound Bayou was chosen for the meeting place, the Convention would be well entertained.

A good program, which will include addresses by some very prominent speakers, is being prepared. In addition, twenty-five valuable prizes will be awarded to members who bring in for exhibit the best sample ears of corn—stalk of cotton with the largest number of bolls,—largest watermelon, —best display of vegetables,—best display of jellies, canned fruits and vegetables. — best dozen eggs (to be decided by weight), and for other exhibits. All contestants must furnish proof that they have produced the exhibited articles by their own efforts and labor. A full list of prizes will be published later.

All southern Units are planning to send delegations to the Convention. All colored farmers are invited to attend, whether members or non-members.

Ladybugs Used To Save Apples From Insect Parasites

Ladybugs have often been advised: Ladybug ladybug, fly away home, your house is on fire, your children will burn." But few persons ever thought these insects would have anything to do with Chicago's food supply.

It appears they have, however—these dainty orange colored bugs. Out in the state of Washington in the Wenatchee apple orchards the ladybugs are being sold by the thousands to keep down the aphid population in orchards.

Persons have even gone into the business of collecting them and present quotations are $1 per thousand, based on weight. This dollar's worth is considered about sufficient to take care of an acre of trees. Gatherers of the bugs take a shovel and scoop them into sacks from the insect homes on hill tops. The sacks are placed in cold storage until the orchard operator decides to liberate his ladyburg patrols.

DR. TAUBENHAUS SAYS DUSTING WILL CHECK BLIGHT

AUTHORITY OF TEXAS A. AND M. COLLEGE GIVES FACTS

Harlingen, Tex., Dr. J. J. Taubenhaus, chief, Division of Plant Pathology and Physiology at the Texas A. & M. College, has been in the Lower Rio Grande Valley for the past several days making a general study of the late blight disease which has attacked the potato crop. This study covers conditions in Cameron, Hidalgo and Willacy counties.

Late blight is a disease which is common in many of the states where potatoes and tomatoes are grown, but this is the first record of its appearance in Texas, and particularly in the Lower Rio Grande Valley. The disease attacks every part of the plant; that is, leaves, stems, petioles, and even the tubers of the Irish potato and the fruit of the tomato plant. It appears as large, dark, water soaked spots on the affected parts of the plant, and in a short time the spots become covered with a superficial downy fungus growth, which consists of thousands of spores of the fungus, technically known as Phythopthoro Infestans. These spores are readily blown about by the wind, and every time they lodge on a tomato or potato plant they cause infection. Late blight is a disease which is greatly favored by frequent rains or dews, and by cloudy foggy weather.

Fortunately, late blight is a disease which may be controlled, and the thing to do immediately is to dust the plant with copper lime dust. This may be secured locally and the amount used per acre will naturally vary with the age of the crop. As an average, however, from 20 to 30 pounds per acre will sufficient. In dusting, care should be taken to cover every part of the plant. The dusting should be given at intervals of a week to ten days, depending on weather conditions. Dusting should be resorted to particularly in fields where the disease has not made great inroads. Dusting should be done early in the morning when the plants are still wet with dew. This will enable the dust to cling better to the treated plants.

At the end of the tomato season, it will be advisable to destroy the old plants, and the best way would be to burn them by fire. Furthermore, it would be advisable not to plant potatoes or tomatoes in the same fields where disease now occurs for at least a year or two.

Six Lambs Born to Ewe

WOODLAND, Cal.,—In the sheep family twins are a rarity and triplets virtually unknown. Imagine the surprise of stockmen in this vincinity when a thoroughbread Romney ewe at the ranch of E. E. Brownell gave birth to six lambs, all perfectly formed and normal in every respect.

COTTON CLUB EXPANDING FOR FUTURE SERVICE

PURPOSE IS TO INCREASE USE, SAYS VISITING OFFICIAL IN WEST TENNESSEE CITY

A vigorous and persistent campaign to increase the use of cotton is planned by the newly organized Association for the Increased Use of Cotton, according to Harold C. Booker of Columbia, S. C., secretary of the association, who is a visitor to Memphis. Mr. Booker will attend a meeting at Jackson, Miss., Tuesday, at which time organization of the Mississippi branch of the association will be perfected.

Harry D. Wilson, commissioner of agriculture of Louisiana, is president of the association; J. E. McDonald, commissioner of agriculture of Texas, is vice president, and thero is also a vice president for each of the cotton states. S. Odenheimer of New Orleans, president of the Lane Cotton Mills, is chairman of the executive committee.

Organization was perfected at a meeting held in Atlanta on March 23.

Mr. Booker said yesterday that the new association was meeting with instant favor all over the south.

The association has set a minimum goal of 250,000 members and is launching a vigorous campaign to that end. The membership fee is $1, but organizations and firms will be encouraged to take out bulk memberships.

"The association," said Mr. Booker, "will strive to increase the use of every product that originates in the cotton boll. We will stress cotton clothing, cotton bags, cotton wrapping, cotton towels, cottonseed oil products, cottonseed meal, and any and every product that helps to consume the principal crop of the southern farmers. While our efforts will be nationwide we will of course direct our first efforts at the south because we have not been using our own products in the manner that we should."

J. C. Holt, state commissioner of agriculture for Mississippi and vice president for the state, has called the meeting in Jackson Tuesday and is expecting a large attendance Mr. Booker stated.

—Memphis Appeal.

Electrically Heated Hotbeds

Independence, Mo.,—The best thing about an electrically heated hotbed, says H. W. Guengerich, county horticultural agent, is the fact that the heat can be turned off. Users of such hotbeds have often needed heat only at night, and in beds located in greenhouses no heat has been necessary after plants have been up a few days. The cost of heating a six by 12 bed, he says from one and one-quarter to one and one-half cents an hour.

CORN PLANTING DELAYED, SAYS GOVERNMENT REPORT

The low temperatures with frequent rains were unfavorable for corn planting and germination, as indicated by the government weekly weather crop report. Only a small amount of seeding was accomplished and there were many complaints throughout the principal producing areas of poor progress of early corn in the south west. In Illinois germination was slow. Condition of winter wheat was good, with considerable jointing and heading in the lower part of the Ohio Valley. The crop looks well in Missouri but growth is slow in Iowa. In the southwest, including Nebraska southward, condition remains good.

Private reports claim that the Texas panhandle will have approximately 42,000,000 bu. of wheat this season.

Kenneth Pierce of J. E. Bennett and Co., who is attending the Kansas Grain Dealers association at Salina says: "Some wheat condition is excellent, some wheat is in the boot in central and southern and western Kansas. Kansas has 12,000,000 acres the largest of any previous year. Estimates range fom $180,000,000 to possibly 200,000,000 bu.

RESULTS OF OKLAHOMA TESTS WITH POTATOE

Stillwater, Okla.,—Test have been made by the Oklahoma Agricultural Experiment Station with the hope of being able to produce late crop of potatoes that could be kept through the winter.

The stand of potatoes seems to determine whether or not a crop will be produced. Very often the potato refuses to start to grow until so late in the season that there is not enough time to produce a crop before the frost kills the plants in the fall. Attempts have been made to break this rest period and make them come up earlier by treating them in a number of different ways:

A certain amount of the spring crop, after harvesting was placed in the shade of a tree but exposed to the light. When left three weeks before planting, they gave a better stand than when the potatoes were taken directly from the field and planted again or where they were taken directly from storage and planted.

Three treatments were applied, using chemicals. One has given promising returns. Another treatment that is likely to accomplish the purpose is to bruise the potatoes before planting them. Last year they were bruised by rolling them around under a board. This year a concrete mixer holding a bushel of potatoes with about half the amount of round pebbles was used. The mixer was then turned 15 minutes.

The result last year showed that the bruised potatoes gave the highest yield of these treatments and the ones treated with chemicals as second highest. The sun-cured potatoes were third:

Another test was made by importing northern grown seed that had been held in common storage in the north until the latter part of June or early July. These potatoes were shipped to Oklahoma and held in cold storage until ten days before time to plant. They were taken out and part of them cut and part planted whole. Most of the cut potatoes rotted. The whole potatoes gave practically twice the yield that any of the other treatments gave.

FIRST GEORGIA PEACHES SHIPPED

Macon, Ga.—The first crate of Mayflowers was shipped Wednesday night by E. E. Payne of Reynolds, Ga., to Green and Milam, Atlanta. The first car is expected to move Monday or Tuesday.

RUSSIA SOWING WHEAT BY AIRPLANE

The experimental farm in Russia is sowing wheat by airplane. They believe in shallow plowing. They claim the deep furrow is bad, for the reason that it turns over the sod grown with weeds and this forms an insulated layer a few inches deep against heat and moisture. The hot dry wind sucks out the moisture from the soil above this insulated belt and prevents the seeds from developing properly. Or, in other words, don't disturb the undersoil, but leave it to hold the moisture.

In sowing wheat by air they claim that the seed will penetrate deep enough by falling a distance of 500 feet. After sowing the land is harrowed over and is then all right.

Statistics show that in 1918 wheat was sown by air in the San Joaquin Valley of California very successfully. Last year rice was sown by air at Mercedes Calif., with planes flying 70 miles an hour and giving a spread of 66 feet.

Sowing by air cuts cost of production very materially.

FORTY GOLD STAR MOTHERS SAIL FOR FRANCE

New York City— (CNS) — The third party of Gold Star Mothers and Widows, numbering 40, sailed for France at noon, Friday, May 29, on the steamer America Skipper from Pier 4, Hoboken, New Jersey.

This party, known as "Party E2, consisting of four groups, go to the graves of their soldier dead buried in the American Cemeterie, Meuse Argonne and St. Mihiel or to pay memorial tributes of respect to the soldier dead, seven of whom were lost at sea; three of whom received army sea burial, and two others, who were buried in "Navy outside waters."

Colonel Benjamin O. Davis, highest ranking Negro officer in the United States army, detailed as military instructor at Tuskegee Institute, Alabama, is the official escort of the mothers on this trip, the first of the 1931 series . Miss Mary E. Williams, director of the Nurse service bureau of Tuskegee Institute Health Center, Tuskegee, Alabama, accompanied the mothers as official nurse.

Archibald Runner of the Memorial Branch, and William H. Lewis, Jr., civilian clerk of the Quartermasters Department of the War Department in Washington, were on duty in New York City, the week May 25-30, detailed to assist the officer in charge of the arrangements, in providing for the comfort of mothers and widows as they assembled in the city, preparatory to sailing. Robert G. Brown, stationed at New York was also detained to the comfort squad.

Included in the party are 16 mothers, the oldest, 65 years of age from Southhampton County Va.; and the youngest, 48 years of age from Harris County, Texas. Eighteen widows, the four youngest being 30 years of age, one from Alexandria County, Ill.,; one from Philadelphia County, Pa.; one from Sumter County, Florida, and one from Madison County, Mississippi. Also three stepmothers and there legal parents.

On arrival in France, the party will be divided into groups: "Group MA" to visit the Meuse-Argonne Cemetery, located just outside of town of Romagne-sous-Montfaucon, 160 miles from Paris, and 30 miles from Verdum. "Group St. M" to visit the St. Michiel Cemetery, located at Thiacourt, 55 miles from the Meuse-Argonne Cemetery. Groups "LAS" and NOSW," composed of mothers and widows of soldiers and sailors, "Lost at Sea," or those that were given "Army Sea Burial," or those that were given "Army or were lost in "Navy Outside Waters," will visit Paris, the Mennse-Argonne Cemetery and the Brookwood American Cemetery, located within the cemetery of the London Necropolis Company, at Brookwoodm of Survey, England, 28 miles from London.

The party is scheduled to return to New York, June 29.

The official list of 17 in "Group MA" shows:

Mrs. Ollie Buggs, Bangor, Alabama.

Mrs. Amanda Mitchell, Washington, D. C.

Mrs. Laura S. Johnson, Wilwood, Florida.

Mrs. Mary B. Ingram, Americus, Ga

Mrs. Hattie Campbell, Des Moines, Iowa.

Mrs. Laura A. B. Wheeler, Springfield, Mass

Mrs. Marelda Ward, New York City.

Mrs. Marion Sealey, Jamacia, L. I., N. Y.

Mrs Sally Ann Anderson, Asheville, N C.

Mrs. Daisy Hammonds, Mt. Vernon, Ohio.

Mrs. Clara Pegram, Philadelphia Pa.

Mrs. Tom (Rosanna) Hampton, Matthews and Mrs. Matilda Stewart Harris, Silver Street, South Carolina.

Mrs. Martha Thirgood, Chattanooga, Tenn.

Mrs. Geneva Holland, Dallas, Texas.

Mrs. Mary C. Harpole, Phoebus, and Mrs. Mary Poyner, Norfolk, Va.

In group "St M" are eleven, as Follows:

Mrs. Sylvia Dorsey, Corona, Ala.

Mrs. Ollie Davis, Mariana and Mrs. Ada Laird, Augergne, Ark.

Mrs. Leola Edwards, Macon, Ga.

Mrs. Elsey Griffin, Amito, La.

Mrs. Sarah Downs, Baltimore, Md.

Mrs. Mary Dennis, Okolona and Mrs. Lela Jones, Columbus, and Mrs. Mary Moore, Rigeland, Miss.

Mrs. Carrie Beck, Cleveland, Ohio.

Mrs. Margaret Thompson, Houston, Texas.

In "Group ASB" are: Mrs. Emma Bowden, Cairo, Ill.; Emma Heater, Indianapolis, Ind.; Mrs. Gabralla Middleton, Bonneau S. C..

Groups "LAS" consist of seven: Mrs. Margaretta M. Johnson, Washington, D. C.; Mrs. Elizabeth Holland, Jersey City, N. J.; Mrs. Gladys O. Marshall, New York City; Mrs. Eva Baylor, Philadelphia, Pa.; Mrs. Mary E. Marshall, Portsmouth, and Mrs. Emma J. Johnson Parker, Franklin, Va.; Mrs. Florence D. Cochran, Cleveland, O.

And "Group NOSW" has two mothers: Mrs. Lenora Whitesell, Denver, Colorado and Mrs. Annie F. Bailor, Atlantic City, N. J.

FOREST FIRES RAVAGE 10,000 ACRES OF LAND

MARION N. C.,—Approximately 10,000 acres of forest land were burned over during recent forest fires, believed started in McDowell County by persons wanting employment as fire fighters.

DEAN HAWKES OF COLUMBIA UNIVERSITY ST. AUGUSTINE COMMENCEMENT SPEAKER

Raleigh, N. C. — (CNS) —"Every day of our lives may be called a boundry day, but there are certain days which are clearly marked as boundry days, and one of these is graduation day," said Dean Herbert E. Hawkes of Columbia University, New York City, in his address to the graduates of St. Augustine's College at the sixty-fourth commencement exercises Wednesday. President E. H. Gould of the college, presided.

The speaker based his address on what he described as the greatest things in life. These he set forth as beauty, laughter and love, continuing on to explain the meaning of each a he interpreted them.

Happiness and "Effectual living," he declared, depends entirely on places we give these three factors of life. Wealth and position are non-esscntial to a happy life, everything depending on the finer things of this world.

"A truly educated person," he said, "attains the appreciation of beauty, laughter and love due them if one is to be happy, and we must not forget that laughter is not the least among these. We are just as careless about giving laughter its true place as we are beauty."

The following received Bachelor of Arts degrees from St. Augustine's College: Lillian B. Ancrum, Raleigh; Ludwif T. Caldwell, St. Augustine, Fla.; Tamar Rebeka McClenny, Edenton; Walter A. McLaughlin, Charlotte; Anna L. Morgan, Raleigh; George T. Newton, Tarboro; Saiie B. Perry, Raleigh; Annie M. Stallings, Birmingham, Ala.; Minnie B. Stanley, Raleigh; and Elizabeth E. Williams, Raleigh.

Mildred E. Freeman of Raleigh and Oliver Hilton Richardson, of New York City received Bachelor of Science degrees from St. Augustine's.

The following were graduated from St. Agnes Training School for Nurses Marie E. Gary, Portsmouth, Va.; Ardelia C. French, Wadesville; Rugh L. Calhoun, De Land, Fla.; Ruth Ethel Harbin, Tampa, Fla.; Lulu Mae Morrison, Winston-Salem; Sophia G. Hagood, Winston-Salem; Mary E. Newkirk, Wilmington; Odessa McNair Whitley, Tarboro and Corine V. Glover, of Tampa, Fla.

VOCATIONAL AND CHRISTIAN CONFERENCES HELD AT PRAIRIE VIEW STATE NORMAL AND INDUSTRIAL COLLEGE

SUMMER SCHOOL FOR TEACHERS OPENED JUNE FIRST—1,200 EXPECTED TO ATTEND

The conference of teacher trainers and state supervisors of vocational agricultural education was held May 26. The conference discussed and agreed upon a state program for teachers of vocational agriculture throughout the state for 1931 and 1932. Those participating were: Dean C. H. Winkler, A. and M. College, Messrs. E. R. Alexander, J. C. Dykes, and M. F. Thurmond, of A. & M. College; Messrs. S. C. Wilson, S. S. Graham, J. B. Monroe, and R. A. Manire, of Sam Houston Teachers College; Mr. W. N. Elam, Teacher of Vocational Agriculture, Taylor, Texas; and Professors L. A. Potts, J. C. McAdams, C. H. Banks, of Prairie View; Mr. C. L. Davis, Chairman, State Supervisor, and Mr. J. B. Rutland, Assistant State Supervisor.

The eighth annual Christian Conference for Negro Women was held at the college from May 23 to 29. The conference was conducted by the Women's Auxiliary of the Presbyterian Church, U. S. Mrs. George A. Sprague, president, Texas Synodical, was chairman. Features of the program were as follows: Bible—Mrs. George W. Hopp; Parliamentary Law—Mrs. George A. Sprague; The Christian Home—Mrs. L. C. Majors; Sewing—Miss E. F. Martin; Health Lectures—Dr. J. M. Franklin, Dr. E. B. Evans, Mrs. M. S. Brannon, and Dr. A. K. Smith; Handicraft—Miss M. I. Moore; Recreation—Miss Youra Qualls, Miss M. I. Moore, Miss M. E. Suarez, and Mrs. P. E. Bledsoe; Sermon—Rev. Mack T. Williams; Open Forum—Professor R. M. Woods; Address—Mrs. A. E. S. Johnson; Drama, Wagging Tongues—Nautilus Club.

The Summer School began June 1. Applications for entrance exceed again the capacity of the college to provide rooms. In order to attend the session, a great many applicants have secured board and lodging at Hempstead, Texas, and among the residents of the college community. Registrar D. R. Glass estimates that the enrollment will exceed 1200. He based this estimate upon the applications on file in his office and those now in actual attendance. Registration was practically completed Tuesday and class work was begun.

U. S. FORESTRY SERVICE PLANTS 21,000, ACRES

WASHINGTON,—The national forest service planted last year more than 21,000 acres of trees in national forests accoding to reports.

Forest acreage planted has been increased gradually from a low point in 1921 of 5,500 acres, as the result of small increases in funds made available by Congress, and of improvements in planting technique. Forest officers are of the opinion that more than 25,000 acres will be planted during this year.

Large crews already have been sent out to begin planting operations for 1931.

HEN'S CACKLE SWEET MUSIC TO WESTERN CANADIAN

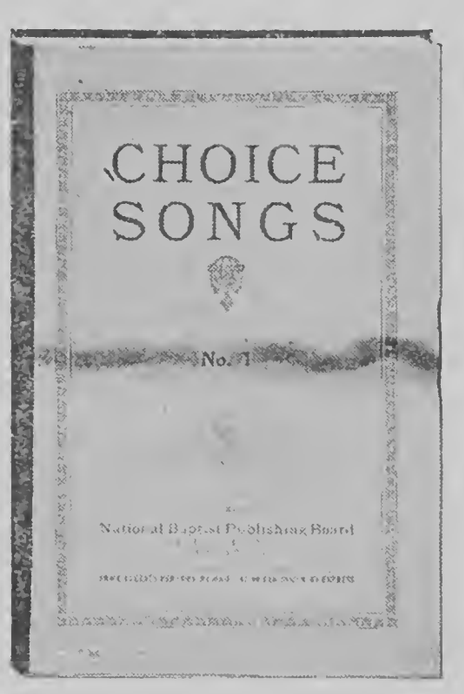
OTTAWA, Ont., May 21—The hen is one of the greatest factors in aiding the Canadian west through these days of stress, Fred E. Elford, dominion poultry husbandman, said today on his return from an official trip to the Pacific coast.

"Poultry is carrying things along," he said, "For the farmers have the feed on hand and are turning it into new laid eggs. Even though eggs are down to 9 cents a dozen in some sections, the cash farmers are getting for them enables them to buy necessities."

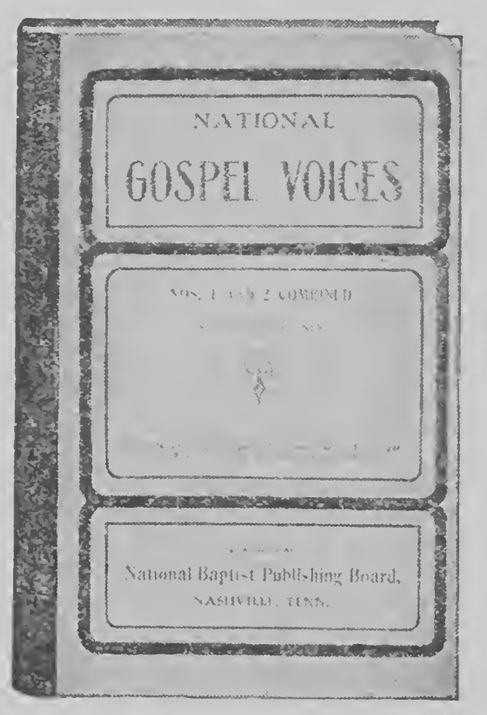
DOG AT HAMPTON KILLS 60 FOWLS, INJURIES OTHERS

Hampton,—Curly little dog, whose owner is not known, killed sixty chickens and injured others so that they had to be killed on the farm of I. E. Pratt, Saturday morning.

The dog entered the hen house between daylight and 6 Saturday morning. After completing his work there he attacked fowls on a hillside back of the house. It did not eat any of the chickens and did not seem to be suffering from hydrophobia.

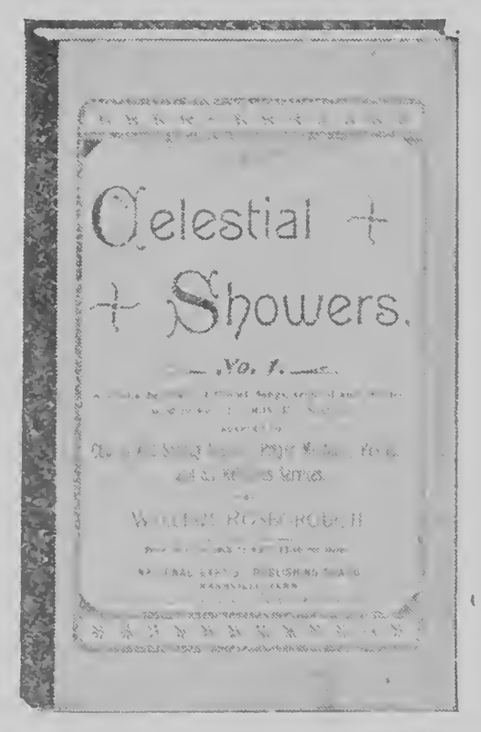


Choice Songs 15c each; $1.80 per dozen.



National Gospel Voices Nos. 1 and 2 combined 45c each; $5.40 per doz.

National Harp of Zion 35c each; $4.20 per dozen.



Celestial Showers 40c each; $4.80 per dozen.

HONOR PAID TO SHERRIFFS WHO UPHELD THE MAJESTY OF THE LAW

MEDALS AWARDED IN TWO CASES BY INTERRACIAL COMMISSIONS—PUBLIC PRESENTATIONS MADE SUNDAY

Atlanta, Ga., June 1:—In recognition of notable courage and judgment in successfully resisting mobs during last year, the Commission on Interracial Cooperation today announced the award of handsome medals to two Texas sheriffs, W. W. Covington of Beaumont, sheriff of Jefferson County, and W. K. McLemore of Shamrock, former sheriff Wheeler County. Formal presentations of the medals were made at public meetings at Beaumont and Shamrock yesterday, with prominent people making addresses. The Governor also sent messages commending and congratulating the officers.

The awards were passed upon by a commission composed of Ex-Governor Hugh M. Dorsey of Georgia, Mrs. J. H. McCoy of Athens, Alabama, Marshall Ballard, editor of the New Orleans Item, and George B. Dealey, editor of the Dallas News.

The award to Sheriff Covington commemorates events of June 28 and 29, 1930, when mobs stormed the Jefferson County jail and demanded the surrender of Rainey Williams, colored, charged with a series of serious crimes. The first mob, numbering 100 or more, arrived in automobiles shortly after midnight of the 28th, bringing rope, tar, and feathers. The sheriff had received news of their coming, however, and was ready for them, with a number of deputies stationed at the jail windows, prepared to shoot if necessary.

—Defied Mob; Knocked Leader Down—

The sheriff himself met the mob outside and plead with them to let the law take its course. The crowd rushed him; he grappled with them and discharged his pistol. They retired for the moment, but made a second rush and were repulsed with tear gas bombs. Meantime additional officers joined the sheriff and finally the mob grew discouraged and dispersed.

The next day another group, led by a sailor, appeared and demanded the prisoner. Advancing to meet them, Sheriff Covington gave the leader a punch in the jaw and felled him, whereupon the crowd dispersed in haste.

—A Sheriff Who Meant Business—

In the Wheeler County case a mob of three hundred gathered at Shamrock on July 12, 1930, seeking the life of Jesse Lee Washington, charged with murder. The expressed purpose of the mob was to lynch Washington and burn the Negro quarter of the town. Assigning several officers to protect the colored section, Sheriff McLemore sought out the mob leaders and reasoned with them. They were assured that any unlawful effort would be resisted with force and that somebody would certainly be killed. Yielding to the sheriff's appeals and the determined attitude of his deputies, the mob dispersed.

The medal which is awarded in such cases by the Commission on Interracial Cooperation was designed by one of America's leading artists and represents a heroic figure standing guard before the gates of justice. Encircling the medal is the legend "In Defense of Law and Civilization." To date this medal has been awarded to twelve sheriffs in various states who have shown exceptional coolness and judgment in averting threats of mob violence.

CHICAGO C. O. P. WOMEN CONFERENCE

Chicago—(CNS)—The Women's Republican League held a fact finding conference of leaders of Negro political thought ion last Saturday.

This conference was called with the idea of taking the offensive in making recommendations to the State Republican Commit ee and National Republican Committee, which has sent cut a call for a rejuvencation meeting early in June

NEW YORK TAXI MERGE

Now York—(CNS)—The Hamilton Peters Taxicab Company has become a unit of the famous Par units melee system. The Hamilton firm is an all colored organization including the executive and all employees. The Parmelee Company operates a fleet of taxicabs in Celeveland, Chicago, Pittsburgh and Minneapolis, and is acknowledged as one of the largest taxi units in the world. It is said that the company operates more cars and they carry more passengers and cover more miles than ony single firm in this country.

BOY FIFTEEN AND FISHMAN DROWN

Windsor, N. C.,—(CNS)—The body of James Curtis Bond, fifteen years, who was drown in the Roanoke River Monday was recovered Thursday morning. The boy was in swimming with his brother and another companion when cramps seized him and he drowned before the other boys could save him.

TENNESSEE STATE TO BEGIN

The 20th annual summer session of Tennessee A. and I. State College will begin, Monday, June 8, and extend for a twelve week period, closing on Friday, August 28. Advance indications points to a record breaking attendance despite the fact that a branch is being established in Chattanooga. Practically all the courses offered during the regular school will be given. Special emphasis will be placed on educational subjects and problems of rural teaching. Additional faculty members have been secured to supplement the present staff. Prof. James A. Atkins, head of the Department of English, and Prof. Merle R. Eppse, instructor in History, are expected to return from leaves of absence which they have spent during the past year pursuing gradnate work in the University of Chicago and Columbia University.

SCHOLARSHIP SOCIETY CHARTER MEMBERS RECEIVE KEYS

Pres. W. J. Hale, presented keys to twenty-four students and alumni at the chapel hour at A. and I. State College, Wednesday, May 20. Those receiving keys were charter members of Phi Beta Tau, newly organized honorary scholastic society. Admission is based on qualifying for graduation with distinction based on acquiring quality points in courses pursued. The personnel of the charter members follows:

Sponsors—Pres. W. J. Hale, Dean G. W. Gore, Jr., Mrs H. E. Hale.

Alumni Members—Mrs. M. J. Riley, Miss Beatrice Gordon, Mrs. Corrine Springer, Miss Dorothy Leavelle, Mrs. Pearl W. Gore, Miss Juanita Morell.

Undergraduates—Eddean Morris, Myrtle Roberts, Etha Campbell Geraldine Bennett, Josie Ruffin, Ned Rawls, Williams J. Hale, Jr., Clydi Bradshaw, Edna Neal, Edith Crawford, Samuella Totty, Clinton Derricks, Tillie Wilson

The first initiation and banquet was held on Monday, May 25.

THE MODERN FARMER

Official organ of the National Federation of Colored Farmers

Leon R. Harris - - Editor

Published Monthly by the Modern Farmer at Nashville, Tennessee, and Chicago, Ill.

Devoted to the interests of the Farmer, Truck Gardener, Livestock and Poultry Breeder, the Home and the People.

Entered as Second Class Matter, April 10, 1929, at the Post Office at Nashville, Tenn., under act of March 3, 1879.

All contributions for publication in the Modern Farmer should be addressed to The Modern Farmer, 447 4th Avenue, North, Nashville, Tenn.

No libelous matter will be published. Unsigned articles or letters, and those written on both sides of the paper will not be used.

Subscription price $1.00 per year, payable in advance. Personal checks must be certified. Make all checks or money orders payable to The Modern Farmer.

Advertising rates and sworn circulation figures presented upon application.

"OUR SLOGAN"

STAY ON THE FARM IF YOU'RE ON IT! GO BACK TO THE FARM IF YOU'RE OFF IT!

THE LAW

"It is hereby declared to be the policy of Congress to promote the effective merchandising of agricultural commodities by encouraging the organization of producers into effective associations under their own control.

The Board is authorized and directed—to promote education in the principles and practices of cooperative marketing—to encourage the organization, improvement in methods, and development of effective cooperative associations." (Public—No. 10—71st Congress. Sec. 1-5.)

THE GOSPEL

"This law is predicated upon the ability of the farmer to manage his own business, once he is organized to do so. Cooperation is the key to it and only in exceptional cases can the Federal Farm Board have any dealings with a farmer who is not a member of a producer-owned and producer-controlled marketing unit." Hon. Sam'l R. McKelvie, Member, Federal Farm Board.

The National Federation of Colored Farmers believes that the Colored Farmers of America should own and control their own co-operative associations.

"Co-operation With All—Affiliation With None."

EDITORIAL

ABOUT THE N. F. C. F.

It is the purpose of the National Federation of Colored Farmers to help colored farmers of America get what they should get, have what they should have and be what they should be. To achieve this purpose its leaders are travelling a straight road. They are doing —not talking. They are working—not waiting. They are wideawake progressive, resourceful, and sometimes, rather bold. They do not believe in dilly-dallying. When they know something should be done they go ahead and do it. They don't temporize with evils nor theorize with facts. When they realize that certain conditions are detrimental to the welfare of Negro farmers they try to change them.

Officers of the N. F. C. F. have been advised by certain big school and farm leaders of our racial group to sit still — to wait—to depend on others — to let the white people start our organization — to be patient. They have not accepted this advice. Evils don't die out. They have to be stamped out. What you want does not come to you. You have to go and get it.

These big school and farm leaders know what is hurting southern Negro farmers. They are men of intelligence and education. Most of them were born in the south. They have always lived in the south. They are living there now.

They know that many colored farmers do not get their rightful share of the profits from their crops after they work and produce them. Many landlords will not give their tenants written contracts.

They know colored farmers are often charged exorbitant prices for food, clothing, feed and farm supplies. Thousands of colored farmers did not know, for instance, that sugar and rice could be bought for as low as from two to five cents a pound until they joined the N. F. C. F. They had never paid less than from nine to fifteen cents a pound for these groceries.

Colored farmers have been charged $62 a ton for nitrate of soda that cost the one who sold it to them $39 a ton delivered.

Colored farmers have been charged $28 a ton for 10-4-4 that cost the one who sold it to them $14 a ton delivered.

Colored farmers who have been compelled to borrow have been charged from ten cents to thirty-seven cents on each dollar borrowed.

Colored cotton farmers have been cheated in weight and grade of their product and dared to resent it.

Progressive colored farmers, who have money, have been unable to build decent houses in certain counties because they could not get them insured.

These are some of the evils with which colored farmers have to contend. They stand out bare — brazen — naked. Why, then, should the officers and leaders of the N. F. C. F. accept advice from those who tell them they should wait and do nothing?

These big school and farm leaders have been dilly-dallying with the welfare of nearly a million farmers and their families and they know it. They have been afraid to take the bull by the horns. They have stood afar off with outstretched hands full of "salt."

Their favorite "salt" has been "agricultural training" or, advice to the farmer on how to produce his crops." This is good to a certain extent, but it doesn't fill the bill. A colored farmer can't eat "agricultural training." He can't wear it. He can't use it as a roof for his house. He can't pay his debts with it. He can't purchase a home of his own with it.

The founders, organizers and leaders of the N. F. C. F. are the only farm leaders who have preached common sense organization, cooperation and business farming to colored farmers. The N. F. C. F. is the only farm organization that has faced these evils and conditions and tried to remedy them. The rest of the National farm organizations have looked at them with their eyes shut. The N. F. C. F. is the only national farm organization that has ever attempted to do any thing at all to relieve NEGRO farmers.

The N. F. C. F. is not a secret organization. It has nothing to hide. Anyone who wants to know can find out what its objectives are and its members know what its program is. For the benefit of a few of its shy and silent friends we again state some of its objectives: —

To organize Units in every country in the United States where there are Negro farmers.

To teach co-operation and to help its members practice co-operation.

CO-OPERATIVE BUYING — of farm and home supplies groceries feed seed. fertilizer,—anything members can purchase at wholesale prices and save money by so purchasing. Our members who purchase co-operatively know they save money They have saved from ten to eighty per cent compared with prices charged for various articles by merchants in their home communities.

CO-OPERATIVE PRODUCTION — to teach and help members plant Unit acreage of certain crops, especially food and feed crops, and to produce certain types and breeds of livestock and poetry. When co-operative production is practiced then—

CO-OPERATIVE MARKETING is profitable. Units can ship in carlots and get the benefit of the best market prices.

Members are told where, and from whom they can purchase at the best advantage and where, and to whom they can sell to the best advantage.

Members are told how to grade, pack, load and prepare their products so they will bring the best prices. Their national office is their clearing house.

To help good tenants find good landlords who will give them a a square deal.

To help tenant farmers become landowners.

To help good landlords find good tenants, who are industrious, skillful and thrifty.

These are some of the objectives of the N. F. C. F. There is not an intelligent school or farm leader in the south who can say that such objectives are unworthy. The officials of the N. F. C. F. are not holding conferences about these objectives. They have been talked about long enough. Instead of holding conferences, the leaders of the N. F. C. F. are doing business. They are organizing Units — these Units are practicing co-operation — they are buying together — producing together, planting Unit acreages of certain food and feed crops — and they are marketing their crops co-operatively. Only a week or so ago one Unit in South Carolina shipped a car of Laxtonian peas to New York City, the first carlot of English peas of one variety, perfectly graded and packed, ever shipped to market by a group of colored farmers anywhere in the United States. What this Unit has done others will also do this season.

If Booker T. Washington, greatest of all southern school and agricultural leaders, was living today, the N. F. C. F. would have an able champion. He was not afraid to organize and support the National Negro Business Leagne and he would not be afraid to support the National Federation of Colored Farmers. Booker T. Washington had vision. He knew that some sweet day, such an organization as the N. F. C. F. was bound to come. That day is here.

Tho N. F. C. F. is not afraid of PROSECUTION OR PERSECUTION. It will defend itself if prosecuted because it has done no wrong — it is legally organized — its business is legally conducted — it breaks no laws.

It will bear all the persecution it is able to bear and then, its persecutors may expect it to do the the natural thing. They know well what that is. If they can bear the toil it can endure the pain.

If big Negro school and farm leaders in the south want to give Negro farmers good advice they should advice them to join the N. F. C. F. If they want to retain their influence they had better wake up. The era of conferences, experience meetings and barbecue is past. The era of organization, co-operation and business is here.

THE SECOND ANNUAL CONVENTION

The second annual convention of the National Federation of Colored Farmers will be held at Mound Bayou, Miss., the latter part of August. If all Units are represented,—and we hope they will be,—there will be assembled at that little Mississippi "farming town," delegates from fourteen states.

These colored farmers and farmerettes will he the representatives of the only co-operative organization of Negro farmers in the United States. They are the pioneers — the beginners of a movement that is destined to influence the progress of the mass of our racial group in this country more than any other. They will come endowed with faith, courage. and best of all, with a knowledge of what co-operation really is, and what it can do for those who believe in it and practice it.

This convention will not pass any second-hand resolutions — it will not make any big-phrased declarations — it will not demand anything from federal or state governments nor will it belittle the efforts other individuals and organizations are making to aid colored farmers. Every representative of the N. F. C. F. knows what the program of his organization is. Pioneers must be builders. Delegates will be instructed at this convention how they can build better and stronger local Units — how they can become better organized— how they can buy for less, produce better, and sell for more — how they can save more, get more, have more and bo more. A successful convention will be held at Mound Bayou and the National Federation of Colored Farmers will treble its membership, its usefulness and its power during the next twelve months.

BUT WE WERE NOT THERE

On May 18, leaders of nearly all of the national co-operative marketing organizations in the country met in Chicago on the call of President E. A. O'Neal of the American Farm Bureau Federation to plan a big drive to organize all the farmers of the United States and to try to create public sentiment favorable to the Federal Form Board. President O'Neal estimated that the group of leaders present represented one-half of the farmers of America.

The colored farmers of America were included in the half not represented. Why? Simply because your representatives were not wanted. They were not invited to the meeting although they had previously assured officials of the American Farm Bureau Federation that they would attend if invited.

The N. F. C. F. is willing to co-operate with the other national Farm organizations but its a cinch that it cannot co-operate with them if they won't let it. Evidently these leaders believe that organization and co-operation is beneficial to white farmers only. Or, probably they do not want colored farmers to secure any of the benefits organization and co-operation will bring.

Colored farmers of America should accept this back-handed slap in the face given them by the America Farm Bureau Federation as proof positive that plenty more slaps will follow if they are foolish enough to bother with that organization. The American Farm Bureau Federation has never wanted colored farmer members. It does not want any now. It DOES WANT Negro farmers to tie themselves onto it in some certain way so it can control them and make them pay out their good money for practically nothing. A few colored farmers in Alabama followed the advice of some of our farm leaders in that state and "think" they joined it, but they have never attended a meeting of the organization or received any tangible relief or help. In spite of their "joining" they are about as close to it now as they will ever be.

The N. F. C. F. sticks to its stated policy — it is willing to co-operato with any of the national farm organizations in any manner that will be beneficial to American agriculture — but it does not propose to affiliate with any of them. It still believes that its members and all colored farmers, are better off now and will alway be better off if they remain under their own vine and fig-tree.

THE SOUTH IS COMING

There is nothing wrong with the South. God made it a potential "heaven on earth" when He gave it her soil and climate. If she is not what she should be it is wholly the fault of her inhabitants.

For centuries the people of the South have failed to take advantage of their opportunities. They have nearly everything to do with but for some reason they just would not "do." Southern farmers the founders of Southern Civilization have been just as guilty of ancestor worship as have the people we are prone to call the "heathen Chinese." Perhaps they have not worshiped the bodies of their ancestors but it is a fact that they have worshiped the minds of their ancestors. They have farmed as their fathers before them farmed — the hardest way— the most unprofitable way— the oldest way.

But the South is waking up. The South is coming. Southern farmers are forgetting what they should forget and are learning what they should know. They are beginning to practice common sense farming —modern farming, and this practice is going to make the "new South" new indeed. Let us cite a few examples:

Last spring a South Carolina widow faced the prospect of going hungry and seeing her children hungry. She owned ten acres of land, three acres of which were tillable. Her neighbors advised her to put it in cotton but she was sick of cotton. Cotton alone had put her in the place she was in then — in poverty and in rags. She told them, "No, I am going to try potatoes." They laughed at her. They told her that potatoes would not grow without fertilizer and she had no money to buy fertilizer. But she had determination — a hard head and a willing mind.

She built a huge pile of barnyard compost, cared for it as she should, and this was her fertilizer. Sho succeeded in obtaining enough good seed to plant just one acre. She cultivated this acre well and it yielded 233 bushels of spuds. Her net profit was $360. Today she is laughing at her neighbors and has three acres of fine spuds ready to dig and market.

Another South Carolina woman

keeps a flock of ninety hens — all one breed and it a good one. She knows her business. Last year her income from each bird was $5.91. Figure it out.

Louisiana sold three and a half million dollars worth of Irish potatoes last year.

More bathtubs were sold in Georgia last year than ever before.

Farmers in Dale county Alabama sold $96,000 worth of hogs and poultry co-operatively, during January and February of this year.

Production of sweet potatoes in South Carolina show a profit net of $76.12 per acre last year.

Eighteen million dollars worth of honey was produced in the South last year.

There is no doubt about it. The South is coming. She is learning how to live at home and board in the same place. Organization, co-operation, commonsense, and plenty of old-time religion that makes "you love everybody" is going to make the South a "heaven on earth" yet.

FRUIT TREES MAY YIELD FOOD, FLOWERS, SHADE

The addition of fruit trees to the home grounds is a splendid investment which yields three-fold returns—fruit trees add color and fragrance to the garden; provide welcome shade, and supply delicious fresh fruit.

Many of the smaller growing fruit trees are admirably suited as accents in the background or for massing in interesting groups in the border. A thicket of plums is a beautiful sight when the trees are covered with their springtime array of dainty white flowers.

Apple trees form low, rounded heads and are excellent for shade. When in bloom the trees are a glorious mass of pink blossoms, and their exquisite fragrance perfumes the entire yard. Don't overlook planting one variety each of summer, fall and winter apples if you possibly can find space for them and more of them if room. You will never regret it.

Another variety of fruit tree that will add a charming color note on the rear lawn is the peach. At blossoming time every twig and branch is bright with its beautifully formed flowers of a lovely pink making the tree showy and attractive, even at a distance.

Cherry trees are well worth a place in the home grounds for their ornamental value alone. And who does not enjoy cherry pie made with the freshly picked fruit? In the cherries there are both sweet and sour varieties. In the sour varieties some are early and some are late, so the fruiting season can be extended over quite a period if several trees are planted.

There is really everything one can need in the way of trees to be found in this group of fruits. There is hardly a yard which does not offer considerable opportunity for planting fruits on the rear lawn. And when we realize that fruit trees are as ornamental and desirable as any other tree and give us a worthy crop of fruit besides, there is little reason for not planting them more extensivly.

Look around your grounds now and stake out the places where fruit trees shond be. Springtime is the best season of the year for planting all types of fruit trees.

PRIEST AIDS HIS PEOPLE TO BUILD HOMES ON CREDIT

If the Rev. N. J. Lentz, pastor of St. John's Catholic church in Waterloo, Ia., had not decided to enter the priesthood, he perhaps might have become a banker, a realtor or a hard-headed business man, says the Des Moines Register. Father Lentz believes in spiritual guidance for his flock, of course, but his interest does not stop at that point. He believes most good citizens desire to own and are better off if they do own their own homes. He has helped, thus far, more than twenty families in his parish to acquire homes.

He believes that when a member of his flock is in need of cash to tide him over a trying period money should be available at less than the interest charged by the ordinary loan company. So he has instituted a credit union which has proven successful and popular.

Church Has Grown.

Father Lentz has been in Waterloo for the last six years. During that time he has seen his church grow steadily and during that time he has acted not only as priest but as realtor, financial adviser and in any other capacity demanded of him at the time. Before coming to Waterloo he served churches in Dubuque and State Center.

The St. John's Credit union has been in operation since last October.

"The credit union," the priest explains, "feels that the ordinary interest rate on small loans in Iowa is too high, and that when working people are in trouble it is much more than they can afford to pay. Therefore, if people can show us that they pay their bills and if they give us a mortgage on their furniture or their car, or if they get singers on their note, we make them loans of from $25 to $300 and give them the opportunity to return it in small easy payments."

The credit union officers are members of St. John's parish. A special credit committee passes on applications for loans.

Thus far more than fifty churchmen have been helped by the credit union, and deposits have reached nearly $8000.

January 1 a 6 per cent dividend was paid depositors. This dividend is to be paid twice annually.

Even before the organization of this credit union, Father Lentz was helping his parish members buy their own homes. He worked out a special plan of financing such purchases which was more attractive than the ordinary arrangements. Twenty-two homes have been acquired through his church thus far and at present three more are being constructed. There are 325 families in the church.

TWO TEXAS SHERIFFS GET MEDALS

Atlanta, Ga., — (CNS) — Two Texas sheriffs who saved colored prisoners from mobs have been awarded decorations for courage and judgment by the Commission of Interracial Cooperation here. The names of men announced by Dr. Will W. Alexander, director of the commission are Walter W. Covington of Beaumont, sheriff of Jefferson county and W. K. McLemore of Shamrock, former sheriff of Wheeler county.

Sheriff Covington received his medal last Sunday. McLemore's will be presented at a public meeting in Shamrock next Sunday.

The award to Sheriff Covington commemorates events of June 28 and 29, when mobs stormed the Jefferson county jail and demanded the surrender of Rainey Williams, Negro, accused of a series of crimes. The Sheriff and his deputies repulsed the first mob, numbering one hundred or more, with the aid of tear gas.

The next day another group demanded the prisoner. Advancing to meet them, Covington punched the leader on the jaw knowked him down The crowd dispersed in haste.

In the Wheeler county case a mob of 300 gathered at Shamrock on July 12, seeking the life of Jesse Lee Washington, a Negro charged with murder.

Sheriff McLemore sought out the mob leaders and reasoned with them . They were assured that any unlawful effort would be resister with force.

The awards were passed upon by a committee composed of Hugh M. Dorsey, former Governor of Georgia; Mrs. J. H. McCoy, of Athens, Ala.; Marshall Ballard, editor of the New Orleans Item and George B. Dealey, editor of the Dallas (Texas) News.

NEGRO POPULATION IN OHIO NOW OVER 300,000

Washington — (CNS) — The announced population of Ohio is given at 6,646,697, comprising 3,361,141 males and 3,285, 556 females, or 102.3 males per 100 females. There were in the State, April 1, 1930, 6,331,136 white persons, 309,304 Negroes and 6,257 of other races.

As compared with the number in 1920 (5571,893), the white population shows an increase of 759,213, or 13.3 per cent, while the Negro population (which numbered 186,187 in 1920) shows an increase of 123,117 or 66.1 per cent.

Of the Negro population 159,128 are males and 150, 176 females, an excess of 8,952 males over females. The Negro population, 21 years of age and over, is given at 199,291, — 105 males and 93 555 females. This element of the voting population of the State increased more than 12,000 during the decade from 1920 to 1930.

The Negro population of Akron, Ohio, now given at 11,080 is an increase of nearly 100 per cent over the population shown by the 1920 census. Of the Negro population, 21 years of age and over 6,908, —3,781 are males and 3,127 females, an increase of 3,717 over the 1920 figures.

TWO PROMINENT NEW YORK BARRISTERS DEAD

New York — (CNS) — Death claimed two of the city's prominent bar leaders last week.

George E. Hall, 42 assistant district attorney, died at Bridgeton, N. J., last Sunday, where he had passed sometime as a result of a nervous breakdown. Hall was appointed an assistant district attorney of New York County in 1929. He gradnated from the Howard Law School in 1920, and received a doctor of jurisprudence degree from New York University in 1922. He was admitted to the New York state bar in 1923. Surviving him is his widow, Mrs. Flora Hall and a son, George Hall, Jr. The deceased was a native of Kentucky.

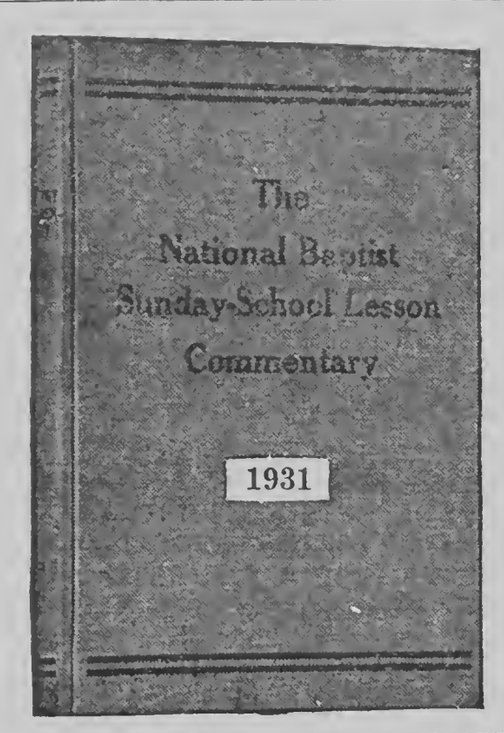
Oscar Garrett, veteran criminal lawyer died at his home in Jamaica last Thursday, at the age of 55 His death was due to a nervous breakdown. Garrett was a native of East Tennessee and a graduate of the University of Pennsylvania. He was for some time a law associate of George H. White, former Congressman from North Carolina. His first wife, the daughter of the Congressman. After leaving Philadelphia, Garrett came to this city and was admitted to the New York bar in 1920. The deceased is survived by his widow, Mrs. Rosa Garrett, and a daughter by his first wife.

CANCER UNKNOWN AMONG HABITUAL ONION EATERS

Butler, Ind.,—Once more the humble onion is being honored by a medical authority, writes the Paris, correspondent of the London Daily Telegraph. According to Doctor Lakhovsky, who has for some years been engaged in cancer research work, raw onions are not only a preventive, but also a cure for cancer. Onions, he says like a number of other vegetables, have radio-active properties when eaten raw, and he has sought to make use of them. He found from all parts of the world that in those places where raw onions formed a staple part of the ordinary diet cancer was practically unknown. There are certain communities of Jewish ascetices in Russia and Poland who live exclusively on bread, raw onions and water, and among these, he declared, not a single case of cancer has been recorded. Serbians, Bulgarians, and certain communities in the Caucasus who eat raw onions daily are singularly free from cancer.—Butler, Indiana Record:

FRUIT IN TABLET FORM INVENTED BY GERMAN

New York, May 15—Karl Hessel, Berlin engineer, has invented a process to convert raw or cooked fruit into a fruit powder, or fruit flour, which doesn't spoil and yet contains all the ingredients of natural fruit, cable reports from Berlin this week announced.



SUNDAY SCHOOL LESSON Commentary

For 1931

Every Sunday School Teacher Should Have It

SIX REASONS WHY YOU SHOULD USE IT:

First: It is the production of your own National Baptist Publishing Board which gives employment to more of our people than any similar concern in the United States.

Second: It is purely baptistic and orthodox in every particular.

Third: Its doctrines are unquestioned, and the Biblical requirements are stressed in a manner to make it absolutely dependable.

Fourth: None of the modern theories leading to skepticism are admitted.

Fifth: It aims to be true to the teachings of Jesus and whatever there is presented which has not the "Thus saith the Lord" is discarded as unsafe and destructive of the best interests of mankind.

Sixth: Thoroughly adapted to the uses of our Sunday school constituency, it stands as a beacon light to all those who would like to rise in the scale of intelligence and demonstrate the qualification necessary for the accomplishment of the "Great Work" devolving upon us as a people.

FRENCH CITY CABLES INTERNATIONAL LABOR DEFENSE IN CASE OF CONDEMNED BOYS; CITIES HOLD MEETS; DREISER TO TALK

NEW YORK, June 3—Mayor G. Marrane and the Board of Supervisors of Ivry, France, a city of fifty thousand population, have cabled thru the International Labor Defense, protesting the judicial lynching of the eight Negroes who were sentenced to be electrocuted on July 10 by the state of Alabama. The cable reads:

"We Board of Supervisors of Ivry Seine fifty thousand people protest the death sentences passed upon Negro workers. We demand prosecution of lynchers and immediate freedom Negro workers. We will not allow another Sacco Vanzetti case."

Unions, Churches, and Ne-
Board Supervisors, G. Marrane, Mayor Ivry.
gro Clubs in Scottsboro Conferences.

The United Front Scottsboro Conference meeting now in 33 cities to work in conjunction with the League of Struggle for Negro Rights and the International Labor Defense in the defense of the nine Scottsboro boys, are turning into huge, militant mass bodies, according to detailed reports received in the national office of the L. L D. Many churches, Negro clubs and unions are joining in the defense of these boys.

Philadelphia's conference on May 25 was attended by 198 delegates. 65 Fraternal organizations were represented with 126 delegates 199 trade unions and unem- 11 churches joined in with 19 delegates. 19 ttrade unions and unemployed councils were represented with 40 delegates.

Chicago also reported an excellent conference with 285 delegates present, representing 182 Negro and white organizations. Among the oganizations present were 18 Negro churches, 15 clubs and lodges and 17 unions.

At the conference in Charlotte, N. C., Mrs. Williams, mother of 14 year old Eugene Williams, one of the convicted boys, and Honorary Chairman of the Conference spoke. She said:

"I want to praise the International Labor Defense and want to say I am with them until I am dead and gone. Our boys were being whipped and beaten until the I. L. D. came in. They've done everything they could. I've seen some of the good they have done. If it hadu't been for the I. L. D., we mothers wouldn't have been able to see our boys. I guess, until judgement day. I hope we win this fight. If we don't win this they'll do something else against the workers."

A telegram of greetings from Claud Patterson, father of one of the boys, was read at the Chicago Conference. All the parents and guardians welcomed in message of cheer the gathering throughout the country which are working in conjunction with the I. L. D., to save the boys from the electric chair.

Hearing in Scottsboro on June 5

A motion for a new trial in all the cases has been made by George W. Chamte and Josept Brodsky, attorneys for the I. L. D., and the hearing will be held at Scottsboro before Judge Hawkins. In seven cases a motion had already been made by the original "defense" but denied by the court. The I. L. D. attorneys demanded a new trial for all the boys and the court set the date for the hearing for June 5th. In case of the court's denial of the motion, the I. L. D., will appeal to a higher court.

Dreiser to Speak at Town Hall

The National Committee for the Defense of Political Prisoners, working in conjunction with the I. L. D. on the Scottsboro case, will hold a protest meeting at Town Hall, New York City. The speakers will be Theodore Dreiser, famous novelist, Mrs Ada Wright mother of two of the boys, William Patterson, of the League of Struggle for Negro Rights, Waldo Frank, novelist; Frank Palmer, of the Federated Press and others.

ATLANTA SCHOOL GRADUATES FIVE; JOBS READY

Closing out what the director, Forrestor B. Washington, classed as the most successful year in its history, the Atlanta School of Social Work presented an impressive commencement program at Sisters' chapel, Spelman college, Friday evening.

Five young women received certificates of graduation: Miss Bertell Louise Collins, of Conyers, Ga.; Frances Marcena Douglas, of Macon, Ga.; Mario Helen Foster; France Belle Peoples, of Omaha, Neb.; Mae Barece Taylor, of Bonner Springs, Kan. Each of the graduates have been offered lucrative employment by some social work agency.

Dr. Edgar H. Johnson, chairman of board of trustees was master of ceremonies. Forrestor B. Washington, director of the school, presented the diplomas.

Mr. Eugene Kinckle Jones, executive secretary, National Urban League, commencement speaker of the Atlanta School of Social Work, presented to a large group of guests assembled in Sisters chapel Friday evening a complete analysis of "Social Work in its General Significance to Negroes."

According to this analysis, social work in its general significance, embraces work for defectives, delinquents and dependents, preventive activities in the field of recreation and in the securing of proper lodgings for detached young men and women and constructive service looking toward better housing of families, improvement in working hours wages and conditions and civic welfare through better municipal county and state service to the people.

Social work as understood by the Negro public embraces in addition to the above those activities that would tend to improve the relative statue of the whole Negro group. Each individual Negro is trained for participation in the group advance. Any artist actor, writer, athlete, scientist or professional leader who achieves the unusual is considered an exhibit of the evidence of progress in social improvement. The gains that are made as a result of those individuals' activities are considered strictly racial advances and the Negro administrator uses every effort to encourage the individual and to provide opportunities for him to perform adequately and progressively.

The most important phase of social work engineering among colored people are: those efforts which effectively show to the community that the Negro is part and parcel of society as a whole (this is educational and can best be illustrated by the publicity work of interracial committees by means of the press and the platform) next social service agencies should be led to consider Negroes' need as proportionate parts of the total social needs of the people at large and Negro Social Workers should be trained and placed where they can accomplish the most good.

Our greatest need is the development of more social engineers who see the manifestations of social disorder who can visualize the goal to be reached and who can develop the methods of reform that should be utilized.

Preceding the speech by Mr. Jones, a one-act playlet, "Out of Work" the original work of Miss Ernestine McGill, member of the School's faculty was presented by the students

Miss Mary Dickerson, executive secretary, Atlanta Auberculosis association, offered remarks representing the oard of Trustees of the School.

Music fo this occasion was furnished by the Clark University quartet, Spelman Glee Club, and special solo number by Veninmin Blinov of Emory University.

SOUTH GEORGIA WATERMELON CROP WELL ADVANCED: FIRST CARS ARE EXPECTED JUNE 20.

Moultrie, Ga.,—The watermelon crop in Colqnitt, Thomas, Brooks and Lowndes counties, the chief producing areas in the south Georgia belt, is well advanced and indications are that the first cars will go out about June 20.

A recent survey of the belt indicated that the acreage in melons this year is at least 20 per cent smaller than it was last season. Reports from Florida show that shipments from that state will also be considerably smaller this year than they were during the 1930 season.

Melon men in this section believe that this year's crop will show a profit. Last year hundreds of cars failed to bring enough to pay the freight and to this fact the cut in acreage this season is largely attributed. The stopping of advances to growers also played an important part in reducing the size of the 1931 crop.

POTASH IMPROVES THE BAKING QUALITIES OF MICHIGAN POTATOES

Edmore, Mich., May 3—An advertisement in a trade paper a year ago has led to a very important discovery, affecting the entire potato production program in Michigan. The advertisement said, "Idaho potatoes have high quality because they are grown in the ashes of extinct volcanoes which are rich in potash."

Fred W. Johnson, owner and operator of the Northern montcalm Potato Farm, chanced to read this advertisement and it caused him to wonder if the reason why Michigan farmers do not produce as good baking tubers as Idaho prodncers was perhaps not one of fertilization. He invited two fertilizer companies to make tests in 1930 in a five-acre field on his farm. This led to the discovery that the soil was deficient in potash, that the yields per acre could be stepped up by the use of fertilizers with a high potash content, and that the baking quality could be materially improved.

It was observed that plots receiving fertilizers containing no potash yielded only seven bushels per acre more than check plots which received no treatment, while the addition of potash served to step up the yields by 22 to 49 bushels per acre.

Oven tests showed the potatoes grown under the potash treatment baked better than those grown without potash. The experiments were conducted with potatoes of the Russet Burbank and Russett Rural varieties Mr. Johnson and his neighbors plan to use potash fertilizers on all their potatoes this season. They predict that Michigan in the future will be a factor in the the baking potato trade.

WHAT'S HOG AND WHAT'S MEAT

Chicago, Ill., (Special to Modern Farmer)—In talking with an official at the stock yards here relative to the reason for price differentials in various cuts of pork he said that based on a 250 pound hog the following are the average weights of the different cuts:

Fresh meat, loins, Boston butts and spare-ribs 37.05 lbs.
Hams 32.05 lbs.
Bacon 29.37 lbs.
Fát backs 23.75 lbs.
Lard 22.05 lbs.
Shoulders 12.05 lbs.
Plate 6.87 lbs.
Sausage 5.63 lbs.
Jowl 5.63 lbs.
Kidney, stomach linings, for pepsin 5.62 lbs.
Hide and hair 9.38 lbs.
Shrinkage 51.25 lbs.

Skull toes and knuckles and blood 9.30 lbs.

The skull ground into meal makes an animal food that will easily test 60 per cent protein. The hide is tanned and the skin used for footballs, shoes and etc. The hair is used in upholstery and parts of the bone used for bone handles, buttons and etc. The toes go into glu and the blood is used in the manufacture of tankage.—St. Louis, Mo.

TO TEST FERTILIZING SPRAYING OF POTATOES

Indianapolis, Ind., April 24—Early potato growing on one of the Purdue University experimental farms will be tried for the first time this year. Henry Cripe, the farm operator, E. W. Heeter and H. K. Riley both of Purdue, are co-operating in conducting experiments. The soil is a sandy loam, and early Ohio potatoes will be planted. The seed was grown from certified stock last year.

The plot was covered with barnyard fertilizer during the winter. This makes a coating of fresh fertilizer which is discouraged by many growers. They reason that the heat generated encourages the development of many potatoes fungus diseases. The land recently was plowed and harrowed as is ordinarily done. Commercial fertilizer, the amount not yet determined will be worked into the soil before planting.

Seed will be treated with a corrosive sublimate solution. Four ounces of the chemical will be mixed with 30 gallons of water, the uncut seed to be soaked for 30 minutes. It will be planted at the rate of 20 bushels to the acre. The ground will be harrowed twice after planting and until growth begins. Cultivation, intermittent, with two hoeings, will follow as plant growth advances. Plants will be sprayed with Bordeaux mixture and arsenate of lead and dustings of copper lime once each week throughout the season. Part of the ground will be given liquid sprays and the remainder will be dusted. the two methods being used to check which is the better in disease control.

EMPLOYMENT STILL BAD NEGROES LOSE TO WHITES URBAN LEAGUE REPORTS FOR APRIL

The National Urban League's monthly check on employment conditions among Negroes shows that wages have dropped decidedly in all sections of the country, that whites continues to supercede Negro workers in hotels, and that now people have moved into Northern and Southern cities from neighboring rural areas. Only in a few cities are conditions thought to be improving. In most places they are either at a standstill or in worso shape.

In Spartanburg, South Carolina, wages dropped from 5 to 20 per cent. A monthly wage of $30 for domestics in Seattle is common, and men in the lumbering camps aro paid as little as 18 cents per hour. In Richmond construction laborers have been reduced from 35 to 20 and 25 cents per hour. Only by accepting reduced wages of from 10 to 20 per cent, have Negroes been able to keep their jobs in Grand Rapids.

In the New York area wages for domestic and common laborers have shown similar curtailment. Women recently employed in an important business establishment are working for less than whites who formerly held the job, and doing more work than it ordinarily entails. In some places men are paid considerably less than whites working along side of them.

Cutting of prices was resorted to in South Carolina by a cleaning and dyeing establishment run by whites when a similar business was opened by Negroes employing ten workers. In at least two cities on the Pacific Coast, white girls are now waiting in hotels in the place of Negro men. Attempts are being made to crystallize sentiment against continuing the policy of employing Negro bellmen and waithers in hotels in certain sections of the South. When department stores in Richmond discontinued their delivery service and entered into contracts with express companies to handle their packages, a number of Negro drivers lost their jobs.

Strangers are moving into Denver, Detroit, Atlanta, Akron (Ohio), Boston, and Philadelphia. Some reports indicate a movement to the farms from cities, but the largest movement appears to be in the opposite direction.

TWO IMPORTANT HAMPTON APPOINTMENTS

Head of New Phenix School Elected

Director of New Nurses Training Course Chosen

By George A. Kuyper

Hampton Institute, Va., May 28.—Two appointments eagerly awaited by those interested in Hampton Institute were announced by President Arthur Howe here today. Ian Ross has been chosen to head the new George P. Phenix School, which will open its doors this fall to the primary and grammar children of this section and to the high school students of Elizabeth City County. This school will serve as the training school for prospective teachers who are students in Hampton Institute's School of Education, and the post of principal will thus be an important one in Hampton Institute's educational life. The other appointment was that of Nina Gage as director of the new Nurses' Training School to be in September in connection with Dixie Hospital, adjoining the campus.

Ian Ross, whose father—the Rev. G. A. Johnson Ross— was for many years an eminent professor at Union Theological Seminary, comes to Hampton Institute highly recommended from the institutions of learning where he has studied and taught. He left Harverford (Pa.) Preparatory School, where he was a student, to enlist in the British Army at the beginning of the world War. being commissioned as lieutenant. He gradnated from Massachusetts Agricultural College, where he served as president of the student council, captain of the basketball team, and president of his fraternity. He was one of the most outstanding and helpful influences while at this college.

In 1925, Mr. Ross received the degree of A. B. from the Western State Teachers College, in Kalamazoo, Michigan. A year later he was awarded the degre of M. A. from Columbia University, majoring in School Administration. While at Columbia he was president of the student council and a member of the forum.

Since leaving Columbia he has served as instructor in history, principal of the boys' boarding department, and as assistant business manager at the Punahu School in Hawaii, a school which was attended by the founder of Hampton Institute— General Samuel Armstrong.

Mr. Ross was born in London of Scottish parents. He is thirty-one years old, married. and the father of one child.

Have done intensive study in the field of school administration, he will no doubt prove an able leader of Hampton Institute's new school.

The director of the new Nurses Training School, Nina Gage, comes to Hampton Institute with a varied experience in both organizational and educational work in this field. At present she is secretary of the National League for Nursing Education. She has traveled extensively and has done practical and influential work in China.

A SOUTHERN NEWSPAPER EDITORIAL

Utterances coming from blue blooded white men in the South condemning mob violence and lynch law seem to be on the increase. The Statesville Daily recently had an editorial under the caption of "Discouraging The Mob." In that editorial they said:—

"The taxpayers of Oconee County, S. C., will pay the widow of a Negro lynched in that county $2000. Counties are liable for damages for lynchings under a South Carolina statute enacted in recent time. The widow brought suit for the amount named and the South Carolina Supreme Court held it is due. The court did not leave it that, but it issued an order that the item be provided for in the county's appropriation bill. Seems rather unfair, it might be said, to make the law-abiding citizens of the county pay for the acts of a mob. But the theory of the law is that when the taxpayers have to pay directly for the acts of lawlessness they will become sufficiently interested to exercise their influence to put mobs out of business.—Statesville Daily."

MORRIS BROWN UNIVERSITY TRUSTEES HAVE MEETING

Atlanta, Ga.—(CNS) — The annual meeting of the trustee board of Morris Brown University was held Tuesday with Bishop W. A. Fountain, chairman of the board, presiding.

The chairman, in his annual address, appealed to the board for its co-operation in creating a greater and better Morris Brown. He cited the institution's $210,000 debt when he took it over three years ago, and how the indebtedness had been reduced to $62,000 He pointed out that the university has an enrollment of 437 students

TWO MOREHOUSE PROFESSORS TO GET FELLOWSHIPS

Atlanta, Ga.— (CNS) — Two Morehouse College professors have been named as recipients of general education board fellowships and will devote next year to study for their degree of Doctor of Philosophy. Professor Nathaniel P. Tillman, Head of the English department, will study at the University of Wisconsin, and Professor Samuel M. Nabrit, head of the department of biology will return to Brown University to complete his work for his doctorate Each of the men was graduated with high honors from Morehouse College, Tillman receiving his bachelor's degree in 1920 and Professor Nabrit in 1925.

NEGRO INSURANCE COMPANIES FROM DEPRESSION SUFFER

Because the business of life insurance stands out in the minds of members of our race as representing the most successful field of our commercial experience, it undoubtedly will come as a shock to know that we have lost considerable ground in this field during the past year. That such is the case is borne out by the year's statistics compiled by the National Negro Insurance Association and the reports of the varions companies to their state examining boards. Comparative figures are not available on all activities of the various companies but the following will suffice to show that it is up to our larger companies to make strenuous efforts to overcome their present handicaps and win a larger share of the public's confidence and patronage.

The annual report of the Association shows that the 27 reporting companies have lost more than $85,000,000 of business during the severe period of unemployment which continues on. The total amount of insurance in force by all companies was $290,881,556 at the close of 1929, whereas it had decreased to $205,881,556 by December 31, 1930. This loss was undonbtedly occissioned by the heavy lapse ratio borne by all colored companies. The report shows total lapses for all companies of nearly $2,000,000,000 against the $101,158,721 of new business written and put on the books for the year. This volume of business, however, gave employment to 7,383 persons including 179 officers. During the same period the white companies of the country increased their business by four and one half billion dollars.

Although the total premiums income for all companies was considerably lower than during 1929, the combined assets of the various companies do not show a considerable loss. The 27 reporting companies have total assets of $14,650,629 at the end of 1930. Of this amount. $2,535,058 was invested in bonds and securities and $1,856,483 was invested in real estate loans on colored property. These figures show aproximately 8 per cent of the Negro companies money invested in mortgages. The remaining assets are accounted for by policy loans, real estate holdings and cash resources.

The year's premium income fro mall reparting companies amounting to $13,150,509. This is less than the previons year's income by several thonsands of dollars. From these receipts a total of $5,052,487 was paid out in claims of all kinds and a total of $4,831,735 was paid in salaries to officers and clerks and commissoins to agents. Operating expenses accounted for a considerable portion of the remaining difference and the balance was returned to surplus accounts.

Negro newspapers were surprised to learn that they have received a total of $119,063 for advertising as shown by the annual report of the companies. Such a sum would account for 20 per cent of their total annual advertising revenue of Negro newspapers.

COMMERCIAL NOTES

(By the Associated Negro Press)

New Orleans, La., — The Booker T. Washington Mutual Aid and Burial Association opened here this week with befitting ceremony. The newly organized enterprize is incorporated under the laws of the State of Louisiana with the following officers: Dr. A. C. Yearwood, president; D. F. Martinez, vice president and general manager; J. L. Edinburg, secretary; Miss M. A. Payton, assistant secretary; Miss V. M. Ferris, treasure; Dr. A. W. Brazier, medical director.

NEW YORK CITY — According to the latest reports the Chelsea Bank will reopen as the Mercantile bank and Trust Company during this month. Of the twelve clerks to be employed in the bank, seven will be Negroes.

HOUSTON, Tex. — Annonncement was made here Thursday morning that a charter has been granted to the Pilgrim Building corporation by the State of Texas. The company boasts of a paid-up capital of $400,000, principally owned at the present time by the Supreme Home of the Ancient Order of Pilgrims of which James D. Ryan is the supreme worthy recorder.

ASHVILLE, N. C. —The Booker T. Washington Hotel built in 1927 at a total cost of approximately $90,000, is the most elaborate and modern hotel between Washington and New Orleans. The hotel located at 411 Southside Ave., is operated by Dr. Harold J. Warren, District Deputy of the Western N. C. Elks, and is being managed by R. D. Rutherford, experienced hotel man. It has 34 rooms, with 16 private baths and dining-room service, with all modern conveniences. It is the most popular resort hotel in the South, and is becoming a noted assembly place for conventions. N. C. Elks will meet here June 16, 17, 18. Miss Carrie Bess is official hostess of the hotel. Eight men comprise the original buildings group.

Application for Membership

NATIONAL FEDERATION OF COLORED FARMERS

Vincennes Hotel, Chicago

As a farmer, I believe the time has arrived when the Colored Farmers should form a National Organization devoted to diversified production, grading, packing, shipping and marketing of farm products and to the purchase of needed farm supplies through co-operative methods, to the end that a more prosperous financial condition may result from their efforts as producers.
I hereby subscribe $5.00 for membership in the National Federation of Colored Farmers for a period of 12 months from date. Also $1.00 for an Annual Subscription to the Modern Farmer.

GIVES FORMULA FOR A POISON FOR CUTWORMS

Jefferson City, Mo.—Due to the mild winter, cutworms are now more numerous and will cause more damage this spring than is ordinarily experienced, according to K. C. Sullivan, plant commissioner of the Missouri state board of agriculture.

Garden and truck crops will probably suffer most, also crops planted in freshly turned sod land will be subject to serious attack.

The most successful remedy for cutworms is a poison bait, which may be made at home as follows, he says:

Wheat bran 20 pounds, white arsenic or arsenate of soda one pound, cheap molasses one-half gallon and water three gallons.

First mix the wheat bran and the poison, second, mix the molasses and water. Third, thoroughly wet the bran and poison with the water molasss solution.

Four of five finely chopped up orranges or lemons or a small amount of amyl acetate may be added to make the bait a little more attractive. Cutworms are noctural feeders, so the bait should be placed in the late evening in small quantities near the plants to be protected.

TO MAKE SPINACH CONCENTRATE

Columbia, S. C.,—A factory has been built here for manufacturing a spinach concentrate, a medicinal food for supplying mineral deficiencies in diet, according to Ralph T. Poole originator of the idea. South Carolina was chosen for the plant, officials said, because of the iodine content in vegetables grown in this state.

BIBLE THOUGHTS

—FOR THIS WEEK—

Bible Thoughts memorized, will prove a priceless heritage in after years.

Endure Until the End.

And many false prophets shall rise, and shall deceive many. And because iniquity shall abound, the love of many shall wax cold. But he that shall endure unto the end, the same shall be saved.—Matthew XXIV, 11:13.

FRESH VEGETABLES SPRING TONIC

Washington, D. C., April 24,—The use of fresh vegetables has supplanted the old-time remedy of sulphur and molasses as a cure-all for spring fever, and the vegetables will do everything the old remedy was supposed to do, Dr. Lonise Stanley, of the Bureau of Home Economics, said in a statement made public by the Bureau recently. Eating, habits have changed so extensively that a spring tonic has become unnecessary, she said.

IS OURS THE MOST OPPRESSED? CONSIDER THE JEW

So Says Writer—Tells About Past Glory, Future Prospect

By Drusilla Dunjee Thoston

(For The Associated Negro Press)

We have been very largely taught by pessimistic leadership in press and pulpit for a decade that the white man and prejudice blocks the way. The masses of black people listening have, if they judge this teaching right, stopped ethical progress and have been picking the flowers of folly along the way. The Ethiopian is a great race. All down the avenues of more ancient ages may be heard their laugh and joke. The black auxiliaries of Hannibal, before the setting out from Carthage, so passed their time away. The black regiments of Crimea were noted for their mirth and reckless daring. When the Ethiopian races have thought the way blocked they do not stop to sulk like the Indian, or despair but they stop and enjoy themselves until the way is opened again. This is the greatest reason why this, the oldest race, has been able to live. The Ethiopians of America have not been taught truly; for prejudice cannot block the way of an advancing race.

We have proof of this in the history of the Hebrew and the recent prejudice against the Japanese. They were not checked in national advance, because they refused to believe that they could be checked. Where is there a race that has been more derided or restricted than the Jew? In this century they have been massacred by the Turk and Russian but at the time of the great World War they held the money bags of the world in their hands. From the most menial positions of trade they had risen to rulership of the economic world. Go into any community and you will find that the wholesale business is in the hands of the Hebrew. The real grievance of the Klu Klux Klan against the Jew was their growing international power. When the native American goes out into the higher realms of business, he finds that Jews and foreigners are in control of both the Atlantic and Pacific seaboards. He hates the Japanese not because of inferiority but for their shrewdness.

If this be true then the arguement that the Aryan can block our way by oppressions is false. Persecution has not welded us together as it did the Jew. We are very prone to think that we are the most persecuted people on the face of the earth. The "rape of the African Continent" perhaps has no parallel in history, but the staus of the Negro in the world today is superior by far to that of the Hebrew when he laid the foundation for his present financial power. The Jew in European countries for centuries was less than a dog. He was considered accursed. He had crucified the Saviour of men. Every man's hand was against him. Like their father Jacob, trade was instinctive in the Hebrew. If he hoarded wealth, his property was confiscated, upon any pretext to satisfy the covetousness of the favored races around him. His daughter might be seized as a concubine and he had no recourse. He was heavily taxed and proscribed from positions of honor. Today Jews stand high in the counsels of the nations.

We are familiar with the Armenian massacres preceding the World War. At hours of popular fury, little babies were snatched from their mothers' arms and dashed down upon the pavements below. The Jew was reaping. He had said of his Redeemer: "Let his blood be upon our heads." Yet they were God's chosen people and slowly, surely, through the avenues of trade he led them to become the economic foundation of nations. In the Negro race today we are squandering ten times more money than this people had at the start and we have ten times their chance. The Jew has never departed from his old economic ways. He comes into your community picking up bottles and selling rags, he opens a little shop. He lives in the back, off what you or I would pitch into the ash can. Tomorrow he waits upon you in an imposing emorium and in the end e sells to the aristocratic stores. We have a Negro here who from a junk yard has built up a chain of businesses.

The first thing that we might note is that persecution welded the Hebrew race into unified cooperaion. The Negro was brought to America from every quarter of the African continent. African tribes are of every color, feature, and grade of intelligence. The different types are not brothers for Cushites and Hamites had not the same father. The Cushites were creators and built up a wonderful empire which was destroyed by Hamitic branches. This warfare goes on today in America betwen these two creative and destructive branches of the black race. It is difficult to obtain cooperation because we spring from primitive opposing roots. We must recognize these ancient antagonisms and decide that as they once destroyed Ethiopian supremacy that they weaken race fibre today. It is out of the pessimistic groups that come the base doctrines of discouragement; that have checked ethical advance.

Out of cruel suffering and ostracism, the Jew rose to a self-sustained culture. He does not want to intermix with other races. A wing of our race is clamoring for it. Another objection of the Klu Klux Klan to Hebrews was that the Jew would not enter into the social life of the Aryan, thus permitting whites to enter their homes and to do for their daughters what they did for the Indian. Out of this the Negro might get a thought. After while this Aryan who has oppressed you, who has shut the race out from all luctrative positions and every chance of wealth so far, will come crepeing around for the hand of the black maiden whose father by sweat and toil has laid away the major portion of his earnings. Unless we have the spirit and wisdom of the Jew, unless we take the same steps to inculcate race pride that the Hebrek has taken, our savings will pass back into the white race. It will be too late to check our daughters then. American girls were eager to marry foreigners.

In his wisdom and pride of race the Hebrew decided that he did not desire to be white. The Semitic race had given the Aryan knowledge of the deity though his knowledge had come primarily from Cushites. They had been the teacher of the white race in art and science. The Hebrew knows these things, we do not, for the threads of remembrance were broken by the Slave Trade. Five hundred years ago Aryans were half savages as proved by their continuous and revolting slaughters of the Middle Ages. In his heart of hearts the Jew scorned amalgamation with these. He did not want the gentle blood of the Hebrew obliterated. He saw no superiority in a race that made its way over the plains of western Europe by ravage, ruin, and confiscation of the lands and treasures of more cultured people. Today we worship a Hebrew God and Hebrew Messiah. The songs and glad praises of every civilized land are models of Hebrew conceptions and rituals. The courts of the land function upon laws given to the world by Hebrew statute makers, who in turn took over more ancient Hamatic law. To the Hebrew this was sufficient and had important bearing upon his faith that he could rise to wealth.

In distinct contradiction to this we find an important wing of the Negro race clamoring for the right to intermix with Aryans as if that would add glory to the race. This wing is enameling white and are doomed to failure. Their lack of race pride springs out of ignorance of the nature and primitive history of the Ethiopian. Intermarriage with whites. Intermingling with what? A race that uncivilized almost to modern times overthrew the ancient culture of western Europe. With them came the dark Ages, when the light of civilization almost went out. A race that considered robbery of virtue and who impaled and roasted their captives identically like they lynch Negroes today. A race that rules the world by might not right. Ask Indian, Egypt, Africa. The old Cuthrite empire of Ethiopians ruled the world for three thousand years by bringing to the nations they conquered the arts of civilization and just and humane leaws. Why should we be anixous to intermarry with white people? The enlightened Negro is not.

THE WORTH OF THAT BALLOT

By Robert Fletcher Leftridge

Washington — (CNS) — The ballot today imperfectly enjoyed as it is by the Negro is withal and after all, the strong shield of the race against any form of aggression. Its steady growth, particularly in the great urban centers of the North and its power in the determination and selection of candidates, seeking high public office, presents a buffet and a barrier which is impregnable. Whenever, and wherever, the franchised consideration is denied, the thing most vital to the Negro, a cooperative freedom, limits his general progress. The practice of disfranchisement when looked upon in the field of human relations as contemplated in a Republican form of government takes away to a great extent the broad friendly relations which should extend to all citizens naturally in a civilized state.

The series of "Black Laws" adopted by the several Southern States which had previously composed the Confederacy of States put the Negro in a worse condition than that from which he had been emancipated. Friendly interests and encouragement had to give way under the pressure set up by State Rights principles, reducing the Negro to a human being without right or responsibility. The first great stimulus to an utter disregard of the fundamental law of the land was born of the evasion of th spirit and letter of the law embodied in the Federal constitution. The initial laxity in law enforcement by the law enforcing agencies in this section was given birth simultaneously. In an open and firagrant manner the agent cies of government in these several Southern States, then under Democratic policy and administration, encouraged and connived at practices which placed a most reprehensible and insidious blot on American history. This early encouragement to crime and violence of all description in al large section of the country, the continued evasion of governmental regulation, made subtle by "States Rights" and a superiority complex yet must be answred for by the Democratic Party to the Negro, notwith standing the fact of the castigation of Parker by Wagner because of political expediency.

Polities is not now, nor can be, ever a matter of local consideration entirely unless the franchise is won for the Negro in the South. Negroes that have migrated to the North, during th past two generations have left behind them remnants of family ties which dictate the will to aid the fight of the National Negro Republican League in its efforts to establish the Negro as a political factor to be reckoned with, regardless of the section in which he may happen to be housed. All sound thinking Negroes are cognizant of the fact, that his real problem can be lessened to a great extent if he can be established as a responsible citizen, having equal opportunity before the law and the full right of citizenship in all civic matters.

A National NEWSPAPER For Churchgoers

Read the National Baptist Union-Review published every week, subscription price $2.00 a year. This newspaper is the oldest religious publication under the auspices of the National Baptist Convention of America. It is eight pages in size, eight columns to the page, and is brimful of denominational information every week. It contains a Woman's Page, spicy editorial matter, and circulates in practically every state in the Union.

Send your Subscription to the

NATIONAL BAPTIST PUBLISHING BOARD

523 Second Avenue, North Nashville, Tenn.

ATTENTION COLORED FARMERS

The National Federation of Colored Farmers is receiving hundreds of letters from Colored farmers requesting all kinds of aid and information. We are willing to do everything we can for all the Colored farmers of America. It costs money, however, to maintain offices and our expenses are becoming so heavy that we are compelled to discontinue supplying information to those who request it who are not members of the Federation. If you have faith enough in the organization to believe that it can aid you, then you should be willing to join it and help support it. Isn't that so?

Several County units have organized and elected officers but have not sent in their membership dues. These units are eligible to membership in the Federation until dues are paid. Be helpful. Co-operate. Pay up. "All for each and each for all."

THE MODERN FARMER

Vol. III. Nashville, Tenn., and Chicago, Illinois, JULY 15, 1931. No. 5.

VOLUNTEER STATE FARMERS TO HOLD MEETING IN COLUMBIA, TENN., JULY 15TH

IOWA STATE LIBRARY AUG - 4 1931 AGRICULTURE

MOUND BAYOU, MISS., WILL ENTERTAIN FARMERS

All Mississippi Units to Be Represented

PRESIDENT OF FEDERATION EDITOR OF MODERN FARMER SCHEDULED AS SPEAKERS

Mound Bayou, Miss. — (Special) —Plans have been completed for the state meeting of the Units that make up the National Federation of Colored Farmers in Mississippi that is to be held here during the month of July. There is to be a three day session. National representatives and speakers, government officials and state extension and administration farm agents have been invited.

Notable among those who are expected are James P. Davis, president of the National Federation of Colored Farmers, with headquarters in Chicago, Ill., Henry Allen Boyd, secretary of the National Baptist Publishing Board and publisher of the Modern Farmer, Nashville, Leon R. Harris, editor of The Modern Farmer from Moline, Ill., with others whose names have not been given out as positive attendants, because the local committee here has been waiting their acceptance of the invitation.

The delta state farmers, with their organizations and units will come here for three days. This is expected to be the largest gathering of farmers that ever assembled in the state, so much so that additional effort is being put on for the housing entertainment and the care of these farmers. During the meeting the program will provide for the discussion of plans for diversified farming, modern dairying, fruit growing, beehiving, poultry raising, the treatment of trees, flowers and shrubbery, in fact, the three days will be consumed in the busiest session ever provided for in a program in the affairs of the state. Sandwiched in between this will be discussion, information and advice from government representatives. There will come in for its share, cooperative marketing calculated to give to this state the benefit of the improved methods that the government has put on to aid the funds; then the farm loan proposition, every phase of it, will be explained and discussed, as it pertains to the Federal Land Banks and the Federal Farm Loan Banks.

President Davis has been enthusiastic in his desire that farmers of the state get together, fine out their needs, see their shortcomings, and embrace as well as begin the operation of those methods that will bring the relief and the desired results. The principal address will have to do with the matters effecting every phase of farm life.

RAILROAD GIVEN DAMAGES FOR ENGINE HIT BY AUTO

Los Angeles, Cal. — The Southern Pacific Railroad Company was awarded $154.70 damages from A. W. Weiss, motorist, in Municipal Judge Lacey's court here as outcome of a suit in which the railroad charged Weiss damaged a locomotive with his automobile. It is the first such lawsuit in Californai.

Rock Island Magazine for May, 1931.

THE GOVERNMENT COMES FIRST

SOUTH LEADS SAYS REPORT

OUTLOOK FOR TEN SOUTHERN STATES IS 18,000,000 BUSHELS

Washington, D. C., May 29. —A large southern peach crop is to be expected this year from present indications, according to the Bureau of Agricultural Economics. According to Bureau reports, unless unforeseen damage occurs before harvest, the total crop in ten southern states seems likely to make 18,000,000 bushels or more, compared with a little over 10,000,000 bushels last year and the big crop of over 21,300,000 bushels in these states in 1928.

The crop is reported to be in very good condition in all the southern states except Oklahoma and Texas where much damage was done by spring freezes. Prospects are especially favorable in Georgia and North Carolina. The May 1 condition was reported to be very much better than on the same date last year and well above the average for that date the previous six years. Curculio damage is expected to be the lightest in years.

In North Carolina the condition is extra good especially in the Sand Hill commercial area where practically every variety has excellent prospects. It will be necessary to thin some varieties, especially Georgia Belles. There has been no damage from freeze, the trees are heavily frulted and the orchards well cultivated and cared for. There appears to be appreciably less damage by insects, particularly curculio, which may be due to late emergence caused by cool weather. Season has been generally favorable, prospects are bright and no material damage of any kind is anticipated.

In Georgia the highest May 1 condition since 1928 exists and prospects so far appear favorable for a good crop. No winter injury was incurred, there was heavybudding and curculio is the lighest in 11 years. The phony eradication work has resulted in a generally better sanitary condition of orchards, and this factor will partially offset the loss in potential production caused by reduction in number of trees the past two or three years. If weather should be dry, small fruit is apt to be produced unless May "drop" is fairly heavy or considerable thinning is done.

In Mississippi although damaged somewhat by freezes in March, a fairly good crop is in prospect unless shedding should become general. An unusual amount of leaf curl is reported, which will tend to weaken the trees.

In Arkansas injury to peaches by frost on April 23 was practically negligible, the fruit being of a size and the foliage being developed enough to afford good protection.

Department of Justice Has Ruled That Loans Made to Farmers Must Lead

The justice department has ruled that loans made to farmers under the drought relief legislation are subject to a prior lien by the government. This means that if a farmer has secured a loan from the government and has given the government, as security, a lien on his crops, no one can come in and attach his crops for any debts he may owe. Crops are the best in years this season, and, as is usually the case when there are big crops, loan sharks and others are sure to come along and hatch up some old debts. Remember THE GOVERNMENT COMES FIRST. Your creditors cannot garnishee you if you have secured a loan from the government. And remember this also —the relief you received from the Red Cross last spring was FREE. You are not supposed to pay anyone for it. No matter who you received this relief from or through, it was free and you owe no one for it. All members of the N. F. C. F. and all other colored farmers anywhere who are bothered by loan sharks or by any who may try to make them pay for relief received from the Red Cross are requested to report their tronbles to our National Office, Vincennes Hotel, Chicago, Ill. Pay your debts just as soon as you can but remember, you must pay the GOVERNMENT FIRST.

KILLS FARMER ACCOUNT OF JEALOUSY

Canton, O.—Stanley Cassidy, 32, a graduate of Ohio State University and a scientific farmer, shot and killed Chauncey Bates, a farmer of meager education. Cassidy is held at Canton charged with murder.

Police report that Cassidy was jealous of his neighbor's success. He had little success with his farm, in spite of the education he had, but Bates produced bumper crops. Cassidy brooded over his failure and finally went to his neighbor's farm, called him out of the house and shot him three times.

BOY FARMER MAKES MONEY

Fredericksburg, Iowa — Six years ago, when Howard Whitcomb was twelve years old, he had one heifer calf. Now at the age of 18 he has nine Holsteins and a bank account of $1046, all of which is profit from his cows and calves.

Young Whitcomb's first heifer produced 725 pounds of butter during the last two years. His second made a record of "[illegible] pounds as a three year old. The Holstein-Friesan association designated him the Holstein boy champion of 1930.

FARMER'S NEWS BULLETIN

ISSUED BY NATIONAL FEDERATION OF COLORED FARMERS INC.

Chicago, Ill., U. S. Government License, No. 14198, July 1, 1931— Our Annual Convention will be held in Mound Bayou, Miss., August 13th, 14 and 15th. This is an all colored town having a Mayor of our own race group, who is none other than the Honorable Benjamin Green. We are expecting representation from eighteen states in addition to about six or eight thousand of our farmers living in the state of Mississippi. Some of the principal speakers who have been invited to address us at the convention are as follows:

Hon. B. A. Green, Mayor of Mound Bayou.

Mr. Arthur B. La Cour, representing the Federal Farm Board, who will speak to our farmers on the invaluable benefits to be derived from organization.

Dr. Henry Allen Boyd, banker, philanthropist and Secretary of the National Baptist Publishing House, Nashville, Tenn.

Col. Roscore Conklin Simmons, orator and editor, a former citizen of Mississippi, who now resides in Chicago.

Col. Cornelius Roscoe Richardson, Chairman of our Board of Directors, who is a practicing attorney of Richmond, Ind.

Hon. Claude A. Barnett, Chicago, President of the Associated Negro Press Association.

Hon. F. B. Ramsom, Manager of the Mme. Walker Company of Indianapolis,, and a true son of Mississippi.

Hon. Leon R. Harris, Secretary of the National Federation of Colored Farmers, and a member of President Hoover's recently appointed Housing Commission.

Messrs. W. O. Lightburne and W. R. Ball, special representatives of the Federation, and many others of National prominence.

The following prizes have been authorized:

1 Rotary Plow.

2 gr. Fruit Jars and Caps.

Subscriptions to the Wallace Farmer magazine.

2 Dictionaries.

1 Portable Radio.

1 complete can sealer and pressure kettle as per enclosed circular and several cash prizes, which will be offered for the following:

Best display of canned fruits and vegetables packed in tin cans.

Largest watermelon.

Best ear of corn.

The stalk of cotton with the largest number of bells.

Best peck of sweet potatoes.

Best peck of Irish potatoes.

Best dozen hen eggs(to be rated by weight)

Best peck of field peas.

Best home made house dress.

Extension Agents and Farm Demonstrators

SPECIAL ADDRESSES BY FACULTY MEMBERS OF A. AND I. STATE COLLEGE

Notice of the meeting of the farmers of Tennessee, to be held in Columbia, Maury County, on Wednesday, July 15th appeared in the daily papers of this city. This far-reaching gathering and coming together of the tillers of the soil, raisers of live stock and poultry, in fact, the rural interests in every walk of life, is argued to mean much for the Volunteer State. Representatives from various universities, special speakers from A. and I. State College, Extension Board representatives, and state officials are scheduled to bring messages, to demonstrate their work, and to be of invaluable assistance to those who will go to make up this state-wide gathering.

The article in a recent issue of The Nashville Banner, in speaking of the meeting said:

"More than 500 colored farmers will assemble at the Institute at the Middle Tennessee Experiment Station in Columbia, July 15. Speakers from the University of Tennessee and from A. and I. State College will participate on the program.

Practical farmers will give demonstrations. The program includes an inspection of the experiment station under the direction of Supt. L. R. Neal, from 9:30 to noon. Other important features include discussions of the following subjects: Home and commercial dairying, dairy products in the home, L. S. Edwards, manufacturing specialist, University of Tennessee; commercial dairying, J. C. Rucker; pork production, Joe McCauley; demonstration, Henry Starns; the home orchard, John Leath and W. C. Pelton, horticultural specialist, University of Tennessee; sanitation and health on the farm, Maury County Health Unit and Dr. Bent.

In the morning a special program has been provided for women which includes the following: Demonstration, dairy products in the home, L. S. Edwards, dairy manufacturing specialist, University of Tennessee; demonstration: The care of dishes, by Miss C. R. McElrath, supervisor of Wilson County; "Improvement I Have Made in My Home and Kitchen." Mrs. H. V. Cantta Pulaski, Tenn.; demonstration rug making, Mrs. Minnio Bledsoe, Elkton, Tenn., and cooking demonstration Mrs. M. E. Richards, A. and I. State College."

OLD FISHERMAN LANDS A FREAK FROM LA. RIVER

New Orleans, La.—Uncle Tom, an old Negro fisherman at Covington, La., is exhibiting a strange amphibian which has been unofficially named variously as a "newt," "proteus," "hell bender," and "wampus." Caught in a local stream the amphibian possesses gills, is shaped like a salamander, has a head like a lizard, and a wide tail. It will be brought to a New Orleans museum.

—Chicago Tribune.

EXPLOSION OF GLASS JAR OF TOMATOES COSTS WOMAN'S EYE

The explosion of a sealed glass jar of tomatoes, late Wednesday afternoon, cost Mrs. Joe E. Gardner, aged 23 of 1113 East Twenty-second avenue, the sight of one of her eyes.

The jar exploded in the basement of her home as she was standing near it. Bits of glass became embedded in the ball of her left eye, and its removal was necessary, Thursday morning, in White Cross hospital. The other eye was not affected. She is reported at the hospital, to be improving.

Mrs. Gardner had gone to the basement to secure food for the evening meal when the explosion occurred. She had not disturbed the jar, she said. Whether the tomatoes had been canned last summer or the summer before, could not be determined.

DEPARTMENT OF AGRICULTURE PLANS TO EXPAND ACTIVITIES

Washington, D. C. —The Department of Agriculture, as a result of increased appropriation provided by the last Congress, plans expansion of research on farm taxation and finance, inspection and grading of farm products, price trends and production. Market news service on fruits and crease the grading service on ed.

Congress has authorized the Bureau to enlarge the inspection of fruits and vegetables, to increase the garding service on poultry, beans, and meats and to establish a market inspection service on canned fruits and vegetables.

Congress has authorized the expansion of the Bureau's market news service on fruits and vegetables in important producing sections, and the establishment of market news service on citrus fruit in the Rio Grande Valley of Texas. Provision has been made for additional statistical work in connection with market news on dairy and poultry products and also in conection with market news on hay, feed, and seed.

Other additions to the Bureau's activities are in connection with administration of the Grain Standards Act.

RECORD WESTERN COW WEIGHS 1,775 POUNDS

Eyota, Minn.,— A cow weighing 1,775 pounds, said to be one of the largest ever marketed in the state, was shipped from here by W. A. Bierbaum.

The cow, a shorthorn, "just grew and grew," Bierbaum said, "and I just let it grow."

THERE ARE OTHERS

A lot of folks wonder why the moth is such a darn fool as to fly into a flame, yet they will try to beat a railroad train over a crossing.

WHEN WINTER COMES

With the approach of winter comes not only the wearing of heavier clothing but also the closing up of windows in the home, office and shop. There is less outdoor life and more huddling around the stove or radiator at home and more congregating in crowds in theatres, dance halls and indoor golf courses.

All of this comes from a dislike of exposure to cold weather or unwillingness to harden oneself to the many delightful winter games and sports which we should find just as enjoyable as swimming, baseball, and hiking in summer.

Consequently we get less fresh air in winter than in summer. As a direct result of this we suffer from more frequent and more serious colds, coughs and illnesses—some of which result seriously when they develop into or invite influenza or pneumonia.

No matter how hot the outdoor air is in summer or how cold in winter, nature keeps the temperature of the human body about the same. But in winter we try to avoid the quick losses in body temperature by protecting the skin with warmer clothing. Nevertheless there always is some loss of heat in winter and we must therefore aim to keep up the heat not only with clothing but by eating foods which produce heat and by more vigorous exercise which also produces body heat.

Most of us eat more food in winter and we are more likely to eat the kind of food which helps keep up the temperature. But when it comes to vigorous exercise, we prefer to take it indoors.

That is a mistake if we confine ourselves to indoors. The skin must be taught to accommodate itself to great changes in temperature and this is easily accomplished if we dress properly for cold weather and undertake active exercise outdoor, such as skating, a fine old sport which unfortunately is indulged in by very few, as well as skating, tobogganing and hiking. Most of us either have automobiles or have friends who will take us out into the country in winter to spots where skating, and tobogganing can be enjoyed at no cost. Hiking certainly is a low-cost sport and is just as enjoyable in winter as in summer.

At home let us be sure we have our bedroom window open at night and that whatever form of heat we use we evaporate enough water in our rooms to take the excessive dryness out of the air. This keeps the nose and throat passages moist and prevents to a great extent coughs and colds we so often susuffer from. Pans of water on stoves and radiators or other means for evaporating water can be easily devised.

Enjoy winter when it comes by meeting the test of cold weather intelligently.

(This health article was furnished by The Chicago Tuberculosis Institute.)

SIX OUNCE EGG IS LAID BY HEN

Lenios, N. C., April 10— (CNS) —Isaac Shade came to town recently with a hen egg that tipped the beam to exactly six ounces, honest weight. It looked about the size of a couple of the best other hens have offered and was a solid meal for any woman addicted to the 18-day starvation.

He doesn't know exactly whether the hen is stocking up for vacation or trying to make up for lost time. Anyway, there are no immediate prospect of decorating a West End table with that hen so long as she holds Shade's by such masterful deeds.

OSCO BANK BURGLARS FLEE WHEN DOGS SPREAD ALARM

Telephone Cables All Cut; Tracks of Three Men Are Found

(Moline, Ill., Laily Dispatch)

Osco, June 24. —Three burglars who cut all telephone wires and made other careful preparations with the apparent intention of entering the Osco State bank, the Enroth & Johnson general store, or both, abandoned their plans when alert Osco dogs spread an alarm at 2:30 this morning.

Discovery that the canine chorus had not been without reason came several hour later. Harold Sten, a farmer taking a load of hogs to the railroad for shipment to market, noticed a telephone wire leading to the Claus Anderson residence had been served and was lying across the road.

Telephone Board Dead

He notified the Osco telephone operator, Mrs. Alice Hanson. She found the wire had been cut. She tried all other connections on her switchboard and found the whole board dead. Immediate examination showed that a cable across the road from the telephone office, on the south side of town, and another, by the general store on the north side of town, had been cut and torn apart with pliers.

Severing of the two cables completely isolated the community as far as telephone service was concerned.

Gus Hanson, Mrs. Hanson's husband, using a lineman's testing kit, connected to wires beyond the cut and called a deputy sheriff, Charles Nash of Cambridge. Mr. Nash reached Osco about 7.

He found that three men had cut through a wire fence on property of Ed Edson and had driven a car some distance into a cornfield which begins at the Osco northwest village limits. The three men were tracked to an oat field where their tracks no longer could be discerned. Footprints and the impression of the car tires are the only clues to their identity.

Bulldog Gets Credit

A bulldog belonging to William Ray, the Osco station agent, is credited with giving the first alarm. Mr. Ray lives next to the Osco bank, and the Enroth & Johnson store is not far away. When the Ray bulldog began barking, other dogs in the village joined the chorus, thereby probably preventing contemplated burglary.

Deputy Nash is of the opinion that the burglars intended to enter the general store, which is a large establishment considering the size of the community which it serves. Several other general stores in northwestern Illinois have been entered within the last year or so. Other persons, however, including Osco residents, give more weight to the theory that the Osco bank was the goal of the frustrated burglars.

Said Deputy Nash, "All country folks should own dogs."

TO RAISE MORE POTATOES AT STATE HOSPITAL THIS YEAR

1930 Crop Inadequate; 150 Male Patients Work on 510-Acre Farm

East Moline, Ill.—Male inmates at the East Moline state hospital will tend thirty acres of potatoes this season, Dr. C. H. Anderson, managing officer of the institution, stated today. Approximately 150 of the male inmates work on the institution's farm, Dr. Anderson said.

Last year patients at the East Moline hospital tended twenty-five acres of potatoes and the yield was 1042 bushels. The increase in potato acreage at the local institution is in keeping with that at other institutions in the state. A. C. Everingham, state farm, garden and dairy consultant, reports that the potato acreage at Illinois institutions is about 40 per cent larger than in 1930. The East Moline hospital did not raise enough potatoes to met its demand last year, Dr. Anderson said.

The use of commercial fertilizer to increase the yield per acre will be extended this season, as result of the tests made last year at Joliet. Dr. Anderson said that lime dust was the only form of commercial fertilizer used at the local institution. It is used on land that shows acidic reaction. Some fertilizer is hauled from the switches in Silvis, the doctor said.

Inmates at the local institution tend 510 acres of land that is under cultivation. Work includes cultivating the soil, planting, tending crops and taking care of the dairy herd. They are eighty-seven head of cattle, 1700 chickens and 481 hogs on the East Moline hospital farm, which approximates 850 acres. The hospital owns 672.92 acres of land and a 180-acre farm is being rented this year.

Crop raised on the farm last year were valued at $49,830.78, Dr. Anderson said. About ninety acres of the hospital farm land is devoted to intensive gardening.

U. S. CAR SHIPMENTS REPORT

According to reports issued by the Market News Service of the U. S. Department of Agriculture June 16th there has been shipped in solid cars so far this season from producing centers in the United States to the large terminal markets as follows:

Snap beans 7346 cars, last season 7772 cars.

Cabbage 18314 cars, last season 15492 cars.

Ear corn 1085 cars, last season figures unavailable.

Lettuce 37643 cars, last season 41744 cars.

Onions 5814 cars, last season 3641 cars.

Peas 4633 cars, last season 3641.

Bell Peppers 1932 cars, last season 1598 cars.

Sweet Potatoes 17625 cars, last season 21988 cars.

Strawberries 11246 cars, last season 14420 cars.

Irish potatoes 256860 cars, last season 24423.

GOOD BUGS IN DEMAND

The Pan-American Airways announced this week that they were handling a shipment of ten thousand bugs from Lima, Peru consigned to the Louisiana sugar cane growers. These bugs were shipped a distance of over four thousand miles and will be used to destroy an insect that is destroying the cane plant.

Out in the state of Washington the apple growers have bought over fifty thousand lady bugs to protect the apple blossoms from a new insect that is ruinous to their trees.

DROUTH HAS TAUGHT ARKANSAS A LESSON ABOUT HOW TO FARM

While it would not be tactful for a stranger in Arkansas to point out that the uses of her present adversity bid fair to be sweet, it is interesting and heartening to read something to this effect from a local source, observes the New York Times. In another column our Watch-Tower correspondent at Fayetteville in the Ozarks describes some of the measures being taken to profit by the drouth which has prostrated the state and called for Red Cross and government relief. It is clear that these measures are adopted by the 1,600,000 of 2 million Arkansans who live on the farm, no future drouth can have so blighting an effect, recovery will be more rapid, and husbandry will be better and more profitable henceforth.

Arkansas is persuaded that not in 1931 will there be any appreciable increase in the price of farm products. This being accepted by the farmers, the way was opened to advocacy of diversification and the "self-sufficing" farm. While the Red Cross has been busy caring for emergency wants, farm leaders have been active in the counties. The report is that their two-point program is being adopted. It contemplates using half of the acreage now devoted to cotton and corn for another purpose. This is to grow food for the family and the livestock: fodder, meat, dairy products, garden truck, eggs and fruit. While the Red Cross was working, and the farm agents were holding meetings, the rain was falling on Arkansas, bringing another hopeful sign to the surface. It is that the overwhelming agricultural aspect of Arkansas will make its recovery more rapid than if it were an industrial state and its chief manufactures had collapsed. For nature moves in a steady cycle, mostly benevolent. And crops are burgeoning while the blight of the summer, fall and half-winter moves more and more into the past.

Because it was hardest hit of all the states by the drouth because its senators have been highly audible in the efforts to obtain government relief; because some farmers marched into a town and demanded food— Arkansas has had most of the publicity of calamity. But its people are finding occasion now to point out that, of the hudreds of thousands of destitute farm families, a great proportion are Negroes whose normal condition is not exactly prosperous. And from every correspondent who visits or lives in the state come continuous reports of a self-sacrificing neighborliness, extending help to black and white alike, which is typically American and should banish fears about future dependence on a "dole."

GRAY HAIR CAUSED BY LACK OF CARE

Beauty Experts Declares Too Frequent Washing Often Spoils Tresses

Permaturely gray hair often is caused by lack of care and too frequent washing, according to V. E. Meadows, international beauty expert and Hollywood cosmetician, in his lecture to the women at the daily sessions of The Dispatch Beauty school at the ballroom of the Southern hotel Wednesday.

"The color of the hair has nothing to do with the frequency of washing," he said when asked a question from the audience as to whether blondes should wash their hair more often than brunettes.

WARNS OF HEAT

Meadows declared that hair should never be washed in anything but soft water and should never be dried by heat.

"Permanent waves do not hurt the hair if the hair is in good condition," he replied to a question as to the harm that could be done to the hair by a permanent wave.

Meadows urged the women always to look natural. "Be yourselves and wear your cosmetics so that you look like nature intended you should," he stated.

"LOOK LIKE SAVAGES,"

"Most women look like a bunch of savages when they get their cosmetics applied for street wear. One must know the correct and proper proportions of cosmetics so that they can be applied correctly," he continued.

SWEET CIDER FUMES ARE DEADLY STATE COMMISSION RULES

Although sweet cider is tempting to the palate, its fumes are deadly and capable of asphyxiation.

This deadliness of sweet cider fumes was disclosed in the state industrial commission's decision to award the full death payment to the widow of Marin Raduloff.

Raduloff, an employe of the Harbour Co., Cleveland, was overcome while scrubbing the inside of a huge sweet cider tank, and died. Investigators of the commission could not decide from the evidence present whether the sweet cider fumes caused asphyxiation or death resulted when Raduloff hit the bottom of the tank.

The commission decided that Raduloff's death was compensable under the Ohio workmen's compensation law and made an award to his widow who resides in Sofia, Bulgaria.

GENERAL NEWS NOTES OF INTEREST

A new fruit known as the youngberry is being developed on the Gulf coast. A few crates of this fruit was shipped by express to the larger terminal markets the past week. The berry is a combination of the blackberry, dewberry and raspberry. It is about the size of a large cultivated blackberry, and has an unusual flavor. The appearance of this fruit on the produce row created quite a sensation. and the few crates that arrived were snapped up quickly at high prices.

A truckload of tomatoes from Laferia, Texas was driven into the South water Market, Chicago, one evening last week. The truck came a total distance of 1600 miles and, strange to say, the condition of the tomatoes on arrival were satisfactory to the buyers.

There were 310 lugs on the truck and the tomatoes sold for $1.50 per lug.

The first car of watermelons loaded this year was shipped from Texas last week and consigned to Kansas City. The melons were of good size and quality and brought high prices. The car was sold out within an hour after being placed on the team track for unloading.

What is believed to be the states record commercial potato crop in North Carolina was given in an interview last week by T. C. Perley, of Enfield, who raised 35 1-2 acres of potatoes in 1930 at the rate of 563 bushels per acre.

Mr. Perley said his success was due to plowing under clover sod in the fall, harrowing thoroughly until the soil would roll up in front of the harrow; using certified seed stock; planting the same day it was cut; applying 1,200 pounds of 8-16-16 fertilizer per acre; dropping it beside each hill without allowing it to touch the seed; cultivating with harrow cultivator and hoe and spraying weekly from July first to digging time.

An item of much interest to Mississippi tomato shippers as well as buyers, is the reduction of freight rates on Mississippi tomatoes effective June 5th. The reduction in some instances amounts to loan 15 per cent with Atlantic Seaboard states, Missouri, Illinois, Minnesota and Wisconsin showing some of the biggest reductions.

A few examples are Baltimore present rate $1.08 per hundred pounds present rate and the new rate 95 cents per hundred. Boston 1.19, and new rate 1.06, Lynchburg, Va., present rate 1.20 new rate 84c., New York City present rate 1.14 new rate 1.00 and Toledo, Ohio present rate 97 1-2 new rate 84c.

In addition to the reduction in freight rates, the building weight on lugs of tomatoes has been reduced from 35 to 33 pounds. The reduced rates also apply to beans and peas.

The state of Georgia has recently adopted the United State Standard Peach grades, without size requirements for all peaches coming under United States fancy, United States number one and United States Number Two grades.

All peaches not meeting the above requirements may be shipped as commercials provided not more than 25 per cent of any lot below the requirement of this grade. Peaches shipped as commercials, must be so marked, stating the minimum size or pack the variety and name and address of the shipper."

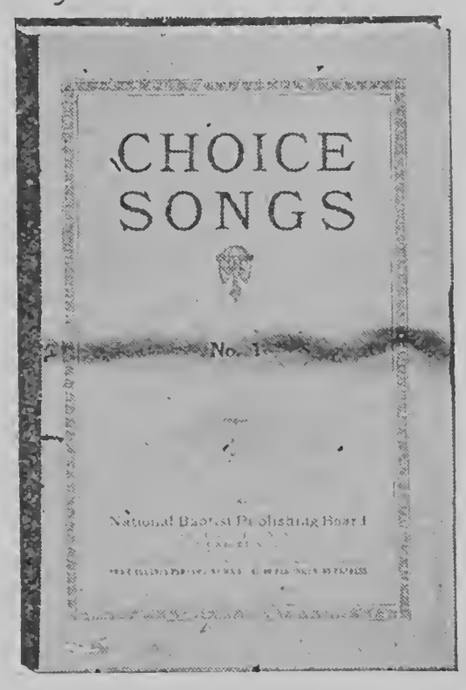
From reports received at the offices of the National Federation of Colored Farmers, Georgia will ship the highest quality of peaches this year in the history of its industry. There has been very little if any complaint from curculio.

Melon shippers will attend a meeting in Macon, Ga., at which time the proposed new melon loading rules will be discussed.

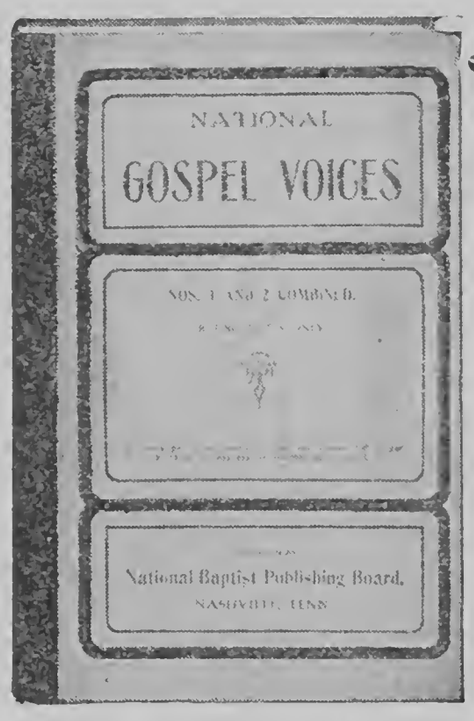
The new rules were recently published whereupon several large shippers filed a protest and succeeded in getting the rules suspended to that they will not apply to melons loaded during the 1931 season.

The new requirements as sought by the railroads and as published require the use of excelsior and clean gress, hay and as the only material used as bedding. Melons varying more than six pounds in weight must not be loaded in the same car unless separated by partitions to separate the different sizes, the partitions to be built of heavy material and padded on both sides, and only Kraft paper may be used for lining the cars the requirements provided. The big shippers claim that such regulations place an added expense on melon loading which is not warranted by the returns from sales and that such packing and loading regulations as have been in force for years are entirely sufficient to meet every demand.

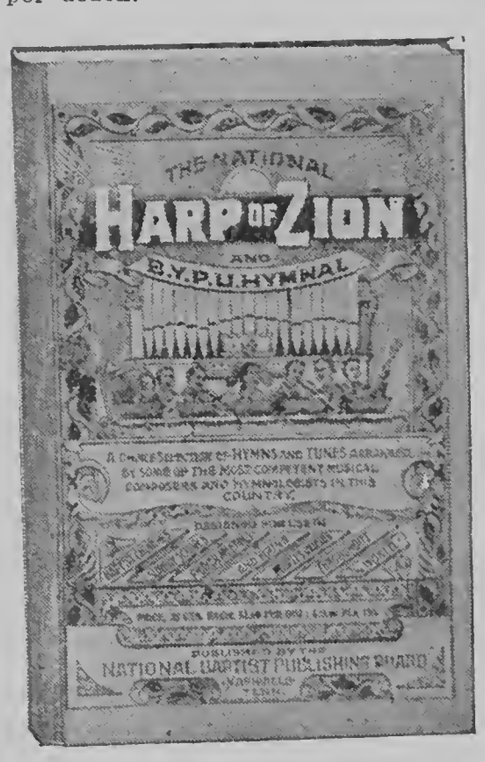
Up to the week of May 25th the Illinois Central Railroad Company handled four thousand four hundred and ninety-five carloads of strawberries from Louisiana to large markets in the north and east. This is by far the biggest movement of strawberries from Louisiana that the I. C. Road has ever experienced according to statement issued by the President L. A. Downs. This is nearly twice the 2800 carloads handled in 1928, which up to that time was the best previous record. Last year the I. C. moved only 2765 cars from that state. The strawberry crop is very valuable. In the Hammond La., territory alone the growers received nearly ten million of dollars for this year's crop.



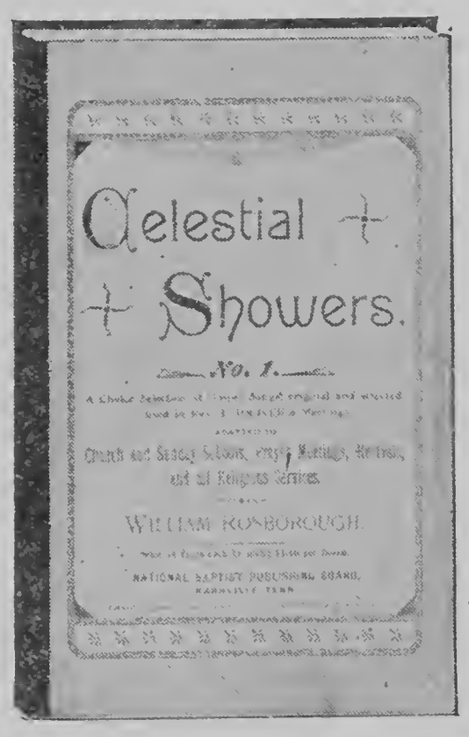
Choice Songs 15c each; $1.80 per dozen.



National Gospel Voices Nos. 1 and 2 combined 45c each; $5.40 per doz.



National Harp of Zion 35c each; $4.20 per dozen.



Celestial Showers 40c each; $4.80 per dozen.

THE MODERN FARMER

Official organ of the National Federation of Colored Farmers

Leon R. Harris - - Editor

Published Monthly by the Modern Farmer at Nashville, Tennessee, and Chicago, Ill.

Nashville, Tenu., Office. 447 4th Avenue, North.

Chicago, Ill., Office: Vincennes Hotel, 36th and Vincennes Avenue.

Devoted to the interests of the Farmer, Truck Gardener, Livestock and Poultry Breeder, the Home and the People.

Entered as Second Class Matter, April 10, 1929, at the Post Office at Nashville, Tenn., under act of March 3, 1879.

All contributions for publication in the Modern Farmer should be addressed to The Modern Farmer, 447 4th Avenue, North, Nashville, Tenn.

No libelous matter will be published. Unsigned articles or letters, and those written on both sides of the paper will not be used.

Subscription price $1.00 per year, payable in advance. Personal checks must be certified. Make all checks or money orders payable to The Modern Farmer.

Advertising rates and sworn circulation figures presented upon application.

"OUR SLOGAN"

STAY ON THE FARM IF YOU'RE ON IT! GO BACK TO THE FARM IF YOU'RE OFF IT!

THE LAW

"It is hereby declared to be the policy of Congress to promote the effective merchandising of agricultural commodities by encouraging the organization of producers into effective associations under their own control.

The Board is authorized and directed—to promote education in the principles and practices of cooperative marketing—to encourage the organization, improvement in methods, and development of effective cooperative associations." (Public—No. 10—71st Congress. Sec. 1-5.)

THE GOSPEL

"This law is predicated upon the ability of the farmer to manage his own business, once he is organized to do so. Cooperation is the key to it and only in exceptional cases can the Federal Farm Board have any dealings with a farmer who is not a member of a producer-owned and producer-controlled marketing unit." Hon. Sam'l R. McKelvie, Member, Federal Farm Board.

The National Federation of Colored Farmers believes that the Colored Farmers of America should own and control their own co-operative associations.

"Co-operation With All—Affiliation With None."

SAYS PROFITABLE FARMING MUST COME FROM IMPROVED CROP PRODUCTION METHODS

Ithaca, N. Y. — Profitable farming in the next few years will result from improved crop production methods as much as from improved methods of sale. If this is overworked, improvements in selling, desirable as they are admitted to be, cannot save farmers from grave financial difficulties, said Dean A. R. Mann of the New York State College of Agriculture in his address of welcome to farm and home week visitors last week.

Fifteen years ago major emphasis of colleges and experiment stations was on production. Today, the economic and business phases, in public discussions, overshadow considerations of improvement in production as completely as the economic of agriculture was overshadowed 15 years ago. One of the chief tasks confronting farmers is to lower costs. Collective buying offers one means but improved farm mauagement methods must enter strongly, he said.

EDITOR'S NOTE:—When you lower costs of operating the farm you save money. Colored farmers must learn that it is as important to save money as it is to make money. Improved farm management methods is one way to lower costs — collective buying is another. Colored farmers have an opportunity through the N. F. C. F. to practice collective buying. White farmers are practicing extensively. If it pays them it will also pay you. why wait? Get into your organization and start saving money now.

EMPLOYMENT STILL BAD NEGROES LOSE TO WHITES

Urban League Reports for April

New York— The National Urban League's monthly check on Negroes shows that wages have dropped decidedly in all sections of the country, that whites continue to supercede Negro workers in hotels, and that new people moved into Northern and Southern cities from neighboring rural areas. Only in a few cities are conditions thought to be improving. In most places they are either at a standstill or in worse shape.

In Spartanburg, South Carolina, wages dropped from 5 to 20 per cent. A monthly wage of $30 for domestics in Seattle is common, and men in the lumbering camps are paid as little as 18 cents pr hour. In Richmond construction laborers have been reduced from 35 to 20 and 25 cents per hour. Only by accepting reduced wages of from 10 to 20 per cent have Negroes been able to keep their jobs in Grand Rapids.

In the New York area wages for domestics and common laborers have shown similar curtailment. Woman recently employed in an important business establishment are working for less than whites who formerly held the job, and doing more work than it ordinary entails. In some places men are paid considerably less than whites working alongside of them.

Cutting of prices was resorted to in South Carolina by a cleaning and dyeing establishment run by whites, when a similar business was opened by Negroes employing ten workers. In at least two cities on the Pacific Coast, white girls are now waiting in hotels in the place of Negro men. Attempts are being made to crystallize sentiment against continuing the policy of employing Negro bellmen and waiters in hotels in certain sections of the South. When department stores in Richmond discontinued their delivery service and entered into contracts with express companies to handle their packages, a number of Negro drivers lost their jobs.

Strangers are moving into Denver, Detroit, Atlanta, Akron, (O.), Boston, and Philadelphia. Some reports indicate a movement to the farms from cities but the largest movement appears to be in the opposite direction.

HE WON

'I reckon," said the farmer, "that I get up earlier than anybody in the neighborhood. I am always up before 3 o'clock in the morning."

The second farmer said he was always up before then and had part of the chores done.

The first farmer thought he was a liar and decided to find out.

A few mornings after, he got up at 2 o'clock and went to his neighbor's house. He rapped on the back door and the woman of the house opened it.

"Where is your husband?" asked the farmer, expecting to find his neighbor in bed.

"He was around her early in the morning," answered his wife, "but I don't know where he is now." —Hardware Age.

PUREBRED CATTLE BOOST PRODUCTION

Ames, Ia. — Sixty per cent of the cows with butterfat production records of more than 400 pounds in Iowa cow testing associations are purebred, according to Floyd Johnston, dairy husbandry extension worker at Iowa State college.

Study of the yearly records of all cows on test in Iowa test associations show that iu general the purebreds excel the grades. During 1928 the purebreds produced an average of more than 1,000 pounds of milk more than the grades. Likewise the purebreds each returned $6.23 more above feed cost than the grades.

That cow testing association members are coming to recognize the superiority of purebreds is shown by the fact that 90 per cent of the herd sires in association herds now are purebred, according to Johnston. High producing herds now are being developed which consist chiefly of purebreds.

OSCO FARMER TRIES TO CATCH HOG AND IS BITTEN ON HAND

Osco, Ill.— Bert Tomlinson of Osco incurred severe injuries to his right hand Friday morning when he was attacked by a hog.

Mr. Tomlinson was at the home of his son, Duane Tomlinson, and was trying to rope the animal. The hog became angered, bitting Mr. Tomlinson. Three of the man's fingers were badly lacerated and the nail was torn from one finger. Dr. Bigglestone of Orion dressed the wounds.

CAN'T ATTACH MONEY LOANED TO FARMERS BY THE GOVERNMENT

New York, June 12. —The government has been having trouble with farmers' loans because of the fact that at different times and in different places the money loaned to the farmers has been attached by creditors. The trouble has become so bad that the Department of Agriculture had to appeal to the Department of Justice for protection. The Department of Justice at Washington, on Monday, notified all United States district attorneys to institute proceedings to protect the interests of the government in connection with loans made to farmers under the Federal Farm Loan Act.

Under the Federal Farm Loan Act, the money is loaned to the farmers and secured to the government by crop mortgages. The Department of Agriculture claims that upon receipt of this money it is deposited by the farmer and that creditors have been garnisheeing or trusteeing the money to settle prior debts. One case in Texarkana, Ark., according to the officials of the Department of Justice, has been won by the government. In this particular case the farmer obtained a loan under the Farm Loan Act, secured by a crop mortgage, but his prior creditors stepped in and garnisheed the money as soon as it was placed in the bank by the farmer.

According to the understanding of the officials, the government has the authority to enjoin persons from diverting these funds through attachment proceedings.

PAJAMAS IN THE GARDEN

St. Louis Post Dispatch: If there is anything the country has been tolerant of it is the pajama craze. Never a week goes by but new uses for them are reported. From their untalked-of beginning in the bed-room they have extended their jurisdiction until now they are proper anywhere in the house at any time. Kitchen, dining room and library have all been conquered in turn. Beach wear was only an entering wedge to street use. Now comes the beam that breaks the elephant's back. Gardening time, says one style adviser, is here again and the flowiug pajamas which fill the stores are "just the thing for work in the garden plot." Then follows a column description of "workaday" outfits of gingham and broadcloth, "in gorgeous striped colors, vivid block designs and other brilliant patterns." This fans our passive resistance into open rebellion. That style adviser uever waded in a dew-wet garden; never had a hoe in his or her hand in his or her life. There is one and only one possible use for pajamas in the garden and that is to cover a scarecrow.

INCREASES HIS EGG PROFIT BY SENDING TO CHICAGO RELATIVE

Lake Mills, Fla.— By sending eggs to relatives at Chicago where they were sold at the top market prices in the city, A. O. Anderson, farmer living near here, has realized a good profit from his flock of 285 hens . With a profit of $100 a month for the year 1928, Mr. Anderson is convinced that his Rhode Island Reds and Buff Orpingtons are well worth their keeping.

Each hen produced an average of nine to ten eggs during the year, 1928, the total production of the flock being 2,565 dozen. Of this amount 2,454 dozen were sold in Chicago at top market prices, bringing a sum of $799. Three hundred and twenty-eight chicks, raised by the hens, sold on the local market for $409. This amount together with the $799 brings the total revenue from the flock to more than $1,200 for the year.

When the relatives in Chicago received the eggs they were in great demand. He states that he always received a price of five cents more than was being paid by the local market and at times received 10 and 15 cents more. Incidently he states that seldom were eggs broken en route.

Mr. Anderson does not claim to be an expert poultry man but believes in giving his flock good care. Only feeds that were raised on the farm were used. This included a mixture of wheat, oats and corn with lots of skimmed milk and good water. He never used a mash to increase egg production but feels confident that he could have increased his production with it use.

PROTECT MELON CROPS FROM BEETLE DAMAGE

Raleigh, N. C., June 12. — Two kinds of beetles have been causing serious damage to cucumbers, squash, and melons in North Carolina this spring. One of the pests is striped and the other is 12-spotted. In some cases damage has been so serious that young plants have been killed. Others have had their growth seriously retarded by reason of the foliage being eaten by the beetles.

"The best treatment for the regular garden or field is to dust with a mixture made up of 20 pounds of gypsum or land plaster to one pound of calcium arscenate," says Dr. B. B. Fulton Carolina experiment station. "This dust should be applied when the beetles first appear and about twice each week until the plants are too large to be damage by the beetles. In case of a heavy rain, the dust must be re-applied. The plants should be watched carefully because the betles sometimes appear in such numbers as to destroy them in a few days. The best time to dust is while dew is on the plants."

Dr. Fulton recommends liberal applications of the dust. It should be used in sufficient amount to give the squash, cucumber or melon vines and the ground under them a whitish cast.

Returning from a field trip this week, C. H. Brannon, extension entomologist, said many melon, cucumber and squash fields have been badly infested with the two kinds of beetles and will need immediate attention.

MADE MONEY BY NOT SPENDING

But Conditions Are Changed Even on Farms, Says Farm Editor.

By Arthur Pickford, in Mason City, Iowa, Globe-Gazette

A friend who was born in Amboy, Ill., sends us a clipping from the Amboy News quoting the Chicago markets for farm products on March 19, 1879 — just 50 years ago, and ask what farmers would do if such prices prevailed today and how it comes that many farmers were well off then.

Chicago Market March 19, 1879

"Chicago market report for this week. Beevers—Extra — $4.85 to $5.10; Choice — $4.50 to $4.70; Good—$4.10 to $4.40; Medium — $3.75 to $4.10; Butcher's Stock—$2.65 to $3.75; Stock Cattle —$2.60 to $3.60; Hogs — Live— Good and Choice $3 to $4.25; Sheep—Common to Choice — $3.50 to $5.50. Eggs —fresh, 16c to 18c; Grain—Wheat, No. 2— Spring, 91c; Corn —No. 2, 33c; Oats—No. 2, 22c Rye —No. 2 46c; Barley— No. 2, 77c; Pork— Mess, $9.70."

Prices are high or low according to cost of production and some of those above are high, barley and eggs for instauce. A bushel of corn will make about eight pounds of pork. At 33 cents a bushel, one pound of pork would cost 4 1-8 cents or $4.12 1-2 a hundred weight. By the same rule if corn cost 90 cents a bushel oue pound of pork would cost $.1125 or $11.25 a hundred weight which is what 250 pound hogs are worth today. If the farmer 50 years ago sold hogs for less than $4.125 he was not getting market price for his corn.

Eggs at 16 cents a dozen 50 years ago were much more profitable than eggs at 25 cents today.

It should not be forgotten that farm labor is more than twice as high as 50 years ago, land costs three and four times as much and rents are at least double.

The taxes on a quarter section then would be about $50 now they are $250 and common lumber could then be bought for $14 a thousand feet.

On Different Level

But the main reason why the farmer of today can not make as much money as his grandfather did is because we are all living on a more expensive plane, and the farmer is entitled to live there as well as any other class.

His grandfather got one hair cut a year and probably his grand-

(Continued on Page 8)

mother did the trimming.

His Sunday suit was worn only on Sunday and on special occasions and the family went to church in a lumber wagon with two spring seats and a board. The boys spent 50 cents on the Fourth of July and they were lucky if they went to one concert or entertainment besides that in a year.

Mother and the girls knitted the stockings and the men wore hickory shirts every working day and had only one a week.

A pair of boots would last them a year and cost $3.50 and a Sunday suit could be bought for $15.

A good country school teacher got $30 a month and Iowa coal was $3.50 a ton. No books other than school books were bought and one weekly newspaper was their only connection with the outside world.

(Coontinued on Page 8)

Ministers' Conference Closes

Hampton Institute, Va., June 27—The Eighteenth Annual Ministers' Conference of Hampton Institute closed Friday afternoon after a five day session. The registered attendance of 377 has been surpassed only a few times in the history of the conferenee; the number attending was exceedingly gratifying considering the fact that three other conferences were in session in the State during the same week and that the current depression made it impossible for many ministers to attend. Clergymen from seventeen different states and Canada were present, Virginia leading with 163, North Carolina being second with 110, and Maryland third with 33. Over 1200 different ministers have attended the Conferenee since it was begun in 1913. Baptist ministers led in attendance this year; the members of the African Methodist Episcopal Church being second. The Conferenee is wholly undenominational in charaeter.

Lectures were given on many aspeets of the minister's life and work, considerable attention being paid to the pressing problem of the Rural Church. Ample discussion of many of the minister's problems took place. A large display of recent books and literature on religious education was a feature of the Conference. There was also an exhibit of drawings of recent church architecture. Betwcen the sessions of the Conference many of the visitors read and studied this literature; many orders for books were plaeed.

Dr. George D. Wharton, a graduate of Hampton Institute of the class of 1880, spoke out of a long and sueeessful experience on "My Experience with a Rural Church." He enumerated the following as the standing needs of the rural church today: "a better educated membership, a better trained ministry, a greater efficiency in church officers, a resident pastor, an appropriate support of missions both here and abroad, and more attractive church buildings."

Devotional Services throughout the Conferenee were conducted by the Rev. Henry Proctor, pastor o fthe Nazarene Congregational Churc of Brooklyn, N. Y. On one oceasion he described his visit to Gethesemane, "and that," he said "means prayer." He described the Lord's prayer as "a structure of seven stories, with a foundation of worship and each clause standing in turn for civil being, law, business, peace, social service, and salvation." The Hampton Quartet sang at each of the devotional serviees.

Dr. Gaius Glen Atkins, of Auburn Theological Meminary, Auburn, N. Y. lectured twice on "The Minister and His texts" "Generally," he said, the text should chose the preacher, rather than the preacher choose the text. But the text will not choose you unless you give it a chanee."

The Annual Conferenee Sermon was preached on the opening night y Dr. J. W. Brown, pastor of the New Mother A. M. E. Zion Church of New York City, on the topie, "Jesus the Preacher Our example." In his sermon he alluded to the Conference as affording some men their only opportunity for an education.

Very significant addresses were made on three sucessive days by Miss Jane Hunter, a distinguished social worker of Cleveland, O., Founder and Executive Secretary of the Phillis Wheatley Society, a large institution for the welfare of working girls. Miss Hunter spoke on "The Youth Problem as it Relates to the Church." She aroused considerable discussion by an appeal to the ministers to take a more liberal attitude on the question of amusements.

Among the most significant hours of the Conference were a series of addresses by Bishop Robert E. Jones, of the M. E. Church in New Orleans who dealt in a humorous, thought shrewd and practical way with some of the sternest actualities of the minister's life. His three topies were: "Why Ministers Fail" "Church Management," and "Church Finanee."

Two special addresses were given to join gatherings of the ministers attending the Conferenee and the teachers now in attendance at the Hampton Summer School for Teachers. One was on "The Church and Social Work," by Dr. Beverly D. Tucker, Rector of St. Paul's Episcopal Church in Richmond, and the other by Dr. R. R. Moton, principal of Tuskegee Institute. There was a stirring moment at the close of Dr. Moton's address, when the great assembly hall of Hampton Institute rang with the strains of the ..Negro National Anthem.

For the past two years the Conferenee has been presided over by arch-deacon E. L. Baskerville of Charleston, S. C. His successor elected at this session is the Rev. D. H. Hargis of Wilmington, Del., who is a District Superintendent of the Methodist Church The Exccutive Secretary of the Conference is the Rev. S. Arthur Devan, the Chaplain of Hampton Institute.

From Morehouse-Spelman Summer School Atlanta, Ga. ..

Atlanta, Georgia, July—(Special)—More than fifty students registered for the Rural Institute which opened this week at the Morehouse-Spelman Summer School. Vinson A. Edwards, specialist in rural sociology, is director of the Institute, and the program includes lectures by such outstanding leaders as: J. C. Dixon, supervisor of Negro education, Georgia State Department of Education; H. W. Harvey, of the State College of Agriculture, Athens, Ga; C. A. Cobb, district manager of Southern Ruralist and Progressive Farmer; Alva Tabor and L. S. Molette of Georgia State Industral College; G. V. Cunningham, Georgia State College of Agriculture; J. V. Boule, assistant director of Rural Health; Miss Mary K. Jerome, of the Georgia State Department of Game and Fish; Dr. E. C. Brenson of the University of North Carolina; Miss Edna B. Callahan, director of physieal education, Spelman College, and Prof. W. K. Harreld, director of music of Spelman College and Morehouse College.

Phases of rural work under discussion at the Institute include: rural home and family; rural health; conservation of fish and game; school organization and supervision; landscaping and horticulture; community organization; art in rural life; forestry; music; recreation; vocational agrisulture; and rural home problems. Several laboratory eriods will be devoted to manual training and home economics.

Hampton Institute Press Service By George A. Kuyper.

Hampton Institute, Va., July 4: Tho first session of the Hampton Institute Summer School, which reached on Saturday its halfway mark, brought to the campus the largest number of teachers since since summer instruction began. The total number of men and women now attending the various courses being given is 801; 683 being women and 118 men. These—all of them teachers, in active work—come to Hampton from twenty states, the Distriet of Columbia, and Africa. Virginia furnishes tho largest group of 260; North Carolina the next largest of 167, Maryland is third with a representation 185.

There are thirty-six graduate students, an increase of ten over last year. Tho number in ths new graduate department of Hampton Institute has been increasing steadiy. At the commencement exercises last month the first M. A. degrees to be awarded at the Instituto were granted to students on the basis of their graduate work done in the Summer Session. Dr. William L. Sanders, dean of men at Ohio Wesleyan, is in charge of the graduate work.

Among the forty-two instructors, three are at Hampton for the first time. These are Dr. Ambrose Caliver, specialist in Negro Eduea-tion of the United States Department of the Interior, who is giving courses in Negro history and community civics; Dr. Sanders, who is teaching economics and education; and Mary Ship Sanders, who is in charge of techinque of teaching course.

A demonstration school is being conducted at the Whittier Training School for the observation of teaching. Courses of special interest this year are the librarian course for high school libraians; a course in scout mastership; and a course in community boy leadership.

Every morning of the school year a general assembly is held at eleven o'clock. In addition to devotional exercses, addresses are made by representatives of other summer schools who are invited about their methods and problems.

The e?cellent courses presented, aim to be of practical use in increasing the professional ability of the colored school teacher, and the many pleasant features of life on the Virginia peninsula, tend to make tho Hampton Institute Summer School in the South. if mer Session the largest colored not in the country.

AFRICAN BOY NAMED 'HOOVER' AS TRIBUTE TO WAR DEBT PLAN

Paris, July 3—Herbert Hoover Babale was the name chosen today for the first Negro baby boy born at the African village at the French Colonial Exposition.

His proud father, who belongs to a French East African tribe, explained that it was the custom in his village to name children after outstanding events and he had been informed that the success of the Hoover plan negotiations just now is clearly indicated. Marshal Lyautey, general director of the exposition, is expected to act as the boy's godfather.

HOWARD STAFF KEPT IN TACT

More of the expected changes of the Howard University Law School were made at the annual meeting of the law school committee of the trustees of the university to-day.

Many of the alumni had expected that a new law dean would be appointed. However, the services of young Charles Houston, assistant dean, were expressed as satisfactory and the committee did not see fit to replace him.

Howard Law School is the only one of its kind run and operated by colored people in this country. This year there were about seventeen graduates.

Teacher—Do you mean to tell me that you can't name all of the great men of our race? When I was your age I could name them all.

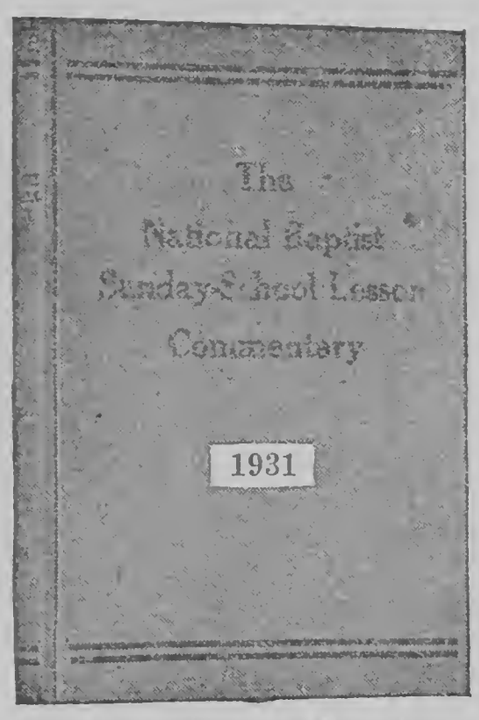
Willie—Yes, but there were only three or four then.

Hello! Bought a saxophone?

"No; I borrowed it from the man next door.

"But you can't play it?"

"Neither can he whil I've got it."



SUNDAY SCHOOL LESSON Commentary

For 1931

Every Sunday School Teacher Should Have It

SIX REASONS WHY YOU SHOULD USE IT:

First: It is the production of your own National Baptist Publishing Board which gives employment to more of our people than any similar concern in the United States.

Second: It is purely baptistic and orthodox in every particular.

Third: Its doctrines are unquestioned, and the Biblical requirements are stressed in a manner to make it absolutely dependable.

Fourth: None of the modern theories leading to skepticism are admitted.

Fifth: It aims to be true to the teachings of Jesus and whatever there is presented which has not the "Thus saith the Lord" is discarded as unsafe and destructive of the best interests of mankind.

Sixth: Thoroughly adapted to the uses of our Sunday school constituency, it stands as a beacon light to all those who would like to rise in the scale of intelligence and demonstrate the qualification necessary for the accomplishment of the "Great Work" devolving upon us as a people.

Boston to Entertain Pythians

Sir. S. W. Green, the Supreme Chancellor Issues Proclamation No. 19.

According to an official Proclamation reaching this city this week, Supreme Chancellor, Sir S. W. Green of New Orleans, has called the Supreme Lodge Knights of Pythias to convene in Boston, Mass., on Tuesday, August 18, 1931. According to the Proclamation which is series L, the Chancellor and the Supreme Keeper of Records and Seals said:

To all Knights of Pythias, Grand and Subordinate Lodges, Supreme Representatives, Officers and Members of the Supreme Lodge— Greeting:

1st—Whereas, Article VI, Section 9, of the Constitution and Supreme of the Knights of Pythias of North America, South America, Europe, Asia, Africa and Australia, provides that "The regular convention of the Supreme Lodge shall be held biennially, beginning on the third Tuesday in August, at such place as may be designated at the previous regular convention";

2nd—And whereas, at the last regular convention held by the Knights of Pythias of the aforementioned Supreme Jurisdiction it was decided to hold the next convention in Boston, Mass.

3rd—Therefore, I, S. W. Green, Supreme Chancellor of the Knights of Pythias of North America, South America, Europe, Asia, Africa and Australia, do hereby direct the Officers and Members of the Supreme Lodge of the Knights of Pythias aforsaid to assemblo in Twenty-sixth (26th) Biennial Session at Mechanics Building, 111 Huntington Avenue, Boston, Mass., at ten o'clock A. M. on Tuesday, 18th day of August, A. D. 1931.

4th—The Officers and Members of the Pythian Temple Commission are hereby directed to assemble at General Headquarters, 1-A Wellington Street, Boston, Mass., at ten o'clock A. M. on Monday, August 17th, 1931, for the transaction of such business as may legally come before them.

5th—The Committe on Finance is hereby directed to assemble at General Headquarters, 1-A Wellington Street, Boston, Mass., on Thursday, August 6th, 1931, at ten o'clock A. M., for the purpose of auditing the books and accounts of the several officers handling funds for the Knights of Pythias aforesaid the Supreme Lodge thereof, and the Supreme Court of the Order of Calanthe of the Jurisdiction of the Knights of Pythias aforesaid.

6th—The Supremo Chancellor, Supreem Master of Exchequer, Supreme Keeper of Records and Seal, Secretary of the Endowment Department, Major General of the Uniform Rank, Secretary of the Pythian Temple Commission, Supreme Worthy Counsellor, Supreme Worthy Receiver of Deposits, Supreme Worthy Register of Deeds and Secretary of Endowment Department of the Order of Calanthe, are hereby directed to have their books properly balanced and send them prepaid express addressed to Sir Robert L. Zeno Chairman of Committee on Finance 1-A Wellington Street, Boston, Mass., to arrive there not later than Wednesday, August 5th, 1931

7th—The Supreme Chancellor, Supreme Master of Exchequer, Supreme Keeper of Records and Seal Secretary of Endowment, Major General of the Uniform Rank and Secretary of the Pythian Temple Commission are hereby directed to have their tabulated reports printed in order that each representative may be furnished with a copy of said tabulated report on the first day of the session.

8th—Officers of the Grand Lodges are hereby directed to forward to the Supreme Keeper of Records andSeal on or before August 1, 1931, their reports and representatives' credentials and all taxes duo the Supreme Lodge in accordance with Article XIII, Section 10, and Chapter IV, Paragraph 24, of the Constitution and Supreme Statutes of the Knights of Pythias of North America, Etc., also forward all taxes due the Secretary of the Pythian Temple Commission in accordance with the law adopted at the Twenty-fourth Biennial Session of the Supreme Lodge, held at Chicago, Ill., August 16th-20th, 1927 and in acordonce with enactments by the Supreme Lodge of the Knights of Pythias aforesaid as may be found in the official proceedings of the Twenty-fourth (24th) Biennial Session, Pages 486 and 487, or suffer the penalties provided under the laws. All back taxes due and unpaid, must be paid.

9th—All subordinate lodges having no Grand Lodge over them shall forward their reports and Per Capita Tax and Emerbency Tax to Sir E. E. Underwood, S. K. of R. S. & S. S., E. Corner Clinton and Washington Streets, Frankfort, Ky, on or before July 1st, 1931.

10th—The Committee on Credentials is hereby directed to meet at General Hearquarters, 1-A Wellington Street, Boston, Mass., on Monday, August Seventeenth (17th), 1931, at one (1) o'clock P. M. for the purpose of examining reports and credentials with the Supreme Keeper of Records and Seal according to Chapter One (1), Paragraph Five (5), of the Constitution and Supreme Statutes

11th—Deputy Supreme Chancellors are hereby directed to forward their Commissions to the office of the Supreme Chancellor on or before July 15th, 1931, with a full report of conditions in their respective districts and the future prospects of the Order in their district.

12th—The Supreme Court of the Order of Calanthe is hereby directed to hold its Session at Mechanics Building, 111 Huntington Avenue, Boston, Mass., at the same time as that of the Knights of Pythias aforesaid.

13—The Sixteenth National Encampment of the Uniform Rank forming our Pythian Army, will be held at Camp Colonel E. B. Barco, between Sherman and Garden Streets, back of Walden Street, Cambridge, Mass., only five miles from Convention Hall.

14th—The Supreme Keeper of Records and Seal has been requested to apply for rates of a FARE AND HALF for round trip with identification certificates for the following named Grand Jurisdictions: MARYLAND, PENNSYLVANIA, DISTRICT OF COLUMBIA, NEW YORK, NEW JERSEY CONNECTICUT, DELAWARE AND MASSACHUSETTS.

Officers, Members and Visitors from other sections are hereby directed to secure excursion rates to New York, where practicable, and in sections where excursion rates cannot be secured, then purchase summer rate tickets.

Officers, Members and Visitors from the States named will purchase round-trip tickets, by securing an identification certificate from the Grand Chancellor of their Jurisdiction or from the Supreme Keeper of Records and Seal.

15th—The Supreme Lodge Officers and Members and Supreme Court Officers and Members with other branches of the Order are hereby directed to assemble at Congregational Church, corner of West Newton Street and Columbus Avenue, Boston, Mass., on Sunday August 16th, 1931, at 2:0(o'clock P. M., to listen to a sermon to be preached by Right Reverend Bishop R. E. Jones, LL. D., of Crecent City Lodge No. 135, K. of P., New Orleans, La.

16th—For information relative to hotel rates, quarters and other matters pertaining to locations, address Mrs. Nona Whitehead, Chairman Committee on Homes, 5 Yarmouth Street, Boston, Mass.

17th—The Dramatic Order Knights of Omar will meet at Mechanics Building, 111 Huntington Avenue, Boston, Mass.

18th—Delegates on arrival will proceed to the General Headquarters, 1-A Wellington Street, Boston, Mass., for registration and assignment to their quarters.

LOOK OUT COMMITTEE AND TRANSPORTATION COMMITTEE, Sir Peter Walther, Chairman. This Committe will have special stations or booths, located in each Railroad Station, decorated with Pythian Colors for identification of delegates arriving, so they may be immediately directed to official Taxi Cabs to all parts of City, with the greatest courtesy and reasonable fee.

There will be least confusion, if all delegates get off at the Terminal Stations, there are only two, South Station and North Station, by whatever route you may come. Inquire what Station, before leaving, into which Station your arrival is expected. Telegrams of Special Delegations may be sent just before train leaves for Boston, direct to the Station of arrival, K. of P. Look-out Committee, Peter Walther, Chairman, provided you leave on or after August 14. If prior to this date address Sir Peter Walther, Chairman, 148 Worcester Street, Boston, Mass.

The Committee in charge of the local arrangements is under the supervision of Dr. W. O. Taylor, General Chairman of the Supreme Lodge and Supreme Court Entertainment Committee, with Sir A. M. Ballard Vice-Chairman, and Mrs. Nona Whitehead, Chairman, Committee on Homes.

Ample arrangements have been made for the meeting places, for all of the Departments of the Or-

Application for Membership
NATIONAL FEDERATION OF COLORED FARMERS
Vincennes Hotel, Chicago

As a farmer, I believe the time has arrived when the Colored Farmers should form a National Organization devoted to diversified production, grading, packing, shipping and marketing of farm products and to the purchase of needed farm supplies through co-operative methods, to the end that a more prosperous financial condition may result from their efforts as producers.
I hereby subscribe $5.00 for membership in the National Federation of Colored Farmers for a period of 12 months from date. Also $1.00 for an Annual Subscription to the Modern Farmer.

LYNCHING RECORD FOR THE FIRST SIX MONTHS OF 1931

FIVE PERSONS LYNCHED FOUR NEGROES, ONE WHITE—MISSISSIPPI LEADS

Tuskegee Institute, Ala., July 1. —Dear Sir: I send you the following information concerning lynchings for the first six months of this year. I find according to the records compiled at Tuskegee Institute in the Department of Records and Research that in the first six months of 1931 there were 5 lynchings. This number is 4 less than the number 9 for the first six months of 1930; 1 more than the number 4 for the first six months of 1926; 6 less than the number for the first six months of 1927 and is 4 1929; it is the same as the number 5 for the first six months 1928; 6 less than the number 11 for the 1924; 100 less than the number 15 for the first six months of 1923; 26 lessthan the number 30 for the first six months of 1922 and 31 less than the number 36 for the first six months of 1921.

There were 32 instances in which officers of the law prevented lynchings. Of these 4 were in Northern and Western States and 28 in Southern States. In 26 of the instances the prisoners were removed or the guards augmented. In the 6 other instances force was used. Thus a total of 55 persons, 10 whites and 45 Negroes, were saved from death at the hands of mobs.

Of the persons lynched 1 was white and 4 were Negroes. The offenses charged were attempted rape, 3; murder, 2.

The states in which lynchings occurred and the number in each State are as follows: Mississippi, 2; Missouri, 1; North Dakota, 1; Tennessee, 1.

Very truly yours,
R. R. Moton, Principal.

BOSTON TO ENTERTAIN

(Continued from page 6.)

der as well as suitable places have been secured for lodging places for all Officers, Members and Visitors of the several departments of the Order. Excellent camp grounds and suitable arrangements for the Uniform Rank Department have also been made.

Given under our hand and the Seal of the Supreme Lodge of the Knights of Pythias of North America, South America, Europe, Asia, Africa and Australia, this Tenth (10th) day of June, A. D. 1931, and Pythian Period the LI (51st).

Attest:
E. E. UNDERWOOD,
Supreme Keeper of Records
Seal.
G. W. GREEN,
Supreme Chancellor.

Prairie View College

By Napoleon B. Edward

The Senior Class met in the science building June 17 and organized. The following officers were elected .

Mr. R. M. Catchings, Houston, president,

Mr. J. H. Allen, Paris, Vice President.

Mrs. Dula B. Reid, Houston, Secretary.

Mrs. M. L. Simpson O'Neil Henderson, Assistant Secretary.

Mrs. Pauline Lewis Lubin, Houston, Treasurer.

Mr. J. M. Hurdle, Diboll, Business manager.

The officers were installed by Mr. D. R. Glass, registrar, who is sponsor for the senior class. The class consists of more than 100 and no doubt 75 will receive their degrees at the close of the summer session. The class has begun its plans and is looking forward to a pleasant commencement. The following standing committees have been apopinted: Invitations, Class Pins, Pictures, and Social.

Mrs. G. V. Banks has returned from Hampton Institute, Hampton, Virginia, where she has been studying the past regular session. She was accompanied home by Principal W. R. Banks and her sister, Miss Elizabeth Perry. The college community is elated over Mrs. Banks' return to take her place in the social and civic affairs of the college and the community.

Dr. Mack T. Williams, college chaplain, continues his series of sermons to the Summer school. His remaining discourses will be upon the following subjects: "A Philosophy of Technique," "The Man No body Knows," "The Miracle of Me," "The Thanatopsis of Bryant," and "Where do we go from here."

Dr. W. A. Adams met a generours reception during his recent visit to the college. He was graduated from Prairie View College in 1919, and subsequently graduated from Howard University,, being awarded the degrees of bachelor of science and doctor of medicine. Dr. Adams is on the Neuro-psychiatric Staff, Lakeside Hospital, one of the university group controlled by the Western Reserve University, Cleveland, O. Dr. Adams stated that there were five more Negro physicians on the staff.

Urban League Announces Three $1200 Fellowships

The Fellowship awards for the school year 1931-32 valued at $1,200 each have ben annaunced by the National Urban League as follows:

MRS. SADYE JOHNSON CARTER, New York City, graduate of Niner Normal School, Washington, D. C., 1926, who has engaged in visiting teaching in New York public schools, assigned to the New York School of Social Work,

MISS ELSIE ROSALIE CLARK, Richmond, Virginia, A. B. Virginia University, 1929, now assistant to the register, Talladega College, assigned to the University of Pittsburgh;

MISS LOIS TAYLOR, New London, graduate of Conneticut College for women, class 1931, assigned to Columbia University.

MISS HELEN ELISE CROMER, Evanston, Ill., class 1931, Northwestern University, on recommendation of the League, has been awarded the MARY C. WALKER FELLOWSHIP at the New York School of Social Work— said Fellowship being financed by the Women's Asociation.

Eugene Kinckle Jones, Executive eScretary of the League states that at a later date there will be further announcements of additional Fellowships.

STATE COLORED FARMERS WILL ATTEND INSTITUTE

Over 500 Colored farmers are expected to attend a Farm Institute to be held at the Middle Tennessee Experiment Station Farm, Columbia, July 15.

Speakers from the University of Tennessee and from A. and I. State College will participate in the program. Practical farmers will give demonstrations. The program includes an inspection of the Experiment Station under the direction of Superintendent L. R. Neal, from 9:30 a. m. until noon. Other important features include discussions of the following subjects: "Home and Commercial Dairying," "Dairy Products in the Home," L. S. Edwards, manufacturing specialist, University of Tennessee; "Commercial Dairying," J. C. Rucker; "Pork Production," Joe McCauley; "Demonstration," Henry Starns; "The Home Orchard," John Leath; W. C. Pelton, horticultural specialists, University of Tennessee; "Sanitation and Health on the Farm," Maury County Health Unit and Dr. Bent.

In the morning a special program has been provided for women which includes the following: "Demonstration: Dairy Products in the Home," L. S. Edwards, Dairy Manufacturing specialist, University of Tennessee; "Demonstration: The Care of Dishes," by Miss C. R. McElrath, supervisor of Wilson County; "Improvements I Have Made in My Home and Kitchen," Mrs. H. V. Cantta, Pulaski; "Demonstration: Rug Making," Mrs. Minnie Bledsoe, Elkton; "Cooking Demonstration," Mrs. M. E. Richards, A. and I. State College.

Join Our Dollar Per Week Savings Club Now Open

Every Citizen Is invited to Cooperate in a Definite Movement Where they Themselves will be the Recipients of all the Benefits Both Principal and Interest

Send $1.00 every week to the Citizens Savings Bank and Trust Company, at Nashville, Tennessee, either in cash or post office money order, or you may send your personal check, if it is certified. This will open a savings account on which we pay interest twice a year. It will make you a member of our "Save a Dollar a week Club." Every member of the club, who qualifies by sending the regular amount, will receive special recognition and an acknowledgement of their remittance when it arrives. You can deposit more than $1.00 per week if it is convenient. No matter where you live, in the United States, Canada or Mexico you can take out membership in this savings plan. The Citizens Savings Bank has been operating for twenty-seven years. Its capital is fully paid. Its officers and directors represent men and women who are nationally known. "Procrastination is the thief of time," so do not wait. Open your savings account at once.

SOUTH LEADS

(Continued from Page 1)

Louisiana's blooming period was relatively free from forest damage and the crop has set well. Crop prospects are good. In Oklahoma the freeze of March 27 killed practically all peaches except in the eastern and southern counties. Further damage was done by the April 21 freeze except in the east and south central districts.

The Texas crop is almost a complete failure in the north central and central parts of the state. Other sections also suffered damage from the spring freezes, varying from slight injury in the extreme south to heavy damage in the northeast. Past production and the 1931 forecast are shown as follows:

PRODUCTION

	5-Year Average	1930	1931
State	1,000 bus.	1,000 bus.	1,000 bus
N. Carolina	1,808	1,800	3,272
S. Carolina	865	952	1,309
Georgia	7,105	4,698	7,310
Florida	103	102	128
Alabama	973	1,105	1,275
Mississippi	524	490	636
Arkansas	2,373	84	3,024
Louisiana	191	112	218
Oklahoma	694	80	220

10 States	16,321	10,173	18,352

FARMER'S NEWS

(Continued from Page 1).

Best home made cake.

Best home made quilt.

Set dishes— For the member bringing in the largest number of applications for membership in the Federation.

Set silver—For the member bringing in the largest number of subscriptions to the Modern Farmer.

We are also expecting other prizes to be authorized, which will be announced in our next bulletin issued July 15th.

Only members of the National Federation of Colored Farmers Incorporated can compete for these prizes. All farm products must be produced by the members. Each contestant must have a statement from the chairman of his unit to the effect that he is a full fledge member of the organization.

By order of the State officers for Mississippi, and approved by the National offices, a special assessment of twenty-five cents per member is hereby levied, and the Chairman of each unit is hereby authorized to see that this assessment is paid by each member of unit, and the sum forwarded to the National officers, not later than August 1st. This levy is for the purpose of aiding in defraying some of the expenses of the convention.

We want every member of the Federation to attend the convention and answer to his, or her name on the roll call.

GROCERIES AND FEED

Practically little changes have been noted since the issurance of our last Bulletin, except the following:

Mixed oats now 35c—white oats 38c per bushel.

Wheat shorts $1.00 per hundred.

Horse and mule feed (50 per cent Grain) $1.35 per hundred.

Pure apple cider vinegar in 52 gallon barrels at 17c per gallon, and $2.25 per case of 6 gallon jugs.

We are looking for lower prices on corn meal, flour and canned goods.

DRY GOODS AND CLOTHING

There has been no change or any consequence in the prices of dry goods and clothing.

COTTON

Since the president of the United States has given the foreign countries an extension of time in the payments of war debts, the cotton market has improved considerably, and during the past week cotton advanced ten dollars a bale.

DROUGHT LOANS

We have been informed that all crops, which were mortgaged as security for government drought loans, cannot be attached for any debts made before receiving government loans.

SCREEN AND DISINFECT

Members should thoroughly screeen the doors and windows of their homes. Continue to wage a war on flies and mosquitoes, as they are the most deadly carriers of diseases, which eventually result in death to you and your loved ones. Do not allow any water to stand in tin cans or barrels at any place on your premises. Be sure to put kerosene on the surface of all ponds or pools of stagnant water, as the oil forms a film on the surface of the water, which keeps the eggs from being hatched, thereby stopping future disaster at the source.

PLANT LATE SUMMER AND FALL GARDENS

As seasonal rains occur, be sure to plant your summer and fall gardens. This will be of considerable aid to you during the "lay-by and harvesting period."

MEMBERSHIP DUES

In checking over our membership cards, we find to our surprise the greater number of our members are considerably behind in their membership dues. We realize the scarcity of cash at this time, but we feel sure that there is not a member of the Federation, who could not pay at least a part of their indebtedness, and aid in our onward march to the gateway of freedom from debt slavery. The Chairman of each unit is hereby instructed to have the Secretary call the roll of membership, and have the members who are in arrears pay up, or, we will be forced to erase their names from membership of the organization that means so much to their present and future welfare. No organization can be well managed and do its work, regardless of the ideals and tremendous good it endeavors to attain, without proper and sufficient funds. It cannot run itself any more than you can operate your farm without money.

PAY YOUR DUES

MEMBERSHIP BUTTONS. — All units who will need buttons for the members should send in their orders for same not later than July 20th, or they will not be able to get them in time for the convention. These buttons can be had for five cents each, and the units can sell them to the members for ten cents each and place the difference in their home treasury.

LET'S MEET EACH OTHER FACE TO FACE IN MOUND BAYOU, AUGUST 13 to 15th.

FORD HOPES TO RAISE ON A FARM ALL RAW MATERIALS FOR AUTO

Detroit, Mich. — (Special) — Henry Ford has taken up the wholesale growing of cantaloupes, not however, to complete with truck gardeners, but for raw material used in the production of automobiles.

On one of the farms near Macon, in southern Michigan, which forms a part of Ford's 3,000 acre agricultural laboratory in Lenawee county, an extraordinary amount of acreage has been devoted to planting of the canteloupe seeds. Old dirt farmers, who have sold their land to Ford and gone to work for him on a $5 eight hour a day basis, expressed surprise at the planting of so much. Now the secret is out.

"One day when Mr. Ford was on one of his numerous personal inspection trips over the fields I heard him make a remark that gave me the tip" said one farmer. "I heard him say, 'I'm going to rush this experiment through with the idea of determining whether every raw material that goes into an automobile can't be raised on a farm.'

"Take these cantaloupes, for instance. His chemists plan to get alcohol for auto paint out of the melons.

"With what is left after the alcohol is extracted, I understand they intend to make a new cheap substance as serviceable as wood."

COTTON GROWERS IN N. C. LEADS WHITES

Greensboro, N. C. — Warren County Vocational Agricultural pupils proved their ability to grow cotton by taking first and third places for the second time from whites in as many years in the state-wide cotton contest, Austin Woodard, was first; George Aycock was third.

Woodarw produced 3,042 pounds of seed cotton on 2 acres, worth $131.78, his project labor income was $92.28. After paying for rent seeds and fertilizer he had a project labor income per acre amounting to $46.14.

Austin attributes his success to selection of soil on the farm best adapted to cotton production, the use of pure bred seed of known quality and the use of good complete fertilizer of 500 pounds per acre together with compost and 125 pounds of nitrate of soda after planting.

BEANS WORN AS JEWELRY

Famed as an actress and as the possessor of valuable jewelry, a woman appeared at a party in Paris recently in a pink gown with what appeared to be three rows of curiously-shaped pink pearls. After all had admired their beauty, she confessed that the necklace was composed of haricot beans cleverly tinted and strung together. To complete her vegetarian ornamentation her long earrings were of tinted rice grains.

MADE MONEY

(Continued from Page 4)

Funerals were not expensive because caskets were plain and hearses were seldom used. Some kind neighbor loaned the family a spring buggy to carry the loved one away.

Not one child in 100 went past the eight grade in school and country roads were mostly an ungraded strip of land four rods wide, where the public might wander at will seeking the easiest track.

The reed organ was the most expensive piece of furniture in the house and not every family had a sewing machine.

If the farmer could keep present day prices and live as cheaply as his grandfather he could save money but he will not live on that plane and the nation cannot afford to have him.

He contributes more to the welfare of the world for what he gets back than any other class and he should demand as good a living. It is wise for the nation at large to see that he gets it.

They walked the lane in silence,
The sky was studded with stars;
They reached the gate together;
And for her lifted the bars.
But this is long since over,
There's nothing between them now,
For he was just the hired man,
And she the old Jersey cow.

THE EIGHT POINTS

These Eight Points, subscribed to by many sociologists, may not be as famous as the historical Fourteen; they are, nevertheless, equally important as war preventive, either international, sociological domestic:

1. Don't contradict people, even if you are right.

2. Don't be inquisitive about the affairs of even your most intimate friends.

3. Don't under-rate anything because you don't possess it.

4. Don't believe that everybody else in the world is happier than you.

5. Don't be rude to your inferiors in social position.

6. Don't repeat gossip, even if it does interest a crowd.

7. Learn to hide your aches and pains under a pleasant smile.

8. Learn to attend to your own business. This is a very important point.

—Rays of Sunshine.

Five hundred pounds of rhubarb was carried by air from gardens at Preston, England, to London recently.

FOOD PROFITEERS BUSY IN ARKANSAS

In times of disaster, the worst as well as the best in people crops out, observes the Houston Post-Dispatch. When a great fire, a great flood, a great storm lays low a community, one of the first things authorities find it necessary to do is to guard against looters. Sometimes, the order is to shoot the moon sight, as was the case in Galveston in 1900. While some people are heroically bending every energy to save life and minister to the needy, others will steal jewels and clothing from dead bodies.

In every war, when young men are volunteering for service and offering their lives to their country's cause the greedy profiteer appears behind the lines, seeking to rob those, the soldier has left behind, and even the soldier himself.

In Arkansas drouth regions, both the heroic and the despicable have appeared. While neighbors divide with neighbors the small amount of food available, while the more fortunate contribute money and supplies, we read that some of the merchants in the stricken districts have been making huge profit on food and other supplies bought for the needy. It has been necessary to take action to limit profits to 10 per cent.

Merchants who have taken profits of 35 to 50 per cent on supplies bought for the drouth sufferers are in the same class with the hijackers who robbed the people by claiming unreasonable profits, during the World war, and with the conscienceless thieves who sent embalmed beef to the soldiers in the Spanish-American war. Words are inadequate to express the contempt that the decent people of the country have for tradesmen of that stripe. It is to be hoped that the names of the Arkansas food profiteers will become known in their local communities, that the buying public may deal with them according to their deserts.

A National NEWSPAPER For Churchgoers

Read the National Baptist Union-Review published every week, subscription price $2.00 a year. This newspaper is the oldest religious publication under the auspices of the National Baptist Convention of America. It is eight pages in size, eight columns to the page, and is brimful of denominational information every week. It contains a Woman's Page, spicy editorial matter, and circulates in practically every state in the Union.

Send your Subscription to the

NATIONAL BAPTIST PUBLISHING BOARD

523 Second Avenue, North Nashville, Tenn.

ATTENTION COLORED FARMERS

The National Federation of Colored Farmers is receiving hundreds of letters from Colored farmers requesting all kinds of aid and information. We are willing to do everything we can for all the Colored farmers of America. It costs money, however, to maintain offices and our expenses are becoming so heavy that we are compelled to discontinue supplying information to those who request it who are not members of the Federation. If you have faith enough in the organization to believe that it can aid you, then you should be willing to join it and help support it Isn't that so?

Several County units have organized and elected officers but have not sent in their membership dues. These units are eligible to membership in the Federation until dues are paid. Be helpful. Co-operate. Pay up. "All for each and each for all."

THE MODERN FARMER

Vol. III. Nashville, Tenn., and Chicago, Illinois, AUGUST 15, 1931, No. 6.

Farmers of Nation Invade Mound Bayou

HIS HONOR MAYOR GREEN EXTENDS WELCOME

City Established by I. T. Montgomery in Delta State is Mecca

Mound Bayou, Miss.—(Special)—His Honor, Mayor J. L. Green of this city delivered an address of welcome to the farmers of the nation who are in session for three days here in what is known as the National Convention of Farmers. It is to be held under the auspices of the National Federation of Colored Farmers, headed by Hon. James P. Davis, its president. The residents of this nationally known town, because of its entire Negro personnel, are hospitable in their entertainment of the visitors.

Representatives from the National Farm Bureau with headquarters in Washington, manufacturing concerns such as the International Harvester Company, many big factories and farm implement houses, with representatives from wholesale concerns, fertilizing plants and other organizations are mingling with the farmers and tillers of the soil; stock raisers, fruit growers, timber men and poultry raisers are listening to addresses of particular merit in their respective fields of labor.

The morning hours are given over to a general discussion and to listening to plans for relief of the farmer. Every subject is being discussed. Government agencies and farm administrators are likewise interested. The largest exhibit ever known at a farm meeting was installed two days before the National Convention was called to order. The Convention opened Thursday morning and will continue in session until Saturday evening. The chairman of the Farm Board at Washington sent a special message. Cooperative farm organizations sent their greetings and the Mississippi State Organization made up of many units, was represented by their president, while the national president brought greetings from many dignitaries. Governors from nearly every state appointed outstanding men and women to represent the several commonwealths in Dixieland. A reception for the visitors is planned for Saturday evening, at which the Mayor of the city, the city officials will present the distinguished guests.

—Nashville Globe.

MOUND BAYOU BOLIVAR COUNTY UNITS ENTERTAIN N. F. C. F.

Instructive and Entertaining Was The Program

The 1931 Convention of all Units of the National Federation of Colored Farmers was held at Mound Bayou, Mississippi, August 13, 14, 15. Three big days of instruction and recreation were given.

Mound Bayou is an all-Negro town located on the Illinois Central R. R. It is recognized as the capitol of organized Negro agricultural activities and progress in Miss. There are nearly 12,000 colored farmers in Bolivar County. There are more colored than white farm owners in the county. The mayor of Mound Bayou, Hon. B. A. Green, son of

RAILROADS AND FARMERS

ARE THE PEOPLE INTERESTED, ASKS WRITER OF ARTICLE

It should be fairly common knowledge that eight million people in the United States are directly dependent for their livelihood upon the railroads;

That the savings of every savings bank depositor or holder of a life insurance policy are invested to a substantial extent in railroad bonds;

That four billion dollars of such bonds are owned by savings banks and insurance companies;

That railroads purchase annually six billion dollars worth of goods produced by our industries and farmers;

That, in addition to the foregoing, the railroads perform an indispensable service to the nation day and night.

These few little facts would indicate that the people are interested in railroads and that in a large measure their very prosperity depends upon them.

What does a 15 per cent freight rate increase mean to the average industry or the average family in dollars and cents compared to the loss, inconvenience, and virtual disaster, that would face this country as the result of a broken-down, crippled and bankrupt railroad system?

One has but to remember the car shortages during wartime and the inability of the roads to correct the situation because of circumstances beyond their control, to realize the incalculable sums which industry loses due to inadequate railroad service.

Only public cooperation at this time, in considering and remedying the problems of the railroads, will prevent a transportation crisis.

Freight Rates High In Relation To Farm Prices

Indianapolis—Arthur M. Hyde, Secretary of Agriculture, in speaking before the State Board of Agriculture here last night, in referring to the proposed railroad rate increase, said:

"Incidentally, I venture to hope that, in the consideration of the appeal of the railroads for higher freight rates, the Interstate Commerce Commission will take into consideration that fact that while the revenues of the railroads dropped 16 per cent last year, the revenue of the farmers dropped 20 per cent; that farm prices are down to pre-war levels while freight rates are relatively high; that with many products taxes, manufacturing costs and railroad rates can be passed on to the consumer, but that the farmer can not pass his costs on. I have no right to speak for the Interstate Commerce Commission and I do not pretend to do so, but I have a feeling—based on its order of reduction of agricultural and horticultural rates a few months ago, which order the railroads held up by injunction—and the Commission understands and sympathizes with the needs and plight of American Agriculture."

EMPLOYMENT NO BETTER

WAGES COME DOWN, SAYS T. A. HILL

All reports of conditions among Negro workers for the month of May and the early part of June show clearly that conditions have remained unchanged, according to T. Arnold Hill of the National Urban League's Department of Industrial Relations.

There are a few exceptions, but the gains are very probably offset by heavier losses. For instance, a new hotel in Akron began with colored service help, and brickmasons are on the increase in Lexington, Kentucky. This latter instance is accompanied by accusations that Negro union men have taken the jobs of white unionists at a lower wage. But Pittsburgh and Hot Springs, Arkansas report substitution of Negroes by whites, and all along the line from Minneapolis to San Antonio, Texas, there are indications that satisfactory conditions have not yet reached Negro workers.

In the matter of wages, they are universally low. In Richmond they are as low as 14 cents per hour. Household workers in St. Paul receive from $5 to $10 a week, and are sometimes asked to work for as low as $3 a week. Columbus, Ohio, has found its situation exceedingly depressing, and agencies interested in Negro welfare are more energized than ever in an attempt to improve the status of colored workers. The unemployed continue to roam from city to city, and in some communities transients who have come in either to pass through to other points or to remain long enough to try out conditions, have added to the burden of relieving unemployed people.

Pineapple Growing In Florida Coming Back

Stuart, Fla., June 26—Pineapple growing in Florida is gradually gaining ground. Many growers are taking an active interest in preparing fields for setting pineapple slips.

Horticulturists advise that Florida is fully as well adapted for pineapple culture as it ever was and at one time it was carried on in a large way. They suggest, however, that in setting out new fields care should be taken that they are at a considerable distance from former fields to lessen the danger of nematodes.

Excellent progress is reported in some of the fields already set.

Ice Substitute Cools Truck Shipments

Sacramento, Calif., June 26—Some of the California asparagus crop went to northern markets on the Pacific coast in motor trucks and with the loads refrigerated with solid carbon dioxide this season. The United States Department of Agriculture points out that for the 900-mile trip from Sacramento Valley to Seattle the running time was about 36 hours. One of the trucks hauled nearly half as much as is ordinarily shipped in a carload by rail. Two drivers went with each truck, driving and sleeping by turns.

Federal Buying of Wheat Said To Be Justified

RESULTS PROVE ITS SUCCESS SAYS HEAD

(Special to The Christian Science Monitor)

Chicago—Government purchasing of wheat which he says has held up the price during something more than the past half year, has been justified by the results, and the Grain Stabilization Corporation feels well satisfied, according to its president, George L. Milnor.

"It is felt," he said, "that any hardship to speculators and commission men has been offset many times over by the benefits to producers, bankers and business in general throughout the country."

If there is a marked acreage reduction as expected in winter wheat next fall, he declared, there was no reason why the present holdings of the corporation could not be marketed in an orderly manner at satisfactory prices. The question of storage he added, is not a serious one.

Noting that the market for May futures wheat contracts closed at 83 1-4 cents a bushel Chicago, Mr. Milnor said:

"Last November the Federal Farm Board decided that, owing to bad economic conditions and general depression, there was serious danger of wheat prices in this country declining to unnecessarily low levels in sympathy with prices in foreign markets. Markets in Winnipeg, Liverpool and Buenos Aires were weak and declining. There were many evidences of panicky selling and unloading of wheat stocks in our own domestic markets, which unless curbed, would in all probability have demoralized prices and forced wheat down to the lowest level on record.

"On Nov. 17, the market for May wheat in Chicago was 76 1-2 cents, in Winnipeg 67 3-8 cents, in Liverpool 75 3-8 cents, and in Buenos Aires 59 1-2. On authority of the farm board, the Grain Stabilization Corporation immediately acted to support the price of wheat in domestic markets.

"Heavy purchases were made daily with the result that the decline was stopped and very shortly the price of Chicago May wheat had advanced to 81 cents a bushel. This price was reached Nov. 24. Since that time such purchases as were to have been made in order to maintain the minimum price of 81 cents Chicago, and corresponding prices in other principal markets. For example 73 cents in Kansas City, 76 1-2 cents in Minneapolis, etc.

"The price of cash wheat has also been maintained on a comparative level with the futures. Thus the Grain Stabilization Corporations has just completed the maintenance of minimum prices for nearly seven months. During that period more than 350,000,000 bushels of wheat have gone into domestic consumption at equal to or higher than the stabilized price.

"It was not the intent of stabilization operations to control or disregard the law of supply and demand on a world basis, but merely to regulate in domestic markets the price of the crop that had already been produced, thus enabling producers and handlers to avoid disposing of their holdings at world level prices, which were not justified by the general economic structure in this city.

TEN YEAR PLAN URGED

PUBLISHER WANTS GROUP OF ONE HUNDRED BUSINESS MEN

(Special from Monitor Bureau)

New York—The American farmer is not bankrupt, and Frederick E. Murphy, newspaper publisher and practical farmer, proposed here yesterday that a commission of 100 business executives from all sections of the country be formed to help the farmer keep clear of that unenviable state under a "ten-year plan for the restoration of agriculture."

Mr. Murphy, who has lately conferred with President Hoover concerning the proposed plan, said that one based on similar lines had already gone a long way toward preventing depressed economic conditions in the northwestern states of Montana, Minnesota, North and South Dakota, and that its extension to operation in the rest of the country would produce comparable results. For the past several weeks he has been speaking before banking representatives, industrialists and advertising men in the East, attempting to enlist their enthusiasm for and practical cooperation with the idea.

Naturally, Mr. Murphy points out, the Northwestern farmer is vitally interested in the wheat price. But, since wheat is no longer the chief crop, it is not his chief interest. Minnesota's dairy industry paid her farmers $200,000,000, against $20,000,000 for wheat.

In Minnesota, North and South Dakota and Montana, farm income totaled more than a billion and a half dollars. Of this wheat earned $178,000,000. Dairy earned $300,000,000. Cows, pigs, chickens and sheep earned more than $800,000,000.

In a survey of the Northwest made in 1921 by the North Dakota Agricultural College it was found that out of 78,000 farms, 23,000 had no cow. There were no potato patches on 23,400 farms. No pigs were raised on 18,000 and 25,000 had no garden even for the family table. The average grocery bill was $800 a year. Conditions like that are not found in the Northwest today.

And because it was early evident that no amount of sales talk could accomplish complete results, he enlisted Twin City bankers and railroad men. Eastern capital was acquired from the big machinery, investment, banking and manufacturing centers with northwestern investments and a total fund of $10,000,000 subscribed, and incorporated as the Agricultural Credit Corporation of Minneapolis.

The country banks in 1921 would not lend money on houses, barns and farms. But the new loan fund loaned on what they had considered unsound security.

PEACH CONDITION 90 PER CENT

Rileyville, Va., June 26—Prospects are for a peach crop here of 6,000 to 7,000 bushels this season. Condition is 90 per cent of normal. Movement will begin August 10 and will be mostly by truck. Quality at present is good—T. W. A.

U. S. WHEAT STORED IN DAVENPORT ELEVATORS

Approximately 1,000,000 bushels of government wheat is stored in Davenport elevators, it was learned today. Grain was sent to Davenport for storage as early as April. It has been arriving through the month of July. About half the total amount is stored in the bins of the Western flour mills and the remainder is divided between the elevators at the Davenport and Victoria milling companies.

Two cents a month a bushed is paid by the government for the storage. This amount takes care of the cost of "turning" and other expenses including insurance. Companies storing the grain are under no obligation to buy it but many do so if they wish.

LIGHTENING HITS TWICE IN THE SAME PLACE

Kingston, N. C., July 2—(By CNS) — Jennie, a 19-year-old mule owned by Adam Jackson, is recoving from injuries inflicted by a bolt of lightening. Lightening does strike in the same place twice occasionally and Jennie is a living proof of it.

When she was little more than a colt a bolt which set fire to a house, killed a dog and shocked three persons into insensibility, razed her back, taking off a strip of skin and hair . A few days ago a "streak" struck her square amidships, it appeared to her owner, own claims to have seen it knock her into a heap 10 feet from where she was standing, but left no serious injury. There was a big bruise on one of her flanks.

TRUCKS NOW TAKE HORSES TO SMITHY

(Special to the Christian Science Monitor).

Council Bluffs, Ia. — Not all of the horses seen riding about the country in motortrucks are being bought or sold.

Some of them are instead only going to town and back to be fitted with a new set of shoes. The situation is thus explained by Renben Burquist, county agricultural agent, working here in cooperation with Iowa State College at Ames.

In a good many cases horse shoeing shops are too far apart to make it practical to drive the horses on their own legs into any of the shops locations. Mr. Burquist declared . So farmers resort to the motortruck for transporting the horses. If the farmer owns his own truck, the tronble is light. But if he has to hire a commercial truck, horse shoeing runs into big expense, that will be tolerated only in the direst need.

Cruger, Miss., July 23, 1931.

Dear Editor of the Modern Farmer:—

Please allow me to say a word about Holly Grove Unit, we still feel incouraged to press our claim as members of this National Federation of Colored Farmers. We are striving earnestly but weak in finance. We hope it is only a mist and will soon pass away, that we can begin handling money so we can meet our obligation. It is impossible for me to express the good that has been and is being done for the Negro in the Southland. We highly recommend Mr. James P. Davis for bringing to us the great lesson economy and how to unite, how to co-operate one with the other and he is about to teach us how to operate, too much good cannot be said about this great national man, who as a sacrifice has placed his life upon the altar for the saving of his race. Since learning these 12 months how to operate there has been spent through Holly Grove unit in the amount of sixteen hundred dollars $1600 . It has been quite a year ago that our charter was granted. O how it thrills my heart with joy to know that the government has given us licenses number 14198.

To the readers of the Modern farmer I don't know who gave the blessed little paper its name. Really it is a national voice for the Negro race. I believe when the Negro throughout the world awaken to the Modern Farmer and its purpose and its object every one that can find a dollar will subscribe. All out for Mt. Bayon, August 13, 14, 15.

Respectfully yours,

H. H. Ingram,

DEPARTURE OF MARY CATHON HAYES

Mary Cathon Hayes the daughter of Mr. and Mrs. J. H. Hayes of Lexington, Miss., took sick Monday, June 7, 1931 and died Thursday June 11. She was 15 years of age, looked as the picture of health. She attended the Lexington graded school under the management of Rev. D. W. Ambros and the Saints Industrial school.

Mary C. Hayes was a member of the church of God in Christ.

The funeral was conducted at the St. Paul Church of God in Christ Church, Sunday June 14. by Elder C. Davis and Elder F. J Tolbert the body was carried afterwards to the Sweet Home Cemetery and put away.

Mary Cathon Hayes leaves a father and step mother J. H. Hayes and Etta Hayes, two sisters Bertha Favors of Chicago, Mirta Clark of Louis, four brothers John Hayes of Memphis, Maron Hayes, of Greenwood, Perry and Travis Hayes of Lexington, a host of relatives and friends to mourn their lost.

By W. M. Little,
President of Sweet Home Unit,
Lexington, Miss.

TORCH SLAYER GETS IMPRISONMENT

Jackson, Mich. — (CNS) — Nathan Blackstone, the only colored member of the trio of murderers, convicted in connection with the killing of two boys and two girls on a road near Ypsilanti several days a go was brought to the state prison here Thursday because of fear of mob violence after the three men had been given sentences of life imprisonment.

With their clothes in tatters and their faces showing bruises caused by chance blows from the fists of rioters, the three men were rushed throguh the gates of the prison and unloaded. They were chained together and were brought from Ann Arbor. Outside the prison walls 100 extra guards kept back a crowd of about 100 who seemed more curious than hostile.

The men were given four life terms each, an dunder the Michigan law, makes it impossible for any member of the trio to become elligible for parole or pardon.

The murdered victims, all of whom were white were attacked and then burned to death in their automobile which was parked on the road.

SOUTH CAROLINIANS URGED TO TAKE ACTIVE PART IN REPUBLICAN PARTY

Columbia, S. C.— (CNS) — Colored citizens of this city were urged to take an active part in the coming Republican primaries to be held throughout the State soon by Joe. T. Jackson prominent colored political leader. Mr. Jackson pointed ont that Negroes in South Carolina owned property amounting to hundreds of thousands of dollars and were qualified to register in the coming elections. A concerted action to oust the so-called "Hambright faction," the lily-white" organization of the state has already begun.

SEVENTEEN EGGS ARE HATCHED BY SUN AT ATKINSON

Somewhat belated, this story nevertheless gives an idea of just how hot the sun really was last week:

Atkinson, Ill.—Last week a farm hand working for Oscar Peterson three miles west of Atkinson discovered a nest of twenty-one hen's eggs near a fence. Thinking the eggs belonged to Clay Little, a neighbor, he gathered them and took them to the Little home.

Mrs. Little broke one of the eggs and found it was bad, so she put them all in a bucket which she placed on the porch, giving her husband instructions to bury them.

He neglected to do so, and they stood on the porch, in the sun, for five days. On the morning of the sixth day Mrs. Little heard some cheeping on her porch. She looked in the bucket, and lo! there were seventeen little chicks.

Join Our Dollar Per Week Savings Club Now Open

Every Citizen Is invited to Cooperate in a Definite Movement Where they Themselves will be the Recipients of all the Benefits Both Principal and Interest

Send $1.00 every week to the Citizens Savings Bank and Trust Company, at Nashville, Tennessee, either in cash or post office money order, or you may send your personal check, if it is certified. This will open a savings account on which we pay interest twice a year. It will make you a member of our "Save a Dollar a week Club." Every member of the club, who qualifies by sending the regular amount, will receive special recognition and an acknowledgement of their remittance when it arrives. You can deposit more than $1.00 per week if it is convenient. No matter where you live, in the United States, Canada or Mexico you can take out membership in this savings plan. The Citizens Savings Bank has been operating for twenty-seven years. Its capital is fully paid. Its officers and directors represent men and women who are nationally known. "Procrastination is the thief of time," so do not wait. Open your savings account at once.

A CREDITOR BENEFACTOR

Providence Journal: A Massachusetts physician who recentiy died directed in his will that all his books of accounts should be destroyed, so that there would be no outstanding bills aaginst his patients.

Doctors' bill are proverbially the last to be paid . Whether the proverb is true or not, thousands of physicians no doubt carry on their books accounts from which they never expect to receive a cent . And yet the doctor is in times of emergency frantically summoned and becomes law in numberless perturbed households His slightest suggestion is complied with, his expert pronouncements are breathless and awaited.

We have no way of knowing how many of the bills receivable in the case of this Massachusetts doctor were "good," Presumably some were collectable and some were not . But with a fine and final gesture he waved them away. It was as if he made a public bequest: "I hereby bequeath to my debtors the face value of their accounts. I freely forgive them their indebtedness. They are welcome to all the counsel I ever bestowed upon them, all the medicaments, all the surgical assistance." Looked at in this way his provision for destroying the account books takes on the aspect of a community benefaction. Literally he gave himself to those of his fellow-citizens who could not or would not pay for his services.

MUSH ROOM PLANT ENTERS BUSINESS

Former Schoolhouse in Rock Island Converted into Spawn Growing

Rock Island—Two Rock Island men and a Davenport man have started in the mushroom raising endeavor in Rock Island, having rented the old schoolhouse located at Twenty-fourth street and Twenty-fourth avenue, Rock Island.

The school building has been leased from the Rock Island board of education. Seven changes have been made in the building to make it suitable for the propagation of the spawns which are planted and from the marketable products.

A shed has been built for curing the mushrooms and a cooling system has been installed. The temperature is kept at 60 degrees at all times.

Present output is 100 pounds a day but the volume is expected to be doubled soon. This mushroom plant is the only within a radius of 200 miles, its owners said.

FAULTY HANDLING OF DEATH REPORTS

By Colored Doctors Blamed for For High Insurance Rate

Washington — (CNS)— That more deaths of colored persons are reported as being from "unknown causes" each year than the total number of deaths from unknown causes reported among white people is shown by the mortality returns for 1929. Despite the fact that the Negro population represents only 13.6 per cent of the total in continental United States, 14.5 per cent of all death for the year 1929 were those of colored persons. Of the total death reported to be from unknown causes, 11,920 or 50.6 per cent were those of Negroes. The number of such death among colored people was more than the aggregate of deaths reported from such causes as malaria, typhoid fever, cancer, malignant tumor, appendicitis, and venereal diseases.

The mortality tables of 1929 for a selected list of 55 American cities, prepared by Charles E. Hall Statistician for the Independent Order of the Elks of the World and expert in the Bureau of Census, further show an alarming cent of all deaths from unknown causes reported in many large cities. In Savannah, Ga.; Kansas City, Kans.; Paducah, Ky.; Charleston, South Carolina; Dallas Texas; and Norfolk, Va., 100 per cent of al ldeaths from unknown causes were colored. In Montgomery, Ala.; Miami, Fla.; Macon, Ga.; Shreveport, La.; Jackson and Vicksburg, Miss.; Winston-Salem, North Carolina; Florence South Carolina and Richmon, Va., the percentage of such deaths credited to Negroes ranged from 93 to 80 per cent.

In Birmingham, Ala., with a 38 per cent Negro population, Negroes were charged with 265 deaths during the year from "unknown causes," representing a percentage of 77 per cent of the total number of such deaths for that city. Houston, Texas, followed with the next largest total having 228, or 55 per cent of deaths from unknown causes, although the Negro population represents 22 per cent of the total.

Insurance Rates Effected

The serious effect of the census figures will be upon the insurance rates charged Negro risks, it was pointed out. Since actuarial and insurance tables are made up on the basis of mortality figures, the large number of deaths ascribed to causes which cannot be traced will have the effect of raising to a considerable degree the rates at which insurance companies will insure Negro risks. Because of this fact, it is said that colored risks are paying hundreds of thousands of dollars to various companies in excess premiums.

Negro Physicians Blames

Direct responsibility for the failure to report many of such deaths and their causes has been placed upon colored medical practitioners Many of them, it is said, fail altogether to give proper diagnosis in death cases. Despite the warning of Dr. Peter M. Murray of New York, president-elect of the National Medical Association last June, that "there are today many incompetent men in the practice of medicine," death in numberous instances, it was pointed out.

Remedy for Situation Sought

Efforts by the Health Commission of the Elks to remedy the situation and lower insurance rates for Negroes has already begun. Other bodies, including the National Medical Association have been urged to actively campaign among colored physicians and other cities where colored doctors ing the causes for deaths. In some circles it is urged that Negro physicians make a mere energetic effort to be placed on the public health boards of the larger cities. In Washington it was pointed out, there has been no colored member of the board of health since 1871, at which time John M. Langston served. In other cities where colored dactors flourish conditions are even worse it is said.

ACCUSED OF COUNTERFEITING; HELD ON $25,000 BOND

Louisville, Ky.— (CNS) —Carey Battles, 37 years old, was arrested here last Monday and held under $25,000 bond by the United Commissioner, Henry E. James, on a charge of counterfeiting.

Battles was turned over to the Federal authorities by police, who arrested him on a vagrancy charge after he had tried to pass a counterfeit 50 cents piece at a restaurant. Several coins were found in his possession that were councharge of counterfeiting.

"OUR SLOGAN"

STAY ON THE FARM IF YOU'RE ON IT! GO BACK TO THE FARM IF YOU'RE OFF IT!

THE LAW

"It is hereby declared to be the policy of Congress to promote the effective merchandising of agricultural commodities by encouraging the organization of producers into effective associations under their own control.

The Board is authorized and directed—to promote education in the principles and practices of cooperative marketing—to encourage the organization, improvement in methods, and development of effective cooperative associations." (Public—No. 10—71st Congress. Sec. 1-5.)

THE GOSPEL

"This law is predicated upon the ability of the farmer to manage his own business, once he is organized to do so. Cooperation is the key to it and only in exceptional cases can the Federal Farm Board have any dealings with a farmer who is not a member of a producer-owned and producer-controlled marketing unit." Hon. Sam'l R. McKelvie, Member, Federal Farm Board.

The National Federation of Colored Farmers believes that the Colored Farmers of America should own and control their own co-operative associations.

"Co-operation With All—Affiliation With None."

EDITORIAL

DIVERSIFIED FARMING PAYS

The officials of a Georgia national bank have discovered that every farmer who has money on deposit in their bank makes a regular practice of raising all the food and feed products he needs on his warm. We are proud to know that some of these depositors are colored farmers.

Again we have proof that it pays to practice diversified farming. The "one-crop farmer" cannot get anywhere and is bound to remain poor and miserable. Every farmer should think first of all of his own fruit, vegetables, chickens, eggs, milk and meat. If he produces these on his farm he has his living— the rest is surplus. Again we urge every colored farmer to farm so he can live at home. If you are tied on to a "one-crop landlord" cut loose from him as quickly as possible. The farmer who will not produce his own "eats" deserves a hard time.

TO OUR CONVENTION VISITORS

The MODERN FARMER extends heartiest greetings to all who attend the annual convention of the N. F. C. F. at Mound Bayou, Miss., which will be in session as our August number goes to press. We trust you will have a happy time and that the visit will do you good. The citizens of Mound Bayou will do their best to make everything comfortable for you and the program will be interesting.

You will not be attending a farmers' conference. You will be attending a convention of a farmers' co-operative association. Not much may be said about growing cotton, corn or hay but a plenty will be said about selling these products and all other farm products. Much will also be said about purchasing farm and home supplies co-operatively. To a large extent, a co-operative association is a "dollar-and cents organization." Its members make all they can and save all they can by purchasing, producing and marketing co-operatively. Co-operative farmers are brother-farmers who help each other in every way possible. "All for each and each for all." Get the idea?

A FARMER'S SON SPEAKS

One of the most distinguished men in America is Hon. Calvin Coolidge, our ex-President. Mr. Coolidge was born and reared on a rocky, hilly New England farm. Like many other farm boys of his day and generation, he left the farm and sought his fortune in the city. He found it.

You can get the man off the farm but you cannot get the farm on the man. Fortune may smile ever so generously upon the farm boy who has left the farm but there is sure to come a time when he will recall the peace and happiness of his farming days. Then, he will realize just how blessed those old days were. Mr. Coolidge, looking about him on the present industrial distress, remarks: "The farm and old-fashioned home with diversified crops, fruit, domestic animals, sufficient to meet the household needs, begins to look attractive.

Thanks to modern improvements, the electric light, the washing machine, the gas engine, the automobile and the radio it can be made a much better farm and home than it was when Mr. Coolidge was a boy. The modern farmer will find happiness indeed upon the modern farm. It is his duty to seek for it by studying his job, by co-operating with his brother-farmers and by earnestly endeavoring to get from his farm the reward he is due.

FROM COLUMBIA COUNTY, ARKANSAS

A letter. "Dear Sirs:— Am writing you concerning the organization of Negro farmers. It is a good thing. Why are we Arkansas farmers so slow to realize it? Please tell me how to get this on foot in my county. Short loans, high interest and this one-crop system keeps all of us in bad around here. We pay almost two prices for what we have to buy. I believe your organization can help us. Please reply by early mail."

Many such letters as this reach the officers of the N. F. C. F. As many as thirty have arrived in one day. They are always answered. The N. F. C. F. welcomes into the fold all colored farmers who want to improve their condition —who want to follow intelligent, trained and progressive leaders — who are willing to co-operate with their brother-farmers. Farmers who join the N. F. C. F. possess faith and wisdom. They are also ambitious. Where you find a Unit of the N. F. C. F. you will find that the best farmers and the best citizens are members of it.

CROPPER SYSTEM OF SOUTH DOOMED

A prominent farm management specialist declares that the "cropper system" of farming followed largely in the South is doomed and in its place will come larger farm units, handled with modern machinery and little hand labor. The single plow, the hoe, the mule, the cabin and the cropper will have to go, where? the learned specialist does not say.

The cropper system is doomed all right. That is true. Many years will come and go before the cropper dissapears entirely but nevertheless, few of our children's children will live to be called "share-croppers." Instead of share-croppers they will be farmers. We hope they will be "sure-enough farmers." The real farmer owns the land he tills, and tills the land he owns. His farm provides all the necessities of life. The real farmer is a good citizen and a happy man.

Perhaps the "larger farm units" will also come but we do not want these units to be owned and controlled by one man or by a corporation. We do not want to see "cham farms. We do want to see co-operative farm units. We want to see communities of co-operative farmers, not communities of farm wage-slaves. And if factories must be located near the farms so the farmers and their children can have employment the year round, we want those factories to be owned and controlled by the farmers who work in them.

Our advice to tenants and share-croppers is to earn and save every dollar they can. Buy a few acres just as soon as possible. Study business-farming. Originate something —new plans— new systems — new methods — new ways of doing things. Join a farmers' co-operative association and be progressive as all wide-awake farmers are. Yes, the share-cropper is doomed and now is the time for him to prepare to be something different and better.

.. IT PAYS

Here is a bill of goods recently ordered by a Mississippi Unit of the National Federation of Colored Farmers:

15 Bbls. Flour
1000 lbs. Lard
200 lbs. Coffee
10 Bxs Soap
500 lbs. Rice
100 lbs. Tobacco
2 Cartons Snuff
6 Cases Baking Powder
6 Cases Soda
5 lbs. Black Pepper
10 lbs. Sage
10 Doz. Overalls
10 Doz. Work Shirts
10 doz. Jackets
50 gallons Vinegar
4 bxs. Prunes
4 bxs. Lemons
10 bxs. Cheese

The amount of this order was around $850. The goods arrived swiftly and safely and after freight and all other expenses were paid the members of the Unit discovered that they had saved $173 on this one order.

Not long ago a representative of an agricultural school visited this community while on a speaking tour and in the course of an address had the temerity to inform these sensible farmers that they were being hoodwinked and misled by the national officers of the N. F. C. F. We take pleasure in informing our readers that the representative to whom we refer will never visit that particular community again.

WE HAVE MUCH TO LEARN

Colored farmers have no idea to what extent co-operative buying is practiced by organized white farmers. Recently, organized white farmers in a certain Illinois county decided they would organize a co-operative oil company. They decided to do this because they knew they could save money by so doing.

First of all, they discovered just how many dollars the farmers of their country spent each year for oil, grease, gasoline and kerosene. The amount ran into the thousands. They discovered that 51 per cent of the horse power hours on farms in their county during 1930 was done by machinery, while six years before only 18 per cent of the work was done by machinery. That was interesting information. Next they discovered that most of their tractor and auto troubles were caused by poor lubrication. They learned that one kind of lubricating oil gave 37 hours of service—another 31 hours and another 67. These were all high advertised brands. But they also found another kind of oil, unknown to most tractor owners, that gave 121 hours of service.

They proceeded to organize their co-operative oil company. $25,000 were needed and was subscribed in a week. Shares sold at $25 each. The company that produced the best oil was given the business. This oil co-operative is doing well and expects to pay its stockholders seven per cent the first year. A certain amount will be set aside for a reserve fund and the surplus left will be paid back to the members of the organization who have patronized the company.

White farmers know the value of co-operative buying. They have learned to look out for themselves first. There were plenty of one-horse oil stations and stores in that county anxious to have their business but they did not get it. These stores could not compete with the prices the farmers got from their own co-operative company. Neither could they furnish such high-grade products. These wise farmers went out looking for bargains and found them. Colored farmers should "get wise" to certain conditions and also organize co-operatives for their own benefit. They have been spending and buying foolishly for the past fifty years. They have helped the other fellow a plenty. From now on they should adopt the other fellows tactics and learn how to help themselves.

ELIMINATING FOOD WASTE

In view of the fact that about 77 per cent of the nation's annual food budget is spent for perishables, valued at more than 16 billion dollars, the new quick-freezing process recently perfected by Clarence Birdseye, scientist and inventor, assumes considerable economic and social significance.

By "frosting" foods at extremely low temperatures, teh new method of food processing is being successfully used in freezing meats, seafoods, poultry, vegetables and fruits so that they become virtually imperisable while kept in a hard-frozen state, holding their original fresh flavor and appearance for months.

Among the many advantages of the new method is seen an appreciable economic saving in preventing spoilage of perishable food in stores. Authorities estimate this loss to be about $500,000,000 annually.

But much more significant than this benefit of the quick-freezing process is its promise to minimize the greater losses of perishable food growers, who crops now spoil or are sacrificed at extremely low prices when market channels are glutted.

It is expected that within a few years quick-freezing plants will be established in many parts of the country to supplement the canneries by quick-freezing surplus crops and holding them perfectly fresh, flavored and fresh-textured at subzero temperature, until market demands release them for public consumption.

DETROIT HAS NEW HOSPITAL

Detroit, Mich. — (CNS) — The Bethesda Maternity Hospital, the city's newest institution was dedicated last Sunday amid gala ceremony. The hospital will be under the supervision of Dr. A. E. Thompson, superintendent; Dr. S. H. Owens, medical director, and a consulting staff of thirteen physicians.

A National NEWSPAPER For Churchgoers

Read the National Baptist Union-Review published every week, subscription price $2.00 a year. This newspaper is the oldest religious publication under the auspices of the National Baptist Convention of America. It is eight pages in size, eight columns to the page, and is brimful of denominational information every week. It contains a Woman's Page, spicy editorial matter, and circulates in practically every state in the Union.

A LETTER FROM BLACK HAWK, MISS.

The Modern Farmer,
Nashville, Tenn.

Will you please let me in for a short while. I have been wanting to write for a long time but just keep putting it off. My father takes the paper and I think its a wonderful paper and also he belongs to the unit. I think it is one of the most wonderful of its kind ever was gotten up by Negroes. Also I read the paper though every month. Now I live in the northern part of Mississippi on a farm of three hunured acres and we raise every thing we can. We have a fine garden and raise lot of chickens. Our hold aim is to can every thing we can for winter. I think every one should do it. The crops in this part of the country are doing fine so far, better than they have been for two years as we have had lot of rain of which I think we should be thankful of. I feel like our Lord is blessing us although he has whipped us much. I don't feel like we are doing what we should do for him. I think if it ever was a time we should get together it is now.

Our churches are going down instead of coming forward and I can't help but think hard of the preacher because they are our leaders and they are failing to tell the people what God would have them to do. I feel like if the preachers would get to gether and do their part we would take this world for our Lord and Saviour Jesus Christ until we do that trouble will be ours. I also saw two letters in the paper from Lexington and Cruger. I think they were wonnertul. I am asking that this be printed as I want to surprise my father and mother and also my friend. Should this be printed I will call again when the earth turn brown.

I am yours in Christ,
Ella R. Fluker.

INCREASE REPORTED IN CALIFORNIA BONDED WAREHOUSES

Sacramento, Calif., June 26—Substantial increase in the number of warehouses seeking to protect holders of stored agricultural produce by means of bonded warehouse receipts was reported today by the State Department of Agriculture.

Within the past fortnight, 17 operators of warehouses have been licensed to do a bonded business or have sought permits action on which is pending, according to L. M. Jefters, chief of the Bureau of Field Crops, which administers this government service. These warehouses are scattered from Red Bluff to the Tehachapi.

Approval of pending applications will bring the total of bonded agricultural warehouses in the state to 190 with indications that the number will be at least 200 by autumn. Amount of bonds which warehouse operators are required to file with the state are dictated by capacity of warehouses and the character of commodities they handle.

Chief advantages of the bonded warehouse system lie in the fact that holders of bonded warehouse receipts are protected against loss to the amount of the bond filed and that the warehouse books and stocks are examined at least four times each year.

EXPORT MARKET REGULATIONS CONCERN VIRGINIA APPLE GROWERS

Winchester, Va., June 26—Commercial fruit growers of Virginia, who expect to harvest a crop of around 3,000,000 barrels of apples this season, are concerned with present import regulations in foreign markets. Only Fancy and U. S. No. 1 grades may be shipped to ports of the United Kingdom between July 1 and November 15 and no such grades are available here until late fall as the fruit does not attain required color specifications until near maturity.

Another restriction with which growers and shippers are faced is the decree of the Argentine government requiring that each apple be wrapped in a silky, water-proofed paper. If even a single apple is found infected with certain insect or disease pests, the entire shipment may be confiscated and incinerated at the expense of the shipper.

With foreign markets almost closed for a part of the season, or shipments hedged about by almost prohibitive restriction, it was said that growers probably would devote their energies toward producing a high quality of fruit and then storing it until conditions become more favorable and the embargo lifted by Great Britain. For some years the bulk of the Virginia crop has gone to ports of the United Kingdom

The commercial crop in the Winchester district is expected to be around 600,000 barrels.

ATTENTION COLORED FARMERS

The National Federation of Colored Farmers is receiving hundreds of letters from Colored farmers requesting all kinds of aid and information. We are willing to do everything we can for all the Colored farmers of America. It costs money, however, to maintain offices and our expenses are becoming so heavy that we are compelled to discontinue supplying information to those who request it who are not members of the Federation. If you have faith enough in the organization to believe that it can aid you, then you should be willing to join it and help support it. Isn't that so?

Several County units have organized and elected officers but have not sent in their membership dues. These units are eligible to membership in the Federation until dues are paid. Be helpful. Co-operate. Pay up. "All for each and each for all."

TRACING A LIFE

By W. T. McClain, Indianapolis
A Birthday Offering (age 86)

Assuming that unnumbered eon-
Was the period of generation;
Long before the power of dec'sion
Was the soul's seed germination—
When God breathed that "holy breath"
It became "a living soul"—creation
As if arused from dormant death
And unconscious perservation;
Till Holy Light flashed on a sense
Of truth and vital obligation
But Satan's lies and false pretense
Now stirred rebellious perturbation
"The soul that sinneth it shall die"
Was God's decreed damnation.
But Satan only winked his eye,
Declaring it a foul flration.
And pitched a war of unbelief
That God is an impostor chief,
Claiming power of subjugation.
Thus disseminating propaganda
With the ensidious accusation
That coveted pleasures awaiting handy
Require no moral investabition.
So by stealthy, cannin; onslaught
Comes the citadel's invasion;
With dying faith and evil thought
Of Jesus' kindly invitation
To "put on the armour"— breast plate
Of righteous-loyal consecration.
"And follow me" without debate:
"My blood alone is your salvation."
But Satan's predetermined advance
With his wily manipulation
Of the temper's snare — last chance—
Evolved the soul's incarceration,
Rendering it limp— bound in chains—
Prisoner of hell— wild consternation.
Then, lo, there came in sweet refrains
A voice of plaint commiseration:
"I came not to judge but to save,"
Evoked perfoundest adoration.
"My soul to save, his blood He gave."
Why call it predestination?
'Twas love unbounded for the lost
That urged this passional mediation,
To give His life on Calvary's Cross,
A sacrifice for reconciliation.
The soul now yields —to peace complete,
Seeking His grace— divine approbation,
The "well done" echo, supremely sweet,
"Come up higher," oh, joyful anticipation.
"Child of God, join heir with Christ,"
Is now my rank of installation.
Saved by grace— my soul was priced.
Redeemed, blessed theme of coronation.

PRESIDENT W. J. HALE ASSURED THOUSANDS OF DOLLARS FOR TWO NEW BUILDINGS

BUILDING ACTIVITIES WILL START NEXT YEAR WHEN IMPOSING STRUCTURES WILL GO UP

Two new magnificent buildings are to be erected on A. & I. State College campus within the next year. Such is the assurance given to president W. J. Hale by the Educational Board at a recent meeting held in the board room in the state capital. Thousands of dollars more are to be spent on this state educational institution to bring relief to its overcrowded condition and add further facilities in an educational way to the hundreds who have not been able to get accommodation in the school for the past two years.

While no definite amount to be spent has as yet been published, those close up and who profess to have some idea are of the opinion that the two new buildings will cost thousands of dollars, that they are to be modern in every respect, and that they will be placed on the campus so as to make the panoramic view of A. and I. State College all the more imposing. President Hale as yet has given out no definite statement, but the daily papers published the action of the Board of Education when it announced that these buildings would be added to the College group. It is known however, here that the attendance at State College has been steadily increasing, and that not only will the people of Tennessee accept the school because of its thoroughness, its splendid faculty headed by its president who is known to be one of the leading educators now in the United States, but because Nashville is an educational center, and is a drawing card.

It has not been definitely stated when the work is to begin or when the ground is to be broken for the new structures.

—Nashville Globe.

SIGHT OF POLICE FRIGHTENS YOUTH, HE PLUNGES INTO CHANNEL

Washington — (CNS) — Caught in the act of tampering with a parked automobile resulted in Fred Wheeler, 19, taking a dive in the Washington channel when police appeared on the scene. Harbor police responded to the call and Wheeler was fished out of the water feeling none the worse except for a few shivers. He denied intent to harm or steal the car.

WHEAT PRODUCING GOOD RESULTS FOR ILLINOIS FEEDERS

Urbana, Ill.—Wheat, which is still on a feed basis so far as price is concerned, is giving fine results for Illinois farmers who are feeding it to hogs and cattle, it is reported by L. I. Robbins, livestock extension specialist of the college of agriculture, University of Illinois. Their success is in line with experiment station tests which always have shown that wheat is a good feed. It gives best results when coarsely ground. It may be fed to hogs either dry or wet.

Out of 111 hogs reports sent to Robbins, a total of forty-two farmers reported feeding wheat in amounts ranging from "some" to 2000 bushels. The thirty-six who reported the amount fed a total of 9020 bushels, or an average of 251 bushels each. Two fed the wheat whole and thrity-nine fed it ground. Seven fed it wet and thirty-one fed it dry in self-feeders. One reported poor results; two, fair; twenty-three, good or equal to corn, and seven, fine, very good or better than corn.

Wheat gives good results even if it replaces all the corn in the ration for hogs or half the corn for cattle. Feeders can afford to pay the same price for a bushel of wheat as for a bushel of corn for hogs or cattle, in the opinion of Robbins. He assumes that there will be an additional charge of perhaps 10 percent of the original price for grinding the wheat.

MARKETING WORK TO GO DIRECTLY TO FARM DOORS

Federal Grain Coroporation to Drop Intermediaries in Its Dealings

(Special From Monitor Bureau)

Chicago—The Farmers' National Grain Corporation, the great marketing cooperative organization launched by the Federal Farm Board, is going to get right down to the grass roots. Hitherto it has dealt with the farm through intermediaries. Now it plans to go to the farmer himself.

Discarding its original scheme of operation, the national cooperative purposes to buy the farmers' grain directly so that the farmer can see it at work. It will have its own warehouses out in the country and its name in big letters on them.

In the wheat pit the Farmers' National Grain Corporation is decidedly an entity. But to the producer whose grain it seeks to handle, it has generally been somewhat remote.

The farmer did not get any picture of it. He sold his grain, if he wanted it to go into cooperative channels, to the regional cooperative. This local organization then passed it on to the national. The farmer and the Farm Board agency were thus one hump removed. Farmers' interest was correspondingly separated.

The new program is for the Farmers' National Grain Corporation to contract with its regional cooperative to do the marketing for it. The regional retains its identity. It serves as a local organizer for the cooperative movement in grain. It keeps its part in the control of the national cooperative, for the national cooperative, for the national is owned by the farmers through their regional setups.

But the marketing of the grain will be passed on to the national by those regionals which adopt the new plan. Consequetly when a farmer in Idaho has wheat to sell cooperatively he, will dispose of it directly to the Farmers'.

LEFT AT THE POST

Ohio State Journal: Apparently this is going to be a year when there are more also-rans than usual.

STABILIZATION OF JOBS STUDIED BY MINNESOTA

Concrete Proposals Expected From Research in Three Cities

Special to Christian Science Monitor

Minneapolis, Minn.—Long-term plans for the stabilization of employment are being formulated in a two-year research project undertaken by the University of Minnesota.

The project, national in scope, has been financed by the Rockefeller Foundation, the Carnegie Corporation, and the Spelman Fund. A total of $880,000 has been made available for the study of employment under the general direction of R. A. Stevenson, dean of the business school.

The projects are concerned with the economic and social aspects of unemployment problems in Minneapolis, St. Paul and Duluth, the three largest cities in Minnesota.

"There should emerge from this study certain concrete proposals for the guidance of individual business concerns, trade association groups, and civic organizations, leading to long-term plans for the stabilization of employment," Professor Stevenson explained.

Questions which confront business executives in ther efforts to maintain an even flow of production in the face of rapidly changing technical conditions and in competition with other regions which offer more favorable operating costs, are receiving primary consideration, he said.

"Educators, civic organizations, and individuals concerned with directing the technologically unemployed into occupations for which they are adapted, or for which they may be trained, constitute a second general grouping," he announced.

"In a third group may be placed those officials and agencies engaged in the placement of unemployed individuals in productive employment. To meet this problem, there should be developed a technique for personnel administration which can be injected into governmental agencies."

Research workers already have undertaken case studies of 500 industrial and commercial concerns in the three cities to determine the factors which cause them to lay off employees. A study of 4000 cases is also under way to determine causes of their unemployment and methods of bringing them back into productive work.

A corps of experts has been organized by Professor Stevenson to carry on the projects. Dr. M. R. Trabue of the University of North Carolina has been brought to Minnesota to serve as executive secretary of the personnel analysis and retaining project. Prof. Alvin H. Hansen is directing the economic survey while a survey of the state employment agencies is directed by J. D. Williams, state industrial commissoner, assisted by Prof. William H. Stead and O. D. Hollenbeck.

TAXING PRODUCE TRUCKERS

Yemassee, S. C., June 26—Competition between merchants and truckers of fruit and produce has grown so keen in the last few months that practically every small town in the lower part of South Carolina has forced restrictive taxes on all truckers attempting to sell within town limits. Beaufort, Port Royal, Yemassee, Ridgeland, Hardeeville, Hampton, Varnville, Walterboro, and many other towns on the coastal regionss have imposed taxes on truckers that only those doing a tremendous business can afford to pay.

SLAPS COLORED HOTEL ATTENDANT AND LOSES LIFE

Washington — (CNS) — W. Frank Norman, white, Tennessean and former Assistant United States Attorney General paid with his life for slapping and threatening Joseph Diggs, 31 years old, in front of the white fashionable Wardman Park House here Wednesday. Diggs, who employed as bellman at the hotel, had refused Norman's chauffeur the right to park in a restricted zion in the rear of the hotel a few days before. Norman became incensed and struck Diggs. Wednesday Norman returned to the hotel and is said to have threatened the bellman. Resenting the prior assault, Diggs opened fire upon the white man and shot him twice while Norman begged for his life. After shooting, Diggs surrendered to the local authorities. He was held to await the action of the grand jury on a charge of murder.

HOWARD UNIVERSITY GETS $5,000 FROM DR. WILLIAMS' ESTATE

Washington—(CNS)—Bequests of $5,000 to Howard University; $2,000 to the Phyllis Wheatley Y. W. C. A. and a small annuity to a sister, Miss Alice P. Williams, also of this city, was announced here Friday as a result of the will of the late Dr. Daniel H. Williams, prominent surgeon, who died in Chicago several days ago. The will was filed for probate in the Illinois city.

Dr. Williams' estate was placed at near $100,000, of which amount half is bequeathed to the National Association for the Advancement of the Negro. Another sister, Mrs. Anna Williams of Lynchburg, Va., will also receive a small annuity.

Dr. Williams was formerly surgeon-in-chief at Freedmen's Hospital. He was credited with being the first member of the medical profession to stitch successfully the heart organ. He died August 4 at Idlewild, Mich., at the age of 73.

KING COTTON'S PLIGHT STRIKES NEGRO FARMERS

Washington — (CNS)—With Negro farmers of the South cultivating more than one-half of the cotton acreage, and producing two-fifths by yield and one-third by value of all the cotton raised in the United States and with hundreds of thousands of Negro farm laborers engaged in growing and picking cotton, the announcement that Chairman James C. Stone of the Federal Farm Board had telegraphed the governors of fourteen cotton growing states urging them to destroy one-third of this year's cotton crop, became a matter of vital importance to the Negro population of the South. Cotton is selling at a lower price than at any time since 1891. The effect of this low price has been to greatly reduce the buying power of Negroes in the South.

While Chairman Stone claims that the destruction of one-third of the crop will enhance the value of the other two-thirds so that its selling price will be more than the entire crop, it is felt in many circles that this scheme would work a hardship on many Negro farmers who might be forced to destroy more than a third of their crop by white farmers.

"BLACK RHAPSODY" MOVES

New York — (CNS)—"Black Rhapsody" Lew Leslie's musical revue starring Ethel Waters, has moved from Broadway up to the Lafayette Theatre in Harlem for an indefinite run. Leaving Harlem, the production will go to Boston.

RADIO BROADCAST IN "NUMBERS" LOTTERY

New York — (CNS) — The latest in the numbers lottery has been uncovered in Harlem. It is on the radio broadcast of Kate Smith, the songbird of the South who appears on the Columbia Broadcasting program daily.

They lay bets during the day, then every one tunes in on the evening broadcast. When she sings the "memory" song, they check up and determine the year that song was published. The man holding the winning year, wins the pot.

THREE JOYRIDERS KILLED WHEN CAR CRASHES

Atlanta, Ga.—(CNS)—Three persons were killed and three others were injured Wednesday when the automobile in which they were said to have been traveling more than 60 miles an hour crashed into a vacant house in the southeast section of the city.

The dead were idtentified as Willie James, Homer Watkins, and Anne McCain. The injured gave their names as James Diamond, Annie Lou Scott and Mae Lewis.

DEAN MILLER'S SON MARRIES D. C. GIRL IN MOSCOW, RUSSIA

Washington—(CNS)—Dr. Kelly Miller, Jr., son of Dr. Kelly Miller, professor at Howard University, was married several days ago to Miss Edna Fitzhugh of this city in Moscow, Russia, where the couple and several friends are passing sometime while on a continental tour of Europe. Dr. Miller, who is a graduate of the Howard Medical School is practising in New York City. The bride is a sister-in-law of the late Dr. Norman, who was for years pastor of the Metropolitan Baptist Church of this city.

Application for Membership
NATIONAL FEDERATION OF COLORED FARMERS
Vincennes Hotel, Chicago

As a farmer, I believe the time has arrived when the Colored Farmers should form a National Organization devoted to diversified production, grading, packing, shipping and marketing of farm products and to the purchase of needed farm supplies through co-operative methods, to the end that a more prosperous financial condition may result from their efforts as producers.
I hereby subscribe $5.00 for membership in the National Federation of Colored Farmers for a period of 12 months from date. Also $1.00 for an Annual Subscription to the Modern Farmer.

FALSE ECONOMY

Recently the armory in the city of Buffalo, New York, was destroyed at a loss of $7,000,000, which must be paid by the taxpayers.

Building of this nature, because of their massive stone walls, are not usually considered by the public to be particularly dangerous fire hazards. But combustible roofing, lack of fire stops and great open spaces through which fire can run almost unretarded, made the Buffalo armory, like others, a conflagration breeder.

The Buffalo building was not safeguarded by insurance. The city was a self-insurer. Special legislation will be necessary for rebuilding and as a result the units which used the armory may suffer in efficiency and rank. And, as the final straw, the taxpayer will have to dig up the cost of a new structure.

Thus the Buffalo fire produces two lessons, each of great interest to all towns and cities. The first is that puble buildings should be rigorously planned and inspected in order to make them as fire-resistive as possible. The other is that self-insurance is all right when one is lucky—but when fire comes, it proves to be false economy and the most expensive sort. The interest on public funds required for rebuilding much more than offset the annual cost of insurance of the property involved.

ELECTRIC TAXES SOAR

The percentage of revenue paid as taxes by the electric industry has trebled in 25 years. In that period gross revenue from domestic service increased about 650 per cent, while taxes went up 7,000 per cent—more than ten times as fast.

In 1902 the companies paid taxes representing 3.4 cents out of each dollar of consumer revenue and 8.7 cents of each dollar of investor's income. In 1922 taxes took 8.4 cents of every consumer revenue dollar and 18.6 cents of every dollar of investor's income. In 1929 taxes had increased 9.7 cents and 19.6 cents per dollar respectively.

It is often said, by advocates of municipal ownership of electric plants, that taxes are of negligible importance and may be excluded from any comparison. This is, to say the least, an error. If the electric industry were relieved of all taxation the domestic rate of the nation, which now averages six cents per kilowatt-hour, could be reduced to about four cents—a decrease of 33 per cent.

Any fair comparison between the cost of heavily-taxed private systems and tax-free public systems must take into consideration this extremely important item. And it gives rise, as well, to the old question of whether or not municipal plants should be taxed. It is an inescapable fact that customers of city-owned utilities are receiving service partially at the tax expense of other residents of the state.

A GREAT ROAD YEAR

Programs of Federal, State and local governments for 1931 road construction call for a total expenditure of $1,616,000,000—an increase of $15,000,000,000 over 1930. The Federal government's contribution of $249,897,000 is $150,000,00 over 1930.

The problem of unemployment has perhaps been the most potent factor in increasing road budgets—coupled with the genuine need for more and better roads in a great many states. The farm-to-market road movement is coming in for increasing attention and more and more communities are finding that full-width, weatherproof, all-year-round roads are essential to agriculture in this modern age.

It might be said that the money we spend for roads gives us a better return than almost any other form of government tax expenditures. Quick and economical transport, true of those rural areas where roads have been in essentially the same state of unimprovement since the horse-and-wagon days. Only by building inexpensive, but good roads, can farming sections be given a place in the march forward.

NO MORE WET HAYCOCKS

(The New York Sun)

The adage "Make hay while the sun shines" soon may lose much of its point. After many experiments an artificial hay dryer has been perfected and its practicality has been proved. The first one in New York state is now in operation on the 700 acre farm of E. B. Ashton, near Saratoga. Green hay brought straight from the fields is run through a chopper which cuts it into suitable lenghts. It then passes through a rotary cylinder, where the moisture is removed by heated gases. The dried hay is blown into the mow bin, or it may even be packed in bags for storage or shipment.

A large volume of hay is required to justify investment in an artificial dryer. However, the economy effected is so great that in the near future hay dryers may be taken from farm to farm as were the old threshing machine. Hay cured artificially has an augmented food value through increase of protein content and digestible carbohydrates, improved flavor and aroma and a seven-fold increased of vitamin A content. The cutting process makes for easier storage of the cured hay, and the worry caused by whimsies of the sun is eliminated.

Improvements on the farm progress almost as steadily as they do in the industrial world. Electric hotbeds and soil heating and electric light traps for orchard pests are recent additions to a total of 225 agricultural devices involving the use of electricity.

SWING LOW, SWEET CHARIOT

Binghamton Press: Thousands of newspapermen all over America read yesterday with a catch in the breath of the death of Daniel H. McDowell at Washington. They knew and loved the giant black man as Mac, doorkeeper extraordinary of the National Press club.

Doorkeeper? Well, you might call him that. More like a reception committee, though; with an infallible memory for faces and names. Men have walked out the door of the National Press club, roamed the far places of the earth and returned five years later to be called by name and greeted as if they had just left the day before. Mac, like Robert in the dining room, was an institution at the National Press club.

He was born a slave and in the Civil war he was bodyguard for Stonewall Jackson. Mac could tell tales. Later he was a servant in the retinue of Samuel J. Tilden. The years beat him down, but he was amazingly bright and cheerful in his fine new uniform there on the door at the Sign of the Owl within the last two years. Not long ago the word went around that Mac was down with his final sickness. Now the sweet chariot has swung low and Mac has gone on.

It isn't always wise to speculate about heavenly rewards and such, but we have this notion about Mac. St. Peter will be standing there at the head of the golden stairway, one eye on the door and the other on some mischevious cherubim playing around the Main Entrance, when Mac comes along, smiling as always—hoping, somehow, there'll be a Floor thirteen in the establishment somewhere. Then St. Peter:

"Why, Mac, old fellow! After all these years. Been waiting for you a long time. How'd you like a job helping there on the Door?"

And Mac, self-deprecating, as always: "Yessus, Mr. St. Peter, but you see—my feet; I always have trouble with my feet. Now if there was some place where Old Mac cou'd sit down——"

Just about that time he'll pause, because St. Peter will be pointing for him to look. And there on Mac's feet will be the finest, easiest, shinnest pair of golden slippers you ever saw; taking the ache all out of those old feet and those old tired limbs.

Yes, and we can see Mac sitting there on one of those comfortable golden chairs through all eternity, smiling his golden smile of welcome to the souls swarming upward for rest and reward and saying to himself, now and then, as he used to say to the Washington newspapermen:

"I'd rather be a doorkeeper in the House of the Lord than have a soft job up on Capitol hill."

SHALL WE LIVE IN STEEL?

Providence Journal: At Cleveland work has begun on a welded steel-frame dwelling house. It is asserted in behalf of this new type of construction that it is more economical than older types and in addition will produce a house without sag or shrinkage and unusually fire-resistant. It will have cement ceilings and walls of tile and brick.

Many owners and lessees know only too well the tendency of hastily or too economically constructed wooden dwellings to sag or shrink, cracking walls and ceilings. And many know, alas, only too well the inflammable character of old-time construction. There is no reason to doubt that the welded steel-frame type will fill a long-felt want. We only hope that, along with structural considerations, will go a desire and demand for agreeable architectural effects.

Farmers of Nation Invade Mound Bayou In Federation Meet

(Continued from Page 1)

one of the two founders of the city, is a practicing attorney and farmer and one of the first and oldest members of the N. F. C. F. The Units of the county did all within their power to make the meeting a success.

The N. F. C. F. now has members and Units in eighteen states and the national officers expect every state to be represented. Units of Mississippi, Alabama, Louisiana and Tennessee, led by their loyal officers, will attend in a body. Illinois will be well represented, also South Carolina, Missouri and Arkansas.

Program Lists Prominent Speakers

The theme of the Convention will be "ORGANIZATION AND CO-OPERATION, THE COLORED FARMER'S SALVATION!" On Thursday, "Co-operative Buying Day,' delegates and visitors will be welcomed to Mound Bayou by Mayor B. A. Green and Hon. E. P. Booze, of the city. The Annual Convention will be preached by a prominent Miss. minister. Mr. C. C. Richardson, state chairman of Miss., will act as Master of Ceremonies. James P. Davis, national president, will deliver a special address. Other prominent speakers on the day's program include Col. Roscoe Conklin Simmons, orator and editor, a former citizen of Miss., Mr. F. B. Ransom, manager of the Mme. Walker Co. of Indianapolis, and a true son of Mississippi, and Mr. W. R. Ball, a special representative of the Federation.

Market Agents of the various Units will discuss co-operative buying and the many problems relative thereto. A special school of instruction will be held for Market Agents and Secretaries of Units.

Friday will be "Co-operative Production Day" and will feature a special address on "Making Co-operative Production Day." This address will be delivered by Leon R. Harris, of the Modern Farmer, if he is able to attend. Others invited to appear on the day's program are Dr. Henry Allen Boyd, banker, philanthropist, and Secretary of the National Baptist Publishing House, of Nashville, Tenn., Hon. C. R. Richardson, Chairman Board of Directors of the N. F. C. F., a practicing attorney of Richmond, Indiana, Col. W. L. Jenkins, special representative of Illinois, and Mrs. E P. Booze, Vice-Chairman of the Miss. Republican National Committee.

Saturday, "Co-operative Marketing Day," will feature an address by Mr. Arthur B. LaCour, representing the Federal Farm Board, who will speak to our farmers on the invaluable benefits to be derived from organization and co-operative marketing. Hon. Claude A. Barnett, President of the Associated Negro Press, and Mr. W. O. Lightburne, special representative of South Carolina, will also speak.

Displays, Exhibits and Awards

Valuable premiums and prizes, donated by manufacturers, friends of colored farmers and by the N. F. C. F. will be awarded the second day of the Convention. These include garden plow and tools, two gross fruit jars and caps, subscriptions to various farm publications, dictionaries, a portable radio, one complete can sealer and pressure kettle, and several cash prizes. Exhibits, and prizes will be on display in the exhibition hall of the Julius Rosenwald high school. Exhibits will be judged the opening day by a committee composed of Mayor Green, C. C. Richardson, state chairman, W. Moore, state secretary, Tom Stewart, assistant state secretary, Louis Irvin, state marshall and M. L. McGhee, state representative of the **Modern Farmer.** Other judges will be appointed by this committee. Only members of the organization and members of their families may compete for prizes. Farm products entered must have been produced by the contestants and each must have a statement from the chairman of his Unit to the effect that he is a full-fledged member of the N. F. C. F. The list of displays and exhibits for which prizes will be awarded include: best and largest watermelon, best display of canned fruit, glass,—best display of canned vegetables, glass,—best display of canned vegetables, three varieties, tin,—member of N. F. C. F. who markets first bale of 1931 cotton,—best display of garden vegetables,—best letter received telling, "Why the colored farmer should organize,"—to Unit that has made best numerical progress,—to Unit that has made best financial progress,—best stalk of cotton and largest number of bolls,—best display of corn,—best display of hay,—best crop of poultry, any breed,—best display of jellies,—best display of preserves,—best display of an original canned or processed food product judged to have a marketing value,—best letter on "What I have saved by co-operative purchasing,—best letter on "Why our Unit should produce co-operatively,—best display of home-made farm appurtunance ax-handle, maul, single-tree, and etc.,—best piece of fancy work, year old,—best new bed-quilt,—best display of home-cured meat,—best display of domestic and wild home-cured medicinal and aromatic herbs,—best display of cantaloupes and muskmelons,—best peck of sweet potatoes,—best peck of Irish potatoes,—best dozen hen eggs to be rated by weight,—best peck of field peas,—best home-made house dress,—a set of dishes to member bringing in the largest number of applications for membership in the Federation and a set of silver to the member bringing in the largest number of paid subscriptions to the Modern Farmer.

Special Exhibits and Features

A special demonstration of General Foods products will be given by Miss Alice Oliver, home demonstration agent in charge of colored work in Miss. This demonstration is sponsored by the distributors of the famous Maxwell House Coffee. The International Harvester Co. will give a free moving picture and will also carry a display of their farm implements. Other special features and details of the program will be announced in the July 15th Bulletin issued to members of the N. F. C. F. from the national office.

The organization invites all interested in organization and the co-operative movement among Negro farmers to attend the convention.

RACE MAN NAMED ON CINCINNATI G. O. P. COMMITTEE

Cincinnati—(CNS)—The Republican Campaign Committee of this city made a definite bid for the support of colored voters in the coming congressional campaign when it announced last week that B. Crittenden, prominent undertaker and well known business man of this city had been named as one of the five members of the Advisory Committee of the Republican organization.

Mr. Crittenden is the first Negro ever to be named on this committee, which has a great part in shaping the policies of the Republican party in Cincinnati. His selection was heralded by colored voters of the city as an outstanding victory for colored people.

You Can Make a Contribution to Our Program

Will You Do It At Once, Without Delay? Read This Plan

DEAR PASTOR, SUPERINTENDENT, B. Y. P. U. PRESIDENT, CLASS OFFICER AND SUNDAY SCHOOL WORKER

Your contribution in our Sunday School Missionary Drive can be made either in cash or in clean, carefully assorted white rags. If you have the cash, then send a post office money order, a certified bank check or the cash by registered mail, to help in my effort to rebuild the church on the Canal Zone in Panama. If you haven't the money, and if you feel the call to do something for Sunday School Missions as conducted through the Sunday School Congress, then have every member of your Sunday School get together one pound or more of clean white rags. This is the least you could give. Don't send rags unless they are white, and unless they have been washed clean. The more you send, the greater will be your donation.

If you will send me these rags through the month of July I can convert them into cash and apply the funds toward Panama Missions. When you wash these rags put them into a neat package or bundle and address them to Henry Allen Boyd, 523 Second Avenue, North, Nashville, Tenn., then put stamps on the package, or pay the express charges on the same.

If you will write me a letter and tell me when you will send them I can be on the lookout for them. I want every Sunday School child to take a part in this. If we build the church in Panama it will be the result of the Rag Month Sale. Remember send a pound or more of clean, white rags to

SHARE IT WITH THE FARMER

Declining milk prices have become an increasingly serious problem to American dairy farmers.

The price declines, of themselves, do not necessarily menace the farmers' economic standards. The fault lies in the fact that farmers have been forced to take all of the loss. When milk sold at 16 cents a quart, the distributor received 6.5 cents. With milk selling at 13 cents or less, the dealer still has his 6.5-cent margin, the farmer absorbing the loss.

The farmer cannot continue to bear the price cuts alone. Reductions in milk prices are a natural part of the drop in commodity prices of all kinds—but now the dealer must help bear the burden. He must follow the example of the farmer, who has raised his efficiency and reduced his operating costs to adjust himself to changed conditions.

Out of the 6.5-cent dealer margin, about one-half cent is profit, and about three cents goes for driver and wagon expense. It is not probable that these items can be appreciably reduced. The cut must come out of the other three cents which goes to overhead. Dealers and farmers must work together in living through the present period of low price levels. Each is necessary to the dairy industry and their difficulties must be shared in common.

ACCIDENT PREVENTION ON THE ROAD

Bad manners on the part of drivers are held by many authorities to be the principal cause of automobile accidents.

According to traffic engineers and statisticians, the accident rate would drop to a minimum if drivers would display a little courtesy in operating their cars by giving way when other machines are passing, and would discontinue crowding cars coming in opposite directions, the unnecessary use of loud horns, driving slowly in the midst of fast-moving traffic, etc.

A survey conducted by the Albert Russel Erskine Bureau for Street Traffic Research has shown that the automobile itself is least responsible for accidents. Poor brakes, steering and similar factors cause only a small percentage of mishaps. Human nature has not yet adjusted itself to take advantage of the full efficiency and safety of the modern car. Nine out of ten cars involved in accidents are in perfect condition. Thus, in 90 per cent of cases, accidents result from human carelessness, incompetence or bad judgment.

Good driving manners can cover a multitude of other failings. The driver who resents passing cars, who attempts to hold an undue share of the road, who has no respect for the rights of the pedestrian or other motorists, is a potential killer and destroyer of property. It is against him that future highway safety campaigns must be conducted if they are to show results.

WIRE SCREEN TRAPS WILL CAPTURE FLIES

The effectiveness of wire screen fly traps in decreasing the fly population around farm premises was demonstrated recently at North Dakota agricultural college where twelve traps succeeded in catching two bushels of flies in ten days, a capture estimated at 650,000 flies. The traps were placed near the college livestock barns and at points where flies are likely to breed.

Traps of the common wire screen type were used, a kind which may be readily purchased at hardware stores or easily constructed from ordinary window screen. The principle of the traps is a cone-shaped screen entrance with an opening near the tip of the cone. Flies entering the trap travel up the sides of the cone from the floor of the cage. Bait is placed directly behind the cone to attract the flies.

Baits which have given the best results are crushed, overipe bananas, and rotten liver. Either bait is very attractive to the flies. Another lure that is recommended is a mixture of equal parts of brown sugar and curd of sour milk, thoroughly moistened and allowed to stand for three or four days before using.

Trapping flies is of importance not only in bringng about an immediate decrease in fly numbers, but is a valuable aid to control by capturing many flies before they have had an opportunity to lay eggs.

YOU'VE GOT US THERE

Life: A college president says that in Europe students are trained to think while in America students are trained to remember. Well, suppose one can't remember what he was thinking?

THE MODERN FARMER

Vol. III. Nashville, Tenn., and Chicago, Illinois, September, 15, 1931 No. 7:

7,000 FARMERS ATTENDED NATIONAL CONVENTION

News Notes and Comments on Last Convention

PRESIDENT JAMES P. DAVIS WRITES HIS IMPRESSIONS

Plays Up Notables Who Attended Session

State Chairman Richardson found out that handling a convention was harder than dirt farming, and we know he is glad to get back on his 200 acre farm. He is the right man in the right place and all unit officers never fail to abide by his rulings.

State Secretary Moore and Assistant Stewart actually wore out a dozen pencils recording data for the convention and handling affairs of the different units. These men are fully competent and there can be no better secretaries anywhere.

State Marshal Irving was on hand early and late. He said it was the easiest handled crowd he had ever been in and this was saying much, for Irving knows his onions when directing crowds.

There is no further necessity for our race group of farmers to debate the "ifs and ands" of organization since we had the pleasure of hearing Mr. LaCour of the Farm Board, Mr. White of the State Extention Service and Mr. Williford that able County Agent of Bolivar. That bunch of fence sitters who have been waiting for further information about organization before becoming members. I have certainly heard a big earful.

That group of officials who came to the convention in a private car from the Memphis Division of the Illinois Central certainly spoke plainly to our members on the second day's session. The Illinois Central officials have always been friendly to Negro farmers.

Charlie Ashley headed the officers of New Foundation unit at the convention. They are all hustlers and brought in a very fine report. Charlie Ashley is a man that any one might imitate. He is honest in all of his dealings. A very good man.

Rev. B. W. Bryant, the big hearted farmer and head of Bolivar County unit gave a very good account of himself at the convention. We predict that he will have over a thousand members in his unit before the first of the year. He is truly a leader among our people.

That canning exhibit sent up from Mount Olive unit created some excitement. Mrs. Clara Booker, who is the head of the canning club in that unit, tried herself in the manner in which she displayed her fruits and vegetables. She deserves much credit for her work among the members of this unit.

T. M. Blackmon and wife from Humphrey county were there.

FARM RELIEF TO BE SOUGHT

AGRICULTURAL DEPARTMENT SETS UP STATION IN TOWN FOR EXPERIMENTS

(Christian Science Monitor)

Washington.—With the middle West facing a political revolt over surplus farm crops, the Department of Agriculture is redoubling its efforts to find a commercial use for agricultural by-products on a scale that will render material farm relief.

With this purpose the department is expanded its activities from laboratory scale to factory scale experiments, according to an announcement by Dr. Henry G. Knight, chief of the Bureau of Chemistry and Soils. The enlarged work will be conducted in a factory at Ames, Iowa, in cooperation with the Department of Commerce and the Iowa State College.

The object of the major investigation is to put chemistry on the farm, and to extract valuable chemicals from wastes. With wheat selling at less than it costs to produce, chemists hold ont the possibility that some day the chaff may yield more valuable materials than the kernals themselves, Cornstalks already have been used for paper making, but the new chemistry goes further and attempts to extract a number of commodities, ranging from illuminating gas to alpha cellulose, and the same efforts will be made for straw, oat hulls, race hulls, cottonseed hulls and the like.

Dr. W. W. Skinner, assistant chief of the division, has left for Iowa to see to the immediate setup of the by-products work for which the last Congress appropriated $75,000. Already material formerly wasted are now being put to man's service, it is stated, and millions of dollars are being saved. The future farmer may not be a producer of hay, corn and oats, but of acelic acid, methanol and furfural it is declared.

Lignin, which constitutes 20 or 30 per cent of the dry material in hulls, straw and leaves has been used in varnishes, dyestuffs and various chemicals.

Culled citrus fruit of grades too low for commercial use is being used to make citric, lemon oil, jams, jellies and fruia juices. One area near Los Angeles reports savings of a million dollars a year by reclamation of former citrus wastes.

Apple cider yields a wax used to slow the drying of varnish. The popularity of tomato and sauerkraut juice as drinks has offered new uses for surplus products. Casein, manufactured from skim milk, goes into everything from billiard balls to fountain pen cases. Sugar cane bagasse makes wallboard; cull sweet potatoes offer a starch similar to tapioca.

LAST HOUSE USED FOR SLAVE TRADE TORN DOWN

OLD MARKET AT MEMPHIS WAS USED BY GENERAL FORREST BEFORE WAR

Memphis, Tenn.— One of the last ante-bellum landmarks of the south is passing in Memphis with the razing of the old Gen. Nathan Bedford Forrest slave mart in rear of the old Forrest mansion.

General Forrest, a hero to Tennessean, was a dealer in slaves. In the files of old newspapers may be seen advertisements of "A fine group of Kentucky and Missouri young Negroes."

Kentucky and Missouri slaves were suposed to be above the ordinary, and Forrest, it is said, handled only the best. For many years before the Civil war he lived in the big three-story mansion located across from what is now Central police station and kept slaves in the mart in the rear.

The mart was three stories and rectangular in shape, walls of brick on the outside and wood inside. A porch ran around the interior, outside windows were barred, and there was only one exit, a narrow door near the only stairway.

Negroes were quartered in rooms around the inside of the rectangle guards stood on the porch and stairway and at the door. When time for selling came, the Negros were herded into the square below.

The mart was just to the rear of the Forrest home, to the left of the two-story structure adjourning the mansion.

Until the slave mart was razed. Negroes live in the old rooms. One old slave, "Aunt Jennie," formerly owned by General Forrest, had lived there since the close of the Civil war.

Shortly after the war the general moved from his residence. For years his famous slave mart stood intact. With its passing another landmark of the Civil war becomes mere history.

—Moline Dispatch.

6-POUND POTATO

New Orleans:—A sweet potato weighing six lbs. was picked Sat. by George Jones, a Negro farmer, in his garden across from his home 1220 South Salcedo Street. The monstrous potato measures 16 inches around and is 12 inches long. It grew in a crop of ordinary sweet potatoes planted last April.

OF INTEREST TO EXPORTERS OF AMERICAN BLACK WALNUT

The Memphis District Office has just received a communication from the Lumber Division, stating that a firm in Auckland, New Zealand is interested in a C. I. F., Auckland, quotation on American black walnut in: 11-4," 1 1-2," 2," 2 1-2," 3," and 4" planks.

NEW HAY-DRYING MACHINE

HAS LAUGH ON OLD SOL AND MR. JUPITER PLUVIUS IN NEW METHOD

(Special to the Christian Science Monitor).

Albany, N. Y., July 16.—A striking advance in machine methods of advantage to the farmer is recorded in an announcement that the first hay rider to be operated by artificial heat in New York State has been installed on the 700-acre dairy of Mr. E. B. Ashton, near Saratoga, and is now in operation. It permits of cutting green hay and storing it the same day, even though the sun is hidden behind clouds.

Green hay is brought directly from the fields, run through a chopper and is then passed through a rotary cylinder where the moisture is removed by heated gas. The dried hay is then blown into the mow or storage bin, or may even be packed in bags for storage or shipment.

The chief advantages of curing hay artificially, according to an announcement by the New York Power & Light Corporation here is in the higher food value and the fact that the farmer is made independent of the sun for drying the hay. The cutting process also makes for easier storage of the cured hay.

"The process of drying hay through artificial heat has been the subject of experiments for a number of years" the announcement says. "The first of these plants was operated in Louisiana 10 years ago. During the intervening years, further experiments have been carried on, and the drier installed on Ashgrove Farms is one of the most satisfactory to result from these tests.

"This installation consists of three concentric revolving drums through which the green hay is rotated with hot gases from an oil burning furnace. The standing hay is mowed in the usual manner, brought in immediately and run through a chopping machine. From the cutter the green hay is elevated to the hopper of the drier. Here the hay is fed into the drier with a mixture of hot gases from the oil burner, the temperature at the intake varying from 1000 to 1500 degrees Fahrenheit.

"The hay and hot gases are drawn through the three concentric cylinders by an exhaust fan at the further end of the drier. To further faciliate the advancements of the material through the drier, the cylinders are rotated. The mixture rolls back through the first and second cylinders and finally passes through the largest one to the blower attachment, where it is sent to separator, which permits the escape of the moisture laden air and collects the dried hay ready for the mow or storage bin."

MOUND BAYOU THE CAPITAL OF NEGRO AGRICULTURISTS

Seven Governors Officially Represented

MOUND BAYOU, MISS. — To night they are not calling Mound Bayou "a little Negro town in Mississippi." It has become" the capitol of Negro agriculture in the United States!" The convention of the N. F. C. F., the only co-operative association of colored farmers in America, has adjourned. Delegates and members of the organization are leaving here full and happy,—officers, those loyal servants who have held on in spite of the most difficulties, are, returning to their labors, encouraged and edified,—and the same thing has happened here that happened at Pentecost, thousands have been concerted to the principles of organization and co-operation and are going back home to spread this great gospel among thousands more who know it not.

Truly the convention has been a success. Those who have been here have sat down to a feast of good things,—from the moment Thursday morning when Rev. B. W. Bryant, president of Mound Bayou Unit, Bolivar county, called the first meeting to order, until national president James P. Davis adjourned the last session Saturday afternoon.

More than three-fourths of the Units of the organization were represented. Delegates were present from twelve states. The governors of Colorado, Kansas, Arkansas, Kentucky, Indiana Tennessee Pennsylvania North Carolina, South Dakota and Georgia officially commissioned prominent colored farmers and farm leaders to represent their states. There was peace, good-will and happiness. It is an undeniable fact that the N. F. C. F. has gained thousands of friends among both races and that the work the organization is doing is now known and appreciated better than ever before.

Your correspondent cannot mention everybody and everything in this brief report. Some characters and features however, stand out so prominently and contributed so much to the convention's success, that we are glad to give them recognition and honor due.

REV. B. W. BYRAM AND MOUND BAYOU UNIT

The Mound Bayou Unit, which entertained the convention, under the leadership of its efficient president. Rev. B. W. Byram, spared no pains or expense in making all delegates and visitors welcome. It was up to them to do the hard and difficult tasks—those many big and little things few want to do but which must be done. They did well. They deserve the thanks and appreciation of all who attended, both delegates and visitors. The members of this Unit are all big-hearted and progressive. It is their ambition to become the biggest Unit in the state. We believe they will succeed. There are more than twelve thousand col-

(Continued on page 5.)

GOVERNOR APPOINTS EDITOR TO REPRESENT KENTUCKY AT MOUND BAYOU

Governor Sampson has appointed I. Willis Cole, editor of The Leader, a delegate to represent Kentucky at the annual Farmers' Convention to be held at Mound Bayou, Miss., August 13-14-15. Mound Bayou is the colored town founded by the late Isaiah T. Montgomery, B. A. Green, brother of J. A. Green, former secretary of the Chestnut St., Branch Y. M. C. A., is the present mayor.

The editor had not planned leaving tho city during the summer, but the appointment which came as a surprise Monday, will be accepted and Mr. Cole will leave for Mound Bayou and other points in Mississippi and Tennessee by motor August 11.

—Louisville Leader.

CORRECT WEIGHTS OF FOODS LISTED

But comparatively few people know tho correct weight for a bushel of different kinds of food and grain and to enable residents of Moline check purchases from stores and peddlers a list has been issued by William Cowley, building inspector and who also has charge of the department of weights and measures.

Any violations of the weights and measures act should be immediately reported to the inspector who will secure warrants for arrest of the violators.

Following are the weights:

Green apples, 47 pounds.
Beans, green or yellow, 24 pounds.
Beets, 60 pounds.
Carrots, 50 pounds.
Corn, Shelled, 65 pounds.
Corn, on ear, 70 pounds.
Cucumbers, 48 pounds.
Hickory nuts, 50 pounds.
Onions, 57 pounds.
Parsnips, 50 pounds.
Peaches, 48 pounds.
Pears, 58 pounds.
Peas, green in the pod, 32 pounds
Popcorn, on the cob, 70 pounds.
Popcorn, shelled, 56 pounds.
Potatoes, Irish, 60 pounds.
Potatoes, sweet, 50 pounds.
Quinces 48 pounds.
Salt, coarse, 55 pounds.
Salt, fine, 50 pounds.
Rutabagas, 50 pounds.
Spinach, 12 pounds.
Tomatoes, 56 pounds.
Turnips, 55 pounds.
Walnuts, 50 pounds.
Wheat flour, per barrel, 169 pounds.
Wheat flour, per quarter barrel, 49 1-2 pounds.

TOO MANY ACRES; TOO MANY BALES

Memphis Commercial Appeal: Something nearly always happens to tho cotton crop, especially if it is a short crop. Boll weevil, army worm, drouth, excessive rain and early frost have a way of affecting short crops adversely, but a 15,000-000-bale crop is too big to hit.

Besides, why cuss the government for making a prediction based on existing condition? The farmers planted enough acreage to produce 16,000,000 bales. They bouhgt fertilizer to increase the yield. They started plowing this spring before the frost was out of the ground. They have never worked as hard to make a big crop.

With the price down to 7 cents everybody is sorry. Everybody is glad that his own particular crop is fine, but there is a lot of wailing because the other fellows have good crops too.

The whole problem goes back to the question of acreage. Some advance leaving a third of the crop in the field. Some advocate destroying every third row. Others recommend that the government burn its 1,300,00 bales.

Everybody is willing for someone else to reduce the supply so that he can profit from an enhancement of price. No statue will solve tho problem. Common sense can not be obtained through legislation.

Farmers some day will organize so efficiently and so universally that a small crop will bring a big price and a maximum crop can be sold for a nice profit.

JANE ADDAMS URGES GREATER PEACE EFFORTS

NECESSARY, SAYS HULL HOUSE HEAD, BECAUSE OF GROWING NATIONALIST FEELING

Special To The Christian Science Monitor

TORONTO.—Picturing the eventual arrival of world peace by little groups of workers increasing in numbers in the civilized countries of the world, Jane Addams, president of the Woman's International League for Peace in an address before that organization, stressed the necessity of greater effort toward peace than ever before. This was necessary, she said, because of a growing nationalist feeling from economic depression; fear of Russia or any other nation should not be allowed to hinder social progress.

Miss Addams thought that just as abolition of slavery came as the result of a gradually aroused world indignation against injustice to human nature, so abolition of war was on its way. Not by petitions, but by the thought they created; not by national conferences, but by the masses which supported them, would peace come; not by drastic economic changes, but by gradual encouragement of social legislation would mankind find its utopia, she thought.

That wars were unprofitable was demonstrated by Miss Addams. The World War had brought profit neither to victor nor vanquished, she said. Tho fear of Russian influence should not be permitted, sho said, to hold up world disarmament. There was a vast difference between armaments and police armies. Armies would not be able to deal with situations such as were feared; they were matters for the police. Nations, she said, must look beyond their frontiers a measuring tho action and interaction of their tariffs and immigration policies. No nation could build itself at the expense of another.

Unless the disarmament conference which will assemble next year is successful war is inevitable was the opinion of E. J. Garland, a member of the Dominion Parliament, who addressed the league.

Great Britian, he said, is spending $1000 a minute on armaments; the United States $1500 and Canada, on war debts and armaments, more than the entire amount required for all federal expenditures in 1913.

Estimating the cost of the last war at $100,000,000,000, he stated that this sum would have paid for the entire real estate of the United States.

All the railway system, street railways, their equipment, motor vehicles and other modes of transportation in the United States, he said, could have been purchased at one-quarter of the cost of the war. It would have paid for a home for overy family in the United States, Great Britian, France, Germany and Russia; bought them each five acres and still have left enough to provide each 20,000 families "with a hospital, university, schools and their upkeep."

Nations must learn to trust each other, he said, otherwise war was inevitable. Upon public opinion depended the will for war or peace, Mr. Garland concluded.

FOREST SERVICE BEGINS NURSERY IN WISCONSIN

Sowing nursery beds with tree seeds for reforestation of areas of tho national forests in the Lake States region began this year at Rhinelander, Wis., where a tangled area of brushy cut-over land will eventually give place to a large Forest Service nursery.

With a planting program of about 25,000 acres for this year, the Forest Service of the United States Department of Agriculture is preparing for an increase in the project of putting idle forest lands back to work. The Rhinelander development will be one of several scattered throughout the nine forest regions of the United States. At least 14,000,000 seedlings per year will be produced at this nursery when it reaches maximum capacity. Trees from the Forest Service nurseries are used almost exclusively for replanting areas burned over before the land was included in tho national forests,

Join Our Dollar Per Week Savings Club Now Open

Every Citizen Is invited to Cooperate in a Definite Movement Where they Themselves will be the Recipients of all the Benefits Both Principal and Interest

Send $1.00 every week to the Citizens Savings Bank and Trust Company, at Nashville, Tennessee, either in cash or post office money order, or you may send your personal check, if it is certified. This will open a savings account on which we pay interest twice a year. It will make you a member of our "Save a Dollar a week Club." Every member of the club, who qualifies by sending the regular amount, will receive special recognition and an acknowledgement of their remittance when it arrives. You can deposit more than $1.00 per week if it is convenient. No matter where you live, in the United States, Canada or Mexico you can take out membership in this savings plan. The Citizens Savings Bank has been operating for twenty-seven years. Its capital is fully paid. Its officers and directors represent men and women who are nationally known. "Procrastination is the thief of time," so do not wait. Open your savings account at once.

KEEPING FRESH BREAD FRESH PROVES PROBLEM

Fresh bread won't stay fresh.

This fact costs the bakers of the country millions of dollars annually and creates a problem which has attracted the attention of chemists of the United States Department of Agriculture.

Bread is considered by the baking trade to bo stale the second day after baking, although some authorities contend that is starts to become stale as soon as it has cooled.

"The exact changes that take place when bread becomes stale are not clearly understood," says L. H. Bailey, of the Food Research Division. "One theory is that much of the moisture contained in bread is held by the starch which has been gelatinized in the baking. As the bread cools, the starch gives up some of its moisture which is absorbed by some of the other constituents, especially the coagulated gluten of the crumb. As this takes place the crust changes from a harsh, brittle material to a soft, pliable one. The crumb increases in firmness, loses its tough, elastic property, and becomes crumbly."

Chemists find that heat applied to bread in this condition restores its freshness temporarily. This bread will again become stale upon standing and once more return to the fresh condition when reheated. Other investigators have found that this process may be repeated as many as seven times before the bread loses so much of its moisture that it can not be continued.

Homemado bread often contains either mashed potato or the water in which the potatoes are boiled. It is claimed that this makes a moist bread that keeps well. With 3 per cent potato flour the bread was found to retain moisture slightly better than that made without the potato flour.

A preliminary study has been made of the influence of the use of certain constitutents in bread making from the standpoint of preventing or retarding the development of the condition known as staleness. While a few of the substances seemed to retard this condition slightly, none of them produced the results desired. Rather interesting observations were made by keeping the bread at a temperaturo below freezing and allowing it to thaw out gradually, when it exhibited some of the characteristics of fresh bread.

FARM NOTES

A Mt. Holly, N. C., farmer has forty cows but he has raised more feed-stuff this year than he can use and has some to sell.

Illinois farmers in some sections are beseiged by factory workers from the cities who want to work for them for only their board. Some of these workers come out to the farms and bring their families with them.

A group of duck-raising farmers in Ohio have provided steam-heated quarters for their flocks.

Illinois has the largest soy bean in its history.

Uncle Tommy Kemp, a Missouri farmer who is 118 years old, believes in keeping up-to-date. He reads the newspapers and farm journals and keeps posted all the time. Ho says the farmer who is foolish enough to grow only one or two crops is out of luck. Uncle Tommy has been farming over one hundred years and he ought to know.

Gov. Roosevelt, of New York, prominently mentioned as the Democratic choice for President, advocates the establishment of county boards of health with a full time personnel. These boards would provide for rural areas more effective control of diseases, protection of maternity and infancy, safeguarding of milk and water supplies, nnrsing service and other elements of a modern health program.

Farmers in Cook County Illinois, have established a new co-operative buying organization which in two month's time purchased $12,000 worth of seeds, insecticides, garden and farm implements and other supplies. They report a substantial saving. And then some still claim that colored farmers should not buy co-operatively.

MORE PROOF THAT N. F. C. F. GIVES SERVICE

The following letter was recently received at the national office:

Dear Sirs:—"We thank you for the information you are giving us. I am trying to do all I can to bring the Mt. Olive Unit up to the standard of the other Units. Nearly every member received some aid from the Red Cross and about fifty per cent received drouth loans. We have saved from $2.50 to $4.00 on each ten dollar order we have sent in by buying together. We save at least fifty per cent all told on buying our feed stuff together. It seems like a dream to me. On a hundred pounds of rice we saved a dollar on a dollar. Best wishes to our officers and prosperity to the work.

Sincerely,

Robert Booker, Lexington, Mississippi, Mt. Olive Unit

BRO. W. L. GRAVES PASSES AWAY

Treasurer of Bassfield Unit Succumbs In 71st Year.

Bro. W. L. Graves, Treasurer of Bassfield Unit, N. F. C. F., and one of the finest of Mississippi's citizens, passed away at his home on July 10, 1931. Brother Graves was 71 years of age and the father of ten children.

For thirty-five years he had been a steward of Sweetwater C. M. E. Church. He was one of the "big wheels" in his community, progressive and reliable, and will be sorely missed.

For years he had talked about the N. F. C. F. and was eventually instrumental in establishing the Bassfield Unit, of which he was treasurer. He talked unity and co-operation to his neighbor farmers and also practiced these virtues.

Bro. Graves is survived by his widow, seven sons, two daughters and a host of relatives and friends.

LISTS OF PORTO RICAN PRODUCTS

According to Mr. Hector Lazo, Chief of the New York Office at 1457 Broadway, New York City, of the Porto Rican Bureau of Commerce and Industry, a full list of the various agricultural products of Porto Rico can be had by writing to him direct. He states that this list is believed to be quite complete as of July 15, and it will be sent to interested parties on request.

THE BIBLE

When I am tired, the Bible is my bed;
Or in the dark; the Bible is my light;
When I am hungry, it is vital bread;
Or fearful, it is armor for the fight.
When I am sick, ti's healing medicine;
Or lonely, thronging friends I find therein.

If I would work, the Bible is my tool;
Or play, it is a harp of happy sound.
If I am ignorant, it is my school;
If I am sinking, it is solid ground;
If I am cold, the Bible is my fire;
And wings, if boldly I aspire.

Should I be lost, the Bible is my guide;
Or naked, it is raiment, rich and warm.
Am I imprisoned, it is ranges wide;
Or tempest-tossed, a shelter from the storm.
Would I adventure, 'tis a gallant sea;
Or would I rest, it is a flowery lea,
Does gloom oppress? The Bible is a sun,
Or ugliness? It is a garden fair.

—Author Unknown.

A National NEWSPAPER For Churchgoers

Read the National Baptist Union-Review published every week, subscription price $2.00 a year. This newspaper is the oldest religious publication under the auspices of the National Baptist Convention of America. It is eight pages in size, eight columns to the page, and is brimful of denominational information every week. It contains a Woman's Page, spicy editorial matter, and circulates in practically every state in the Union.

TEMPTING AND TRUSTING?

By Neola Tracy Lane.

It was warm in the study hall. Unfastening the pin, May turned back the corners of her high collar so that what little breeze was blowing would cool her throat. She laid the pin, a dainty bit of gold filagree and pearls on the window-sill beside her chair and continued studying.

That was the last she thought about the pin until that evening in her own room when she started to change her dress.

"Oh, I forgot about my pin," she exclaimed. "Dulcie," to her roommate, "you're still dressed. Will you run down and get it for me? I left it on the middle window-sill."

Dulcie looked startled. "You don't mean that lovely pin your aunt sent you?"

"The very same."

"You're very foolish to be so careless," said Dulcie, as she left the room.

When Dulcie returned her lips were set in a stern line.

"It wasn't there. I looked in all the window-sills, thinking you have made a mistake, but it wasn't in any one of them. And I looked on the floor too. It just isn't there!"

"Well, it's large enough to be seen. I'm not going to worry about it. It'll turn up."

"Not if someone has taken it, it won't turn up," said Dulcie darkly.

"Oh, nobody's taken it. Why, there isn't a girl in the school that I wouldn't trust."

It was an hour later that Miss Wilder, the English teacher who was scarcely more than a girl herself, knocked on May's door. She laid the pearl pin on the table before May. "You're rather thoughtless," she remarked.

"There Dulcie, didn't I tell you it would turn up?" laughed May, ignoring what Miss Wilder had said. "I knew I could trust everyone in the school."

"OUR SLOGAN"

STAY ON THE FARM IF YOU'RE ON IT! GO BACK TO THE FARM IF YOU'RE OFF IT!

THE LAW

"It is hereby declared to be the policy of Congress to promote the effective merchandising of agricultural commodities by encouraging the organization of producers into effective associations under their own control.

The Board is authorized and directed—to promote education in the principles and practices of cooperative marketing—to encourage the organization, improvement in methods, and development of effective cooperative associations." (Public—No. 10—71st Congress. Sec. 1-5.)

THE GOSPEL

"This law is predicated upon the ability of the farmer to manage his own business, once he is organized to do so. Cooperation is the key to it and only in exceptional cases can the Federal Farm Board have any dealings with a farmer who is not a member of a producer-owned and producer-controlled marketing unit." Hon. Sam'l R. McKelvie, Member, Federal Farm Board.

The National Federation of Colored Farmers believes that the Colored Farmers of America should own and control their own co-operative associations.

"Co-operation With All—Affiliation With None."

EDITORIAL

TENANTS, LANDLORDS AND ORGANIZATION

Although our wisest farm leaders, statisticians and farm management specialists insist there should be more American farm-owners, tenantry is on the increase. The time has not yet arrived when a majority of our farmers own the land they till and till the land they own. Over forty per cent of all farms in the middlewest are run by tenants and in most of the southern states the percentage is still higher.

It has been discovered that tenant farms as a group make a larger net return an acre than owner-operated farms. Tenants also, as a group, operate their farms with less labor cost, less equipment cost and less total expense than owner-operators. On the other hands, farms operated by tenants produce lower crop yields, keep less livestock and deteriorate more rapidly than owner-operated farms. They make a larger net return per acre, but when the net income is divided between the parties there is not enough of it to satisfy either.

At the present time, landlords have no capital to spend for improvements on tenant farms but something could be accomplished through organization if the landlords and tenants would work together to develop a better system of farming. Those landlords who persist in forcing their tenants to cultivate only one or two crops— who do not want them to keep hogs, cows or chickens, and who have not yet learned that the average tenant will respond favoraby to fair treatment if it is given him will never again get much profit from their lands, no matter how much they own. It has been discovered that in some sections of the country, in the same community, there is a difference of more than $10 an acre in net returns on different tenant farms. We venture the opinion that those landlords whose tenants' skill and labor have produced the most profit are men who cooperate with their tenants— who are fair and just— and want their tenants to get a little more out of the soil and off the soil than a mere livlihood.

FATHER FORD AND HIS GARDENS

Henry Ford, Detroit automobile manufacturer, has appointed a "no garden, no job plan which he says he believes will free his emporary business depression. Next porory business depressions. Next year every one of his employees who has a family will be required to have a garden big enough to supply at least a part of the winter's vegetables, or they will not continue working for Mr. Ford long. Father Ford, boss of a couple hundred thousand men, has spoken, and that's that.

We are mighty glad we are not employed by Mr. Ford. We love gardening as well as we love any job under the sun, but suppose we did not love it? Suppose gardening was not our hobby? Could we get any "kick" out of perspiring to produce a peck of potatoes we could buy at the corner grocery for fifteen cents?

But, then, we do not know Mr. Ford. He may have something else in mind. He may know right now that next year and the next year, etc. his factories are going to run only twenty-four short hours a week, like they have been doing the past year or so. He may know that his men are not going to be able to buy that peck of potatoes at the corner grocery. He may know that he is going to build some more factories in other parts of the world outside the United States, where "parts" will be produced by foreign labor and shipped back to this country and sold to Americans at a handsome profit, by the good American, Mr. Ford. He may know that he is going to inaugurate some new piece-work stunts that will force his men-machines to produce much more per man than they are doing now. There is no telling what he knows.

O well, we guess the poor fellows will have to do as Father Ford says. The mills of the money—gods grind to powder . But these "daddying stunts" practiced nowadays by so many of the large corporations are sickening to real American he-men. It will be a happy day when they can look their foster-fathers in the eye and exclaim: "My daddy raised me once, Brother, and you weren't him."

BE FAIR WITH THE YOUNGSTERS

School time is here again, Bro. Farmer. Be fair with the youngsters and try to arrange your work so they can go to school every day the bell rings. We know you will be tempted to keep Johnny or Mary out every once in a while. You will see some task their swift feet and nimble fingers can perform much better than you can do it. Yield not to the temptation. They are yours. They are your dearest possessions. Don't keep them from obtaining the richest gift you can give them—the opportunity to acquire KNOWLEDGE.

The time is here now when the illiterate and ignorant person can hardly exist. Our Race has done nothing during the past sixty yeaes compared with what it is going to have to do during the next sixty. During the past sixty years we got along some how by crawling. During the next sixty years we are going to have to walk, run and even fly. So encourage your children to study and think. Take advantage of your newspapers, magazines and books and study with them.

And don't forget to send them to church and Sunday school also. The day school may make a smart man, but it seldom makes a good man. Keep the Negro church standing beside the Negro school and see that your children get the benefit of both.

A BETTER PLAN DESIRED

We are not in favor of the Farm Board's recent suggestion that a third of this year's cotton crop be destroyed. We are old-fashioned enough and perhaps, foolish enough to believe that it never pays in the long run to destroy anything that the world needs and can use. No one has yet proven to our entire satisfaction that the world does not need and cannot use every bit of the raw cotton on hand.

When the South learns to produce what it can eat and what it should eat there will not be too much cotton. When all southern landlords insist that their tenants produce enough milk, butter, meat, fruit and vegetables to supply their own, and at least five other average size families their cotton will pay the cost of production and more. When those who are wise and rich and cultured because human enough and Christian enough to want to see all of their fellowmen, white or black, living in nice houses, well-furnished, wearing good and pretty clothes and living as well as they, themselves, desire to live—when that time comes the United States will consume all the cotton she produces. There is not an overproduction of cotton or of any other useful products in this country But there is a vast over-production of selfishness of stinginess and of caste.

READ THIS AND THINK

Editor's Note—We are publishing below a weekly news release written by Mr. Clifford C. Mitchell a noted colored newspaper correspondent and reviewer. This release was written for forty weekly colored papers and was published by them the week before the meeting of our convention at Mound Bayou. Mr. Mitchell has given us some good advice and some rich information. He has told us what we should do and what we can do, if we will stick together and cooperate. May we merit his praise and accept at least some of his good advice.

DIGESTING THE NEWS

By Clifford C. Mitchell.

* * *

As this is being read the National Federation of farmers will be holding their second annual convention at Mound Bayou, Mississippi, and while this writer is not fully aware of the purposes and plans of this ogranization, other than what our press has written, there is undoubtedly much that such an organization can do for our race.

* * *

Perhaps no other field, in our race, is in such need of a well rounded educational, progressive and constructive organization. Our farmers who should be the most independent and prosperous are usually the greatest sufferers.

* * *

It has only been in the last decade that our schools and our students have taken the subject of agriculture in a serious way. A great many of our gradnates, even now, who are unable to use this knowlede in the capacity of a teacher seldom put their talents to work on the land as an actual dirt farmer.

* * *

With a properly organized and maintained federation of farmers the country would be divided into districts, communities and locals Through cooperative efforts each local could profitably employ a student graduate of agriculture, thus linking up actual ownership with technical knowledge. Under such an arrangement the graduate would introduce specialized efforts, crop rotations, animal husbandry, marketing, financing etc. work provide a handsome revenue for the farmers as well as the agricultural expert.

* * *

From a strictly financial viewpoint the hundreds of millions of dollars that our race has invested in farm lands are entirely unproductive. This does not mean that we haven't many successful and prosperous farmers, for we have, but as a whole our farm investments are a white elephant. They are not paying the dividends that they should.

* * *

No successful financier would continue to hold a non-yielding security. He would seek the best means of disposing of such possessions or he would employ experts and expert methods to make the properties valuable and revenue-producing. It is in this capacity that there is a timely and useful need for a national federation of farmers that will improve the general status of the farmer and farming.

* * *

In these days of rapid and portable transportation methods, good roads, modern improvements, scientific home amusement devices etc., the farmers' rot should stand out as a paradise, needing only the technical skill and an efficient organization to turn the drudgery and uncertainty of farming into a pleasurable and profitable life.

* * *

It will be interesting to watch the efforts of this organization and it is to be hoped that it proves to bo something bigger than a mere organized 'racket' of which our race is overrun. Success to you!

"THE SOULS OF BLACK FOLKS"

By Dr. W. E. B. DuBois
(A. C. McClurg and Co., Chicago, Publishers)

* * *

This book by Dr. DuBois, though written nearly thirty years ago, and now selling in its sixteenth edition, is truly one of the classics of American literature.

* * *

A good many years have passed since I first read an earlier edition of this book; a great many experiences have I encounted; practically every community (in this country) mentioned in the book have I visited; a living knowledge of life within the veil have I gleamed.

* * *

With the memories of my own experiences in mind I have been able to again read "The Souls of Black Folk" with an interest, an appreciation, not heretofore enjoyed.

The general theme of this book is so universally known that an additional description is entirely unnecessary although one significant fact stands out uppermost in my mind and that is the description, so truly portrayed, in the chapter, "Of the Sons of Master and Man," wherein Dr. DuBois explained (thirty years ago) the southern philosophy of convicting ten innocent Negroes rather than let one guity one escape.

* * *

At the present moment, thirty years later, we find this same Dr. DuBois and the organization he created, fighting an actual example of this unfair and unjust procedure. A much greater appreciation of his work is realized after again reading "THE SOULS OF BLACK FOLK."—Clifford C. Mitchell.

BACK WITH US AGAIN

For the first time since the nations of Europe became inflamed with the passions of war in 1914, Mr. and Mrs. Cicadae (17-year-locusts to you) have come to pay a visit to midwestern states. The locusts, whose resonant song can be heard on hot summer days, are inch-and-a-half greenish bugs, with large trausparent wings, a ferocious looking head and harmless stinger. Eggs are laid in trees and larvae are blown off on the ground. They then burrow into the soil where they sink their mouth-parts into roots and remain there for a period of seventeen years.

ATTENTION COLORED FARMERS

The National Federation of Colored Farmers is receiving hundreds of letters from Colored farmers requesting all kinds of aid and information. We are willing to do everything we can for all the Colored farmers of America. It costs money, however, to maintain offices and our expenses are becoming so heavy that we are compelled to discontinue supplying information to those who request it who are not members of the Federation. If you have faith enough in the organization to believe that it can aid you, then you should be willing to join it and help support it. Isn't that so?

Several County units have organized and elected officers but have not sent in their membership dues. These units are eligible to membership in the Federation until dues are paid. Be helpful. Co-operate. Pay up. "All for each and each for all."

7,000 Farmers Attend National Convention

(Continued from Page 1)

ored farmers in Bolivar county. We expect at least one thousand of them to belong to the Mound Bayou Unit within twelve months.

MAYOR GREEN AND MOUND BAYOU

Only those who truly love their fellowmen could have extended such a welcome to strangers as did the mayor, officials and citizens of Mound Bayou. Mayor B. A. Green was a very busy man and he appeared to be the happiest man on the job. As head of the reception committee, the committee on arrangements, the committee on awards and what-not-else, he had his hands full all the time. The citizens had prepared to entertain and accomodate a large crowd and they did it to perfection.

GENERAL FOODS DEMONSTRATION

A feature that was very instructive and entertaining to the wives and daughters of the farmers was the demonstration of canning and preserving food products given by the representative of General Foods, Inc. The demonstrator, who was assisted by two colored helpers, lectured very interestingly and informed the housewives of many short cuts they could follow which would aid them in preserving their food products. She also made some general remarks during her demonstrations which were well taken by her audience.

INTERNATIONAL HARVESTER CO. EXHIBIT

The International Harvester Co.'s exhibit of farm implements would have done credit to a state fair. This was in charge of Mr. Manly, director of the company's southern headquarters in Memphis. The exhibit was very large, taking up near an half-acre of space, and was very interesting to those who were present. A moving picture, depicting the evolution of farm machinery and the process of manufacturing in charge of Mr. Yancey, was also sponsored by this company and proved to be of great interest and benefit to the many who attended. The company may be assured that the N. F. C. F. appreciated their generosity and that much tangible evidence of their appreciation will be forthcoming in the future.

AUTOMATIC CANNING CO.'S EXHIBIT

The Automatic Canning Co., of Chicago, sent a special colored representative from their southern headquarters at Laurel, Miss., to the convention, who spent three days in the exhibit hall with a special outfit of their cookers and sealers. This company manufactures a product that is second to none and the fact that they are building up a large southern business is proof that colored farmers and housewives know a good thing and seek for the best. Mr. Goslin of Chicago, who was responsible for the exhibit and demonstations, merits the thanks of all for this manisfestation of his company's good-will and friendship.

Mr. LaCouer, of Farm Board

Two of the most outstanding addresses made at the Convention were delivered by Mr. Arthur B. LaCouer, special representative of the Federal Farm Board. Mr. LaCouer advised our farmers to organize, co-operate, diversify their crops and get farm homes of their own. He made it plain to them just what the Farm Board was trying to do to benefit American agricultnre and he told them nothing could be done for them unless they attempted to do something for themselves. Mr. LaCouer was well impressed by the program and policies of the N. F. C. F., so much so, that although he was scheduled to deliver one address the first day, he remained over and delivered another the second day.

Mr. White's Address

Mr. White, assistant director of extension work, state of Mississippi, made a most excellent address. He fully explained to our farmers the benefits of organization and co-operation and especially the necessity of all southern farmers, white and colored, working together for the common good. The farmers enjoyed his address and many of them expressed keen disappointment over the fact that Mr. Hubert, the director of the colored extension work of Miss., was not present.

BOLIVAR COUNTY'S FARM AGENT

Mr. Williford, the county extension agent for Bolivar county, Miss., is a man big enough for his big job fully capable and fair to all. He is well liked by the farmers of Bolivar, colored and white. He has an unique position. Bolivar county produces more long staple cotton than any other county in the U. S. and there are more colored farmers in Bolivar county than in any other county in the U. S. From all accounts it can be said for Mr. Williford that our farmers appreciate his advise and service which he gives to all so freely. Apparently he is the right man for the big job. His address was a good one and the convention was pleased to have him on the program.

THE I. C. RAILROAD AND OFFICIALS

Some of the officials of the I. C. came down from Memphis in a special coach and deliver two good addresses. They urged our farmers to diversify their crops, to produce more and better livestock and to produce and market co-operatively. The I. C. has always shown a fine spirit of friendliness toward colored farmers and this visit was appreciated.

Exhibits and Prizes

Farm and home products on exhibit occupied one entire wing of the spacious high school building. Mississippi has fine crops this year and our farmers were much pleased to display them. Products on exhibit came from thirty-two counties of the state. They included every variety the state produces. More than $500 worth of prizes were awarded by the Committee on Awards, which was composed of Mayor Green, T. M. Blackman, of Belzoni, Swiftown Unit, and Miss Martha Chalmers of Lonise, Holladay Chapel Unit.

SPECIAL BUSINESS CONFERENCE

A special business conference was held at Bethel A. M. E. church Saturday morning, presided over by State Chairman C. C. Richardson, assisted by the efficient secretaries Moore and Stewart, with Marshall Irvin at the door. Among other important matters considered, complete instructions were given to all Units relative to the organization of a Miss. Agricultural Credit Corporation and special instructions were given to all Unit officers to be present at a meeting to be held in Mound Bayou, December 4th, with complete reports, at which time a credit corporation will be set up and will be ready for business the first of next year.

Special mention should be made of the music furnished the convention which was as fine as was ever heard. Those responsible gave the convention a rare treat which was more than appreciated:

Mrs. Washington, who had charge of the registration books, received an unanimous vote of thanks. She was very efficient.

The address delivered by Mrs. Mary C. Booze, Republican National Committeewoman of Mississippi, was highly enjoyed. Mrs. Booze spoke on behalf of the women's clubs. The convention was glad to hear her.

Tho barbecue and other refreshments were good and plenteous. All of the thousands received their share. The committee in charge had a hard job but they did it well. They deserve great credit for their good work.

Mr. E. P. Booze made a delightful Master of Ceremonies. His humor, tact, and homely wisdom kept all highly keyed and added much to the spirit of friendliness and harmony in evidence.

The agent of the I. C. was a very busy man, dishing out information and selling tickets to members and visitors. Few of our race have the opportunity to hold such a position as his. It is a cinch that he knows the art of being agreeable and also patient and the great I. C. appreciates his service and keeps him on the job.

The pastors of all the churches of the city and county were willing to do all they could to make the strangers welcome and help the cause which means so much to their members. Apparently they have also learned to co-operate and this is a hopeful sign.

The merchants of the city went out of their way to assist the local committee in entertaining the crowds and in providing for their comforts. Homes were thrown open and merchants and restaurant keepers even went so far as to reduce their prices, which is an unusual happining for convention time.

Prof. J. H. Powell, superintendent of Mound Bayou Schools, who has just succeeded in getting a boarding department established in connection with the high school, worked long and faithfully in administering to everyone's comfort. He was at the school building from early morning until late at night.

The dance Friday night was enjoyed by all the young people as was also the baseball game Saturday afternoon between Greenwood and Friar's Point. More than one thousand people attended both these affairs.

THE BOY THAT LAUGHS

I know a funny little boy—
The funniest ever born:
His face is like a beam of joy,
Although his clothes are torn.

I saw him tumble on his nose,
And waited for a groan—
But how he laughed! Do you suppose
He struck his funny bone?

There's sunshine in each word he speaks:
His laugh is something grand;
Its ripples overrun his checks
Like waves on snowy sand.

He laughs the moment he awakes,
And till the day is done;
The schoolroom for a joke he takes—
The lessons are but fun

No matter how the day may go,
You cannot make him cry:
He's worth a dozen boys I know,
Who pout and mope and sigh.

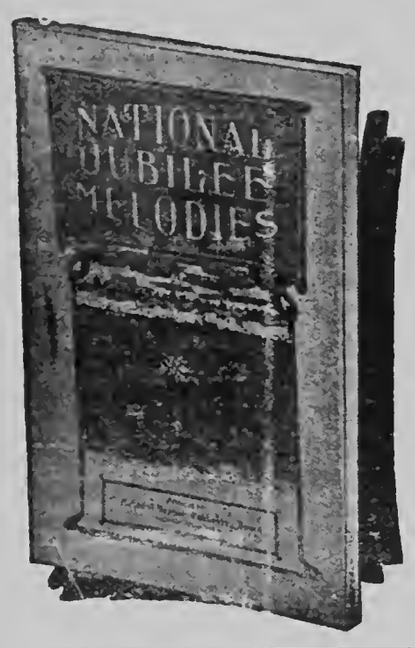
—Wide Awake.

THE LOVE OF THE JOB

I haven't much faith in the man who complains
Of the work he has chosen to do
He's lazy, or else he's deficient in brains,
And may be a hypocrite, too.
He's likely to cheat and he's likely to rob;
Away with the man who finds fault with his job!
But give the man with the sun in his face,
And the shadows all dancing behind;
Who can meet his reverses with calmness and grace,
And never forgets to be kind;
For whether he's wielding a scepter or swab,
I have faith in the man who's in love with his job.

—Clipped.

National Jubilee Melody Song Book



America's original music. Songs from the Plantation and Slave Days. More than one hundred thousand sold in the year of 1921. More now going. Send your order.

PRICE 50c

Use Sunday School Catechisms
FOR THE LITTLE ONES
Select one of the three---First, Easy Lesson Primer 6c;
Second Child's Bible Question Book 5c;
Third Baptist Sunday School Catechism

After thirty-three years of actual Sunday School experience, after thirty-three years of developing a service for the Sunday School forces, we have been convinced that the Sunday School Catechisms, edited, published and printed by the National Baptist Publishing Board, will give help and instruct the children in a way far more advantageous than the Picture Lesson Cards. At the same time, they will save the Sunday Schools money, because there are thirty-two pages in each of these Catechisms, with illustrations, Bible questions and intensive study calculated to develop their minds. These Catechisms are described and priced on the order blanks.

In preparing your order for the next quarter, and from now on, give attention to the Sunday School Catechisms, substitute them for Picture Lesson Cards. We recommend them. We endorse them. We specialize in them.

POULTRY POPULATION OF ILLINOIS IS MORE THAN 28 MILLION

Illinois is an important poultry and egg producing state, according to the following figures:

Chickens on farms in the state last year numbered more than 28,000,000. Illinois has more than one-sixteenth of all the hens in the United States.

More than 3,000 carloads of eggs were shipped in 1930 to Chicago, Boston, New York and Philadelphia from Illinois farms.

Illinois farm hens drink more than 15,000 barrels of water in a day and eat 631 carloads of feed each week. The annual value of poultry products in the state approximates $60,000,000.

COTTON ACREAGE REDUCTION

Houston Post-Dispatch: To judge from the trend of the cotton market following the publication of the government's report on acreage in cultivation, cotton farmers heeded the advice of the federal farm board to reduce acreage this year, but they did not go far enough with their reducing operations.

They cut the area from 46,078,000, cultivated in 1930, to 41,491,000 acres now in cultivation, a reduction of approximately 10 per cent. That is making a start toward cooperation with the board, and under some other conditions, would have been a very strong factor in improving the price structure for cotton.

But with a carryover of about 8,000,000 bales in prospect at the end of the season and with consumption showing no important tendency to increase, a 10 per cent cut in acreage has not thus far served to stiffen the market.

The loss of foreign markets is one of the most serious problems the cotton farmer is facing. If the outlet for his cotton abroad were larger and the movement for export more free, the producer would be better off, even if the price did not improve greatly. With slow demand and low prices at the same time, the situation of the cotton farmer is difficult indeed.

Eight percent less turkeys are being grown in Oklahoma this year than in 1929.

FIND PINK LEMONS IN CALIFORNIA, BUT SPECIMEN IS RARE

Pink lemons have been found growing on a tree in California.

However, the tree is a rare specimen, and the public is warned that there is little chance of the pink lemonade industry switching to the new lemons for raw material.

Pink lemons were first exhibited at the national orange show this year. They came from a tree in Burbank and so far as known, the tree is a bud sport (or freak) of the variegated Eureka lemon, which was developed from a limb variation of the Eureka lemon, discovered in 1911. The variegated Eureka lemon trees are not as productive as the normal Eureka lemon trees and they are grown chiefly for ornamental purposes.

The pink fruited lemon tree is identical in appearance to the variegated Eureka tree, but as the fruit approaches ripeness it develops a decidedly pink color in the rind, flesh, and juice.

Budwood from the pink lemon tree has been inserted in sour orange seedlings and the resulting trees will be studied to see if the pink lemon can be further propagated.

MISSOURI FARMERS PLAN EXPERIMENTS TO GROW RICE CROP

Columbia, Mo.—Success of rice growing experiments conducted near Elsberry by the Missouri college of agriculture has led the animal husbandry department of the institution to conduct livestock feeding experiments with the grain in hopes of finding in it a cheap feed.

In the feeding experiments, rice will replace corn in several combinations and will be mixed with corn in another. Various lots of cattle, hogs and sheep will be fed to determine the rate of growth for the next three or four months.

Rice, used almost exclusively as a human food, has been fed successfully to hogs in some sections of the country, but few experiments have been conducted on beef cattle and sheep, according to E. A. Trowbridge, chairman of the animal husbandry department. Four parts of rice may be utilized. On the outside is a hull similar to oat hulls.

When rice is polished to obtain the grain normally used for human consumption, a dust known as rice bran is obtained. In some cases the entire grain is mixed, and it is with this latter grain that feed experiments will be conducted.

Rice was introduced in Missouri several years ago with varying degrees of success. When low prices forced growers to abandon rice-growing places expensive dikes, canals and watering processes, installed at a great expense, were made useless. With little cost, however, these can be repaired and a cheap crop capable of producing 150 bushel of grain per acre, it is believed, can be sown. Aside from the initial cost, production expense is low.

In efforts to develop a productive system for the gumbo bottom lands of Missouri, the field crops department conducted rice-growing experiments in Lincoln county last summer. The results were extremely gratifying, according to Dr. W. C. Etheridge, chairman of the soils department.

More than a score of varieties were planted and the yield ranged from fifty-eight to 124 bushels to the acre. The average was ninety bushels. This yield was obtained with seed which may not be the best variety or at least hasn't been improved for adaptation to Missouri, Dr. Etheridge said. He believes that the maximum yield has not nearly been reached and that a more productive irrigation method and more effective method of rotation and cultivation can be found.

"Rice is a crop strictly limited to bottom lands with a subsoil tight enough to hold irrigation water," he said. Dr. Etheridge estimated that between one-half and a million acres of Missouri land can be converted to rice growing fields. During the heaviest season, Missouri farmers planted 19,000 acres in the Elsberry district.

The college hopes to work out a practical rotation system with corn, soy beans, wheat, clover and rice. There is no reason, Dr. Etheridge stated, why corn can't be irrigated by the same system used for rice.

The large yield obtained by the college experiments are quite in contrast with the fifty to seventy-five bushel yields obtained in Missouri by rice growers during the last few years.

Application for Membership
NATIONAL FEDERATION OF COLORED FARMERS
Vincennes Hotel, Chicago

As a farmer, I believe the time has arrived when the Colored Farmers should form a National Organization devoted to diversified production, grading, packing, shipping and marketing of farm products and to the purchase of needed farm supplies through co-operative methods, to the end that a more prosperous financial condition may result from their efforts as producers.
I hereby subscribe $5.00 for membership in the National Federation of Colored Farmers for a period of 12 months from date. Also $1.00 for an Annual Subscription to the Modern Farmer.

SHIFTS IN THE NEGRO POPULATION

In the war years and immediately after the war the southern states manifested considerable uneasiness over the exodus to the north of Negro workers—a movement which not a few northern corporations encouraged. The extent and the social effects of that migration have not received as yet thoroughly scientific treatment, largely because of the lack of accurate data. Now the federal census bureau's special bulletin on the Negro population of the country has supplied many significant facts and figures.

The nationwide enumeration of last year showed for the preceding decade an increase of about 1,500,000 in the Negro population. Two-thirds of the increase was in the north. In all the former confederate states, except Texas, the ratio of Negro to white population declined. In four or five southern states there was an actual reduction in Negro population. In northern industrial states, as well as in some far western sections, there were increases of 100 to 180 per cent.

These extraordinary changes naturally entailed a variety of important consequences. For one thing, the death rate among Negroes has been perceptibly reduced, thanks to better living conditions in the north and to urbanization of hosts of rural Negroes. In cities, of course, medical care and hospital facilities are infinitely superior to those in the agricultural regions of the south.

Negro competition with white labor has necessitated readjustment in many industries. The leading trade unions have evinced in recent years a more amiable attitude toward Negro workers. In civic and cultural spheres there has been more and better co-operation between whites and Negroes. The housing of Negro workers in northern cities still presents a grave problem, and the business depression, it is well known, has hit the Negro hard. These matters insistently challenge attention as do other aspects of the great Negro migrant northward and westward

—Chicago Daily News.

FLOOD SPOILS SOIL SURVEY

A flood of the Rio Grande River in New Mexico in 1929 deposited so much silt and sand on lower lands that it made useless a soil survey that had just been made of the region. Deposits of eroded soil were 7 feet deep in some places. It was necessary to resurvey the region.

However, according to the United States Department of Agriculture, the resurvey, along with the figures of the original survey, affords an excellent opportunity to study just how much soil was moved by the flood.

The territory surveyed, covering approximately 100 square miles, lies immmediately above Elephant Butte Reservoir. The surveyors estimate that approximately 88 1-2 million tons of sand, slit, and clay were laid down in the valley. The huge quantity of debris came from the Pnerco River Basin, where overgrazing had made the soil subject to much more rapid erosion than ordinarily takes place.

In many places in the valley the character of the soil was entirely altered by the overdeposits of debris and slit deposited by the flood.

FADING SOIL MEANS FADING OF PROFITS

When the color of a soil begins to change from dark to light, the farmer should look out. A change in the other direction—from light to dark—usually indicates improvement, more organic matter. But a fading soil in most cases means fading crop returns. In central Texas the rolling black lands—uniformly black—have faded in many places to gray, yellow, and even almost white, as if something had drawn the life blood. And erosion has done just that.

Erosion, speeded up by cultivation, has profoundly altered soil conditions in the Texas black lands, the Bureau of Chemistry and Soils of the United States Department of Agriculture has found. This land in a virgin condition produced from 1-2 to 1 bale of cotton per acre without manure or fertilizer of any kind.

Now the region is a mixed black, gray, yellow, aand white area, so rapidly has erosion skinned off the successive layers of soil from black, almost superproductive clay on top, down to white, comparatively unproductive subsoil. This change has occurred in 40 years of cultivation.

This damage has been caused chiefly by sheet erosion, scarcely noticeable as it takes place, but which carries off a portion of the essential topsoil every time there is a rain.

Twenty-three tons of topsoil were removed from each acre by a single rain, measnrement on an average slope showed. This single rain affected 3,000,000 acres of Texas land.

Department soil specialists warn that unless vastly more is done in the future to protect the erosive slopes of Texas than has ever been done in the past the rolling areas of this great cotton-producing belt are doomed to destruction.

FREIGHT CARS FUMIGATED WITH PORTABLE APPARATUS

Plant quarantino inspectors of the United States Department of Agriculture have adapted a portable hand-operated apparatus to fumigato freight cars upon entry into this country at points along the Mexican borders where no car fumigation house is available. This method is an improvement over the old pot method formerly employed for this purpose, say officals of the Plant Quarantine and Control Administration.

Tho portable apparatus consists of a container for liquid hydrocyanic acid, equipped with an air pump and spray hose. When not more than 10 pounds of gas is needed, liquid hydrocyanic acid as a fumigant can be quickly applied by means of air pressure develop- In fumigating cars the car is sealed, one door being left slightly ajar, and a spray rod, equipped with an ordinary spray nozzle, is thrust through the opening. The rod is connected with the portable applicator, and liquid hydrocyanic acid is forced through the nozzle by means of air pressure developed by a hand pump. Great care in handling the hydrocyanic acid, of course, is necessary, as it is quite as deadly to human beings as to insects.

The applicator, charged with 10 pounds of liquid hydrocyanic acid, complete and ready for operation, weighs about 35 pounds. It is compact and has been found very convenient by the plant inspectors.

CONTROL OF MOSQUITOES VARIES WITH THE TYPE

Although to most people a mosquito is just a humming insect which goes around puncturing skins, there are many different kinds of them, says the United States Department of Agriculture. There are mosquitoes which breed in old tin cans containing water and in rain barrels, mosquitoes which breed in swamps and ponds, mosquitoes which are found in clear cool water, and mosquitoes which are most at home in the stagnant water of sewers.

Workers use this knowledge of the different mosquitoes in their campaigns to eradicate the pest. For one type of mosquito they concentrate on the rain barrels, tin cans, and other receptacles near homes. Often water-lily ponds or stock ponds are breeding places of mosquitoes. Here the placing to top water minnows or goldfish is effective for all mosquitoes pass through a "wiggle-tail" or wiggler" stage and the fish feed on them. Frequently the mosquitoes breed in swamps and ditches. If it is too expensive to drain these areas, the method most widely used is that of spraying fuel oil on the surface of the water. This destroys the wiggle tails. Oiling should be done every 10 days during the summer to catch each new crop of wiggle-tails.

DOG AMPUTATES OWN LEG; DOES GOOD SURGICAL JOB

Jacksonville, Ill.,—Charles Phillips, farmer, has a hunting dog which recently successfully acted as his own surgeon. One of his hind legs was injured by a mowing machine, and the dog gnawed his leg off at the hock joint, above the wound, drew the skin down over the joint with his teeth, and now the wound has healed nicely. He would not let any one touch the leg for him.

Correspondence Course By Mail

Special Inducement Offer for Ministers who wish to Study at Home and get the Benefit of the Advanced Course recommended by us

Send Ten Dollars for your enrollment so you may start with the new class, another class in the Correspondence Course Department of the National Baptist Publishing Board will begin to pursue their study. Members are being enrolled, students are being registered, and another opportunity is being offered to those who wish to remain at home and pursue their studies.

We have the following courses and new classes started: Biblical Introduction, Exegesis, Homiletics and Systematic Theology. We are making a special inducement offer of $10.00 for each Course. The lessons will be forwarded immediately upon receipt of a money order for the $10. Questions will be forwarded, examinations will be regular, and the grades applied as soon as they are made, to any who wish to avail themselves of this privilege.

News Notes and Comments

(Continued from Page 1)

Lots of people were under the impression that it was a pair or newly weds. They made a very fine appearance. Brother Blackmon was one of the Judges in awarding of prizes.

That distinguished minister, Rev. H. N. Tyler, Chairman of the Holaday Chapel unit, was there with his other officers. Rev. Tyler is a leader in his section and well liked by all who know him. We are looking for big things from Rev. Tyler this fall.

Sunshine unit was well represented. Those old reliables Messrs Caldwell, Jordan and Harris gave a good account of themselves. Sunshine is one of the best units in the entire Federation.

Think of it. Governors from 12 states issued official commissions to Negroes to represent Colored farmers of their respective states at the convention. This is something new in the history of the Negro farmer.

That little Napoleon, Rev. Gray, and his able secretary Bro. Diggs, carried off the prize for the unit with largest membership. Bro. Gray was so far ahead of the other units in membership that they were lonesome.

Joe Byrd, from way down below Jackson, brought in four of the finest farmers we have ever met. They left well satisfied that the convention was a big success.

Leflore county was more than well represented. Every unit in the county had their officers on hand and they all rendered good service. Brother Gus Moore, the old reliable, R. W. Woodward, G. W. Blackmon, J. C. Harrington, A. D. Banks R. C. Conly, G. W. Bryant and a host of others were on hand from the very beginning of the opening session and remained until the closing day.

Spring Hill did not lack in representation. Brother W. M. Hughes made a fine talk in the business meeting. What he said was well worth hearing.

Spring Hill unit is a little over a year old and they have made some fast strides in membership.

Everybody knows Daniel Givens. He and the other officers of Holly Grove were there. They rendered good service too, in making the convention a success. Brother Givens is one of the first supporters of the Federation.

Carroll, Good Hope, had her officers there. This unit came near winning the pair of hogs for being the largest unit. Bro. Haslett is thoroughly business and is the right man in the right place.

Bro. Griffin and his officers from Gage Spring, were a little late in arriving, but they made up for lost time after they did get there. This bunch of officers believe in doing things big.

Mount Pleasant had more members in attendance than any other unit. That splendid divine Rev. Barrett and his son were on hand early. This unit made up a special donation of five dollars and presented it to the local committee to help in entertaining the convention.

There is a little church over in Holmes County better known as Hyman. A unit was formed there a little over a year ago. Rev. Franklin, Mr. Granderson and others just couldn't stand the idea of a convention and not being there. They scored a home run. Both of them.

Meeks Chapel is another unit that has stood the test of time and made good. Brother Winters and his assistants were there. He made a fine talk.

Saint Mary's does not talk very much, nor do they write very often, but they were on hand and gave a good account of themselves. Brothers Payton and Middleton can always be relied upon. They are dependable.

Galilee unit was more than represented. That former Georgian, R. E. Cash is fairly worshipped in his section, and as one of the officers of Galilee, he has made a good name for himself. This unit had a big delegation.

That big cotton farmer Sam Buckles that knows his onions and his cotton, and who lives over in Sunflower county was one of the first arrivals to the convention. We are looking for some big things from Sunflower county this fall.

The man who has never missed a meeting of the federation is Newt Williamson, of Tunica. He was the first delegate to enroll on opening day. When Newt Williamson gives his word you can always depend on him.

John Cooper, from Watson Chapel, made a fine talk. Our only criticism was that he did not talk long enough. Brother Cooper says crops in his section are the finest in years.

Robert Booker, Chairman of Mt. Olive unit, says every member of his unit is now using "anti knock gas." He says there is absolutely no knocks coming from his section, and he was all smiles when the judges awarded Mount Olive the two Durocs.

A prominent white land owner in attendance upon the convention told President Davis that now is the time for both white farmers and colored farmers to work together or they would be lost. He is thoroughly in accord with organization and says the Negro farmer who tries to make it out of the organization is lost.

Mr. A. M. McDonald from Belmont unit was present at the opening session of the convention. He spoke highly of the organization and said his unit would take on new life this fall. Belmont unit should be larger than it is.

A. R. B. Payne, from Jones Chapel, an all Colored farming settlement in Humphrey county was on hand with his usual smile and cheerful disposition. Bro. Payne is the owner of a fine farm in Honey Island. He says crops are more than fine this year.

E. W. Williams and A. J. Jones ably represented upper Yazoo county at the convention. Bro. Williams carried off one of the prizes for the best peck of field peas. He had a fine display.

FARMERS WILL MEET MAY ORGANIZE LEAGUE TO SECURE MORTGAGE LOANS WITH LOW INTEREST

Geneseo,—Arrangements have been made for a meeting of farmers to be held at 8 Monday evening in Freeman's hall, in the interests of organization of a Farmers' Threo Per cent League in Henry county. Every one is invited to attend.

The purpose of the league is to secure mortgage loans for farmers at 3 per cent interest through a bill to be presented to congress in December. Petitions supporting this measure are being circulated among voters of this community, and will be presented to congressmen.

William F. Costello, field organizer of Ottawa, Ill., is in charge of the organization work in Henry county.

SOY BEAN IS LITTLE, BUT VERY VERSATILE

Christian Science Monitor

Chicago—The humble soy bean is to be one of the prominent actors at Chicago's 1933 Century of Progress Exposition, according to plans.

Tho soy bean is a little thing, a round ivory seed the size of a small French pea. It doesn't look at all important. But, Ah, what it does for man and beast!

Mr. Harvey J. Sconce, farmer chief of the agricultural division of the fair, is gathering in his office some of the products of the soy bean. Varnish. Chocolate candy made in Switzerland. Chop suey sauce, Flour, Salad oil And many others.

The soy bean not only is able to feed animals and humans, but it is good for the soil. While all of this has been known in China for ages, it is still something of a novelty in tho western world. The Russians say, "Plant soy beans and you plant meat, milk, egg and omelets!"

IF YOU CAN GET JOB NOW, YOU ARE QUITE LIKELY TO KEEP IT

I was delighted the other day to find a ray of sunshine piercing what I had feared was another of the dark clouds rolled up in this day of economic storm and stress, writes John O'Ren in the Baltimore Sun.

The light came from the employment manager of one of the nation's largest retail corporations, and was relayed to me by a young college graduate who had just succeeded in landing a job with the corporation in question. I had supposed that this was a particularly bad time to graduate from college and go out into the world to make a living. It had seemed to me that with millions out of work the chances were remote for any of tho recent products of the educational machine to find remunerative or promising employment in tho occupations to which they wished to devote themselves.

But my informant told me that tho aforesaid employment manager pictured the prospect in a somewhat more favorable light. His idea was that, while it is more difficult to get a job now, anyone who does succeed in finding a place and who has any trace of ability is sure to enjoy more rapid advancement than would otherwise be the case when business does begin to pick up

In other words, the opportunity for those who happen to be on the inside when improvement sets in is going to be much broader than it would be if business were already at top-notch. Being always on the lookout for a little illumination amid the encircling gloom, I was delighted with this argument and herewith pass it on in the hope that it may contribute to the general enlightenment.

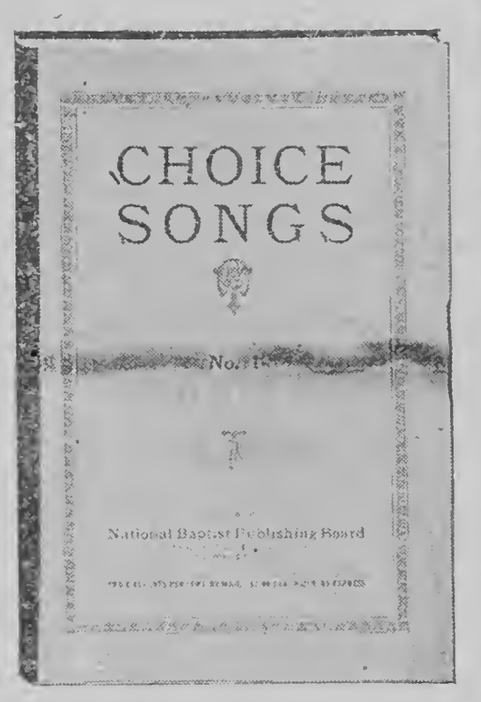
FURTHER CHANGES IN CANADIAN DUTY ON FRUITS WHICH MAY BE OF INTEREST

Fruit and vegetable shippers of tho Tri-States will be interested in the recent change of duty, effective July 21, on peaches, plums, and prunes, under authority of Order in Council, the Minister of National Revenue was authorized to fix the value for duty of certain products named hereunder, as follows:

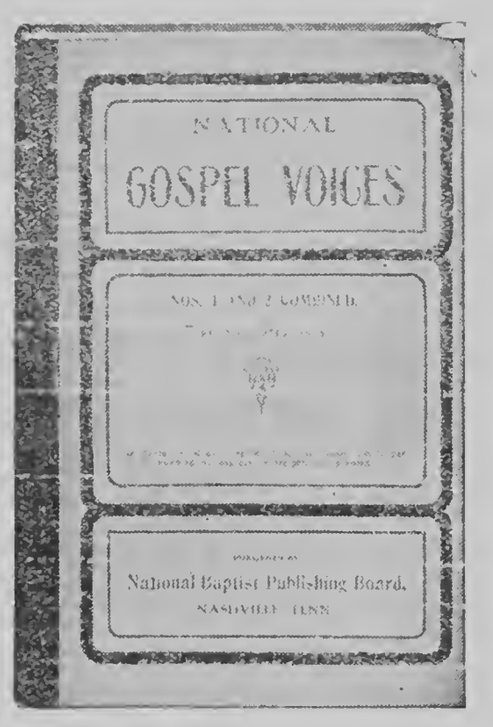
Peaches.....4 1-2 cents per pound; plums and prunes 3 1-2 cents per pound.

Another Order of Council effective July 27, 1931 fixes the value of canteloupes, musk-melons, honeydews and casabas at six cents per pounds; and pears at four cents per pound.

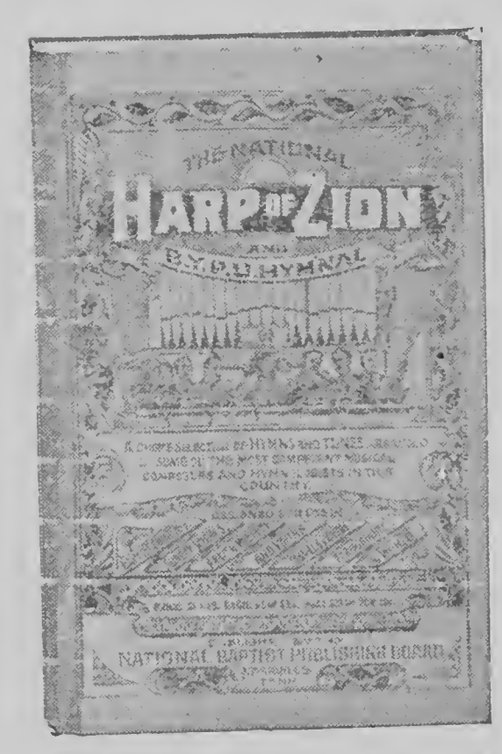
Tho above values apply to the point of production, and where such products are exported directly to Canada from a diversion or intermediate point, the value for duty shall be these so fixed plus all charges thereon to such intermediate points from the point of production. For further information, apply to the Memphis District Office.



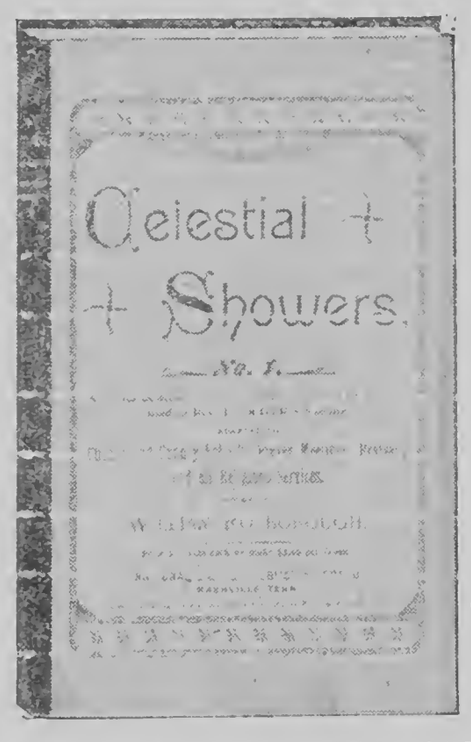
Choice Songs 15c each; $1.80 per dozen.



National Gospel Voices Nos. 1 and 2 combined 45c each; $5.40 per doz.



National Harp of Zion 35c each; $4.20 per dozen.



Celestial Showers 40c each; $4.80 per dozen.

THE MODERN FARMER

Vol. III. Nashville, Tenn., and Chicago, Illinois, October, 15, 1931 No. 8.

Talks To Colored Farmers

By Leon R. Harris, Secretary of National Federation of Colored Farmers

The leaders of the National Federation of Colored Farmers are interested but little in the thousand-and-one plans proposed now-a-days to raise the price of cotton that prosperity may return to southern farmers. Nearly all of the plans proposed are radical, foolish, unsound or worse and will do more harm than good if adopted. Most of them are simply schemes to buck and try to beat the law of "supply and demand!" But this happens to be one law that cannot be beaten by any person or by any nation.

These leaders are interested however in the situation and condition of thousands of colored farmers and farm laborers in the South, many of whom are members of the N. F. C. F. They know it is their duty to give wise advice and instruction and this is what they shall try to do.

First of all—colored farmers

FARM EXECUTIVES TO HOLD MEETING

President James P. Davis to Confer With Leaders of National Federation of Colored Farmers in Mound Bayou

Chicago, Ill.—(Special)—An executive committee meeting of the leaders of the National Federation of Colored Farmers has been called to be held in Mound Bayou, Miss., on December second. This information was given out here this week by James P. Davis, the president of the Federation, after a conference that he had with Leon Harris of Molene, Illinois, and Henry Allen Boyd of Nashville, Tenn., and others interested not only in The Modern Farmer, the official organ of the Federation, but with members of the executive staff. President Davis emphasized the need of such a conference following close on the heel of the National Convention that met in the Mississippi town several months ago.

Notice of the call is being mailed out to officials scattered in the various states. It will be a one-day session, but in that time the president believes that all matters of moment effecting the Federation can be delved into, ironed out and presented in a definite way not only to the state organization but to the local Units in the several states.

The membership in the Association, according to the president's estimate, has gone steadily forward until it represents a little over thirty thousand. The executive committee expects to put on a drive for one hundred thousand goal in membership, and to place the official organ in the hands of every one of these one hundred thousand farmers, tillers of the soil, poultry raisers, fruit growers and stock raisers. There will be, so it is stated, several members present from the Farm Board, whether they will come from Washington or be detailed from some other section, was not definitely learned.

WILL BECOME BIG FACTOR

Farmer to be Most Powerful in Trade

From Lexington, (Miss.,) Advertiser.

To The Lexington Advertiser:

Please allow me space to express a few observations made at the meeting held in the court house at Lexington, Tuesday afternoon when the farmers and business men made an effort to have the price of ginning reduced in line with the extremely low price of cotton this year.

Being interested from the standpoint of a man who is in sympathy with the farmer, the thought occurred to me that the greatest opportunity in the history of farming exists today for organization. The magnitude of such an organization would startle the world in its perfection, and the organized farmers would be the most powerful group on earth.

They could dictate to the universe and in six months have the world on bended knees.

They would force the stock exchanges to close their shops and the brokers would be applying as field hands in their regulated production. No more would they chalk up fictitious values and gamble at pleasure with the toil and sweat of the farmer. Prices set by their group would have little meaning when Mr. Farmer presented them with cost of operations, and demanded his rightful share of profit as other interests now do.

If the world refused to meet them on a basis of fair treatment, the farmer could withhold and produce from the market and starve them into line in less than 24 hours.

Organization would do it—and unless the world looks out and recognizes the fact that the farmer must have a square deal, it is going to dawn on them some day when the fact is made evident by a world-wide organization that will be the most powerful factor on the globe.

The farmer is fast learning his

"Back-to-the-farm Trend Seen in Georgia 1925-30

Loss in Number of Farms Accounted for by Tendency From 1920-25, Reports Show.

WASHINGTON, Sept 9.—In a recapitulation of statistics obtained in the last national enumeration the bureau of census issued a report today showing that while the number of farms in Georgia decreased from 310,732 in 1920 to 249,095 in 1925, a back-to-the-farm trend was noted in the state during the five-year period between 1920 and 1930. By the latter year the number of farms in the state had increased to 255,598, it was shown.

The total number of farms in Georgia include 97,150 having from

PRIZE WINNERS LISTED

Names as Well as Prizes Awarded at the National Convention of Colored Farmers

The list of competition, prizes awarded and winners of contests are as follows:

Largest watermelon—First prize, one can C. M. A. coffee; second prize, year's subscription to The Chicago Defender, both won by Fred L. Booze, Mound Bayou.

Best peck Irish potatoes—First prize, one can C. M. A. coffee; second prize, year's subscription to The Chicago Defender both won by Mrs. Alti M. Crowe, Mound Bayou.

Best stalk of cotton with largest bolls—Tip-top overalls, won by Mrs. Carrie Ford, Merigold, Miss.

Best ear corn—First prize, Tip-top service work shirt; second prize, Tip-top blanket lined coat, both won by Johnie Gayden, Herd's unit of Greenwood, Miss., Route 1, Box 267.

Best peck sweet potatoes—Tip-top overalls, won by Mrs. E. P. Frances, Mound Bayou.

Chairman of lagest unit delegation present—One portable radio, won by I. Gray, Tehula.

To the kid who can holler "Tip-top Overalls" the loudest—First prize, one Tip-top children's rompers and one Tip-top boys' overalls, won by George Hibbler, Mound Bayou; second prize, one box Teaberry chewing gum, won by Chester Gloss, Mound Bayou

To best marble shooter—First prize, one Tip-top overalls, won by Charlie Pious, Mound Bayou; second prize one box Teaberry gum, won by C. F. Morgan, Mound Bayou.

Best dozen eggs (by weight)—First prize, one-pound can C. M. A. coffee; second prize, year's subcription to Abbott's Monthly, both won by Mrs. Altie Crowe, Mound Bayou.

Best peck field peas—First prize one-pound can C. M. A. coffee; second prize year's subscription to Abbott's Monthy, both won by E. W. Williams, Vaughn.

Best home-made house dress—One complete alumium cooking set, donated by the Murray Manufacturing Company, Chicago, won by Mrs. Pearl Davis, Mound Bayou.

Best display of home-made quilts— Sewing machine, donated by Sears-Roebuck Company, won by Mrs. Carrie Ford, Merigold, Miss.

Three largest sweet potatoes—First prize, one can C. M. A. coffee, donated by C. M. A.; second prize, year's subcription to Abbott's Monthly, both won by Mrs. E. P. Frances, Mound Bayou.

Three largest Irish potatoes—First prize, one can C. M. A. coffee; second prize, year's subscription to The Chicago Defender, both won by Fred Montgomery, Mount Pleasant unit.

Best quart jar tomatoes—Year's subscription to Abbott's Monthly won by Mrs. Pearl Davis, Mound Bayou.

Best quart jar corn—Year's subscription to Abbott's Monthly, won by Mrs. H. Brown, Mound Bayou.

Best display of fruits and vege-

SQUARE DEAL FOR FARMER

W. F. Reden of Souix Falls, S. D., Makes Talk

W. F. Reden of Sioux Falls, S. D., representing the National Federation of Colored Farmers, Inc., addressed several hundred persons Sunday morning the Mt. Zion Baptist Church regarding "a square deal" for colored farmers from the Federal Farm Board. The speech followed the regular services conducted by Rev. G. Augustus Burke pastor of Mt. Zion Church.

Mr. Reden discussed a petition that is being sent to 60 leading United States senators and representatives. He is making a tour of the northwest. Returning Monday to Sioux Falls, he then will go to Omaha, Neb., for another address.

Mr. Reden is a 1908 law school graduate of the University of Iowa. He was in the same class as Don Mullan, Sioux City lawyer and exalted ruler of the Elks lodge.

Mr. Reden said the petition is directed chiefly at Senator L. J. Dickinson, as he is leading the effort to reconcile the farmers to the Hoover administration. The petition follows:

Sioux City, Ia.
Sept. 4, 1931.

Sen. L. J. Dickinson, M. C.
Valley National Bank Bldg.,
Des Moines, Ia.,
Dear Senator:

Recently an appeal came to us from Attorney B. A. Green of Mound Bayou, Miss., attorney for the National Federation of Colored Farmers, Inc., under the laws of Illinois and licensed by the department of agriculture, as a co-operative marketing association, conforming to the McNary-Haugen farm relief bill governing such organizations. The National Federation of Colored Farmers has units in all the southern states.

The Negroes are 15 per cent of the farming population of the United States. Over seven-eigths of the cotton is raised by them, and they own 35 per cent of all that is produced in the United States, and yet the Negro farmer has received no assistance or rec-

(Continued on Page 2)

The Same Old Story of The Pools

(Professor James E. Boyle in the Cotton Digest)

Since the farm board's main program is one of big commodity pools and since Chairman James C. Stone of the Farm Board was once general manager of one of the three big tobacco pools, we had better pause for a moment at this point and ask a few questions about the failure of these tobacco pools. At the very outset, we may divide all big cotton, wheat, and tobacco pools into two classes: First, those that have failed; second, those that will fail.

Now, to come back to the big tobacco pools, the burley, the tri-state, and the dark tobacco. What

(Continued on Page 2)

Organize All Farmers, Hyde

Government Official Urges United Action to Control Production

By Colvin C. Bowsfield

Arthur M. Hyde, Secretary of Agriculture, advocated mixed farming on small tracts and complete organization of rural families all over the United States in an address before the national farm conference, which closed yesterday at the Hotel Sherman.

He supported the program which Edward A. O'Neal, L. J. Taber, James C. Stone, C. W. Warburton and Charles A. Ewing had outlined on Monday, and which was adopted yesterday in the form of a resolution.

Implies Hoover Support.

Secretary Hyde did not say he was voicing the ideas off President Hoover, but the speech upholding a nationa plan of rural organization was interpreted as indicating administration support.

"If agriculture is to advance," said Secretary Hyde, "there can be no halfway businss in the matter of organization. Farmers need to become conscious of the fact they cannot successfully go along under old methods. There must be united action both in commodity production and marketing."

He said the large farms are re-

(Continued on Page 2)

Many New Strawberries But Older Ones Remain

Washington, D. C., Sept. 11—People who avoid strawberries because of their high acidity need not deny themselves the pleasure of eating this fruit if they will try some of the milder flavored varieties such as the New York, the Marshall, and the Chesapeake, the department of Agriculture advises. Several hundred varieties of strawberries are grown in the United States, one for every locality and purpose, according to specialists of the department who have classified them for the benefit of growers and consumers. Of this large number of varieties, however, only about 40 are grown commercially, and 19 of these constitute 96 per cent of the acreage. The three leaders—Klondyke, Aroma, and Howard 17—account for 63 per cent of the acreage in the country.

Climate and soil conditions are factors that determine to a large extent the best varieties to grow in the different sections of the country. The Missionary is the leading sort in Florida and along the Atlantic Coast to Maryland. Most other parts of the south prefer the Klondyke. The Blakemore, a new berry developed by the Department, is becoming popular in the Carolinas and as far north as New Jersey.

The Aroma is a favorite in most of the milder regions of the central states, including the northern part of Arkansas and Tennessee and the southern parts of Missouri, Illinois and Indiana. The Dunlap is popular in the remainder of the middle west. In the northwest, Marshall, Oregon, Ettersburg 121, and Clark are most widely grown, while the

(Continued on Page 8)

ORGANIZE ALL FARMERS—HYDE

(Continued from Page 1)

sponsible for much of the overproduction.

Program Adopted.

The last business of the conference was the adoption of the following program:

"In order that American agriculture may enjoy economic, social and educational equality of opportunity with other groups, it is agreed that the first requisite is the complete organization of farm people in general farm organizations, educational project groups and co-operative associations.

"The limiting factor in our efforts for success is the failure of so many farmers to support existing organizations. Responsibility for this situation must rest upon those who have failed to respond to appeals for united efforts."

Urges Support.

He also urged creation of an extension service, agents of which would promote further organization and support from the farmers.

Another meeting to discuss agricultural problems will be held today by the American Farm Bureau Federation at 58 W. Washington St. The Purpose is to seek means of stabilizing value of farm products. Farm leaders, economists, editors and financiers will attend.

THE SAME OLD STORY OF THE POOLS

(Continued from Page 1)

was their announced purpose? To dominate the market. Their announced aim was to control the price of tobacco by the simple process of controlling the supply. The supply was to be controlled by means of signing up most of the growers with iron-clad, legally binding contracts. The contracts were signed. Temporary monopoly power was secured. Prices were elevated by the simple process of holding back tobacco from the market. We all recall the cotton and wheat program of our farm board—how this board on October 21, 1929, advised the farmers to hold back their cotton; and on October 26, advised the farmers to hold back their wheat; we all recall how public money was put into the market by the farm board to hold back more and still more cotton and wheat, until the price broke under the accumulated stocks amounting to some 250,000,000 bushels of wheat and some 3,500,000 bales of cotton—all of which should long ago have gone into foreign consumption.

But to get back to our tobacco pools. As I have already said, these pools practised holding the crop off the market—one, two, three, or more years for parts of the crop. When a pool, or a farm board, holds back a crop to force the prices up, two things always happen: Consumption of our crop falls off. Production of this crop, both in domestic and foreign countries, increases.

For instance, note carefuly what happened to tobacco when the dark tobacco pool withheld the crop. Before the days of the pool, we were producing and selling at a profit some 300,000,000 to 375,000,00 pounds of dark tobacco a year. Seventy-five per cent of it went for export. It went to England, to France, to Italy, and elsewhere. Italy was buying 48,000,000 pounds a year. The pool changed all this. Markets, built up slowly over a period of half a century, were destroyed in three years by pool domination. Italy stopped its purchases entirely. Other foreign buyers stopped or curtailed their purchases. The question may be asked, where did these former customers of ours get their supplies of tobacco? The answer is easy. The Italians entered into the growing of tobacco in Italy. Resisting the pool's demands, Italy was soon producing 96,000,000 pounds of tobacco in Italy, which was twice their requirements. Italy sold its surplus to other countries. The head of the agricultural department at Rome remarked to a gentleman from Kentucky that hopes were high in Rome that the pool would continue a few more years, for then Italy could pay its war debt through profits on tobacco alone.

In some degree the growing of tobacco took place in other countries in Europe, such as France, where their crop was largely increased and their purchases in this country decreased. England, normally, taking 100,000,000 pounds of our tobacco, reduced its orders very greatly, and increased its imports from its colonies. These increases largely came from India and South Africa.

Now our average annual crop of dark tobacco has dwindled from 350,000,000 pounds to under 200,000,000. And this small crop has almost no buyers. Thus the pool in two or three years destroyed a foreign market which it had taken half a century to build up. What the pool did to the tobacco farmer, the farm board is doing now to the cotton and wheat farmers. To save the farmer we must destroy the farm board. For the famers have already learned one or two simple lessons in economics, namely: Co-operation of, by, and for the farmers is good. But the big pools are not owned or controlled by farmers. Pools, with their "orderly marketing," are only high-sounding names for speculation by amateurs.

SQUARE DEAL FOR FARMER

(Continued from Page 1)

ognition from the Federal Farm Board.

As nearly all Negroes north of the Ohio river once lived in the south, they are well acquainted with the conditions of the Negro farmer, and as Representative Kopp of Iowa says. "the Negro should have representation on the farm board because the Negro race has its own peculiar problems."

We Negroes in the north, being zealous of the welfare of our southern brother, will support at the polls the man who will give us farm relief, regardless of party.

From Sioux City (Ia.) Daily Tribune.

WILL BECOME BIG FACTOR

(Continued from page 1)

lesson. He is buying much of his needs through community organizations. He is saving money and reducing costs.

What will happen when the farmer graduates in his school of experience and can control everything from the seed that goes into the ground to the harvest products? You can write your own answer.

You are going to be forced to grant him a living wage, or else we are going to be crushed, for the point of desperation is practically reached at present—and the farmer is fighting back through demands that must be given him or we are going to find ourselves at his mercy.

He can care for himself easily by raising what he needs.

He has been feeding the world and the world knows it.

The minute he decides to quit running a free boarding house, organize his forces and engage in battle with the non-producers, you are going to see one of the most determined set of men on earth, and the fact might as well be known—he is better prepared to win than the rest of the world that is dependent upon him.

One year of idle acres will convince the universe that the farmer is the biggest unit and he is now in a receptive mood towards caring for his own welfare.

The farmer figures he can be no worse off and, in the meantime—if he organizes—the agencies that have been living off his labor will find heisno longer tolerant of the conditions he has been working under.

It is high time for the farmer to organize.

The time is now and the world would do well to recognize this fact.

The farmer must get a square deal or else we will face the power that will come through his organization.

Think this over, Mr. Business Man. The farmer is coming into his own!—ONLOOKER.

CALIFORNIA MAN BUILDS HIS HOUSE FROM DIRT HE DUG TO MAKE CELLAR

Special to The Christian Science Monitor

Davis, Calif.—Some experts fail to take their own advice, but at the State College of Agriculture here is an engineer who not only believed that mud buildings would make excellent farm homes, but built one in which to live and prove his theory.

The builder is Mr. J. D. Long, a member of the research staff of the agricultural engineering division of the college. He first became interested in adobe construction some seven or eight years ago when an investigation of the suitability of such material for California farm buildings was proposed.

Two years ago Mr. Long decided to try out in a personal way the merits of the material. The result is a snug, attractive home, where inside temperatures never reach the extremes of the exterior and high winds and outside noise are not noticeable, according to the builder.

The house is not of the sun-dried brick common to early California days, but is of rammed earth. Loose, moist soil was placed in shallow layers in forms and tamped directly in place in the walls. The walls are 12 inches thick, and have a small amount of straw in them for surfacing.

A heavy, reinforced concrete foundation supports the walls, and around the top of the walls lies a reinforced concrete bond stone which ties them together. Interior partition walls are of good studs and lath, plastered. The abode walls are surfaced with a lime plaster on the interior and have an exterior stucco coat of mud plaster. The plaster was applied with a steel trowl, and after it had dried was given one spray coat of diluted linseed oil.

Steel casement windows with inside screens were used. All but one door was made by hand. Heavy hand-split shakes cover the roof. The house plan includes a moderate-sized living room, two bedrooms, bath, a concentrated kitchen and dining nook, rear service porch, dining porch opening on a rear garden, and an attached garage. The house has a large basement. It was from the basement excavation that the material was secured for making the walls.

SAUERKRAUT IS DANDY IF YOU LIKE IT

(Des Moines, Iowa, Register)

(Iowa News Service)

Lakota—Twenty-six years ago R. C. Smith, a young merchant, conceived the idea of treating the city's visitors on one day to sauerkraut.

Now sauerkraut is a food that you like or you don't. There's no middle ground. People in the first class came from miles around.

Careful Selection.

So every year since then, Lakota has had a sauerkraut day. For the last 18 years Fred Schwarz, farmer, who knows a good cabbage when he sees one, has selected the choicest that these parts have to offer for the annual celebration.

Buttermaker Nick Behrends steam cooks the food in the local creamery. Saturday there were three barrels of laced cabbage served with trimmings—frankfurters and buns—to 4,000 watering mouths at noon.

An Institution

But sauerkraut is more than a food in Lakota. It is an institution, a tradition. There is a sauerkraut committee, on which S. A. Lindsey has served 18 years.

And the figure of 4,000 plates served at noon does not measure the crowd. Saturday's program was the largest ever attempted, and last year 9,000 persons tasted sauerkraut.

—and Sauerkraut.

The Lakota boys band, the Mason City drum and bugle corps, baseball teams and dance orchestras filled in the time between bites.

There are free acts and sports and dancing and music—and sauerkraut.

"Old timers" on the sauerkraut committee are M. B. Pringle, Ed Thaves, Bill Turley, Bill Gutknecht, I. E. Wortman, Oran O'Keefe, U. A. Dressman, Dr. H. H. Murray and E. R. Worley.

BABY NEAR OELWEIN DROWNS IN RAIN JAR

Oelwein—Agnes Maxine Ott, 13 months, seven miles west of here, drowned Friday when she fell into a five-gallon jar of rain water near the porch. Funeral services will be this afternoon at the Lutheran church in Fairbank.

"GET YOUR SPARROWS OR PAY"

Sparrows are causing so much damage to farm products in many parts of Britain this year that members of clubs formed with the object of exterminating the birds are fined if they do not return a sufficient quota of "dead." Wire traps, baited inside with corn, are used to capture the birds. Gray squirrels are also causing annoyance, particularly in Kent, where an intensive "war" is being waged against them.

NANNIE H. BURROUGHS ON "INTER-RACIAL COOPERATION

In an address before the National Baptist Convention in Atlanta, Miss Nannie H. Burroughs, president of the National Training School, of Washington, D. C., remarked:

"The commission on inter-racial co-operation, which commission is the most significant bi-racial movement that has been started and promoted by white Americans in this generation, is the voice of the new south crying in the wilderness, saying, 'Prepare ye the way of the Lord by making the south safe for both races.'

"The only thing this and the next generation can do is to beat race prejudice off the main highway of American progress, and thereby keep it from blocking the onward march of the whole nation. Statesmen and churchmen are together responsible for keeping the road clear.

"Race prejudice should not be permitted to masquerade in the constitution of the United States, in courts of justice, and in the church of God."

COPPERIZED PAPER WRAPPERS PREVENT ROTTING OF PEARS

Washington, D. C., Sept. 11—Copperized paper wrappers for pears boxed for shipment in Washington and Oregon will practically prevent the spread of "gray mold" or "nest decay" in storage, Dr. J. S. Cooley, plan pathologist of the United States Department of Agriculture has discovered. Washington and Oregon pear growers are accustomed to the wrapping of fruit but ordinary paper does not check the spread of this rot to sound fruit.

The decay is caused by the fungus Botrytis, and has caused serious losses. Doctor Cooley developed a wrapping paper impregnated with copper, and proved highly satisfactory last year in packing about 30,000 boxes of pears.

Reports to the Department say that most of the Oregon pears to be stored for any length of time this year will be wrapped in the copperized paper. The Department has applied for a public-service patent on the new process.

CIVILIZATION

Life: A jazz band composed of Indians was heard on the radio the other night. Its players whooped and yelled like wild white men.

WESTERN 'HOPPERS' FINDS ITS WAY EAST

White Plains, N. Y.—A five-inch grasshopper was captured by an office boy on the window ledge of the Travel Service Co.

Amateur specialists were mystified as to how the grasshopper had made its way east since it belonged to the species only found in the far west.

ATTENTION COLORED FARMERS

The National Federation of Colored Farmers is receiving hundreds of letters from Colored farmers requesting all kinds of aid and information. We are willing to do everything we can for all the Colored farmers of America. It costs money, however, to maintain offices and our expenses are becoming so heavy that we are compelled to discontinue supplying information to those who request it who are not members of the Federation. If you have faith enough in the organization to believe that it can aid you then you should be willing to join it and help support it. Isn't that so?

Several County units have organized and elected officers but have not sent in their membership dues. These units are eligible to membership in the Federation until dues are paid. Be helpful. Co-operate. Pay up. "All for each and each for all"

THE COUNTRY SCHOOL
By L. H. Bailey

I teach
The earth and soil
To them that toil,
The hill and fen
To common men
That live just here;

The plants that grow,
The winds that blow,
The streams that run
In rain and sun
Throughout the year.

* * * *

And then I lead
Thro' wood and mead
By bench and rod
Out unto God
With love and cheer.

—Selected.

THE BANANA

(As the Japanese schoolboy would have described it.)

The banana are a remarkable fruit. He are constructed in same architectural style as hon. sausage. Difference being, skin of sausage are habitually consumed, while it are not adviceable to eat rapping of banana.

Perhaps are also intrissting the following differences between the two ojpacts:

Banana are first green in culler, then gradual turn yallowish. Sausage start out with indeffinit culler (resamble terrior cotta) and retain same hue indefinitely.

Sausage depend for creation, etc., upon human being or stuffing machine, while banana are prristine product of hon. mother nature.

Both articles resamble the other in that neither have pit or colonel of any kind.

In case of sausage, both conclusions are attached to other sausages; hon. banana, on opposite hand, are joined on one end to stain, either termination are intirely loose.

And finally, banana are strictly member of vagitable kingdom, while affiliation of sausage often are undecided.

—From Columbia Cauldron.

PAPER SUBSCRIPTION OFFERED FOR COTTON

Jonesboro, Ga.—The Clayton County News and Farmer, local weekly newspaper of Jonesboro, announced today that it would take cotton on subscriptions to the paper, accepting either the baled product or cotton warehouse receipts. The editors and publishers are L. M. Moore and J. E. Mundy.

WHAT TO ASK FOR WHEN ENTERING MODERN SHOP

So many people complain that they do not know where to go to purchase the articles they desire. This is perhaps due, says the Baltimore Sun, to the fact that they are old-fashioned and have not kept up with modern methods of distribution. They may be assisted by an up-to-date classification of shops and the goods which they handle.

Sports shop—A place to buy shirts, neckties, flannel trousers, underwear and similar haberdashery.

Tobacco shop—A place to buy clocks, watches, playing cards, candy, books, shoe-trees, sandwiches, coffee and soft drinks.

Drugstore—A place to buy books, magazines, toys, electric toasters, salted nuts, hats, clocks, cameras, olive oil, coffee, handkerchiefs and sporting goods. Customers, it is rumored, are beginning to complain because drugstores do not carry automobiles and sewing machines.

Lunch room—A place to buy soft drinks and tobacco.

Book shop—A place to buy greeting cards, place cards, favors for parties, fountain pens, office accesories, wedding invitations, calendars and etchings.

Hardware store—A place to buy grass seed, fishing tackle, insect powder, fertilizer and dog biscuits.

China store— a place to buy office furniture, sand boxes, slides, trapezes and costumes for children.

Shoe store—A place to buy socks, stockings, walking sticks and spats.

Grocery store—A place to buy tobacco, favors for parties, soap and ice cream sodas.

Department store—A place to have the motor car washed, polished and otherwise serviced.

Piano store—A place to buy radios.

Shoppers should always bear one point in mind: Never be discouraged by the sign over the door.

TIME TO FIGHT PEACH BORER

East Lansing, Mich.—The entomology department of Michigan State College announced this week that it is time for orchardists to make applications of paradichlorobenzene for the control of the peach tree borers. When covered with soil this chemical volatilizes into gas, killing borers in the soil and in the trunks of the trees.

PRESS BULLETIN OF THE MEMPHIS DISTRICT OFFICE OF THE BUREAU OF FOREIGN AND DOMESTIC COMMERCE

Monday of each week there is issued a press bulletin from this office consisting of pointed paragraphs of general interest to those concerned with foreign trade—and that means everyone, for it is necessary to export about 15 per cent of our surplus in order to insure a profit on the other 85 per cent sold to domestic trade. The Department of Commerce is in touch with all sections of he world, and these paragraphs pertaining to foreign news are based on cablegrams. We also offer domestic commerce items in cryptic paragraphs, as the Department of Commerce activities are now being directed to domestic commerce problems.

"AMERICA'S SWEET TOOTH" is to be the title of a discussion of the confectionery business which Dr. Julius Klein, Assistant Secretary of Commerce of the United States, will broadcast Sunday, October 11, over the coast to coast network of the Columbia Broadcasting System from 6:00 to 6:15 P. M., Central Standard Time. This talk will be heard locally over STATIONS WREC, Memphis; KLRA, Little Rock; WDOD, Chattanooga; KNOX, Knoxville. In addition to these it will be read independently over Station WSM, Nashville at 11:30 on Monday following, and over WDIX, Tupelo, on the following Wednesday at 12, noon.

Dr. Klein will show how the story of a pound package of candy would read like a chapter out of Marco Polo's Travels since its ingredients have their origin in many fascinating lands. He will tell something, also, of the history of this commodity—the sweetmeats of the ancient Egyptians, the traditions about confections at the luxurious court of the great Solomon, and so on down the ages.

The present importance of the confectionary industry and trade in the United States, its success in export markets, and the striking measures taken recently to put candy distribution on a more scientific basis—all these phases of the subject will be discussed by Dr. Klein. His broadcast will be especially timely in helping to usher in the National Confectionery Week which will have its culmination date on October 17.

FACILITATING THE USE OF COTTON IN GREAT BRITAIN

A report from Consul Dayle C. McDonough, at Bombay deals with the facilities provided the raw cotton trade in India by special agreement with the cotton trade in Lancashire, England. The report is long and contains some valuable information, one paragraph of which is as follows:

"The Indian Central Cotton Committee has been making systematic efforts to popularize the use of improved varieties of Indian cotton in the Lancashire mills and were supplying type bales of such cotton to the Liverpool Cotton Association for some years past. They have, however, lately stopped sending these type bales although they had helped merchants and spinners to see for themselves what cotton was available and to compare the genuine article with private types offered them."

For further information regarding this report, apply to the Memphis Office.

BRITISH BUSINESS REACTS TO STERLING SITUATION

Current developments in Great Britain resulting from the depreciation in the pound sterling are reported in a cablegram to the Department of Commerce from Commercial Attache William L. Cooper, London, who states, "There has been a curtailment in retail buying, with the exception of a sharp increase in demand for some imported merchandise, such as canned goods, in anticipation of higher prices (in terms of British currency) Prices for raw materials are being adjusted to offset the decline in the value of currency. The "Buy British Goods" campaign is experiencing a renewed strong stimulus." For further information, apply to the Memphis District Office.

DROP IN STERLING STIMULATES BRITISH COTTON TRADE

Cotton trading has been greatly stimulated owing to the hope that the textile export trade will revive as a result of the depreciation of the pound sterling, Commercial Attache William L. Cooper, London, informs the Department of Commerce. Spot sales of raw cotton during the last three days of the past week amounted to more than 90,000 bales, the cable states. Business in yarns has expanded greatly with heavy forward bookings. The Lancashire Cotton Corporation is reprted to be reopening for mills with a combined total of 315,00 spindles.

DOMESTIC BUSINESS CONDITIONS

As measured by statistic available through the "SURVEY OF CURRENT BUSINESS" indications are as follows:

Bank debits: Declined from the previous week and were lower than like period, 1930.

Interest rates: On call money remained the same as the previous 18 weeks.

Prices for representative stocks: Declined materially from the previous week reaching the lowest level so far in the present depression.

Prices of 40 leading bonds: Continued the decline which has been under way since the second week in July, reaching the lowest quotation for this year.

Business failures: As reported by R. G. Dun Company increased materially in number reaching the highest number since the first week of August, but were under those of last year.

Wholesale prices: As indicated by Fisher's composite index of 120 commodities decreased slightly from the week previous and lower than last year.

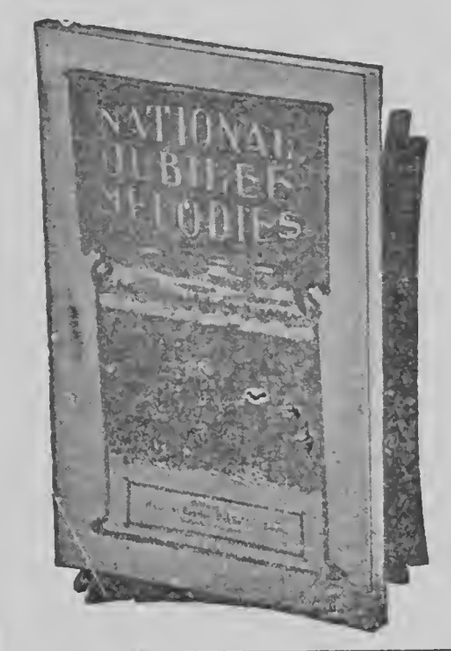
Cotton prices: For middling, decreased to the lowest quotation so far this year.

STOCKS OF AMERICAN COTTON IN ROTTERDAM REDUCED

The stocks of American cotton in Rotterdam at the end of August decreased to 5,871 bales from the stocks at the end of July when they amounted to 10,054 bales although considerably larger than those at the end of August, 1930, when they amounted to 1,614 bales, according to a cablegram received in the Department of Commerce from Commercial Attache Jesse Van Wickel, at The Hague. For further information, apply to the Memphis District Office.

Cans for preserving fruit are to be made at the rate of 1200 a minute, or 100,000,000 a year, at a new factory in Worcestershire, England.

National Jubilee Melody Song Book



America's original music. Songs from the Plantation and Slave Days. More than one hundred thousand sold in the year of 1921. More now going. Send your order.

Use Sunday School Catechisms
FOR THE LITTLE ONES
Select one of the three---First, Easy Lesson Primer 6c;
Second Child's Bible Question Book 5c;
Third Baptist Sunday School Catechism

After thirty-three years of actual Sunday School experience, after thirty-three years of developing a service for the Sunday School forces, we have been convinced that the Sunday School Catechisms, edited, published and printed by the National Baptist Publishing Board, will give help and instruct the children in a way far more advantageous than the Picture Lesson Cards. At the same time, they will save the Sunday Schools money, because there are thirty-two pages in each of these Catechisms, with illustrations, Bible questions and intensive study calculated to develop their minds. These Catechisms are described and priced on the order blanks.

In preparing your order for the next quarter, and from now on, give attention to the Sunday School Catechisms, substitute them for Picture Lesson Cards. We recommend them. We endorse them. We specialize in them.

THE MODERN FARMER

Official organ of the National Federation of Colored Farmers

Leon R. Harris - - Editor

Published Monthly by the Modern Farmer at Nashville, Tennessee, and Chicago, Ill.

Nashville, Tenn., Office 447 4th Avenue, North.

Chicago, Ill., Office: Vincennes Hotel, 36th and Vincennes Avenue.

Devoted to the interests of the Farmer, Truck Gardener, Livestock and Poultry Breeder, the Home and the People.

Entered as Second Class Matter, April 10, 1929, at the Post Office at Nashville, Tenn., under act of March 3, 1879.

All contributions for publication in the Modern Farmer should be addressed to The Modern Farmer, 447 4th Avenue, North, Nashville, Tenn.

No libelous matter will be published. Unsigned articles or letters, and those written on both sides of the paper will not be used.

Subscription price $1.00 per year, payable in advance. Personal checks must be certified. Make all checks or money orders payable to The Modern Farmer.

Advertising rates and sworn circulation figures presented upon application.

"OUR SLOGAN"

STAY ON THE FARM IF YOU'RE ON IT! GO BACK TO THE FARM IF YOU'RE OFF IT!

THE LAW

"It is hereby declared to be the policy of Congress to promote the effective merchandising of agricultural commodities by encouraging the organization of producers into effective associations under their own control.

The Board is authorized and directed—to promote education in the principles and practices of cooperative marketing—to encourage the organization, improvement in methods, and development of effective cooperative associations." (Public—No. 10—71st Congress. Sec. 1-5.)

THE GOSPEL

"This law is predicated upon the ability of the farmer to manage his own business, once he is organized to do so. Cooperation is the key to it and only in exceptional cases can the Federal Farm Board have any dealings with a farmer who is not a member of a producer-owned and producer-controlled marketing unit." Hon. Sam'l R. McKelvie, Member, Federal Farm Board.

The National Federation of Colored Farmers believes that the Colored Farmers of America should own and control their own co-operative associations.

"Co-operation With All—Affiliation With None."

Editorial

MORE LOW-DOWN ROBBERY

Reports reaching the general offices of the National Federation of Colored Farmers state that in some sections of the South, especially in Mississippi, some landlords are allowing their tenants only from $4.50 to $5.00 per bale for their half of the cotton produced. The present price of cotton is from five to six cents per pound but long staple cotton is bringing much more. Some of these tenants are producers of long staple cotton.

This is simply brazen robbery. We know landlords are hard up and can just keep their heads above water, but he is more than unfair and unjust who will take advantage of his tenants' lack of knowledge and helplessness during these times. Landlords who practice such tactics are bound to reap a whirlwind and reap it much sooner than they expect. If they are as wise as they are evil, they will get all they can this year and then abandon the plantation and move to the city or to some other "foreign" country. They will never have such a good opportunity to rob again.

COLORED FARMERS MUST BECOME FARM OWNERS

A farm home-ownership campaign is about to be launched among tenant farmers in Georgia. This is a grand and glorious movement—in fact, it is the best news that has come out of Georgia for many moons. It is the New South—the Young South moving now and moving in the right direction.

We hope every colored tenant farmer in Georgia will be ambitious enough and courageous enough to accept any reasonable opportunity offered him to purchase a home and farm of his own. The time has come when the colored tenant farmer must prove that he wants to have something and be somebody by his actions. Talk is useless. Whining is worse than useless. Praying is also useless if the Brother is too trifling to watch and work.

We are informed that the Georgia State Chamber of Commerce is sponsoring a plan whereby every tenant farmer in the state of responsible character may become a farm owner. Thousands of colored farmers in the state are men of responsible character. If they were not they would not be in Georgia.

These tenant farmers should swamp the office of the State Chamber of Commerce with inquiries concerning the plan and if it is at all worth while, they should sign up and move to their own farms. Please write and let us know who is the first.

HELP THE RED CROSS—IT HELPED YOU

The American Red Cross will open its annual drive for funds next month and every colored farmer who can possibly do so should give something to this organization. It came to our rescue last spring when we were in distress and now is the time to prove our thankfulness in a way that will do some good. "Freely as ye have received, freely give."

We trust that every Unit of the N. F. C. F. will send an offering and get its name on the membership roll. We are not able to give much but let's give what we can. The "widow's" mite is always acceptable and is sure to bring a blessing.

THE SMART FARMER STILL MAKES IT

It was Sydney Lanier, the great southern poet, who said, "There is more in the man than there is in the land." We might add that there is more in the man than there is in the crop, too. In spite of low prices some colored farmers are going to make some money this year and it is interesting to know why they are going to do it.

First of all, they purchased their farm and home supplies co-operatively and this cut down their living expenses and production costs Some were able to get reasonable credit because they have proven to their creditors in times past that they are dependable risks. They always managed to come out ahead. Then they accepted the advice of those who knew what was what last spring and planted many crops instead of just one or two-crops. They fed cheap shorts and wheat to their hogs, cattle and chickens and ere long, they will sell meat and eggs at a good profit. They planted cotton for quality instead of for quantity and this is going to bring them much more than the measly five or six cents per pound and they are going to have an easy time selling it.

Yes, some colored farmers are going to make money this year. It isn't luck, Brother Farmer. It is organization and pluck and good-management and industry and commonsense. Go thou, next year and do likewise.

COLORED FARMERS SHOULD PIONEER

Some variesties of agriculture experienced a decline between the censuses of 1920-1930 but nurseries, greenhouses, vegetable and flower seed farms, bulb farms and mushroom farms did a thriving business. All of these increased in number and value and their owners made money.

Very few colored farmers are engaged in these lines of agriculture but there is no reason why they should not be. If a white farmer can make money growing mushrooms, seeds, flowers and nursery stock a colored farmer can too. The consumer is not going to boycott the colored farmer's product if it is as good or better than the other fellow's.

We should pioneer a little and discover some of these ways of making money off the farm besides raising cotton, corn or tobacco. Sometimes there are "acres of diamonds" right at our back doors. We know of a 500 acre swamp in North Carolina, every foot of it owned by colored farmers, that would make a fine muskrat or otter farm. The southern states should be supplying the nation with froglegs. They are as good as spring chicken and bring high prices. There should be at least a hundred greenhouses in every southern state owned by colored farmers. We should also have many more seed farms and nurseries. There are fox farms in this country bringing their owners thousands of dollars a year but we have never heard of one owned by a colored farmer.

Let's look about us and discover where the money is and go after it. That's what the white man does More colored farmers should be explorers and pioneers.

SELFISHNESS OF SOUTHERN CITIES

Some southern towns and cities have almost taxed the farmer and his produce off the streets. They really do not want to help the farmers, despite their assertions to the contrary. They possess no adequate marketing facilities where farmers can display and sell their produce and a farmer cannot sell from wagon or truck unless he pays as big a tax as the merchant or druggist.

This is politics' meddling with the individual's personal liberty. Many city people prefer their vegetables eggs and butter direct from the farm and they should be allowed to buy them from the farmer. The middleman is not needed when the farmer, himself, can sell.

More southern towns and cities should also establish processing plants and get the farmers to supply the raw products. Their own citizens would just as soon eat canned stuff raised near home as stuff raised a thousand miles away. And also, they would be able to get better goods at lower prices. These towns and cities might find it profitable to help their farmer-neighbors a little themselves, instead of requesting Washington to do all the helping.

DIGESTING THE NEWS

By Clifford C. Mitchell

Don't wait for someone to give you a break, make a break. Don't wait for the iron to get hot, but make the iron hot by striking.

While perusing a mass of "exchanges" last week the above quotation was found. The message is significant to us as individuals, and as a class. How frequently we hear the expression, "just waiting for a break"? We are all, more or less "waiting for breaks" but at the same time it is possible to make our breaks.

The farmer, in waiting for the government to guarantee him a market, is waiting for a break. Industrialists, waiting for governmental protective measures, are waiting for a break.

Capitalists, anxious for a higher money rate are waiting for a break. Business men reluctant to spend, are waiting for a break. The small investor, waiting for the return of good times, is waiting for a break. Laborers, with little employment, are waiting for a break. Organizations, hesitating to further their platform are waiting for a break. The college graduate, expecting an immediate executive position, is waiting for a break, and so on down the line. All waiting for breaks.

The farmer, already in possession of his land, can diversify his crops, raising for actual consumption first, with his surplus for the market. The Industrialist, can so systematize his production to meet actual demands and possible necessities, spread over a given time, thus guaranteeing a steady employment instead of sparadic spurets of maximum production with a subsequent period of idleness.

Capitalists can finance undertakings that will afford employment to thousands. Business men can so organize their affairs as to include additional partners through a cooperative spirit and with a combined pulling power plus efficient methods the beneficial results will expand in keeping with the energy exerted.

The small investors can so invest their savings in enterprises, sound and secure, that will offer employment to themselves, their sons or daughters or at least, will enable them to receive a return dividend on the monies they are forced to spend for necessities. Laborers can materially help themselves by cooperating with their employers, rendering the very best service possible and investing a portion of their wage in the concern that employs them, thus, assuring them of permanency and a competency in old age.

Organizations can forget selfish aims and so present their crusades as to teach the masses how to help themselves and how to take advantage of merely organizing so that the masses can support the organizations through a perpetual levy. The collge graduate should seek those with experience and capital, which together with the graduate's technical knowledge, would form a cooperative combination guaranteed to "make" breaks.

PICNICS FOR FARMERS

In union there is strength and also happiness. This is the picnic season and thousands of organized farmers and their families are forgetting toil and trouble for a day while they assemble together for festivities and pleasure

This is one of the biggest benefits organization brings the farmer. He learns to know his neighbor intimately—he learns what the blessings of companionship, comradeship and friendship really are—he is a better man for being agreeable, friendly and playful if only for a day. The man who knows how to enjoy himself among his fellows finds no mountains of difficulty to climb when the opportunity comes for him to work with his fellows.

THE COLORED FARMER AND BUSINESS

The National Federation of Colored Farmers is worth supporting because it is teaching its members something they never knew before about modern business and business methods. It is worth supporting for this reason if for none other. Colored farmers, as a class, have had very little business experience. The average colored farmer has always had Mr. John or somebody else to look after his business for him and as a result he has never learned to use his own head or do his own thinking. Church business and lodge business is about all the business we know anything about and we don't know too much about this.

When a group of farmers band themselves together in a co-operative association and begin buying and selling together they soon get acquainted with some of the rules nd methods of real business. Usually they quickly discover that the man who knows the most about markets and prices is able to buy for less and sell for more. Knowledge is power in the business world and the one who is able to save the most and make the most has the most power always.

Albon L. Holsey, secretary of the National Negro Business League, and organizer of the C. M. A. Stores, is authority for the statement that Negroes in this country spend two million dollars a year for groceries alone. We spend a larger share of our income for food than any other group in the Nation. There is absolutely no reason why Negro farmers should not be selling to least one-half of this food consumed direct to their own people. We could do it if we were organized as we should be. Then too, there would be more decent jobs for our own, more Negro factories, mills and banks. It's funny why we don't get together faster.

Statement of Ownership

The Modern Farmer as required by the Act of Congress, August 24, 1912.
State of Tennessee,
County of Davidson.

Personally appeared before me, a Notary Public in and for the State of Tennessee, County of Davidson, S. B. Wilson, who having been duly sworn according to law deposes and says that she is the Business Manager of the Modern Farmer, and the following is to her knowledge and belief, a true statement of the Ownership, Management, etc., of the said publication for the date sworn above caption requested by the Act of Congress, August 24, 1912, embodied in section 443 Post Office laws and regulations.

1. That the name and address of the publisher, and business manager of the Modern Farmer, Nashville, Tenn., and Chicago, Ill., S. B. Wilson, Business Manager.

2. That the owners are Henry Allen Boyd and S. B. Wilson, both of Nashville, Tenn.

3. That there are no known bonds, mortgages or other security holders or owners holding one per cent or more and that there are no bonds, mortgages or other securities on the corporation.

(Signed) M. G. FERGUSON, N. P.

Sworn before me the 15th day of October, 1931.

My commission expires January 10, 1939.

A ONE-HORSE FARMER'S PSALM

By J. T. Read
Box 334, Sidon, Miss.

Cotton is my shepherd; I am in want.

It maketh me to lie down beside mortgaged windows; it leadeth my children from the paths of education; it restoreth my doubts in one-crop farming.

Yea, though I walk through the valley of starvation, for crop's sake, I will fear no evil; for the cow will feed me: the hen and the pig, they comfort me.

Thou preparest a reduction in my income for me in the presence of my creditors: thou anointest my head with debts; my expenses run over my income.

Surely without the pig and the hen poverty and misery will follow me all the days of my life:

And I shall live on mortgaged or rented farm forever. Amen.

FARM NEWS AND NOTES

The federal office of education has made a survey of 52 land grant colleges and universities and discovered that a large proportion of students in the United States earn their own way through college. Of the number students of agriculture were found well in the lead. Many of these were students attending Negro colleges.

More than fifty per cent of Wisconsin's farm income is derived from the dairy herd. There are a few Negro dairymen in this state.

Farmers of Kansas, Missouri, Minnesota and Illinois are demanding a reduction of local and state taxes. The movement is gaining headway and some counties have greatly reduced school and local taxes.

Secretary of Agriculture, Arthur M. Hyde, declared in an address delivered at Chicago, September 15th that large farms were responsible for the present overproduction. He declared that there must be complete organization of American farmers and urged that wives and daughters of farmers get into the farm organizations.

A large Unit of the National Federation of Colored Farmers has been organized in Tallahatchie county, Mississippi. Many colored farmers own fine farms in this county.

The South Side Marketing Place, a Negro owned and controlled corporation, has started business in Chicago. The corporation will conduct a general market, handling fresh fruit, vegetables and farm products.

Writing to the Memphis Commercial Appeal, one who signs himself L. K. A. informs that paper that Pres. Hoover has a cotton farm of 370 acres in the Imperial Valley near Colton, California, that is producing two bales to the acre. He asks if our President will take the advice of the Farm Board and plow under a third of his cotton.

The Chamber of Commerce of Texarkana, Ark., is backing up a program of one cow, one sow and fifty hens on every farm within a radius of 20 miles of the city. It is not announced whether or not colored tenant farmers have a part on this program.

A clever Wisconsin farmer mounted his hen house on a wagon and drove it into a Sudan grass patch which was being destroyed by grasshoppers. The chickens saved the crop by eating the grass hoppers and also saved the farmer the trouble and expense of feeding them.

Co-operative associations in Finland now have a membership of 230,000.

It is reported that the employees of Henry Ford's large auto factory in Cork, Ireland, will not have to "either raise some of their winter vegetables or get fired." Evidently Mr. Ford is afraid of "Irish up" but does not fear "American down."

The Board of the Indiana State Fair accepted a bushel of wheat as the price of admission for any individual or any automobile.

Illinois peach growers spent $416,500 for baskets this year. Texas, Arkansas, Missouri and Indiana furnished most of them. They also spent $60,000 for paper liners and $24,000 for corrugated paper lids. The total cost of materials for marketing and equipment was $500,500. There was a 4,000,000 brushel crop.

Iowa's vegetable industry is worth $3,000,000 annually. 4,912 acres are devoted to producing vegetables. Sweet corn leads and then in order comes dry onions, tomatoes, cabbages, watermelons, muskmelons, beans and asparagus.

It is estimated that there are over 7,000,000 cats in New York City, almost two cats for each inhabitant.

A survey reveals that more fruits and vegetables have been canned by farmers this year than ever before in history. North Carolina home club women have filled nearly four times more containers this year than last. More city people have raised gardens this year than ever before and city housewives have also canned immense quantities of fruits and vegetables.

Much wheat is being used for stock feeding in the middle west. Livestock experts say that wheat feeding at present prices is more economical than corn feeding.

Mrs. Jimmy Walker, wife of the mayor of New York City, spent her vacation on her farm near Clinton, Iowa, this summer while her distinguished husband was spending his in Europe. She owns a farm of 120 acres and loves it. While on her farm in the summer she does chores, goes to bed early and rises before sun-up. It is reported that she is very fond of fried chicken.

Congressman Hull, of Illinois, says that the return of light wines and bear would greatly benefit grain growers. He estimates that they could sell 120,000,000 bushels of grain to the brewers.

Subscribe for the MODERN FARMER.

J. S. Jones, of Bentonia, one of the old reliables, was on hand and says big things are in store for the Federation from southern Yazoo county this fall and winter. Brother Jones is one of our best supporters.

Messrs Carpenter and Bennett, of Mt. Carmel, were among the first arrivals. They are from a flourishing Unit and say that Mt. Carmel will do her part toward raising the capital stock fund for the Agricultural Credit Corporation.

WANT A "BIBLE FLOWER GARDEN?"

If you wish a garden containing flowers that grew in Palestine, these are the varities you should plant: oleander, vitex, plane carob, hawthorn, sumach, laurel, broom, myrtle, buglos, scabiosa, squills, thistles, acacia, arbutus, oleaster, styras (mock orange), Judas tree, caper, rock rose, poppy, crocus, cyclamen, narcissi, anemones, anemones, ranunculus, gladioli, iris, orchids, flax and borage.

A garden including these flowers well arranged would be very beautiful and it would interest your friends to inform them that they all grew in Palestine during "Bible times."

GEORGE S. SCHUYLER ON NEGRO FARMING

In his own way, our friend, Geo. S. Schuyler, eminent Negro critic, author and iconoclast, has this to say about Negro farming in a recent issue of the Pittsburgh Courier. Says Mr. Schuyler:

"It might be well for these young folk in search of a career to give heed to agriculture, too. The scientific agricultrist has ten chances to succeed to the one of the untrained and uneducated farmer. While farm conditions are none too good in the United States today, it is possible for the college-trained agriculturist to make as good a living as the average physician and dentist, and better than a large percentage of them who are living from hand to mouth and vainly endeavoring to make ends meet between influenza epidemics.

Statistics show that farmers are most prosperous in those states—like Iowa and New York—where from one-third to one-fourth of the farmers are graduates of the state agricultural colleges. The trained farmer who understands how to treat his soil, curb insects, rotate crops and got all of the food for his family and his cattle off his land is in a far better economic position than the average Negro lawyer chasing ambulances and hanging around courthouses to fleece the unfortunate.

Nor does the trained Negro agriculturist have to settle in the South. I have often wondered why Negro farmers seemed to think there was no land except in Dixie. Good farm land is for sale in every state from Maine to California, above the Torch and Tar Belt, and in those states the Negro farmer can join the neighboring farmers' associations and get his share of the Federal farm loan money.

If the American Negro possessed trained leadership aware of the economic trend in this country but why bring that up?"

HON SAM W. SMALL ON "COTTON"

Hon. Sam W. Small, the smartest white man in Georgia, writing in the Atlanta Constitution, has the following to say about the almighty "cotton question":

"Just now the country is wondering what is to be done about the over-production of cotton, a situation menacing millions of the southern farmers with manifold distresses.

It is proposed to prohibit all planting of cotton in 1932. The plan is alluringly plausible on its face, but it immediately brings up the more imperative question of how the cotton growers, 70 per cent of whom are tenants, renters or croppers, are to be taken care of during that year of nonproduction of the only crop that gives them a living credit from year's end to year's end.

It seems reasonable that a state that forbids certain of its people from making a living should furnish it to them in the meantime—and what state in the south is now financially able to supply support to its many thousands of cotton farmers while keeping them out of their fields?"

THE FORD GARDEN.

Boston Transcript: If Henry Ford had hired a Philadelphia lawyer to draw up that order requiring all his married employes to cultivate gardens, we think it would have been worded less loosely. Any hireling who prefers to spend his summer hours of leisure at a ball game or reading the "bunk" in Carlyle's French Revolution, or playing golf or fishing rather than getting up at dawn to chase the elusive cutworm and straining his back at evening imitating the labors of the unfortunate man with a hoe, can easily evade the spirit of the order while keeping strictly to its letter.

As the posted notice reads, the employe's garden must be "of sufficient size to supply his family with at least part of its winter vegetables." And that is where the famous manufacturer slipped a cog, put his gears out of mesh. The little joker in the order is the word "part". Just what is "part" of a family's winter vegetables? What is "at least part"? Is it something under a half? Is it a quarter, an eighth, a sixteenth? Is it enough for a month's meals or a day's meals? Is not one lone gnarly red radish as much part of a family's winter vegetables as a whole bin full of potatoes? May not a matter-of-fact man who hates gardening argue that a pair of carrots or a sprig of spinach constitutes a part as nominated in the order?

MOUND BAYOU HOST TO EXCURSIONISTS

The Illinois Central Boosters Club under the leadership of Mr. Ben Hayes, took approximately 300 persons to Mound Bayou, the noted Negro town, on their annual picnic and excursion. Mayor Green and his fellow townmen spared no pains in making the guests enjoy themselves. The drug store, cafes, restaurants, grocery stores and many other businesses were opened until wee hours of the morning when the excursionists left. Many of the excursionists were in Mound Bayou for their first time and were astonished to see a town where all of its inhabitants were Negroes.

From the Memphis Liberator.

URGES BUILDING SWEET POTATO STORAGE HOUSES

Baton Rouge, La.—Several million dollars worth of sweet potatoes are destined to rot in Louisiana the coming winter unless storage facilities are provided to take care of them, advises M. Hull, horticulturist, Louisiana State University agricultural extension division. Louisiana is producing one of the largest sweet potato crops on record, one that the early markets cannot possibly absorb. This means that the growers are going to suffer heavy losses unless they plan to store their crop and carry it over the glutted period.

With this in mind the extension division has inaugurated a campaign for the erection of a storage house on every farm in Louisiana, he says. Plans and specifications are offered free to every farmer who makes request for them. Personal assistance will be given during the erection of the house and throughout the curing period of the potatoes. In a number of instances abandoned tenant houses and other buildings may be converted at small cost. In the hill sections of the state where pine logs are available they may be used for this purpose.

Plans can be secured from the farm demonstration agents or by writing the horticultural department, extension division, Louisiana State University, Baton Rouge, La.

SLASH IN FARM FIRE LOSS ASKED BY HYDE

Cooperation to Reduce Tremendous Waste Sought as Prevention Week Objective

Secretary of Agriculture Arthur M. Hyde makes a plea to farmers and rural community residents of the United States to reduce the huge annual fire loss on farms estimated at $100,000,000 in property and 3,500 lives, in a statement in connection with National Fire Prevention Week which begins October 4.

The secretary points out that every fire prevented represents that much gain for a community. The reduction in the average farm fire loss is equal to that much increase in the agricultural income. Farm fire property losses are about one-fifth of those for the nation and the loss of life is about one-tenth. A majority of the farm fires are preventable Secretary Hyde declared. He mentioned as the principal causes of farm fires; defective chimneys and flues, sparks on combustible roofs, lightning, careless use of matches and smoking, spontaneous ignition of agricultural products, careless handling and storage of gasoline and kerosene, defective wiring, and improper use of electrical appliances.

Local organizations, backed up by individual effort, is one of the most effective means of reducing farm and rural community fires, Secretary Hyde said. He urged communities to organize for fire protection wherever possible. During National Fire Prevention Week he urged farm clubs, schools, and other civic organizations to call attention to the danger and needlessness of fires and to follow up with collective organization for their control.

—Note:—Local.

Units of the N. F. C. F. should consider this question of fire prevention. One reason why colored farmers who are charged higher rates for insurance than other groups is because they are doing little, in an organized way, to reduce farm fires. Organized colored farmers can demand cheaper insurance when they can prove their fire losses have been reduced.

COTTON
(Editorial, Chicago Tribune)

The melodramatic interchange of compliments between the governor of Louisiana and the legislature of Texas seems likely to obscure the fundamental facts of the cotton crisis. Those facts were brought out clearly by Mr. Henning in a recent dispatch from Washington. He showed, conclusively, we think, that the difficulties in which the cotton planters find themselves are only incidentally to be attributed to the prevailing business depression. He traced the present over-production back to the boll weevil.

When that insect had ruined the cotton farmers in many sections of the old south the government's experts were set to work to find a way to destroy the pests or produce a crop in spite of them. The scientists succeeded in producing a cotton plant which reaches its maturity so quickly that crop is already baled before the weevil is ready to go to work on it. It looked for a time as if the worst enemy the cotton planters have known in recent times were routed forever.

Unfortunately for the farmers of the southeast, the defeat of the weevil brought new difficulties. The new cotton plant produced a short fiber and therefore an inferior one, bringing a smaller price. In addition, the shorter growing season made it possible to produce cotton in Texas and Oklahoma where formerly the weather had been too severe for cotton culture. The new lands to the west with their enormous cotton acreage, not much less than half of the whole American crop, and their greater use of machinery have all but ruined the old cotton belt.

No doubt this new competition accounts for the bitterness which has been displayed between the spokesmen for the old cotton belt and the Texas government, representing the new. This kind of competition is not a new thing in this country. When the prairie lands were opened up, to the great injury of farm values east of the mountains, a somewhat similar crisis developed. It was met by heavy migrations westward and by the absorption into industry of many of the farmers whose livelihoods had been threatened by the new competition.

Cotton has dropped sharply in price in recent years. The decline in 1929 and 1930 was not less than $35 a bale. In that fact lies the essential corrective of the present confused situation. Cotton acreage will be reduced, regardless of what the state legislatures and governors may do or may not do, and if the reduction does not come in 1932 it will come in 1933. Meanwhile, it is evident that the farm board can do nothing to help the situation. It has already bought cotton with the same free-handedness with which it bought wheat and the result has been no less disappointing.

A CHART OF COMFORT

A prominent merchant of New York City carried these rules of conduct in his pocketbook, accompanied by a memorandum to this effect: "Read these rules at least once a week."

Never be idle.
Make few promises.
Always speak the truth.
Never speak ill of any one.
Keep good company or none.
Live up to engagements.
Be just before you are generous.
Earn money before you spend it.
Drink no kind of intoxicating drink.

Good character is above all things else.

Keep your own secrets if you have any.

Never borrow if you can possibly avoid it.

Never play at any kind of games of chance.

Keep your promises if you would be happy.

Make no haste to be rich if you would prosper.

When you speak to a person, look him in the face.

Your character cannot be essentially injured except by yourself.

If anyone speaks evil of you, let your life be so that none will believe him.

If your hands cannot be usefully employed attend to the cultivation of your mind.—Dexter Statesman.

Save when you are young, to spend when you are old.

Never run in debt unless you see a way to get out again.

Avoid temptation, through fear you may not withstand it.

Ever live (misfortune expected) within your income.

Small and steady gains give competency and tranquilty of mind.

Good company and good conversations are the sinews of virtue.

THE COTTON PLANT

From An Address by the Late Henry W. Grady

What a royal plant it is!

The world waits in attendance on its growth?

The shower that falls whispering on its leaves is heard around the earth!

The sun that shines on it is tempered by the prayers of all people.

The frost that chills it and the dew that descends from the stars is noted, and the trespass of a little worm on its green leaf is more to England than the advance of the Russian army on her Asian outposts.

It is gold from the instant it puts forth its tiny shoot. Its fiber is current in every bank, and when loosing its fleece to the sun, it floats a banner that glorifies the fields of millions of humble farmers who are marshaled under a flag that will compel the allegiance of the world, and wring tribute from every nation on earth.

It is the heritage that God gave to this people forever as their own when he arched our skies, established our mountains, girt us about with the ocean, loosed the breezes, tempered the sunshine, and measured the rain!

Our's and our children forever! As princely a talent as ever came from His hand to mortal stewardship!

This book should be in the hands of every real citizen of the south—it is well written, attractively illustrated and carries a real message with it, especially to the south, the south of today. (G. P. Putnam's Sons, New York.)

DENMAN TELLS PROPER WEIGHTS FOR SWINE

Springfield, Ill., Aug. 28—Because the American family has decreased in size and its members earn their living by brain instead of brawn, hog owners must market animals weighing between 200 and 220 pounds if they wish to obtain the best market return, declared C. B. Denman, federal farm board member, in an address to the National Swine Growers' association here last night.

Denman expressed apprehension that an overproduction of swine will result from cheap feed, due to the low price of wheat, and that the experience of 1922 and 1923, when the market was glutted for a similar reason, will be repeated.

European and Argentine competition has reduced foreign markets for hog products, notable lard, which further decreases the market for heavy hogs yielding a high percentage of lard and fat cuts, he explained. Chicago market prices were cited to demonstrate the preference for lightweight cuts, which consistently bring higher prices than heavier weights.

Although turnover of invested capital is more rapid in producing and marketing younger animals, farmers have failed to adjust their production policy to meet demand for lightweight hogs, especially during the last decade, said Denman.

WORLD FAIR IN 1937 PLANNED BY ATLANTA

Special to The Christian Science Monitor

Atlanta, Ga.—Plans for an international exposition and world's fair, to be held here in 1937, were put under way at the preliminary meeting of the Central Organization Committee of the 1937 Atlanta Centennial Exposition, held on the roof garden of the Cecil Hotel.

It was unanimously determined at this meeting that such a movement shall be organized, and that it shall be independent and nonpolitical, and that every organization in the city be invited to send a representative to the next meeting, which will be held in the near future.

The purpose of this meeting, it is stated, will be to formulate plans for and begin the actual organization of the "1937 Atlanta World's Fair Bureau." All interested citizens are earnestly urged to attend this meeting and to do all in their power to forward plans and to help shape them into definite form in the immediate future.

LIGHTS ON AUTOS? THEN WHY NOT ON FARM MACHINERY

Lincoln, Neb., Sept. 22—Whether the state law requiring vehicles using the highways at night to display warning lights applies to farm machinery, by implication, is the main question referred to the supreme court by the insurance carrier for Henry Ferguson. A $4,000 judgment was entered against him in Holt county in favor of M. B. Trussell, who was towing some machinery by wagon. This is the first time the court has been called upon to pass upon this particular point. Trussell claims that the law is that every motorist operating a machine at night must have it under such control as will enable him to stop the car within the radius of the rays thrown by his lights.

PECAN GROUPS GET FINANCIAL AID

Special from Monitor Bureau

Washington, August 21—Loan commitments have been granted to the National Pecan Marketing Association of Jackson, Miss., central sales agency of the pecan cooperatives, it was announced today by the Federal Farm Board.

With the financial assistance, this new cooperative hopes to handle increased deliveries expected in 1931 and to carry out the organization's expanded merchandising program, it was said.

Growers in nine southern states established the National Pecan Marketing Association with 15 locals last year. The association received approximately 3,000,000 pounds of pecans from the 1930 crop. There now are 24 locals with 300 grower members who are expected to deliver to the central sales agency more than 10,000,000 pounds from the 1931 pecan crop.

HOW TO BEAT THE DOLE

New York Times: All our public officials from the president down are resolved to do everything possible in aid of the unemployed, but all are equally determined never to countenance the "dole."

Every one will agree that, whenever possible, the money raised ought to be paid out, not in charity, but in wages. This would mean a direct appeal to American ingenuity in finding or making work for the unemployed. Any one who can produce a scheme to give jobs to, say a thousand men, without interfering with any established and going business, will be welcomed with joy by the relief commissions, who will be only too glad to provide the corresponding funds.

Efforts of this kind are already being made, and will doubtless be enlarged. The principle is sound, as are the economics. Let the word go round widely to everybody who is frightened at the mention of the dole that the way to beat it is to invent and provide new jobs.

THICKER SLICES

The Pathfinder: Hon. Cyrenus Cole of Cedar Rapids has a platform on which everybody can unite. He advocates thicker slices of bacon and ham—"thick enough to give some taste." He objects, and so do all the picnickers and non-pickners, to those machines which get "forty-eleven slices to the inch." We are rapidly becoming a nation of sandwich eaters, and some of our major crimes are perpetrated under the name of sandwiches. The ham is sometimes scarcely visible—it is little more than a stain on the bread. We have long ridiculed the old countries for their parsimony in consumption and general tightness, but it is a safe bet that we have the skimpiest meat slices of any sandwich-consuming nation. The wonderful machinery—and it takes a delicate machine to cut them so thin. If the Chinaman by adding an inch to his shirt tail could make cotton growers prosperous in the United States then meat slices of a decent thickness ought to be a big boost to our livestock industry.

MOURNE DOGS SAVE LIVES

Dogs of Mourne, Ireland, are gaining a reputation as life savers. Two new cases have just been reported. One was that of a dog jumping into a river and pulling ashore a small boy who had gotten beyond his depth. The other was that of John Rea's collie which leaped into the Kilkeel river and, seizing a small dog in his mouth, swam to shore against a heavy current.

PLANS SET FOR RACE DAIRY IN CHICAGO

Chicago, Sept. 3—(CNS)—H. E. Gross and T. J. Wesby of this city are planning to open a dairy here. The company is to be owned, operated and controlled entirely by colored people. Speaking before the Housewives' League here recently, the sponsors of the dairy company promised to have milk wagons on the streets in September.

TOBACCO EXPORTS ADVANCE OVER JULY

Exports of leaf tobacco from the United States during August, advanced 2,500,000 pounds over shipments during the previous month and there was an increase in value of approximately a half million dollars, according to a review of preliminary data by the Tobacco Division of the Department of Commerce.

ARGENTINE GOVERNMENT TO SELL SEED TO FARMERS ON CREDIT

A recent decree by the Provisional Government of Argentina authorizes the Ministry of Agriculture to purchase and sell seed wheat and linseed to the farmers of Argentina on credit, according to a report received in the Department of Commerce from Julius B. Smith, Assistant Trade Commissioner in Buenos Aires.

To SAVE Something!

Join Our Dollar Per Week Savings Club Now Open

Every Citizen Is invited to Cooperate in a Definite Movement Where they Themselves will be the Recipients of all the Benefits Both Principal and Interest

Send $1.00 every week to the Citizens Savings Bank and Trust Company, at Nashville, Tennessee, either in cash or post office money order, or you may send your personal check, if it is certified. This will open a savings account on which we pay interest twice a year. It will make you a member of our "Save a Dollar a week Club." Every member of the club, who qualifies by sending the regular amount, will receive special recognition and an acknowledgement of their remittance when it arrives. You can deposit more than $1.00 per week if it is convenient. No matter where you live, in the United States, Canada or Mexico you can take out membership in this savings plan. The Citizens Savings Bank has been operating for twenty-seven years. Its capital is fully paid. Its officers and directors represent men and women who are nationally known. "Procrastination is the thief of time," so do not wait. Open your savings account at once.

'BACK-TO-THE-FARM' TREND SEEN IN GEORGIA IN 1925-30

(Continued from Page 1)

20 to 49 acres. 751 from 50 to 99 acres and 37,853 of from 100 to 174 acres. There were 3,639 farms having 500 acres and over.

Of the 255,598 farms in the state in 1930, as reported in the census, 79,802 were operated by owners, 1,406 by managers and 174,390 by tenants. The band in farms decreased from 25,441,061 acres in 1920 to 21,945,496 acres in 1925, but increased to 22,078,630 in 1930. The value of farm land and buildings decreased from $1,138,298,627 in 1920 to $587,554,329 in 1925 and $577,338,409 in 1930.

PRIZE WINNERS

(Continued from page 1)

tables in jars—Three gross fruit jars and caps, won by Mrs. Altie Crowe, Mound Bayou.

Best home-made lemon pie—One half barrel Dictator flour, won by Mrs. Ethel Williams, Mound Bayou.

Best home-made cake—One-half barrel Dictator flour, won by Mrs. Beatrice Thurman, Mound Bayou.

Member bringing in largest number of aplicants for membership in the National Federation of Colored Farmers, Charles Ashley, 1 set dishes.

Member bringing in largest number of subscriptions to the Modern Farmer, the official paper of the N. F. C. F.—Set of Rogers silverware, won by Mrs. Ella H. Jones, Mound Bayou.

To the unit which has co-operatively bought and sold the largest volume of merchandise—Two pure-bred registered Duroc pigs, won by the Mt. Olive unit, Lexington, Miss., Robert Booker, chairman.

Market agent of the winning unit of the above proze—One membership into the American Duroc Jersey Association, won by Isaac Randall, Lexington, Miss. One subscription to the Duroc Sentinel goes to Robert Booker.

Best display of home-made bread—One kitchen cabinet, donated by Sears-Roebuck agricultural foundation, won by Josephine Gaunt, Mound Bayou.

Best quart jar peach preserves—Year's subscription to The Chicago Defender, won by Mrs. E. P. Frances, Mound Bayou.

Best stalk of sugar cane—Year's subscription to the Mid-South Liberator, won by Mrs. W. A. Worthington, Mound Bayou.

Best display of home canned fruits and vegetables—One automatic canner and one pressure kettle cooker, won by Mrs. T. B. Walker, Mound Bayou.

Best display of fresh peaches—N. J. Williamson, Dundee, Miss., subscription to Defender and Household Magazine.

Member Bringing in second largest number of applications for membership—Daniel G. Givens, Route 3 Box 30 Lexington, Sub. to Capper's Farmer.

Second Best display—canned fruits and vegetables.—Mrs. Cora Booker, Route 8 Lexington, Miss., 1 set dishes.

Application for Membership
NATIONAL FEDERATION OF COLORED FARMERS
Vincennes Hotel, Chicago

As a farmer, I believe the time has arrived when the Colored Farmers should form a National Organization devoted to diversified production, grading, packing, shipping and marketing of farm products and to the purchase of needed farm supplies through co-operative methods, to the end that a more prosperous financial condition may result from their efforts as producers.
I hereby subscribe $5.00 for membership in the National Federation of Colored Farmers for a period of 12 months from date. Also $1.00 for an Annual Subscription to the Modern Farmer.

TALKS TO COLORED FARMERS

(Continued From Page 1)

are advised to stick tight to their local Units and keep in close contact with their national office. A close watch is being kept on all developments that may effect colored farmers in any way and the information your officers have is yours for the asking. Don't be misled. Don't make any business contracts, either buying or selling, unless you are certain that what you are doing is the best you can do. In these times of stress and trouble it pays to watch and go slow. Keep your eyes wide open.

Colored farmers who are not members of the N. F. C. F should join a Unit or should help organize one in their community. This is the wisest step you can take. American Negro farmers must be organized into one big, powerful organization that can talk loud enough to be heard. You know why. The large white farm organizations—The American Farm Bureau Federation,—the National Farmers Union and the National Grange are right now making the biggest drive for members they have ever made.

They have learned well that the farmers of the United States will never get anywhere until they are organized. If white farmers know they can never get anywhere unless they are organized, where do you think you can get unless you are organized? Then get into your Unit or get up a Unit. Now a-days it's a case of "do or die" and you had better "do" quickly.

Continue buying co-operatively and if you have not started doing this, then start now. Buy from those who will sell you good merchandise at a reasonable price. That dollar you spend is a mighty weapon. Use it. It is yours and you are not compelled to turn it loose to any one who will not give you a good hundred cents' worth in return. Spending money wisely is saving money. Be wise. Buy together—co-operatively. Buy through your Unit.

If you are a tenant farmer take advantage of the first opportunity you get to purchase a farm of your own. Now is a good time to buy. Better times are coming for the farmer just as sure as daylight. We predict that the farmer who buys now will have an easier time paying for his farm than the farmer had who brought ten years ago.

Don't let the "Long Plan" or any of the other plans worry you a bit. If you have any sense at all you will reduce your cotton acreage next year, plan or no plan. Prepare to do this and prepare to raise more livestock, food and feed. If you will manage well you will discover next year this time that your annual income is as large as it would have been had you depended on cotton for a cash crop. Any crop you can get cash out of is a cash crop whether it's cotton or chickens. Successful farmers depend on many crops—not on one only. We know a large western wheat farmer who cut off half of his usual wheat acreage last year and put that acreage in flax. Today he is "sitting pretty" while his neighbors are in despair. You cannot raise flax but you can do something else just as sensible.

It is going to be very hard for colored farmers to get sufficient credit next year so it will be necessary for you to save every dollar you can now so you will have them to spend next spring. We must stop depending on credit anyway. Colored farmers keep hundreds of their fellow citizens living on "Easy Street" just because they are such habitual borrowers. We borrow and get in debt, then we borrow again to try to get out of debt and get still deeper in,—and pretty soon our creditors own us body and soul. With the co-operation and support of its members the N. F. C. F. hopes to soon have an agricultural credit corporation for colored organized and functioning in every southern state. We will get these yet in spite of men or devils if you will join in and do your part. When we get these, production credits will be easier to obtain and interest charges will be greatly reduced. This part of our program alone should make you a loyal supporter of the N. F. C. F. No other farm organization is attempting to help you get this relief so stick tight to your organization and all of us can help each other. That is co-operation. If we don't learn to co-operate we will continue to have it hard and we will deserve to have it hard.

(This is the first of a series of "Talks" prepared by Mr. Harris. In the next issue of the Modern Farmer he discusses the "Colored Farmer and the Farm Board.")

Correspondence Course By Mail

Special Inducement Offer for Ministers who wish to Study at Home and get the Benefit of the Advanced Course recommended by us

Send Ten Dollars for your enrollment so you may start with the new class, another class in the Correspondence Course Department of the National Baptist Publishing Board will begin to pursue their study. Members are being enrolled, students are being registered, and another opportunity is being offered to those who wish to remain at home and pursue their studies.

We have the following courses and new classes started: Biblical Introduction, Exegesis, Homiletics and Systematic Theology. We are making a special inducement offer of $10.00 for each Course. The lessons will be forwarded immediately upon receipt of a money order for the $10. Questions will be forwarded, examinations will be regular, and the grades applied as soon as they are made, to any who wish to avail themselves of this privilege.

MANY NEW STRAWBERRIES BUT OLDER ONES REMAIN.

(Continued from Page 1)

Howard 17 is king north of the Ohio and Potomac and east of the Mississippi.

In recent years varieties adapted to special purposes have taken their places by the side of the older ones. The Ettersburg, 121, grown in Washington and Oregon, is preferred by canners, while the new Blakemore appears to be especially good for preserving. The ice-cream trade prefers the Marshall and Klondyke.

New varieties of strawberries are being introduced connstantly, the Department says. Many of them possess no special value as compared with the well-established varieties, and most of them soon disappear from nurserymen's lists. Occasionally a new variety such as the Blakemore has merit enough to make a place for itself.

MAN IS KNOCKED THROUGH FENCE BY ANGRY BULL

Prophetstown—Axel Swederus incurred severe injuries at 10 Saturday morning when an angry bull knocked him through a wire fence on his farm east of town. He has scratches on his face and chest.

THE MODERN FARMER

Vol. III. Nashville, Tenn., and Chicago, Illinois, November 15, 1931 No. 9.

SUCCESSFUL WISCONSIN FARMERS

MISSISSIPPIANS WHO MOVED NORTH FORGED TO THE FRONT, SAYS DAVIS

In the Chicago Defender's popular column "The Week," mention is made of Pres. Davis' discovery of tho Bassett Brothers, two former colored Mississippi farmers, who are now making all the big state of Wisconsin sit up and take notice We thank the Defender the writer of the column for this recognition and consideration. Says the "Week:"

WHILE your mind is on nature, her ways, her sons, how she yields her secrets to anybody she takes from a fancy to, take a little report from James P. Davis, hard working president of the Colored Farmers organization.

Up in Wisconsin a few days ago M. Davis ran up on the Bassett brothers, Frank and H. C., successful farmers, former farmers in Mississippi, who pulled up, thinking that it is just as easy to cultivate land in freedom as in Mississippi.

The University of Wisconsin, foremost agricultural college in the world, takes notice of the Bassetts. On their 80-acre farm in Racine county, Wisconsin, they have produced a short row of cotton, a quarter acre of sweet potatoes and a half acre of black eye peas.

None of these products had been attempted in Wisconsin before. They raised the cotton, maybe just to show that cotton will grow for a Negro where it won't budge for anybody else.

The Black eye peas were planted to give them standing. The sweet potatoes, popular the world over, were planted to give them standing. The sweet potatoes, popular the world over, were grown to prove the soil of Wisconsin,

Wisconsin farmers will loop up the Bassetts, question them, ask advice of them, and join them as workers in soil. Eighty acres in Wisconsin is a thousand acres somewhere else The Bassetts say that their 80 is heaven.

Mr. Davis reports that in Wisconsin 25 Colored farmers own and operate their own farms. That is real news.

NEW COTTON PLANT

(Special to The Christian Science Monitor)

New Orleans, La.—A new type of cotton plant, whose "okra-shaped" leaves allow sunlight to penetrate to the depths of the plant, and thus materially reduce boll-weevil and boll-rot, is being developed at the Louisiana Experiment Station maintained by the State. More sunlight means fewer enemies to the cotton plant, according to Dr. B. H. Brown of the experiment station.

Other plans to combat insects and plant rots include development of a dwarfed variety of cotton by the experiment station. The smaller plant has less rank undergrowth. Varieties which are "wilt-resistant" are also being sought by the station The okra leaf type is being crossed with standard and extra-fine varieties of cotton plant with an idea of combining all possible good qualities, Dr. Brown explained.

MORTGAGED FARMS INCREASING

OWNER-OPERATED PLACES ARE FEWER—CENSUS BUREAU REVEALS FACTS

BY RUSSELL KENT

Commercial Appeal Staff Correspondent.

WASHINGTON, Oct. 4.—A decrease in the number of farms in Arkansas operated by full owners and an increase in the number of such farms that are mortgaged is shown by a summary of the census of agriculture taken last year made public today by the census bureau.

Of tho 242,344 farms reported in Arkansas last year, the census bureau how 72,597 operated by full owners. This contrasts with 81,540 farms operated by full owners out of a total of 221,991 farms in the state in 1925, and with 98,037 out of the 272,601 farms in the state in 1920.

Of the farms operated by full owners last year 26,669 were mortgaged, contrasted with 26,489 such farms mortgaged in 1925 and with 20,501 mortgaged in 1920.

Value Much Less.

The value of land and buildings operated by full owners in Arkansas in 1930 was $92,603,000, compared with an aggregate value of $115,470,000 for such farms in 1925 and of $129,347,000 in 1920.

The amount of mortgage debt on such farms last year was $35,388,000, compared with $46,283,000 for farms of this class in 1925 and with $129,347,000 in 1920.

The ratio of debt to value of Arkansas farms operated by full owners in 1930 was 38.21 per cent; in 1925, 40.08 per cent; in 1929, 20.80 per cent.

A substantial increase in the number of automobiles, trucks and tractors is reported by the census bureau for Arkansas farms of all classes, including those operated on tenants, part owners and full owners.

Autos gain heavily.

The census bureau shows 65,935 automobiles on Arkansas farms in 1930 compared with 16,408 in 1920; 11,000 motor trucks last year contrasted with 1,027 10 years previously, and 5,684 tractors in 1930 compared with 3,476 in 1925 and with 1,822 in 1920.

The number of telephones on Arkansas farms decreased in the decade, dropping to 25,046 in 1930 from 52,869 in 1920. There was an increase, however, in the number of farm dwellings, lighted by electricity, 5,121 reporting this facility last year as compared with 2,643 in 1920.

RAILROADS HELPING FARMERS

BRINGING FOOD TO THE DOORS OF SUFFERING AGRICULTURAL TOILERS

DURING the 1930-31 drought railroads of this country hauled a total of 611 carloads of food supplies into the drought area from outside states without charge. The foodstuffs were donated to the American Red Cross from manufacturers and individuals, and for the most part, included canned good, fruits and vegetables which were not perishable in shipment. Hundreds of tons of the donated supplies were routed over the Rock Island System. In instances where it was practical, the solid cars were hauled to warehouses, unloaded by Red Cross workers, and reassembled as mixed cars before reaching their final destinations. In this way most of the drought sufferers were given balanced rations from the donated supplies. All railroads penetrating the affected area as well as many outside the drought states, cooperated with the Red Cross in the plan.

Some idea of the magnitude of the drought relief program is reflected in the fact that for weeks more than 300 tons of supplies were distributed among drought victims each day in Arkansas alone by the Red Cross. Although Arkansas was the hardest hit, 21 other states were in the drought area. More than 1,000 counties, a number equaling one-third of all the counties in the United States, required Red Cross assistance.

The drought program included many other phases of relief. Hot lunches were served to 185,000 children in 3,500 rural schools. Feed was furnished for family milch cows. Powdered yeast was distributed upon advice of local health authorities and physicians to combat pellegra and other diseases. Thousands of warm garments were given to the victims last winter.

During the drought, the Red Cross was busy with other assignments. The society handled 61 disasters during the year besides the drought. They affected 31 states. The insular and foreign service of the Red Cross assisted in 12 calamities in insuar possessions of the United States and abroad.

This year the Red Cross needs memberships more than at any time since the World War. Increased demands for its services have resulted in a heavy drain

(Continued on Page 4)

NOT DEPENDING ON COTTON

HENRY TINSLEY OF UNION, S. C. GIVES RECIPE ON HOW HE HAS WORKED

Union, S. C.—(CNS)—Twenty-nine years on a 129 acre farm, with never a loss and never a hard year, is the record of Henry Tinsley, who lives near here. He owns his own place and has reared seven children, all girls.

"I've farmed when prices were high and when prices were low," said Mr. Tinsley, "and have managed to get along under either condition. I've never paid much attention to prices in planning my operations. What I think of first is living. 'Can I eat it or feed it?' I ask myself about most things I grow. I plant about the same as I planted before the war."

This year Mr. Tinsley will get about 20 bales off his 129 acre farm, and if it didn't bring anything he would get along all right next year. For every few days, he puts a load of stuff in his car, drives to one of the nearby towns and exchanges produce for cash. Somtimes it's poultry products, sometimes vegetables, but most often fruit. He is one of the best fruit growers in this section. From a 3-acre orchard, most of it in peach trees, he harvests salable fruit regularly from late May to mid October

"There are three products I make it a rule never to sell," says he.

"These are butter, roast'n e'rs and hams. If I sell butter and hams there is danger of my not having enough for myself and if I go to pulling green corn I might not be left with enough for my stock. I always play safe as to food and feed and never buy any of either, except things like sugar and coffee which I can't produce. The only times when I buy flour is when I'm too lazy to take wheat to the mill and have it ground." Tinsley keeps up with the literature of farming and consults frequently with the county agent. He bought his place in 1901, paying a small part of the $1,000 purchase price in cash. The balance was paid off of earnings by the end of 1904. He has made many improvements in the place, for which he was once offered $8,000. He declares that only once since he began farming on his own has he incurred a debt for expenses in making a crop.

"I bought this place with 6 to 7 cents cotton and present conditions, don't scare me a bit," he declares

RAISING BUTTER FAT PRICES

DAIRY FARMERS PROFIT ALSO BY CHEAP FEEDS AND BIG CROPS RAISED

A. and M. COLLEGE, Miss., Oct. 24.—Probably no other group of farmers in Mississippi occupy as advantageous a position just now as does the dairy farmer, declared L. A. Higgins, state extension leader, in dairying, in discussing the dairy situation.

While the price of cotton has been going down, the price of butter fat has been going up, advancing ten to twelve cents per pound since July, Mr. Higgins said.

The advance in the price of butter fat has been due to increased consumption of dairy products in 1931 over 1930; the decrease in storage holdings of butter and, the protracted, wide spread drouth in Minnesota and Wisconsin, the nation's largest dairy production area. There was 38,414,000 pounds less butter in storage on September 1, 1931, than on September 1, 1930, and 45,339,000 pounds less than the past five year average.

The withdrawal of butter from storage during the month of September was the heavest on record for that month.

See More Profit.

The extension dairy specialists and county agents of the state are pointing out to the dairy farmers that with the advancing price of dairy products and the decreasing price of purchased feeds, there should be a wider margin between feed costs and prices of dairy products the coming winter than during any recent season.

Inasmuch as the state has harvested the largest feed and forage crop this year on record, dairy farmers are being urged to take full advantage of the present butter fat price situation by feeding their cows to full capacity and by planting heavily to winter grazing crops.

The practice of full feeding and provision of abundant winter grazing crops will largely increase milk production and should add millions of dollars to the income of dairy farmers this winter.

Detailed information on feeds and feeding may be had upon request to L. A. Higgins, state extension leader in dairying, A. and M. College or to local county agents.

GAGES SPRING UNIT NEWS

(Special To Modern Farmer)

Rev. R. W. Griffin, chairman of the Gages Spring Unit, moved all doubts in his address at the Holmes County Unit meeting on October 24th at the Mt. Zion M. B. Church, at Howards, Miss.

Brother chair, and members of this N. F. Rev. Grace, who was the 1st matare of this organization and my other Brother, who has just spoken, both have said the truth, nothing else but the truth, so help them God. As for myself I know times are tough, but I have always found a dollar or two and I always will find a dollar in case of emergency like this. And more than that I am willing to do without my top shirt and wear my coat with my under shirt all winter and spare the price of my top shirt just to help fray the expenses of J. P. Davis, President of the N. F. C. F. and Attorney B. A. Green of Mound Bayou in making the trip to Washington in our defense. We can not

Talks To Colored Farmers

By Leon R. Harris, Secretary The National Federation of Colored Farmers

Although the Federal Farm Board, the bureau established to carry out the provisions of the agricultural marketing act—has endeavored in a way to arouse interest among colored farmers in organization and co-operation, especially co-operative marketing, it has not recognized the peculiar position of colored farmers in America and, therefore, the colored farmer has received little relief he can really see and feel. The Board has advised the colored farmer to organize and co-operate but has not satisfactorily answered his questions: "How shall I organize?" and "With whom shall I co-operate?" The colored farmer realizes that a membership in a local co-operative association of white farmers would not be worth a dime to him if he could be a member, and when a local co-operative association is established something is always sure to turn up to prevent it from affiliating, on equal terms with local white co-operatives, with regional and national co-operatives, which are also controlled by white farmers, and usually, by the wealthiest white farmers. Naturally, he wonders why the Board will not recognize and assist a national colored co-operative association, composed of units of local colored co-operatives scattered throughout the country, which, through its national of-

(Continued on Page 5)

go and if we went there we would not know what to say nor how to say when we got there. But thanks to God we have somebody who is willing to go and are ready to go and knows when to say, how to say, and what to say when they shall have arrived. So my dear farmers, let us forget the things behind, let us forget the press of times and go forward to the mark of a higher calling. Don't you hear the voice of our President Davis, calling in every Bulletin. Don't you hear the voice of our Attorney Green calling in columns of the Modern Farmer If you do then let us obey the call. I must say ever since we came to this western world everything that has been done for us has been done without us lifting one hand unappreciative to the boon except in the lowest aspect of it and this is enough to let you know that God does love us because he has sent us a leader. The Bible declares there is nothing new under the sun, which lets you know there is not anything that is now being that has not been in some former age or country.

You know as well as I when God's people were under bondage in that Egyptian land and there he caused one to be born and reared in the king's home, educated in the king's school and was familiar with all the king's equipments of war, from the sword and cavalry up to his artillery. But God had this man to leave the land of bondage and go up into the wilderness and the man was in the wilderness 40 years. But one day God met the man near the Mt. and God said to him I want you to go back to the land from whence you came and bring my people out of that land of bondage, that they may serve me. But Moses did not want the job, because he had been away from that land 40 years, and by this time his own people would not know him, so they would not believe him, because he was a stranger to them. But God told Moses to go, and he would meet his Brother Aaron coming out of that land, so he could carry his Brother Aaron with him back to that land, and the people will know him. So I will tell you what to say and you tell Aaron what to say and Aaron will do the talking. My brother farmers, the same thing is now on with us in their southland. We are here in bondage, God knows we are. James P. Davis was born and reared down here in this land and he left this land doubtless 40 years ago and fled to the wilderness, Illinois, for these names have the same meaning. But the best of all we know that God has met him somewhere and ordered him to come back to the land of his birth and bring his brethren from under bondage and debt slavery. Davis objected the order, because he had been gone so long that his people in this land would not know him and so they would not believe that God had sent him back for us. But God said to Davis, go back and he would meet his Brother, B. A. Green, of Mound Bayou, coming out from Goshen, the fertile spot of this southland to meet him, and God told Davis to bring Green back with him, because we know Green, and believe the message. So God is telling Davis what to say, Davis is telling Green what to say and Green is doing the talking. You remember when Moses came to Pharaoh the people's burden was made greater So it is with us in this southland, since our deliverers have come and brought the message you see Pharaohs have made our burdens heavier, but let us do all we can to stand. We know when Moses brought the people to the Red Sea, which was spreaded out before them and the enemies were spreaded out behind them, then the people began to worry Moses, and Moses began to be troubled so he did not know just what to do because he could not afford to show how troubled he was. So he said to the people, stand still and see the salvation. Then Moses sought to pray but God said to him it is no time to pray now, but it is time to do, then Moses held out his rod and the sea fled before them and they crossed dry shod.

Ah! Bro. farmers, do you know we are at the Red Sea, our enemies are coming on behind. We are worrying our leader without a cause yet he tries to keep it hid from us. So he has ordered us to stand and see the salvation of God. Our President has taken his rod in hand and is ready to stretch it out, if we will obey his orders. The Seas of Adversities will soon disappear and the pillar of cloud by day and the pillar of fire by night, will lead us on. You know when the people came to Jordan River, it was in the spring season of the year. The snows on Mt. Lebanon were melting and running down, and the spring refreshets was on, causing the river to overflow its banks. But, when Joshua gave order the priests took up the ark and walked into the Jordan, and asked no questions, and the host followed so the water fled before them.

So let us obey the orders of our President, our most worthy state chairman and officers of the N. F. C. F. and the pillar of fire by night and the pillar of cloud by day will lead us into the promised land.

(Sent in by J. B. Baugus.—A reader.)

HYDE CALLS FARM PARLEY FOR NOV. 19 TO 21

Washington, D. C.—Secretary of Agriculture Hyde today issued a call for a three day conference on agriculture land utilization to be held in Chicago, Nov. 19 to 21. The association of land grant colleges and universities is joining in the call.

The conference, it was announced, will consider essential steps toward a national policy of land utilization, and the bearing of such a policy on problems now confronting agriculture. Sub-marginal land, tax delinquency, farm abandonment, mortgage indebtedness, foreclosed farm lands, and other immediate problems also will be discussed, Secretary Hyde stated.

"The department of agriculture has long left the need for a land policy consistent with the outlook for American agriculture," Secretary Hyde said, "and has from time to time suggested the broad outlines of such a policy. The time is particularly opportune for such a conference, for many of the emergency problems now confronting agriculture are directly due to the lack of a sound land policy."

Farmers, bankers, railway officials, insurance and mortgage company officers, and others will be represented at the conference.

It is expected that representatives of the N. F. C. F. and of Negro bankers and land grant colleges will be invited to attend this conference.

FAVOR COVER CROPS.

Mississippi Farmers Rally to Campaigns of County Agents

A. and M. College, Miss.—The winter cover crop campaign waged by state and county extension agents during recent weeks has met with an enthusiastic response from farmers of the state, according to reports from county agents from all sections of the state.

The only factors that will limit the acreage planted to soil-building and grazing crops this fall will be a lack of moisture at planting time and inability of farmers to buy as heavily of seed as they had planned. County agents state that demonstrations conducted this year in turning under vetch and Austrian winter peas, which were followed with corn, has proven that our farmers can double the yield of corn without the use of a pound of commercial fertilizer.

Where farmers are not able to buy enough vetch and Austrian pea seed to plant the desired acreages in cover crops, the agents are suggesting the planting of oats as many farmers have their own seed or can buy good seed oats cheaply. While oats do not add nitrogen to the soil, they prevent soil erosion, provide excellent grazing, and when plowed under add much organic matter and greatly increase the moisture holding capacity of the soil.

Increasing attention is being given by farmers to the production of oats as a grain crop. The large yields of oats obtained this year, with the harvest coming at a time when many farmers had neither feed nor money with which to buy feed, did much to popularize oat production in the state.

THE CREED OF A REAL AMERICAN

The following "Creed," which is worthy of adoption by all of us, was written by Louis A. Bowman, trust office of the National Builders Bank of Chicago.

"TO LOVE my country and appreciate its true grandeur as the cradle of liberty, the author of freedom, the leader among nations.

"TO BELIEVE in the Declaration of Independence, the Constitution, the Emancipation Proclamation, and the eternal principles which they promulgated.

"TO STUDY the lives of the great men whose ideas and ideals achieved and maintained liberty for whites, black and browns, realizing that present day blessings are resultant from their heroic sacrifices.

"TO SERVE my country loyally, with arms if needed, but always with equal loyalty in peace, realizing that the present opportunity for service is in serving its people and its institutions, and that such opportunity may lie in my own precinct, ward village or city.

"TO REVERE the stars and stripes not merely as an idle sentiment, but with a glowing heart which impels right conduct.

"TO PARTICIPATE in politics, meaning by politics all matters pertaining to public welfare, and to do my full share to redeem them from corrupt men.

"TO USE my franchise conscientiously, fearlessly, independently, at primary and polls, and reprove my neighbor who does not.

"TO EXERT my influence for the enactment of wise laws for the protection of men, women and children, to aid in their enforcement, and to oppose the official who violates his oath by declining to enforce them.

"TO DESPISE anarchy, whether its expression be by a misguided individual, or by a mob, a corporation, a trust or a union, and to strike it a blow wherever it raises its hissing head.

"TO BE AN ENEMY to graft, dishonesty, selfishness, to be an uncompromising foe to all manner of vice, and to work and vote against them at every opportunity.

"TO OPPOSE with vigor, tyranny, greed, oppression and injustice, and to do my best to obtain square treatment for every individual whom I may help.

"TO DEVOTE a portion of my time, strength and means for the annihilation of evil and the upbuilding of the good, for the resistance of wrong and the assistance of right.

"TO DO WELL all the ordinary every day duties and to accomplish something for the elevation of the ideals of mankind

"TO BE a true patriot, not for reward or glory, but for genuine love of freedom, liberty, manhood and principle.

"TO SERVE my generation as devotedly in peace as my ancestors served theirs and their posterity in war.

TAMING OLD MAN RIVER

Washington Post: Probably few Americans realize that the amount of earth that is being placed in the levees in the gigantic work of controlling the flood waters of the Mississippi amounts to twice the excavation required on the Panama canal. Two-thirds completed, the project calls for the moving of 500,000,000 yards of dirt. The work is going forward at the rate of about 8,000,000 yards a month.

Of the $325,000,000 authorized for this great improvement $127,000,000 has been expended on schedule. President Hoover's intense interest in the project and the direct personal supervision he gave it was well justified by its inherent importance and the value it will be to vast sections, but it is doubly justified at present because it now supplies work for an army of employes

The government employs many workers directly, but thousands of others receive employment through contractors, and still more are indirectly benefited by orders to manufacturers of machinery, boats, trucks, automobiles, cement and many construction materials, all of which are required in large quantities. Needless to say the latest and largest types of graders, tractors, hydraulic dredges and conveyors are in use, and the work is being done with every economy that ingenuity, mechanical efficiency and engineering skill can devise.

The Mississippi flood control improvements extend all the way from the Rock Island district to the gulf of Mexico. Protection from flood waters is afforded mostly by levees, which are simply great ridges of earth built up parallelling the river. These are placed far enough back to escape the danger of caving banks, and to provide space between the river channel and the levees to carry flood waters. The levees vary in height from 20 to 30 feet. At many points the process is not as simple as this; dams must be built, and river banks fixed by revetment. Piling is at times required, and spillways have to be constructed.

All this vast undertaking is financed without any local contributions whatever, the entire expense being borne by the United States The enterprise, of course, is not only of vital importance at this time to a great stretch of territory in providing work that is most opportune, but it is building up permanent values for many thousands of acres of rich land. Improvements can now be made with assurance of security that was impossible before. The control of the Mississippi, bringing peace and prosperity along the Father of Waters, may well be considered the great physical achievement of the present administration

COLORED FARMER'S COTTON CROP GROWING IN CITY

The Memphis Commercial-Appeal tells an interesting story of a colored farmer's crop of cotton that grew almost in the center of that city—in fact only six block from the post office. We congratulate Henry on his industry, thrift and also, "nerve." We hope the city fathers will let him alone and treat him right. He is certainly needed where he is an example to a few hundred Memphis Negroes who seem to think that cotton and working in cotton is a shame and disgrace. This is the story:

COTTON AS GOOD AS BEST IN DELTA BEING RAISED ALMOST AT CITY'S HEART

Folks who have been driving over into Arkansas or down to the Mississippi delta to see the fine cotton being raised this year are going to a lot of needless trouble.

Within a half mile of the postoffice, in fact, in the first ward, first precinct, there is cotton that is producing well over a bale an acre.

On a 12-acre clearing on Mud Island opposite the Auditorium, Henry McCarroll, Negro, has a fine stand of cotton from which he has already turned in nine bales and he says there are six more bales to be picked.

At the G. W. Hurley Produce Company, which is supplying McCarroll, the cotton is graded at middling, with 1 1-16-inch staple.

His land is probably as rich as any soil in the world, and its fertility is renewed with every high water, which deposits a thick new layer of alluvium.

Henry lived in a stranded quarter boat until the city harbor commission cleared the port of shantyboat men, he now lives in a tent. He says he owns the land because his father took squatter's rights. The city harbor commission says the city owns it, because it had been owned by the federal government which gave it to the state, which gave it to the city. These claims have no effect on Henry, since he pays no rent or lease fees to the city, and he paid no attention to orders of the city not to plant last spring.

Some time, when the city legal department has settled the Collier tax claims, issued the city digest and cleared up some other matters, the ownership will be settled in court. Until then, some fine cotton may be seen at the very heart of the city of a quarter million population.

HOLLY GROVE UNIT NOTES

Lexington, Miss.
Route, 3, Box 77

To the Editor of the Modern Farmer,
Nashville, Tenn.

Please let me in for a few moments, and allow a little space in one corner of your paper for this little bit of news. I always enjoy reading the news of our Colored race I read it with pleasure. I think the paper is one of the greatest that has ever been printed by our race.

After all we are getting along fine. We have a very good membership, and we are still joining them to our unit, which is known as the Holly Grove Unit.

Very truly,
Arnecia J. Givens.

ATTENTION COLORED FARMERS

The National Federation of Colored Farmers is receiving hundreds of letters from Colored farmers requesting all kinds of aid and information. We are willing to do everything we can for all the Colored farmers of America. It costs money, however, to maintain offices and our expenses are becoming so heavy that we are compelled to discontinue supplying information to those who request it who are not members of the Federation. If you have faith enough in the organization to believe that it can aid you, then you should be willing to join it and help support it. Isn't that so?

Several County units have organized and elected officers but have not sent in their membership dues. These units are eligible to membership in the Federation until dues are paid. Be helpful. Co-operate. Pay up. "All for each and each for all"

OUR JOBS ARE GOING AND COMING

Urban League Tells About It In Their Bulletin Released Through Its Department of Industrial Relations

New York, N. Y.—The old adage that it is an ill wind that blows nobody good is illustrated by several innovations that have brought jobs to Negroes as result of the business depression. The necessity of keeping plants running is of greater moment than race prejudice and so Negroes have been employed by telephone companies in Richmond and Los Angeles to solicit business among members of their own race. Also in Los Angeles and in New York chain store corporations have employed their first Negro workers In Milwaukee two public school teachers have gone to work and two eligible policemen await assignment.

But these innovations for the white collar worker, while comforting, are few compared with the large number of jobs lost by the laboring group not because operations were curtailed or working force cut, but to make room for workers of another race. In Harrisburg one of the largest hotels now uses white waitresses instead of Negro waiters, some of whom had given as much as fifteen years' service.

Department stores in Columbus, Ohio are reported to have replaced colored porters with white, and railroads in the North West have taken off dining and Pullman cars, thus throwing idle employees on the streets in Minneapolis and St. Paul. In Fort Wayne, foremen inform Negro applicants they "cannot hire colored men just now." Pullman shops in St. Louis, Buffalo, and Wilmington, (Del.)—in normal times outstanding places of employment for Negro workers—are employing considerably fewer numbers of workers.

When management changed in an automobile agency in Seattle three Negroes were released, one of whom had been five and one-half years' service with the company. The new manager brought in his crew of workers, among whom were no Negroes.

BROWN EGGS OR WHITE

Boston Transcript: Our heart leaps up when we behold on the market page of a New York newspaper that one outcome of the hard times is that housekeepers in New York are overcoming their squeamish prejudice against brown eggs and are now buying them because they are a few cents cheaper than white ones, the reporter adding by way of commentary that 'it is a New York idiosyncrasy to demand white eggs."

We have often wondered at this strange caprice, for it means that the poultry raisers who cater to the metropolitan market, whose flocks are numbered by the million all through Long Island and New Jersey and the Hudson river counties, are restricted to keeping fowls which lay white eggs, notably the leghorn, which is probably the most accomplished egg-producing machine in the feathered kingdom. But the Leghorn has the defects of its qualities: it uses up so much energy in laying that it has no leisure to put meat on its bones. As a table-bird it has no standing

In New England, however, where buff eggs are preferred, we have a variety of breeds to choose from— the Rhode Island Red, the buff Plymouth Rocks and Orpingtons and Wyandottes, all of them creditable layers as a prima donna so that they are greatly in quest among bon vivants. In New England we do not disdame white eggs as being less palatable than buff ones; we choose the latter for esthetic considerations—they lend themselves easily to artistic color combinations at the breakfast-table. Consider how their hue fits in with the oatmeal, the cafe au lait, the pale brown of properly made toast, the dusky crust of English muffins, the pale green and ambers of ripe cantaloupes. No white egg fits harmoniously into the color scheme. It is too white, as if it had been whitewashed. It has none of the blue shadows which give tone to newfallen snow. It is an egg and nothing more. We hope that New York women, now that they have been forced by economic reasons to use buff eggs in their households, will come to value them at their true worth. King George of England, it is said, owes his convalescence and recovery from his dangerous illness a while ago to a diet of buff Rhode Island Red eggs, prescribed for him by his physician, Lord Dawson of Penn. It is now the royal egg and we should not be surprised any day to hear that the College of Heralds had taken out one of the lions on the king's escutcheon and in its place blazoned a Rhode Island Red, rampant etclamant, as testimony forever more to the invaluable service the bird rendered his majesty in his time of great need.

VEGETABLE AND FRUIT EXCHANGE TO OPEN SOON

With sufficient tonnage pledged to insure efficient operation, the National Fruit and Vegetable exchange, in its first stockholders' meeting yesterday at the Sherman hotel, announced the exchange would be open in Chicago within a short time as a central sales agency to operate through the present trade channels in handling all kinds of vegetables and all fruits except citrus.

Six months of study preceded the setting up of the exchange, which is a cooperative agency designed to represent various producers 'organizations without having each group of producers maintaining separate sales offices.

Officers of the exchange, which has been incorporated, include A. B. Leeper, president, Centralia, Ill. of the Illinois Fruit Growers' exchange; H. L. Robinson, vice president of the Hastings (Florida) Potato Growers' association, and F. P Hibst, secretary and treasurer, Cadillac, Mich., of the Michigan Potato Growers' association. Representatives at the session yesterday were from nine states.

This will afford another opportunity for colored farmers' co-operative associations to secure valuable marketing facilities. Officers of the N. F. C. F. have been assured that their Units who plan to ship in car-lots will receive fair treatment and their patronage will be appreciated.

PRESIDENT HOOVER'S THANKSGIVING PROCLAMATION

Text of Proclamation.

The proclamation follows:

"We approach the season when, according to custom dating from the garnering of the first harvest by our forefathers in the new world a day is set apart to give thanks even amid hardships to Almighty God for our temporal and spiritual blessings. It has become a hallowed tradition for the chief magistrate to proclaim annually a national day of thanksgiving.

"Our country has cause for gratitude to the Almighty. We have been widely blessed with abundant harvests. We have been spared from pestilence and calamities. Our institutions have served the people. Knowledge has multiplied and our lives are enriched with its application. Education has advanced, the health of our people has increased.

"We have dwelt in peace with all men. The measure of passing adversity which has come upon us should deepen the spiritual life of the people, quicken their sympathies and spirit of sacrifice for others, and strengthen their courage.

Ask Help for Needy.

"Many of our neighbors are in need from causes beyond their control and the compassion of the people throughout the nation should so assure their security over this winter that they too may have full cause to participate in this day of gratitudes to the Almighty.

"Now, therefore, I, Herbert Hoover, President of the United States of America, do hereby designate Thursday Nov. 26, 1931, as a national day of thanksgiving, and do recommend that our people rest from their daily labors and in their homes and accustomed place of worship give devout thanks for the blessings which a merciful Father has bestowed upon us."

MT. CARMEL UNIT NEWS

Dear Editor:

Allow space in your paper for a few words from the Mt. Carmel Unit. This being our first time to write I want to say accept us as one of you. We don't have much to say but we feel like we are a part of the body, even though we are a very small part, yet we are members of the family. Hyman Chapel Unit, St. Mary, Mt. Olie, Mixes Chapter are some of the units that are succeeding. We are doing service as farmers. I was born on the farm. I was raised on the farm. I married on the farm. God blessed me with a family on the farm. Time shall find me on the farm. As members of the N. F. C. F brethren, let us stand for our national organization and our President J. P. Davis. This unit train is quite an easy train, it doesn't make much fuss. If you want to succeed get in the N. F. C F. at Mt. Carmel, go with us. If you trust and never doubt, God will surely bring you out on the farm.

R. B. Carpenter, President.
A. D. Banks, Secretary.
Sam Clergett, Jr., Reporter.

GRAPEFRUIT HAS A PAST.

Los Angeles Times: The baby name of grapefruit was "shaddock."

It was discovered by Captain Shaddock in the Polynesian islands Because it grows in clusters, it came to be popularly known as grapefruit. Horticulturists have been trying in vain to rechristen it "pomelo."

Who would have dreamed just a few years ago that the sour shaddock would become a prince of the citrus industry? The fascinating story is told in the California Cultivator by W. E. Bemis, industrial and agricultural secretary of the Phoenix Chamber of Commerce.

One million one hundred and eighty-nine boxes were grown in 1909. But in twenty years, the number has increased to 9,218,000 boxes. Sixty thousand acres of young trees should be added to the 100,000 already producing.

Spain is the great orange country of the Mediteranean group; but America pioneered the grapefruit.

Coachella and Imperial valleys, along with Arizona, furnish the deluxe grades of the far west. California has 9000 acres of bearing trees and 5600 non-bearing. Arizona has 2830 bearing and 5800 non-bearing.

Florida boasts 75,000 acres of producing trees and 5000 on the way. Texas will be the surprise citrus country of the future. Little has been broadcast about it; for her oil derricks have overshadowed all else. She already has 10,192 acres of bearing orchards and 49,830 non-bearing.

A BIG PIE

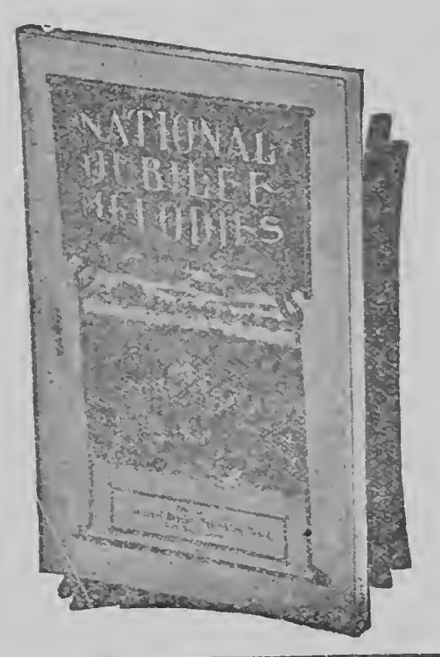
One of the world's largest apple pies was recently baked in Birmingham, England. It was 12 feet long, 10 feet wide and 2 feet deep It contained 450 pounds of apples, 150 pounds of flour, 50 pounds of lard and 28 pounds of sugar.

LAST STRAW

Des Moines Register—The National Casket Co., reports a 17 per cent decrease in business since trade started its slow-motion act. Are times getting so bad a fellow can't afford to die?

Unimproved land in Hawaii is being sold at 1920 prices.

National Jubilee Melody Song Book



America's original music. Songs from the Plantation and Slave Days. More than one hundred thousand sold in the year of 1921. More now going. Send your order.

PRICE 50c

Make all orders payable to

NATIONAL BAPTIST PUBLISHING BOARD

Henry A. Boyd, Secretary,

523 2nd Ave., N., Nashville, Tenn.

Use Sunday School Catechisms FOR THE LITTLE ONES

Select one of the three---First, Easy Lesson Primer 6c; Second Child's Bible Question Book 5c; Third Baptist Sunday School Catechism

After thirty-three years of actual Sunday School experience, after thirty-three years of developing a service for the Sunday School forces, we have been convinced that the Sunday School Catechisms, edited, published and printed by the National Baptist Publishing Board, will give help and instruct the children in a way far more advantageous than the Picture Lesson Cards. At the same time, they will save the Sunday Schools money, because there are thirty-two pages in each of these Catechisms, with illustrations, Bible questions and intensive study calculated to develop their minds. These Catechisms are described and priced on the order blanks.

In preparing your order for the next quarter, and from now on, give attention to the Sunday School Catechisms, substitute them for Picture Lesson Cards. We recommend them. We endorse them. We specialize in them.

"OUR SLOGAN"

STAY ON THE FARM IF YOU'RE ON IT! GO BACK TO THE FARM IF YOU'RE OFF IT!

THE LAW

"It is hereby declared to be the policy of Congress to promote the effective merchandising of agricultural commodities by encouraging the organization of producers into effective associations under their own control.

The Board is authorized and directed—to promote education in the principles and practices of co-operative marketing—to encourage the organization, improvement in methods, and development of effective cooperative associations." (Public—No. 10—71st Congress. Sec. 1-5.)

THE GOSPEL

"This law is predicated upon the ability of the farmer to manage his own business, once he is organized to do so. Cooperation is the key to it and only in exceptional cases can the Federal Farm Board have any dealings with a farmer who is not a member of a producer-owned and producer-controlled marketing unit." Hon. Sam'l R. McKelvie, Member, Federal Farm Board.

The National Federation of Colored Farmers believes that the Colored Farmers of America should own and control their own co-operative associations.

"Co-operation With All—Affiliation With None."

EDITORIAL

GIVING THANKS ALWAYS

"Giving thanks always for all things" was the advise the apostle Paul gave the Ephesians. It is good advice for us today. Paul knew that one who had a thankful heart—who was not ashamed to praise the God from whom all blessings flow—would be inspired to work and struggle to possess something. Giving thanks has a beneficial effect upon the mind. The mind is freed of fear and worry—productive thoughts flow into it—and prosperity comes when those thoughts are turned into something we can see and handle. So giving thanks is a duty that pays good dividends.

We would like to see America's colored farmers observe Thanksgiving Day this year by being really thankful. We are fortunate. We have been blessed with bountiful harvests. We are living in the best place the average colored American can live today—on the farm. We are blest with opportunities to be healthful—to be contented—to be happy.

Let us give thanks always for all things. The thankful heart lives long to enjoy abundant blessings.

SENATOR CAPPER ON ORGANIZATION

"Organization and co-operation are the salvation of the farmer without these two mediums he will get nowhere. My plea to you is to get together through your Farm Bureau, your State Grange and through the Farmers' Union. These three organizations, in my opinion, are three of the finest institutions the farmer has today."

This is an excerpt from a speech of Senator Capper, of Kansas, made to a farmers' gathering at a little country town in his home state. It is good advice to colored farmers also. Had there been a number of colored farmers in the audience, doubtless Senator Capper would have added the National Federation of Colored Farmers to the other three great organizations mentioned. The Senator also stated that he believed "better times and sure prosperity are ahead for the farmer," but, he added, "you people first must decide your own needs. You must band together for unity and strength. You must form your own program."

This is exactly what colored farmer must do. We must know what we need and what we want. We must make our wishes and desires known. We must request—continually request an American farmer's chance in America. Organization and co-operation will give us power—will enable us to speak with a loud voice. The National Federation of Colored Farmers, the colored farmer's own organization, is speaking for him today at every opportunity. The real progressive and thinking colored farmer should join his organization—should unite with his brother farmers—and aid in bringing prosperity and happiness to all of us.

PLOW 'ROUND THE BUMBLE-BEE NESTS

We well remember that rocky old hillside in Kentucky where we first learned to play. We remember the kind old white gentleman who employed us at 25 cents per day and board. Big money that was back then! We also remember the bumblebee nests—five of them—and the admonition we received, "Stay clear of those nests, Boy. Plow around them."

Naturally we are a peace-loving people. We are not fuss-makers, squabblers nor rioters. We are prone to turn the other cheek and endure to the bitter end. We have pretty good judgment and we usually use our judgment. Sometimes our temper gets us into a little trouble, but when we hear of American Negroes getting into "big trouble" we can rest assured we were fooled

Not long ago some Alabama sharecroppers around Dadeville were fooled into "big trouble." They got tied out a sharecroppers' union of some kind—ran afoul of the law—some were killed—some were wounded—some got in jail—some are in jail yet. They were fooled into joining something they knew nothing about—they were promised something they could not possibly get,—they were led like lambs to the slaughter,—they suffered and some of them died and no one knows yet what for?"

Our advice to colored sharecroppers, tenants and small farmers is to steer clear of organizations and leaders, white or colored, who promise you the world in a paper bag with a ribbon tied around it. Beware of organizations and leaders who cannot prove their character. Beware of a thing that has a bad name. The country is getting full of false prophets who take special delight in prophesying to colored people. Don't listen to agitators and fuss-makers. Seek wisdom and understanding. Live peaceably with all men. If conditions are so bad where you are that you can't endure longer, then get up and move. Don't stay there and suffer and don't stay there and fight. The odds are against you and they are going to be against you for a long time yet.

You certainly should belong to a farmers' organization but be sure the organization you join has a purpose and a program, that is reasonable and sensible. Join one that talks more about building than destroying. Those organizations that want to tear up everything and change the face of the earth in a week are too dangerous to fool with. Plow 'round the bumblebee nests!

THEY ALL FALL SOMETIMES

The Montgomery County, Alabama grand jury has reported a $12,000 shortage in the Alabama Farm Bureau Cotton Association funds and returned indictments against three men alleged responsible. Those of us who are prone to criticize Negro farm organization leadership and who are always fearing that something may happen to the funds of colored organizations should take note of this and remember that color has nothing at all to do with character. White or black, they all fall sometimes. They all bear watching and it is only good business and good sense to keep an eye on those who handle money that belongs to others.

Colored organizations should elect to office only those men or women who have proven they can be trusted and all of our secretaries, treasurers and market-agents should be required to give sufficient bonds The honest official will not object to being bonded. The old saying that "his word is his bond" is no good in business. Play safe. Tie your officials up so tight they will have to be honest or suffer the consequences of not being honest.

A SHARECROPPER'S LETTER

Dear Sir:—Please let me know if all cotton is bringing 5 cents a pound and whether or not the government has set that price on cotton Our landlord here tells us that 5 cents is all we can get and that the government is buying all of it at that price. Mr.————was in Memphis last week and he told me that cotton there on the market, no better than ours here, was selling for around 9 and 10 cents. Our cotton is long staple and good grade.

Our reply

Dear Brother:

Your landlord is mistaken. Long staple cotton, such as the average produced in your community, is bringing from 7 to 11 cents. The government has nothing to do with fixing the price of cotton. It is evident that your landlord is trying to mislead you for his own benefit.

I cannot advise what is best for you to do at the present time. I expect you are one of the unfortunates whom the landlord owns, body and soul, and you will just have to take what you can and make the best of it. But for your own sake and for the sake of your family, get off that man's plantation just as soon as possible. Get off, if you have to carry your goods on your back. Find a landlord who is honest and just. There are many good landlords who will appreciate your industry and your desire to have something and be somebody and such a landlord will treat you right. We must starve out those landlords who persits in starving us. When they discover that they cannot get tenants on account of their injustice they will be forced to mend their ways.

MR. GUPNES WANTS COTTON PICKERS

Mr. G. M. Gupnes, of West Memphis, Ark., writes to the Memphis Commercial Appeal and complains that he cannot hire cotton-pickers in Memphis although he is paying pickers 50 cents a hundred, which is ten cents higher than others are paying. He says that every morning he passes hundreds of idle Negroes standing around the Memphis city auditorium and near the end of Harrahan Bridge, who scoff at the few who ride the trucks out to his fields. He says they will not work because the city has promised to feed them. They have registered—election is coming—and the white folks need their votes.

These idle, no-good city loafers are a curse to the race. All of us have to suffer on account of them and the worst of it is that we cannot help ourselves. They belong to a rotten political system we did not help establish and can do little to help destroy. What Memphis and other like cities need is a law forcing these adult loafers to attend school at least three hours a day. They are idle and lazy because as a rule they are illiterate and ignorant. They must be taught to be different.

On the other hand, we realize that Mr. Gupnes lives in a section of Arkansas that has a bad name among colored people. Negroes have been lynched, flogged and even burned to death in that section and this may be the reason why so few venture there.

A Negro who would rather beg than work is a very low person and a community that flouts the law and destroys human life indiscriminately is a very low community. It's a mesh that both need reforming, educating and Christianizing.

THE OLD ART OF WORKING

The Shetland Islands, from whence came the sturdy little Shetland ponies, are inhabited by a people who know what it is to have to work hard. Their very existence depends on their ability to make every minute count. These islands are poor and inhospitable and a living is hard to get. The islanders, however, become accustomed to their struggle for existence and they are happy. They are contented because they have learned to take life as it comes and make the most of it.

T. Harold Grimshaw, in his book, "A Sturdy Little Northland," says: 'A familiar sight on the islands is a lassie going over the hills to fetch provisions or to carry the peats, her outer skirt pinned up, a white kerchief over her head, basket on her back, knitting all the while."

Who can remember the colored country lassie who used to carry her knitting or crocheting with her to the spring or to the fields? Sometimes the bucket or basket rested on her head and as she walked along, her skillful fingers were busy, knitting a glove or stocking, or crocheting a fancy scarf or table cover. Who can say she was not happy? She was proud of her art, of her skill, or her industry. She got a far bigger "kick" out of making things than her children or grandchildren get today from buying things the machines and factories make.

The old art of working remains the most important art in the world. It still pays to be diligent—to be useful—to keep busy. The wages are what money will not always buy. They may be bodily health, peace of mind, enough of the necessitics of life, and a clear conscience.

The world owes no one a living who is not willing to work for it.

Railroads Helping Farmers

(Continued from Page 1)

upon the society's resources. The annual Roll Call is scheduled to begin on Armistice Day, November 11. The campaign will extend through Thanksgiving, November 26. Between those dates every one will be afforded an opportunity to take out a membership in the society

Application for Membership
NATIONAL FEDERATION OF COLORED FARMERS
Vincennes Hotel, Chicago

As a farmer, I believe the time has arrived when the Colored Farmers should form a National Organization devoted to diversified production, grading, packing, shipping and marketing of farm products and to the purchase of needed farm supplies through co-operative methods, to the end that a more prosperous financial condition may result from their efforts as producers.
I hereby subscribe $5.00 for membership in the National Federation of Colored Farmers for a period of 12 months from date. Also $1.00 for an Annual Subscription to the Modern Farmer.

NEWS BULLETIN

NOVEMBER 4TH, 1931

COTTON

The cotton market is holding up very well, and all indications point to higher prices. The larger part of the crop has been picked and from now on ginngings will not be as heavy, and we look for prices to rise steadily. The approximate premiums for staple cotton on the Memphis market as reported to the Memphis office of the United States Department of Agriculture, based on New York December futures contract which closed on October 31st, 1931 shows:

Strict Middlings, 7-8 inch $6.15
Strict Middling 1 1-4 inch 11.65
Middling, 7-8 inch 5.90
Middling, 1 1-4 inch 10.65
Strict Low Middling, 7-8 inch 5.55
Strict Low Middling 1 1-4 inch 8.15

The above will show that all cotton is not selling for the same price

The United States Feed and Seed Loan Office is reported willing to take cotton as colaterel on indebtedess to them at the following prices:

Middling, 7-8 inch 8.00
Middling, 15-16 inch 8.40
Middling 1 inch 8.80
Middling 1 1-16 inch 9.50
Middling, 1 1-8 inch 9.80
Middling, 1 3-16 ... ...11:00

For strict Middling 25 points more for all staples and for Good Middling 40 points more for all staples.

Mississippi members who have drught loans should send their cotton in to the Mississippi Cotton Co-Op at Jackson, Miss.

Cottonseed meal is up about a dollar per ton.

GROCERIES AND SUPPLIES

Wheat has made a good advance during the last few days and will result in higher prices of flour.

It will be well for our members to buy a two months supply at present prices.

Your list will show good plain Patent flour as low as $3.15 per barrel.

Corn meal still being offered around $2 to $2.20 per barrel. Macroni and Spaghetti 59c for a case of 2 dozen seven ounce packages. Cheese in 23 pound hoops at 15c per pound. Alaska Salmon in pound tall cans at $3.92 per case of 4 dozen cans. This figures a little over 8 cents.

Fancy rice $2.10 per hundred pounds.

It will soon be hog killing time. Buy your salt now. One hundred pound sacks 70 cents. Grey shorts in one hundred pound sacks 72c, and bran 65 cents. Horse and mule feed 50 per cent grain $1.25 per hundred pound sack. Laying Mash in hundred pound sacks $2.75.

DRY GOODS AND SHOES

There has been no material change in prices since our last news bulletin, but we are expecting an advance most any day. Members should anticipate their needs and buy before prices are advanced.

AMERICAN RED CROSS

The American Red Cross will put on a nationwide drive from November 11th until Thanksgiving and we urge every member of this organization to try and help out in this worthy cause. They aided us last year.

SWEET POTATOES

We have in Chicago some wholesale buyers who need several cars of sweet potatoes. Let us have prices.

Sorgum and Cane Syrup

Send in prices on syrup to be shipped in gallon buckets with four to the case.

The following farms are for sale on lang time payments with a small cash down and balance in about 23 years.

To good farmers who have their own stock and feed it is possible that some of these farms can be leased the first year, with the privilege of buying at the end of the harvest period.

MISSISSIPPI DELTA SECTION

Coachoma County—Clarksdale County Seat

639 acres 1 1-2 mile S. E. of Rich on good gravel road; now highway graded along west line; good improvements; 500 acres in cultivation, well drained; low taxes.

Quintman County— Marks County Seat

120 acres 1-2 mile North Belen on excellent gravel road; good improvement.

80 acres 1 1-2 mile south of Marks, also near Lambert on good graded road; good improvements; 65 acres in cultivation.

316 acres 1-2 miles N. from Lambert, near Marks; 250 acres in cultivation; ample improvements, highway goes right through the plice.

120 acres near Birdie; good gravel road goes through the farm; ample improvements; practically and in cultivation.

502 acres at Birdie; on good gravel road; ample improvements, store building and old gin; 390 acres in cultivation.

Tallahatchie County —Sumner County Seat

80 acres 3 1-2 miles east of Sumner; on gravel road; ample improvements; 65 acres in cultivation.

Leflore County —Greenwood County Seat

353 3-4 acres 7 miles S. W. from Sidon; 160 acres in cultivation; very good land; ample improvements.

1071 acres across Tallahatchie from Phillips; 800 acres of best sandy loam land in cultivation; good improvements; two good roads to property; artesian wells all over property.

EAST MISSISSIPPI

. 314 1-2 acres in Monroe County 2 miles S. W. of Muldon; on good graded road; 3-4 miles from gravel highway; all cultivable; ample improvements; best kind of farm for all around use; priced to sell $20.00 per acre.

1375 acres in Noxbee County 16 miles N. E. Brooksville; ample improvements; good strong land; 420 acres in cultivation; price $8.00 per acre.

Also the Crenshaw farm about 2 miles from Crenshaw and 4 miles from Sledge, and the Fiftian place consisting of 569 acres near Falcon station. These farms are in Quitman County also.

In Bolivar County the Burt place near Gunnison is also available.

In Yazoo County the Castleman farm of 1325 acres is considered one of the best farms in the Delta. It runs along Silver Creek, with the Y. and M. V. road running through the farm.

ARKANSAS

The Marvell Farm in Phillips County Arkansas is also for sale, and it may be that the owners will consider a lease. This farm is on State Highway No. 20.

LOUISIANA

CALCASIEU PARISH: 658.79 acres 3 3-4 S. E. Vinton, 12 miles West of Lake Charles; 590 acres in cultivation; good improvements; excellent rice and general farming proposition gravel road on west line of property; near oil field and sulphur proposition; priced to sell at once.

NATCHITOCHES PARISH: 1543 acres 3 miles from Clarence, railroad stop (Lnella) on the property; No. 71 Federal Highway (being concreted) runs through the farm; high state of cultivation with 950 acres in crops; good improvements. Low price and best terms.

ST. MARTIN PARISH: 87 acres 2 miles down concrete highway from Brossard — 8 miles from Lafayette; all in cultivation, and a very desirable property fair improvements. A real bargain.

St. MARTIN PARISH: 791 acres at Huron, about 12 miles N. E. of Lafayette; good gravel road through property; good improvements; practically all in cultivation; very desirable property in an excellent community. The man who gets this place at our price will end all his worries.

Members in Georgia, Tennessee, Alabama and South Carolina interested in leasing or buying farms, write the main office.

ALL COTTON NOT BRINGING SIX CENTS

We publish below price list of staple cotton premiums on Memphis market, October 24th. Again we say that some cotton is bringing much more than six cents. Colored farmers should be wary and demand that their cotton be graded according to U. S. official cotton on the Memphis market, as send a sample of your cotton to a U. S. grading office. Write to the N. F. C. F. Chicago, office, for instructions and advice. Don't let the sight of a few dollars make you careless. GET ALL YOU CAN GET FOR YOUR CROP AND SAVE SOME OF YOUR MONEY.

STAPLE COTTON PREMIUMS ON THE MEMPHIS MARKET

Approximate premiums for staple cotton on the Memphis market, as reported to the Memphis office of the United States Department of Agriculture, based on New York December futures contracts (the spot trading month), which closed on Oct. 24, 1931, at 6:85c.

1 7-32 inch, 100 on, or..... 7.85
1 1-4 inch, 150 on, or 8.35

These quotations based on U. S. official cotton standards for grade and staple. Interior points in Memphis territory 10 to 15 points cheaper.

(St. Louis Post-Dispatch)

NEGROES IN THE CENSUS

Census figures just issued show an increase in Negro population more rapid than the gain for whites, and a heavy Negro migration to the North, particularly to indnstrial centers. The white race has an increase of 14.8 per cent in the 1930 tabulation, as compared with a gain of 16 per cent in 1920; Negroes have a rate of 14.6 per cent as against 6.5 per cent. The last decade's virtual cessation of immigration, nearly all of which added to the rate among whites, had a large effect on the changing figures.

The northward trek is indicated in these figures: Negroes increased only 5 per cent in the South, whilo they gained 63 1-2 per cent in the North and 53 per cent in the West. Georgia, South Carolina, Virginia and Kentucky had smaller Negro population in 1930 than in 1920, while the Negro population of New York doubled in the decade and that of Michigan almost tripled. In the South the migration corresponded to the national trend to industrial centers North Carolina, for instance, has attracted largo numbers, while agricultural states have lost.

This tendency has made the Negro a heavy sufferer in the present industrial depression. The National Urban League finds unemployment among Negroes to be five to six times higher than their population status would warrant. The Negro thus has not bettered his economic position by leaving the land. He is paying a heavy price for listening to the call of northern mills and factories that needed cheap labor in the late boom times but had a surplus when the pinch came. A back-to-the-farm movements for Negroes would better their condition and remove a heavy strain from relief o ganizations.

TALKS TO COLORED FARMERS

(Continued From Page 1)

fice, could very easily affiliate and co-operate with the large regional and national commodity co-operatives, and whose transactions would save him much trouble and expense and would insure him against much embarrassment and injustice.

The Farm Board has stated that it cannot recognize or assist a national colored co-operative association for the same reason that it cannot recognize or assist any co-operative association whose membership is restricted to members of a general farm organization, like the National Farmers' Union or the American Farm Bureau Federation. It cannot recognize or assist a national colored co-operative because its membership is restricted to members of a certain race. It believes the co-operative marketing movement should be unified, should be independent of affiliations with farm organizations and with race organizations. In other words, the Farm Board believes the co-operative movement should not be split along racial, sectional, or social lines. We believe so too. But this split along racial lines exists here in America in every religious, educational and social movement there is, so it is reasonable to expect it to develop also in any economic movement initiated. In fact, it has already developed. There are numerous banks, drug-stores, grocery stores, newspapers and etc. known as "colored' businesses and institutions. Some of these are co-operatives. There are also "colored" farm co-operatives in existence now.

The Farm Board will probably remain a permanent government bureau. If it does, it must be able to serve, and it must serve the colored farmer as well as it can serve the white farmer. If it is the will of a majority of the American people, and of a majority of American farmers, that the colored farmers of America be served by the Farm Board "along racial lines," then the Farm Board will have to do that whether it wishes to do so or not. If, as it claims, it cannot do so now under the provisions of the agricultural marketing act, then the act must be amended to permit it to do so.

The Farm Board knows, though it will not admit it, that it cannot serve the American colored farmer as well as it can serve the American white farmer, unless it can render this service due the colored farmer through his own co-operative associations. Colored farmers are prevented now, by social and economic reasons, from affiliating with large regional and national co-operatives on equal terms with white farmers. Ninety per cent of American colored farmers live in the South. It is unreasonable to suppose that they will ever be admitted into local co-operatives organized and controlled by white farmers.

The easiest way to avoid confusion and injustice, as we see it, would be to give the Farm Board authority to assist in organizing and establishing a national colored co-operative association, formed of local, county and state units, which would affiliate with the large regional and national commodity co-operatives. A national co-operative would be unusually effective in promoting the economic interests of the colored farmer and in making him see and feel the benefits of co-operation. This would not be splitting the co-operative movement along racial lines. Instead, it would be giving colored farmers a medium through which their dealings with the large regional and national co-operatives could be transacted,—a medium they could rely upon for service without prejudice and co-operation without confusion.

At the present time, more progress would be made if the Farm Board would employ some colored farm leaders to assist in organization work and in giving educational assistance to colored farmers in the packing and grading of farm products. This is one specific service the Board could render right now and one to which no fairminded taxpayer would object.

PONY WINS AWARDS FOR SCHOOL SERVICE

Special to The Christian Science Monitor

Hiawatha, Kan.

PANSY, a Shetland pony, has been awarded a regular eighth grade diploma and a certificate for not having been either absent or tardy from the Padonia School, north of here, for 22 years. During that period the pony has taken children to school every morning there was any school.

It is planned to make a formal presentation of the diploma and certificate to Pansy next spring, at the time of the rural school commencement. and to have Pansy appear on the stage.

WHERE OVERPRODUCTION FAILS.

Indianapolis Star: Some politicians who are worrying about the surplus of wheat, oil, cotton and other commodities are also becoming anxious about a shortage of campaign issues.

A National NEWSPAPER

For Churchgoers

Read the National Baptist Union-Review published every week, subscription price $2.00 a year. This newspaper is the oldest religious publication under the auspices of the National Baptist Convention of America. It is eight pages in size, eight columns to the page, and is brimful of denominational information every week. It contains a Woman's Page, spicy editorial matter, and circulates in practically every state in the Union.

BIG WHEAT PYRAMID COVERS WHOLE BLOCK

Special to The Christian Science Monitor

LAMAR, Colo.—An entire city block is heaped with wheat—1,000,000 bushels of it. Charles Maxwell, Mayor of Lamar, has purchased the wheat at 8 to 10 cents a bushel above the market price and is still buying it to help the wheat growers of his community.

"The Federal Farm Board," Maxwell believes, "has talked a lot but always runs for cover when the market breaks. Anyone who wouldn't pay 30 cents for wheat is a piker and as evidence of my faith in this statement I cite the fact that I have purchased 1,000,000 bushels of wheat and expect to continue to buy.

"Lamar is ready, willing and able to care for her own people this winter without aid from the Government. We do not expect, we do not need and we are not going to ask for aid from anyone outside our city."

POOR BUT HONEST

Ole, a Swede farmer in the northwest, had had the misfortune of having had one of his cows stray onto the railroad track, and get killed by a train.

The road sent its claim agent to Ole to settle the matter, and naturally the agent wanted to make the best terms of payment for the cow that he could. So he opened fire on Ole about as follows:

"You know, Ole, that cow had no right on our track. It was only an act of Providence that it was not a passenger train that hit your cow, else there might have been a terrible accident, with many passengers killed and wounded. Just think of it Ole, the killed and injured lying helpless and bleeding all over the track, just because your cow strayed on our property! By the law of habeas and corpus delici, not to say anything about the jus genium and the League of Nations, we ought to make a claim on you for negligence and contributory criminality."

And he went on in that strain for several minutes, with poor Ole holding his mouth open and not saying a single word in reply.

Finally the claim agent said:

"But, Ole, we don't want to be too hard on you in this mater, and we want to settle with you as easily as possible. What do you say—how shall we adjust this matter?"

And Ole swallowed hard and answered: "Ay ban poor man. Ay gif you two dollars."

LAST SURVIVOR OF HEATH HEN FLOCKS IS OFFERED WIVES

Washingon, Oct. 26,—The "world's safest bachelor," the last heath hen on earth, may not be so safe after all.

An expedition of five harum-scarum young female prairie chickens is being organized by the happily married game officials of Oklahoma to carry lightness and gayety into the sequestered life of the heath hen, reports a bulletin of the American Game association. The prairie chickens are closely akin to the eastern heath hen species, now extinct except for this last bird, which has lived alone since 1828 on Martha's Vineyard Island, Massachusetts.

Scientists have maintained, however, that the confirmed bachelor is not likely to "fall" for any western beauties. In similar attempts in the past, the imported prairie chickens failed to adjust themselves to their new surroundings and quickly died.

INVITATION FROM FARMERS FEDERATION

Mound Bayou, Miss.—Hello colored familics: I am calling your attention in order that you might look and think for the future. Many of us have never had the privilege of thinking for ourselves. But the condition that confronts us all now, is causing us to think, and help others to think for us. The National Federation of Colored Farmers is bringing to you, joy peace and love which is for the betterment of all colored farmers.

This Federation teaches you how to be better farmers; how to be industrious how to treat your neighbor; how to be useful; and how to work well and earn honest money. The Federation doesn't promise to give you money, but it teaches you to save what you make. Now colored farmers, join the National Federation. It is for you and will help you. JOIN! JOIN!

The National Federation of Colored Farmers,
B W. Byram, President
Mound Bayou Unit.

NURSERY BUSINESS IN ILL, SHOWS LARGE INCREASE

Washington, D. C.,—While other varieties of agriculture experienced a decline between censuses nurseries and greenhouses in Illinois did a thriving business, with the result that there were 845 establishments in 1929 growing flowers, plants and vegetables under glass and flowers in the open and 292 nurseries, compared with 1101 greenhouses and 155 nurseries in 1919.

These figures are not exactly comparable for the two classifications differed somewhat in the years for which statistics were gathered. However, the nurseries did a business of $2,960,736 in 1929, compared with $780,092 in 1919, whilo the establishments growing flowers and produce under glass sold $11,188,368 worth 1929, against $9,978,606 worth in 1919. The acreage used for growing nursery stock mounted from 1869 to 5899 in the ten-year period, and the average rec ipts per nursery from $5033 to $10,139.

Tho 1929 figures also show sixty-two bulb farms, with receipts of $173,572, three flower and vegetable seed farms, with receipt of $34,940, and twenty mushroom farms, with receipts of $240,555.

PRESIDENT BYRAM BOOSTS FEDERATION

We are reproducing below a clipping from the Baptists Gazette, published at Mound Bayou, Miss. Pres. B. W. Byram, of the Bolivar Co. Unit of the N. F. C. F., tell the farmers of his county about the good work of the Federation and extends an invitation to all to join.

Such leaders as Bro. Byram are the kind our Federation must have if we expect to grow and prosper. They must be "thoughtful boosters," not the kind of who dote on excitement and exaggeration to bring success, but the kind who tell the truth about their organization and then trust to the good common sense of their brother farmers to get results. For the colored farmer has GOOD sense. Any organization or leader that tries to fool him is sure to discover that it can't be done.

WORK, STARVATION, CHARITY, WHICH?

Negroes out of work with no means of support except to work. Farmers offering all that the present price of cotton will permit them to offer for its picking. Negroes refusing to pick cotton because they can't get more than the farmers are able to pay at present prices of the commodity. Which when summed up means "Work, Starvation or Charity." Which of these should the Negroes of Houston and Texas accept?

—Houston Informer.

CHECK TRAVELS 90 MILES WITH RECENT TORNADO

Everyone tries to make the dollars go as far as possible these days, but L. A. Cherryholmes of Crawfordsville, son-in-law of the late Mrs. Rickie Inghram of Burlington, had the aid of the recent tornado to help a cancelled one-dollar check travel some 90 miles. Mrs. Inghram, visiting at her daughter's home in Crawfordsville, was killed in the tornado which wrecked the Cherryholmes residence, and scattered clothing, household goods, etc., into the fields.

Mr. Cherryholmes has received a letter from Russell Yarolem of Monmouth, Ia., dated September 24 (three days after the tornado) in which he told of the finding of a cancelled check drawn on the Crawfordsville bank and signed by L. A. Cherryholmes. It had been picked up September 22 on the Frank Yarolem farm, 18 miles north of Maquoketa, a distance of approximately 90 miles from where it had been gathered up by the tornado. The check, somewhat blurred by moistnre, and a portion of it torn away, is again in the possession of Mr. Cherryholmes.

FEWER FARMS, BUT LARGER ONES SEEN IN LAST TEN YEARS

Cambridge, Sept. 29—Fewer and bigger farms seems to be the trend in Illinois, according to an analynois. With 22,684 less farms re-H. M. Case, head of the farm organization and management department of the College of Agriculture at the University of Illinois. With 22,684 less farms reported in the census the state has 10 percent fewer than it had in 1920, but the average size has gone up from 134.8 acres to 143.2 acres. Modern equipment has somewhat increased the amount of land the same number of workers can handle, Case explained.

Farms between the size of 20 and 100 acres have disappeared faster than others, there being a reduction of 15,577 farms within this size range during ten years. This accounted for about two-thirds of the reduction in numbers of farms in the state.

VERDICT OF $4,500 AWARDED IN DEATH

Alexandria, Va. — (CNS) — Mary Wanzer, executrix of the estate of Rufus Wanzer, colored man, won a $4,500 verdict last week in the Corporations Court here in a suit arising out of the death of the deceased man. Wanzer was burned to death last winter when gasoline sold him by agents of the National Oil Corporation as kerosene, exploded and killed him.

INTERESTING NEWS AND NOTES

Plans are under way to let part time employees of twelve west side Chicago factories work an 80 acre garden tract next spring. It is estimated that 600 gardens can be staked out and that the gardeners will raise $60,000 worth of produce. Seeds and implements will be furnished at cost.

A New Orleans news item states that steamship company has purchased four torpedo-boat destroyers from the American government and will use them as banana boats. Instead of carrying supplies of war they will carry supplies of peace. This is "beating swords in to plowshares" sure enough.

A dog, a cat and a rabbit are playmates on the farm of Henry Maloney in Texas.

The latest bathroom style in England is to paint the walls into a representation of the Garden of Eden. The tree and the serpent are painted and the electric lights represent the apple.

C. W. Wilson, of Pawhuska, Okla., grew a bean in his home garden that measured 31 inches long. Wilson got the seed from Germany.

Dr. M. A. Raines, associate professor of botany at Howard University, the large colored educational institution in Washington, has discovered on a lampshade an artificial glass adapted to measuring the swelling of seeds and other investigations in connection with the study of the growth of plants

The Department of Labor states that the retail prices of food are 18 per cent cheaper now than they were one year ago.

The Animal Rescue League of Boston, Mass., destroyed 60,000 cats last year, one-half of which were females.

At the Louisiana State Fair, Lincoln Parish girls exhibited dresses made from cotton bagging. The dresses, which cost $1.25 each, were attractively designed and created much attention.

Arthur Settle, student at Brown Summit School, Guilford county, N. C., had an average corn yield this year of 42.5 bushels per acre. This is 22 bushels above the average state yield and 2 bushels above the average county yield.

The first conference of the Young Negroes Co-operative League met recently in Pittsburgh, Pa. George S. Schuyler was elected president. The League plans to organize a big system of chain stores and a children's guild. It will carry out a distinctive program but will also cooperate with the National Negro Business League and similar organizations.

Chas. F. Knox, Jr., of the Commerce Department, in an article in the current issue of "Commerce," the organ of that department, says that the colored Virgin Islanders are being taught to raise cattle and that a cattlemen's co-operative association has been formed. Cooperatives have also been formed by the charcoal producers and by the women who make fancy goods, laces and beautiful baskets. Products are being standardized and have found a ready market. Vegetable crops are also being introduced that can be sold in the U. S. market.

Five men and women cotton pickers were killed and twenty others hurt when a truck carrying the party back to their homes upset near Marion, Ark.

Business is beginning to pick up in Argentina. The wheat crop is estimated at 700,000 tons and the corn crop 2,500,000 tons. 33 million acres of wheat, flax, oats and barley are now on the eve of harvesting. The market for all farm crops is going up.

Orville Welch of Piatt county, won the state of Illinois corn-husking championship. Welch shucked 32.53 bushels net in one hour and 20 minutes. 25,000 persons witnessed the contest.

The National Credit corporation's $500,000,000 bank pool, launched a month ago by Pres. Hoover to extend loans to banks throughout the country, is ready to begin operations. It is expected that many farmers will be able to secure aid from banks that are now unable to make loans.

Montana dark wheat recently sold for $1.01 per bushel on the Seattle market. This is the first time any wheat has reached a dollar in many months.

The National Corn Credit Corporation has been incorporated with an authorized capital stock of $2,700,00. The money is to be used in financing farmers for storing corn on farms.

The first car of oranges of the season was shipped from Plant City, Fla., Oct. 9. The car was sold to a firm in North Carolina. The quality of the fruit was said to be the best ever shipped at this period of the year.

Isaac Miller of Mentone, Ind, captured a large crow about three years ago. An operation was performed on the tongue of the crow and it was then taught to talk. The crow was given its liberty last week and returned to the woods and is now leading a large flock of its own kind.

Now is the time for southern farmers to plant onion sets. Prices for the yellows are less than $1 a bushel and the white stock around $1.25. There is no vegetable more healthy and wholesome than onions.

Foster Woolfolk is the owner of a 50-acre farm near Craig, Miss. His cotton this year will average a little over a bale to the acre, and despite the low prices for cotton this fall, he will be able to make a good showing.

H. E. Gross and T. J. Wesby are planning to open a dairy in Chicago. It is understood that the company is to be owned and operated by men of our Race. Support from the citizens living on the South side has been pledged.

GETS OUT OF DEBT

Joe Chalmers, 70 years of age and one of the oldest citizens of Humphrey county, Miss., will not only come out of debt this year but will be in position to operate his farm another year without being forced to secure a loan. Up to two years ago Mr. Chalmers said he would always come out just about even or a little in debt, and high interest for borrowed money and double prices for groceries and supplies kept him continually figuring on how to break even. Two years ago he made up his mind not to run any account or go in debt, and at the end of the year he was able to square up all old debts. Last year he secured a loan from the drought fund and purchased his groceries and supplies co-operatively through the local unit of his federation in Humphrey county. This fall he will be able to settle up the rest of his debts and get out of that rut he has been in for years. Mr. Chalmers says he saved around 30 cents on the dollar by buying his goods cooperatively. He has an eighty-acre farm and works every day in the year.

HERE'S A HINT FOR FARMERS: PLANT RICE, NOT COTTON

Smithfield, N. C., Oct. 30—Ellison Stokes, farm manager for Mrs. Laura J. A. King (white) of this town, has recently made interesting experiments in raising rice to take the place of the staple cotton crop usually grown in this section. Last year Stokes sowed a half acre of land in rice and now has a crop of heavily headed rice from which he expects a yield of several barrels.

Stokes has shown that by raising rice he can get a profit two or three times that derived from planting the land in cotton at present prices. White farmers of the vicinity have watched with a great deal of interest Stokes' experiment in modern farming.

HOW NEGRO CHURCHES MAY HELP IN UNEMPLOYMENT

New York.—The Commission on Race Relations, Federal Council of Churches, 105 East 22nd Street, has sent to hundreds of Negro ministers in cities and towns in all parts of the United States a letter on "How Negro Churches May Help in Unemployment."

In issuing the statement, Dr. George E. Haynes, Executive Secretary of the Commission, said: "Last season many churches, white and Negro, and local interracial committees were active in work for preventing any discrimination against Negro workers in employment relief. Many Negro churches carried out effective plans for helping their unemployed. The Commission on Race Relations gave counsel and cooperation to many of these groups and has sought the advice of many pastors in order to preserve this experience for guidance to a larger number of churches and committees the coming winter. The critical unemployment situation which Negro people face as the winter approaches, which is aggravated by their regular economic handicaps, makes it highly important that every town and city, pastor and church plan to meet the emergency." The following proposals summarize the experience and ideas of a large number of ministers and churches that dealt with the problems last season:

1. Every local church should have an employment committee with the pastor or some other experienced leader as chairman and at least one experienced social worker, if he can be secured, as a member.

2. Arrange for a canvass of all church members to discover the situation in their own families and neighborhood as to those in need of employment or of help in the form of relief, shelter, medical care and keeping children in school. Personal friendship in times like these constitutes an untold Christian service.

3. Invitations should be given to report to the pastor or the committee persons out of employment and members should be urged to report information about jobs that are open. A blank form might be used for this purpose. Announcements might be made each Sunday of the progress made with the plans, care being taken to make the help given as private as possible. The pastor may be able to establish contacts with a church of white membership of the community through its pastor as a means of locating jobs.

4. Discover among your congregation those who could give the use of a bedroom in their homes to some person recommended by an established agency.

5. Last winter many churches used their plants to full capacity. The church parlors, rooms in the parish house, or other places were provided with simple equipment for games, reading and friendly fellowship. In these places people could find warmth and encouragement. In some cases, educational classes and vocational classes to help some unemployed to improve their efficiency were conducted. In other cases a noon luncheon was served but with such arrangements that only those who could be properly certified as unemployed in distinction from loafers were served. The white pastors of your denomination may be interested to cooperate in such an effort.

6. The women's missionary society could take up some practical plan to care for two classes of women— (a) the older women who are finding at increasingly hard to hold their jobs; (b) unmarried women who are not eligible to receive employment relief given by any of the civic and city agencies. These women are especially in need of attention from the churches. White women of neighboring missionary societies may be interested.

7. In many cases relief of a personal nature such as food, clothing, and shelter is required. Pastors have found that their members come to them and to the churches before they go to the local agencies for charity. It would be well, therefore for your church committee to give thought to dealing with these persons and especially to make connection with the local charity organization or relief society in order that they may cooperate with you in dealing with such cases. The church should be prepared to give emergency relief to its own unemployed people, to people who find themselves suddenly financially destitute, and to people who need a little supplemental aid and who will not become relief cases. If the church lacks the resources and the experienced workers, then its committee should turn to the regular family welfare society or relief agency for direction and assistance.

8. If the church can meet the expense at this time it would be desirable to have a trained nurse or social worker who could help greatly in cases of sickness and relief and with advice on diet to families in straitened circumstances so as to help them spend to best advantage the small amount of funds they may have available.

9. Members of your congregation who could help in the social and civic agencies of your neighborhood in meeting the emergency should be asked to volunteer for such service, if there are agencies that will use their help.

10. In cases where there is need for offering of meals, either those served by the church or if such are given by the Salvation Army, the Y. M. C. A. the Y. W. C. A. or other social agencies, some plan should be made so as to have tickets furnished to those who are to be served. Care should be exercised to see that these tickts calling for meals are given only to persons who are known to be members of the congregation or to representatives of local charitable agencies, who can vouch for their needs. By all means indiscriminate distribution of food or meals should be avoided.

11. Some ministers have set special days for raising funds for unemployment relief. This should be carefully planned in advance of the time the money is to be collected. Christmas and Thanksgiving have proven a season that brings ready and liberal response. Caution in publicity about financial aid is nesessary to prevent the increase of appeals for help from those not urgently in need.

2. Wherever the city or town officials have organized for employment on public works, the pastor and church should make contacts with them to see that Negro workers including their own unemployed are cared for.

13. The pastor should urge wisdom in buying and shonld discourage needless expenditures either for display or luxury not only by those who are in need but by other members of his congregation.

14. Frequent visitors of the pastor in the homes of those out of work to encourage them and keep up their morale is a very great service.

15. Thought should be given to permanent solutions of the employment problems of Negroes Remember that they are the last hired and the first fired. What will happen to them when the present emergency is over? How can they be made more efficient? How can we remove the color bars against them?

a. Interracial groups should be formed for discussing these and similar questions.

b. Literature on the whole question of unemployment may be secured through the Commossion on Race Relations, 105 East 22nd Street, New York.

Get in touch with the interracial committee of your community. If there is none, find out if one can be formed.

WITHOUT A CHANCE TO HELP FELLOWS

Dr. Gunn Estimates What This Would Mean In Course of Lifetime

By Rev. John R. Gunn

"As we have therefore opportunity, let us do good unto all men." — Gal. 6:10.

Many years ago Sidney Smith found in a newspaper a paragraph which so impressed him that he cut it out and pasted it where it would constantly come under his eye. He tried to make it the rule of his life from that time on. The paragraph is as follows:

"When you rise in the morning, say that you will make the day blessed to a fellow creature. It is easily done. A left-off garment to the man who needs it, a kind word to the sorrowful, an encouraging expression to the dejected—trifles in themselves as light as air—will do it at least for the twenty-four hours. And if you are young, depend on it, it will tell when you are old. — By the most simple arithmetical sum, look at the result. If you send one person away happy through the day, that is 365 in the course of a year. And suppose you live forty years only after you begin that course of medicine, you have made 14,600 persons happy —at all event, for a time."

Reading this paragraph, I thought at once of Paul's exhortation, "As we have therefore opportunity, let us do good unto all men." And I thought also of the Master's words, "And whosoever shall give to drink unto one of these little ones a cup of cold water only in the name of a disciple, verily I say unto you, he shall in no wise lose his reward." We may not be able to supply all the wants of all the needy ones around us; but if we would make it a rule to give "a cup of cold water" to some thirsty heart each day, in the course of a year that would amount to 365 cups. We cannot in a direct way "do good unto all men;" but no day ever passes but that we have opportunity to do good to a few, and think of what that would mean in the course of a lifetime.

"But to do good and to communicate forget not; for with such sacrifices God is well pleased." I think most of us do not mean wilfully to ignore our duty to the less fortunate ones around us; it is simply a matter of forgetting. In the enjoyment of our own better condition and better moods, we forget the poor, the sorrowful, the dejected, the distressed; we forget to be thoughtful, kind, generous. Perhaps we would respond liberally to an appeal in behalf of some appalling need; but we forget the many little things we might do, and that would bring relief and happiness to many lives and into many homes. Therefore this little message, intended to be— just a reminder. — Exchange.

HOW DO THEY STAND, GEORGE?

A certain old lady was so concerned about one of the villagers who was unable to write that she persuaded the village schoolmaster to give him some lessons.

Some time later she met the villager and said to him: "Well, George, I suppose you are now able to read the Bible fairly easily?"

"Lor' bless you, mum," he replied, "I was on of the Bible and into the football news over a week ago!"—Sporting and Dramatic.

COE MAN FINDS 1830 PENNY AS HE HUSKS CORN

Coe, Ill.—Glenn McRoberts discovered an 1830 one-cent piece in a cornfield on the Lewis Eipper farm while he was picking corn a few days ago. He first thought the coin was a 50-cent piece, but closer examination showed that it was a rare specimen of early United States money.

Eddie: Do you think you can learn to love me?

Ruth: I can sweetheart but the tuition's going to be high.

The perfect triple-threat man:—He begs, borrows or steals neckties with equal ease.

Land Conference Discusses Problems - Too Much Land Farmed

PRESIDENT JAMES P. DAVIS IN ATTENDANCE

NATIONAL FEDERATION OF COLORED FARMERS SENDS ITS PRESIDENT TO MEETING

Chicago, Ill.— The land conference called by Secretary Hyde, of the U. S. Department of Agriculture, met in Chicago, Nov. 19 to 21. This conference, the first of its kind to ever meet, was called for the purpose of formulating a land policy for the U. S. Agencies of the federal and state governments joined with heads of farm organizations, the association of land grant colleges and other representatives of American agriculture and in the three day meeting attempted to form a land program for the nation that will protect the economic and social values of our farms.

President Davis, of the National Federation of Colored Farmers, attended every session of the Conference. He was cordially invited to do so, and was treated with the utmost courtesy by all representatives.

A brief report of the proceedings of the conference as reported by a representative of the

(Continued on Page 8)

SULPHONATED OIL KEEPS RODENTS FROM TREES

St. Paul, Minn.—Injuries to young trees from rabbits, mice, or other rodents, may be prevented easily and effectively by a new treatment worked out by Dr. R. B. Harvey, plant physiologist of the Minnesota Agricultural Experiment Station. The treatment consist of spraying or painting the trunks of the trees with sulphonated oil.

During the past two winters, Dr. Harvey has worked on this problem confinding rabbits in pens with trees treated with various mixtures including aluminum and bronze-paint, copper, soap dissolved in linseed oil, oil and rubber, beef liver blood, and the sulphonated oil. Although several of these treatments kept the rabbits from attacking the trees until they were near starvation, the sulphonated oil was the most effective, trees treated with this mixture being left until others were completly stripped.

Sulphonated oil may readily be made at home. Heated linseed oil to 470 degrees Fahrenheit, or in other words, until it is smoking hot. Set it outdoors and immediately add flowers of sulphur, one part sulphur to nine parts oil by weight. Sift the sulphur slowly into the hot oil and stir. The mixture will become hotter until all the sulphur has passed into solution. When it cools, the mixture will be ready for applying to the trees with a brush, or if it is to be sprayed it may be thinned with turpentine to permit application with an ordinary chemical sprayer, he says.

GOVERNMENT AGAINST WASTE

NEW FOOD VALUES FOUND IN SUPPOSEDLY WORTHLESS MATERIALS

By C. O. GRIDLEY

Moline Dispatch bureau, Washington, D. C.— Uncle Sam's chemists have not relinquished their fight on waste because of depression, but are making continued progress, particularly in discovery of new food values, according to annual reports of various bureaus now being prepared for congressional consumption.

Government research extends, for instance from uses for surplus sweet potatoes to utilization of seafood now wasted. Starch of prime quality and fine white color has been made from cull sweet potatoes within the last year by a process which the bureau of chemistry of the department of agriculture believes can be made commercially practical.

The residual pulp and the more concentrated portions of waste water from the same sweet potatoes has been mixed with various vegetable oils to form a cattle feed of good quality and satisfactory composition.

Children within a few years may be offered bakery products said to be palatable and nutritious, containing 10 to 25 percent of "fish flour," which is being made by a special process from edible parts of fish, including the backbone, remaining from the filleting or package fish industry. This flour contains from 28 to 30 percent of calcium and phosphorus, and is regarded as an asset to bone growth.

The sacred cod of Massachusetts may shortly be displaced as the principal source of fish oil containing the important vitamin D. Canned salmon has been found to contain oil fully equal to cod liver oil in Vitamin D, and more of it. Waste now discarded in fish canneries, expriments have shown, will produce three times as much salmon oil as the present domestic output of cod liver oil.

Redder Apples

The red apple will be made redident expects the results of this pigments are successful, pointing to methods of imparting a more vivid color to the skins of both red and yellow apples.

Eggs treated with oil under a vacuum retain their freshness and high quality longer than those placed in cold storage without such treatment, experiments with eggs in storage for evelen months have shown.

Federal agencies not only seek-

(Continued on Page 8)

IOWA LEADS IN POPCORN

Washington, D. C., —Sao county, Iowa, raises more popcorn than any other county in the United States and probably more than any other similar area in the world, according to the United States Department of Agriculture. The average acreage in popcorn in Iowa from 1921 to 1930 was 25,884. Nebraska is the second with about a third of the Iowa acreage.

WOULD HELP BUILD HOMES

PRESIDENT HOOVER FAVORS GOVERNMENT FINANCING PROPOSITION

Washington, D. C. — President Hoover has announced that he will ask Congress to set up a dozen homes discount banks, capitalized at around $150,000,000, and capable of advancing twelve times that much to institutions dealing in small mortgage loans. The President expects the results of this proposal to bring about a revival of home building; a safeguarding against future building slumps; and a long-time promotion of home-ownership through the strengthening of credit institutions.

It is proposed that one bank will be established in each federal reserve district. In order to restrict the aid to smaller homes and farms, no loan of over $15,000 could be made.

If Congress should adopt this recommendation, colored farmers and home owners should be greatly helped. It is evident that it is extremely hard for the average colored American to purchase a home of his own and still harder for him to pay for it, once it is purchased. Any plan that would make the possession of a home of his own easier to obtain would be welcomed by colored farmers especially.

YOUNG BEEF CATTLE EXPERT ENTERS 16 AT SHOW STARTING NOV. 28

Adult showmen participating in this year's International live stock exposition at the Chicago stockyards Nov. 28 to Dec. 5, will find in their midst for the first time a young man whose exhibit received the highest beef cattle award of the show two years ago when the exhibitor was a Four-H club boy at the age of 19.

The animal which Elliott Brown, of Rose Hill, Ia., exhibited in 1929 was auctioned after winning the grand championship and sold for $8.25 a per 100 said to be the highest price ever paid for "beef on the hoof." Seventeen head of Aberdeen Angus cattle have been listed by young Brown for this year's show.

Among his competitors will be men such as Robert Ames, Boston financier; Oakleigh Thorne, New York capitalist, and several mining and lumbering magnates, according to Barney Heide, manager of the exposition. He finds indication that there will be as many visitors as usual from Great Britain, France, Italy, Australia and Canada, from which countries delegations come each year to obtain live stock information useful in their home countries.

Twelve thousand head of live stock and 5,000 samples of hay, small seed and grain will comprise the associated live stock and hay and grain expositions.

"Judges will find more difficult than ever the task of determining the winners," promised Mr. Heide yesterday.

—Chicago Tribune.

MAY EXTEND FARM LOANS

FARMER'S SEED LOAN OFFICE

AGRICULTURAL DEPARTMENT HOLDS CROP MORTGAGES AGAINST FARMERS

St. Louis. — Unfavorable conditions during the past year or so among farmers in almost every part of the country has led to the mortgaging of prospective crops— usually termed "crop mortgages." Farmers have obtained the money wherever it was available— from banks, loan companies, and in a great many instances from the Department of Agriculture at Washington in order to obtain seeds and other supplies. Such loans have been obtained by the individual farmers for their individual needs, and as a rule the mortgages have been placed on record in the counties where the farmers reside.

While the Federal Farm Board is not permitted under the law that created that Bureau to make individual loans to individual farmers, yet the Department of Agriculture has furnished seeds and other supplies to farmers in distress, and has taken crop mortgages as a protection to cover such loans. In some localities, the United States Department of Agriculture has done this extremely so that in the aggregate thousands of farmers have been aided. Similar aid has also been given by banks and others who were in position and willing to help.

It is known that the Department of Agriculture has served notice upon the probable handlers of crops mortgaged to the government that certain designated farmers within the country or adjoining counties were growing mortgaged crops, and that the mortgages were of record. Such notices, it is understood, have been restricted to operators located within the counties where the mortgages were reordered. It is plain, of course, that no such notice is legally required, and presumably the information was supplied as an accommodation and a protection to those who might buy or handle these products upon which there was a government lien.

EDITOR'S NOTE:— It is evident that the government still remembers those who borrowed money last spring and expects payment of these loans out of proceeds of first crops sold.

If you obtained a loan from the government prepare to pay it. If you cannot pay all of it, pay what you can. Remember, the Government comes first, so don't get careless and get in trouble.

OR FROM ANYTHING

Rochester Democrat and Chronicle: A German scientist says bread can be made from cotton. That doesn't get us anywhere; we want the scientist who will discover the way to make money from cotton.

CONGRESS MAY APPROPRIATE ONE HUNDRED TWENTY MILLIONS

National Grange Convention To Request Additional Legislation This Session

Madison, Wis. — A resolution asking Congress to appropriate $120,000,000 to extend loans to farmers was proposed by the National Grange Convention at its recent annual meeting in this city. The Grange is one of the three large national farm organizations. It has memberships in every state of the union.

It is expected that some member of Congress from Wisconsin will introduce the bill before Congress and if it is passed, it should extend relief to many farmers who have not as yet recovered from the effects of the 1930 drought and flood disasters.

NORTH CAROLINA HAS LARGE FEED CROPS

The N. C. State department of agriculture has released figures which prove that the farmers of the state are better able to feed themselves and their stock this coming winter than ever before. Increased acreage of all food and feed crops were planted this year and yields per acre show gains.

Corn was reported at 60,500,000 bushels; wheat at 6,180,000 bushels ;oats at 8,181,000 bushels; sweet potatoes at 10,005,000 bushels; peanuts at 279,300,000 pounds; and hay at 990,000 tons. Fruit, syrup and Irish potatoes were also largely increased.

North Carolina has over 90,000 Negro farmers. Negro farmers are increasing faster in this state than in any other.

Job Competition Continues

Urban League Describes New Incidents

The National Urban League, through its Department of Industrial Relations of which T. Arnold Hill is Director, has issued the following account of recent developments in employment.

As the battle for jobs continues between colored and white workers there is evidence of new irritations centering around labor union hostilities and the dismissal of Negro workers whose places have been taken by whites. The political issue was brought to the front in Warren, Ohio, when the employment of six Negroes on a retaining wall built by the city was objected to by opponents of the city administration who demanded that voters favor "somebody who would give white folks some work." The city administration was re-elected, however.

LABOR DISPUTES

The outstanding controversy with organized labor is in Boston where Negro strike-breakers have been engaged in the docks as longshoremen. Incidentally, this has occasioned a movement of the city of persons looking for work

(Continued on Page 8)

INTERESTING NEWS AND NOTES

A colored woman, Mrs. Annie Walker, of Baltimore, has attended night school eight straight years and will graduate and receive a high school diploma next spring. She has never gone to school in the day time during her whole life.

During the recent mild fall weather, garden crops in Illinois grew faster and pastures were greener than at any time during the summer season. Roses bloomed the second time and some fruit trees also blossomed again.

One of the largest shipments of cotton ever received in New Orleans at one time was brought by the steamer Robert Gordon, which towed three barges containing 5,-328 bales.

G. B. Bancroft. of near Tulsa, Okla., has one of the largest and the most modern goat dairies in the United States. Most of his animals are of the Swiss breed but he has some Saanens, Toggenburgs and Anglo-Nubians. All are milch goats and are unlike the goat common to America. Mr. Bancroft has found the business very profitable and his dairy is being constantly increased in size and value.

Charles Church, of Paris, Ill., has picked a fall crop of raspberries from vines in his back yard.

Senator Black of Alabama has announced that he has prepared a bill providing for an appropriation to guarantee loans to Federal Land Banks outstanding to farmers. This is to give farmers who have borrowed and find they cannot meet all of their obligations this fall another chance to get even next year.

Farmers of the Texas panhandle who have large grain sorghum crops are finding it profitable to leave their crops in the fields for grazing by sheep and cattle. They receive from $2.00 to $4.00 per acre for their fields. There are few Negro farmers in this part of Texas.

Mechanical cotton pickers are being used in large numbers on the plain farms of southern Texas. Most are of the horse-drawn variety. They are giving good results because in this section cotton stalks are short and most of the bolls mature at the same time.

A yield of 1542 eggs from five White Leghorn hens, won the grand championship for the year in the Illinois state egg-laying contest. The champion hen was a single comb Rhode Island Red, which laid 332 eggs, five less than the 1929-30 champion.

Orville, Welch, of Illinois, won the national corn husking championship this year. Welch is 26 years old. He tossed 49 ears of corn a minute to win. 60,000 persons saw the contest which was staged at Grundy Center, Iowa.

Cotton exports exceeded 1,000,-000 bales in October for the first time in a year.

Roy J. Barker, a Negro grocer of Kansas City, recently gave $800 in cash to the Kansas City Charities' Campaign Fund.

Lydia Pinkham died nearly fifty years ago and the Smith Bros. of "cough drop" fame never saw the present century, but few people know they are dead. Last year year they spent over two million dollars for advertising alone.

Japanese and English cotton mills are opening and it is believed much cotton will be purchased and shipped abroad this winter and coming spring. Prices should continue to rise.

A farmer boy, Lew Hawkes, of Cumberland Center Maine, brought forty bushels of Maine potatoes to the White House and presented them to President Hoover. They arrived in an ox cart drawn by two prize oxen. The President patted the oxen and personally inspected the potatoes. President and Mrs. Hoover also received a thirty pound Thanksgiving turkey from West Va.

Agricultural income in the United States this year is estimated at 6 billion, 500 million dollars. In spite of larger crops, it is stated that only one major crop, rice, will bring farmers an increase over last year.

Representatives of Negro education on the National Advisory Committee on Education, in a minority report, urged that federal grants for special forms of education be granted to Negroes by the Federal Government. They say that in eighteen states colored schools have one-fourth of all school children and get only one-tenth of the school funds,— that $80 per year is spent on each white child in school and only $15 dollars on each colored child.

There are a number of Race farmers who have surpluses of fruits and vegetables they would like to sell or trade, but the quantity is so small that they are prohibited from shipping to larger terminal markets where there is a demand. Leon R. Harris, secretary of the National Federation of Colored Farmers, says they are now holding joint meetings of the officers of country units in different states in the South and they plan to have certain days in every week when the farmers will pool their products and be able to make up carlot quantities. This is a good idea and will enable our farmers who are in the organization to dispose of their surplus and at the same time get cash for it.

—Chicago Defender.

Robert H. Sanders is the owner of a 160-acre farm in Wright county, Mo. He has decided to make a specialty of hogs and poultry and to operate a stock farm almost exclusively. This farm is up in the Ozark mountains and is one of the finest in the state. Mr. Sanders says by next summer he will be in position to supply southern farmers with high grade pedigreed registered O. I. C. and Durco Jerseys.

GETS 800-BUSHEL POTATO YIELD

Montrose, Colo. — Twenty-four yields of 600 bushels or more of potatoes to the measured acre were dug by 23 Montrose county farmers, including five 4-H club boys and their club leader, Kenneth Health who produced 808.5 bushels per acre to win the county potato king crown for 1931.

FIRST FLORIDA BERRIES BRING BONUS

Plant City, Fla.— The first pint of new Florida strawberries was received here Monday morning and was sold through the Miller Auction, Inc., bringing a bonus of $5. The acreage here will probably be cut by the dry weather.

STEPS TO REMEDY SERIOUS CONDITIONS IN NEGRO HOUSING PROPOSED TO PRESIDENT'S CONFERENCE

Washington D. C. (Special)—On the basis of a factual picture that showed a large majority of the Negro population of this country living under conditions that are inimical to health, morality and contentment and from which special racial factors mako it difficult for them to escape, Committee on Negro Housing yesterday proposed to the President's Conference on Home Building and Home Ownership a number of steps to improve the housing situation of this largo section of the population. These steps included among other things the establishment of a national housing commission to carry on research and oncourage the passing and enforcement of adequate housing laws; the stimulating of Negroes to move into sub-divisions in which modern homes can be built; adequate financing agencies at reasonable interest for people of low incomes; and researches on subjects such as changes in land values incident to Negro invasion of an area.

The committee report to the conference was based upon an analysis of recent studies made in most of the large cities of the North and South and on a limited number of surveys of Negro housing in the rural South.

Herewith is a summary of the report:

The Negro population in 1930 was nearly twelve million or about 10 per cent of the country's total. Four-fifths of this population is in the South. The movement to cities is accelerating. Between 1910 and 1920 the rate of increase for urban centers was 32.3 per cent, while tho rural areas showed an actual decrease of 3.3 per cent. Typical of this movement is the increase of Negroes in New York from 91,709 in 1910 to 327,706 in 1930.

The rapid increase in Negro population has not been accompanied by an expansion of Negro neighborhoods. The result is serious overcrowding. Thus Negro density was twice as great as the total in Chicago and nearly five times as great in Philadelphia. In New York City tho total density for the city was 223 per acre while the Negro density was 336 per acre.

This overcrowding comes about largely from conditions over which Negroes have little control. First, the incomes of the majority are too small to permit them to move into more open and more expensive neighborhood. Second, racial factors make it almost impossible for them to movo into better neighborhoods even if they can afford it.

Insufficient housing causes high rents. For example, a study of a group of low-income families in New York showed the typical rental for all such groups to be $316 annually whereas for Negroes it was $490.

Adjustment to high rentals forces the taking in of lodgers to pay the rent, increases overcrowding and reduces family privacy with consequent evil effects.

The areas into which Negroes move aro almost always old and the houses dilapidated. The greater the isolation of Negro sections, the greater the neglect of them by municipalities so that they are generally inadequately served by public utilities. Thus, one day's inspection of 63 houses in the Negro section of Philadelphia by Bernard J. Newman of the Philadelphia Housing Association, uncovered 90 violations of the Housing Law, such as obstructed drainage, disrepair, and accumulation of rubbish.

Tho segregation of Negro areas is indiscriminate and forces Negroes of all tastes and economic ability into an association which is neither natural or generally wholesome.

As to Negro housing in the South, there is more congestion in the North than in southern cities, but the extent of tolerance of gross deficiency in sanitation is greater in the South than in the North. Negro population in the South is largely rural, and the housing of the rural population is in general primitive.

Racial segregation complicates the housing problems for Negroes. In tho South custom controls racial residential sites to a large degree. In the border states segregation ordinances have sought to do this. In tho North segregation is attempted by privaso convenants between property owners to excludo Negroes from certain areas.

As to the social effects of formal efforts at segregation the Committee said, "Contrary to the professed intentions of these measures in the cities where segregation laws have been attempted, the efforts as a rule have been accompanied by an intensified race friction," involving campaigns of vilification and emotional appeals which have little or no reference to the simplo fact of housing. as to the effect of private covenants the Committee instanced cases in which these have defeated their own purpose and have worked a hardship upon the covenanters as well as their heirs. "When there is danger of Negro residents in a block formerly occupied exclusively by whites, it usually means that something has already occurred in the character of the block to make it available to Negroes at a price which they can pay."

Conderning the belief that Negro residents depreciate property the committee advanced evidence to show that Negroes have been symptom more often than the cause of depreciation. The fact that the belief in resultant depreciation prevails causes depreciation which has no inherent relationship to the actual character and traits of tho Negro.

Concerning the social consequences of the type of housing provided for the Negro population the committee reported that overcrowding and unsanitary conditions result directly in: (1) high rato of delinquency; (2) a high rate of mortality; and (3) a distorted standard of living.

It quoted the report of the causes of crime published by the National Commission on Law Observance and Enforcement to show that the samo results arose from similar conditions among other groups of the population and were, therefore, not inherent in the Negro character. The difficulty is that whereas other groups can escapo is almost impossible for the Negro.

Negro death rates are nearly twice as high as the white; they are higher in the North than in the South, and in cities than in tho country. To show how bad housing bears on the high death rate several studies were analyzed, one of which, made in Washington, brought out the fact that the mortality of Negroes from four leading diseases is from 1 1-2 to 4 times as great in the alley dwellings as in those on the streets.

The fact that Negroes are required to spend a larger proportion of their incomes for rent than other groups is an important factor in keeping their living standards low. Summaries of studies made in Chicago, Pittsburgh, New York, and other cities showed that the Negroe's rent runs over 20 per cent of his budget and in some instances is even more than 75 per cent. In New York, for example, the income of the Negro family is about 17 per cent lower than that of the typical family for the entire city and yet it must pay almost $3.00 more per room per month. High rents and low wages mean working mothers, necessitate lodgers and—along with segregation—overcrowding.

As a result of studies on Negro home ownership, the Committee reported that home buying in Northern cities has about doubled since 1920. For the country as a whole there were 506,590 home owners in 1910. Tho Negro Year Book estimates that this number had increased to 750,000 in 1930. In 1866 the Negro population owned only about 12,000 homes.

Home buying is obstructed by the fact that new housing developments are not freely open to Negroes, either in the North or in the South, except whero they are sponsored by Negroes or are exclusively for them. When theso developments are sponsored by Negroes the lack of capital, the difficulty of securing municipal improvements and the enforced removal from proximity to work render them too hazardous to encourage full Negro financial support.

Tho financing of Negro home buying has been difficult because of the low security rating given by real estate loan concerns to property tenented by Negroes. Because of this Negroes are charged more than white peoplo for loans, find it more difficult to secure them, and are thus greatly handicapped in efforts to buy or improve property. The Committee found that one reason for this low credit rating was that Negroes are forced to buy in dilapidated areas and that, therefore, their properties are not good risks.

Recent investigations in Chicago disclose the fact that banks, white and black, charge a commission of from 6 per cent to 15 per cent on colored loans and 7 per cent interest.

Concerning Negroes as credit risks, the Committee analyzed the opinions of a large group of bankers and real estate dealers in Chicago given in 1928 which showed that Negroes are standing the test of borrowing for home buying and are steadily overcoming the prejudice against loaning money to them. "There is, however," the analysis stated, "a tendency to get behind in payments which makes it necessary for those who collect to bo both patient and persistent in keeping them regular."

The final section of the report of the Negro Committee concerned modern housing projects for Negroes of which the Michigan Boulevard Apartment in Chicago and the Paul Lawrence Dunbar Apartments in New York City, are the most notable. The success of these projects has led to a movement in Detroit for the establishment of a similar project there. There are in scattered areas attempts to improve Negro housing by large scale operations but the number is so limited as yet that they do not greatly effect the average low standard of housing for Negroes throughout the United States.

The Committeo is composed of a group of civic leaders of the Negro race who have given their time for months to assemble the facts of the present situation. The members of the Committee are:

Miss Nannie H. Burroughs, Chairman President, National Training School for Women and Girls Washington, D. C.

George R. Arthur, Associate for Negro Welfare Julius Rosenwald Fund, Chicago, Illinois.

L. T. Burbridge, President, Louisiana Industrial Life Insurance Co., New Orleans, La.

Joseph S. Clark, President, Southern University, Baton Rouge, La.

Mrs. Irene M. Gaines, Vice-Chairman, Executive Board of Illinois, Association of Colored Women, Chicago, Ill.

Mrs. Lena Trent Gordon, Special Investigator, Department of Public Welfare Bureau of Legal Aid, Philadelphia, Pa.

Lorenzo J. Greene, Research Investigator, The Association for the Study of Negro Life and History, Inc. Washington, D. C.

W. J. Hale, President, Tennessee Agricultural and Industrial State College, Nashville, Tenn.

Gordon B. Hancock, Chairman, Department of Economics and Sociology Virginia Union University, Richmond, Virginia.

Leon R. Harris, Editor, The Modern Farmer, Moline, Ill.

T. Arnold Hill, Director, Department of Industrial Relations National Urban League New York, N. Y.

Robert H. Hogan, Contractor and Builder, Lexington, Ky.

Benjamin F. Hubert, President, Georgia State Industrial College Ga.

Zachary T. Hubert, Former President, Agricultural and Normal University, Langston, Okla.

Mrs. Daisy E. Lampkins, Regional Field Secretary National Association for the Advancement of Colored People, Pittsburgh, Pa.

Moses McKissack, Architect, Nashville, Tenn.

Robert R. Moton, Principal, Tuskegee Normal and Industrial Institute, Tuskegee Institute, Ala.

John E. Nail Real Estate Operator, Former President, Association of Trade and Commerce, New York, N. Y.

Samuel W. Rutherford, Former Secretary, National Benefit Life Insurance Company, Washington, D. C.

Miss Fannie C. Williams, President, The National Association of Teachers in Colored Schools, New Orleans, La.

Mrs. F. C. Williams, Field Supervisor Negro Work, Arkansas Tuberculosis Association, Little Rock, Ark.

Charles S. Johnson, Secretary Director, Department of Social Science Fisk University, Nashville, Tenn.

SECOND WISDOM

By Henry Morton Robinson

Corn does not hurry, and the black grape swells
In the slow cadence of all ripening things;
Wise pumpkins idle, and the calm lake dwells
In peace above her unimpetuous springs.

What most unhurried, most full-flavorous is:
The earth turns slowly and the tide stands still.
For him who surely claims, as truly his,
Firm fruitage that no hasty blight can kill.

And we who flung ourselves to sudden wars
And would not wait for quick scars to be healed,
We must recall shrewd pumkins and slow stars,
And be as wise as lilies of the field.

A WISE GEORGIA FARMER

The story of a Georgia farmer to whom times of depression or falling prices of cotton make but little difference is to be found in the fifth of a series of farm-fact stories, appearing on the opposite page. These weekly articles are being sponsored by the Georgia Bankers' Association to assist in driving home to the farmers of Georgia the wisdom of the live-at-home policy of farming.

With the proceeds from a farm of only 200 acres, W. S. Ham, of Macon county, has built himself a comfortable home, installed waterworks and electrict light systems, equipped his farm with modern machinery and stocked it with fine-blooded animals.

Bank loans and mortgages have no place in his life because he raises everything he needs for his family and his stock. On the contrary, the sale of his extra products is giving him enough to splendidly care for his family, educate his children and have sufficient cash left over to possess a comfortable bank account.

This Georgia farm is a modest one in size, but its owner, so far as profits, comfort and independence are concerned, is far better off than those who, although having much larger investment in land, have not followed modern methods and are now feeling the pinch of depressed prices.

Plenteous profits are to be made on the farms of Georgia, but they are not to be expected unless our farmers combined ingenuity and hard work with our natural advantages of soil and climate. That there can be but one result to intelligent farming in Georgia has been adequately and fully demonstrated by the many insurances of success by such farmers as Mr. Ham.

From Atlanta Constitution.

COOLIDGE FENCES IN REPAIR

Kansas City Star: It was said of Emerson that he was a good neighbor who kept his fences up. Plymouth, Vt., now seems to have that kind of feeling about its most distinguished occasional resident, Calvin Coolidge. Neighbors are expecting the former president to spend more time than usual at the old Coolidge family homestead. Their hope grows from the thorough repairs that recently have been made about the place. Every loose board on the premises has been put in order, foundations have been strengthened and other betterments made. So Mr. Coolidge evidently looks after his fences, upon the Vermont farm. He has indicated that he has none that he cares to keep up elsewhere about the country. But the Plymouth neighbors perhaps are not concerned about that at all.

ATTENTION COLORED FARMERS

The National Federation of Colored Farmers is receiving hundreds of letters from Colored farmers requesting all kinds of aid and information. We are willing to do everything we can for all the Colored farmers of America. It costs money, however, to maintain offices and our expenses are becoming so heavy that we are compelled to discontinue supplying information to those who request it who are not members of the Federation. If you have faith enough in the organization to believe that it can aid you, then you should be willing to join it and help support it. Isn't that so?

Several County Units have organized and elected officers but have not sent in their membership dues. These units are eligible to membership in the Federation until dues are paid. Be helpful. Co-operate. Pay up. "All for each and each for all."

THE MODERN FARMER

Official organ of the National Federation of Colored Farmers

Sam R. Harris - - Editor

Published Monthly by the Modern Farmer at Nashville, Tennessee, and Chicago, Ill.

Nashville, Tenn., Office. 447 4th Avenue, North.

Chicago, Ill., Office: Vincennes Hotel, 36th and Vincennes Avenue.

Devoted to the interests of the Farmer, Truck Gardener, Livestock and Poultry Breeder, the Home and the People.

Entered as Second Class Matter, April 10, 1929, at the Post Office at Nashville, Tenn., under act of March 3, 1879.

All contributions for publication in the Modern Farmer should be addressed to The Modern Farmer, 447 4th Avenue, North, Nashville, Tenn.

Advertising rates and sworn circulation figures presented upon application.

"OUR SLOGAN"

STAY ON THE FARM IF YOU'RE ON IT! GO BACK TO THE FARM IF YOU'RE OFF IT!

THE LAW

"It is hereby declared to be the policy of Congress to promote the effective merchandising of agricultural commodities by encouraging the organization of producers into effective associations under their own control.

The Board is authorized and directed—to promote education in the principles and practices of co-operative marketing—to encourage the organization, improvement in methods, and development of effective cooperative associations." (Public—No. 10—71st Congress. Sec. 1-5.)

THE GOSPEL

"This law is predicated upon the ability of the farmer to manage his own business, once he is organized to do so. Cooperation is the key to it and only in exceptional cases can the Federal Farm Board have any dealings with a farmer who is not a member of a producer-owned and producer-controlled marketing unit." Hon. Sam'l R. McKelvie, Member, Federal Farm Board.

The National Federation of Colored Farmers believes that the Colored Farmers of America should own and control their own co-operative associations.

"Co-operation With All—Affiliation With None."

PAUPERIZING THE FARMER

Farmers in the northwest who were encouraged to borrow money from the government to buy seed last spring are not paying back what they owe. About $4,000,000 was due on Sept. 30 but only $147,000 had been repaided, according to the accounting of Oct. 2. This is another item to add to the long record of repudiated loans to farmers from the federal treasury. The government has failed to recover the money advanced for many of its reclamation projects, and if the accounts of the farm board are made public it seems probable that many of its advances, too, would be disclosed as gifts rather than loans.

Professional farm relievers are forever talking in terms of loans. Their cure for many of the farmer's misfortunes is to increase his debts and his interest payments, thereby further compromising his independence. They have encouraged farmers to borrow, and when they have said "borrow" the eyebrows have been lifted and the tongue has been in the northeast corner of the cheek. The result has been that the marginal farmers who cannot earn a living farming have been kept in business by government dole and in consequence the campaigns which have been waged for reduction of surpluses have failed.

There is no justification in economics for many of these loans which the federal treasury has made; and certainly there is no justification for them in morals. A government which teaches its citizens to borrow in excess of their probable means of repayment and to welsh on the debt if they have the means of repayment is guilty of debasing its citizenship. It would do better to give the money outright. That might pauperize the recipients of the dole, but at least it would not teach them that cheating is a virtue.

This editorial from the Chicago Tribune should be considered by all colored farmers who have received government loans. If you have borrowed from the government it is a debt you should try to pay without any dodging or quibbling. The government has no right to give you anything and you should not expect gifts from the government. Be a man and pay your debts. And too, get out of the borrowing class just as soon as possible. It is all right to borrow money to help purchase a home but in nine cases out of ten, if you have to borrow year after year in order to be able to make your crop, you are a failure as a farmer and might as well look for another job.

'LIVE-AT-HOME' PROGRAMS BRINGING PROSPERITY TO GEORGIA FARMERS

Bank loans and mortgages have no place in the life of W. S. Ham, who operates a 200-acre farm in Macon county, near Montezuma, Ga. Twenty years ago he discovered that cotton as a single crop would impoverish any farm exclusively devoted to its production, and has practiced diversification ever since.

Mr. Ham is pointed out by the people of that county as a model farmer. Residing in a beautiful white bungalow, surrounded by pecan and fruit trees, his hame presents the attractions of the character usually associated with wealthy landowners. As a result of this plan of operations he has developed his land and buildings not alone in their utilitarian aspects, but has given farm life many of the refinements of the city. An inexpensive, but practical windmill waterworks supplies his buildings with running water at all times. He has installed a Delco lighting system and an up-to-date heating plant, all of which gives his home practically all the conveniences of a city abode.

Only twenty-five acres of his farm were given over to the production of cotton during the past year and he sold just enough to pay his debts. He owes no money, is educating five children and has a good bank account. His eldest son, 18, is president of the senior class at the Montezuma High school, drives the rural school bus and works on the farm during his spare time.

Mr. Ham has about 18 cows, which alone net him approxiamtely $150 per month. Besides furnishing his own table, he sells sweet milk, butter and sour cream to a local creamery. A fine flock of chickens and a number of hogs help furnish the local market with fresh eggs and meat. He also has pecan and fruit trees scattered about his property. These were planted with the original idea of beautifying his place, but they also keep him well supplied with nuts and fresh fruit.

Among his other crops are corn, asparagus, velvet beans, field peas, peanuts, oats, rye, wheat, O-Too-Tan beans and winter legumes. He has a large garden which produces a superabundance of all varieties of vegetables for his own table. He also sells vegetables to town groceries. By planting field peas between corn and growing velvet beans and similar crops as soil builders, the annual cost of his fertilizer is materially reduced.

Diversified farming is a thing of ten years standing in Macon county. Many of the farmers of that section have made a go of the live-at-home program and are convinced that this is the only safe method of farming. The county produces four cash crops which lend greatly to solving the farmer's needs. These crops are cotton, peaches, asparagus and peanuts.

George M. Chastain, of the Citizens' National bank, of Montezuma, recently started that Macon county farmers were among the first to adopt diversification, and as a result have suffered but little from the present trying times. "This program of safe farming was never advocated in this country." he said, "our farmers realized this as the only solution and just went ahead and diversified."

CABBAGE SNAKES

By C. L. Fitch, Ames, Iowa
(In Chicago Packer)

A woman wrote me a little while ago asking what to do about "cabbage snakes" in her cabbage heads and whether they were poisonous.

At times this pest has been a very serious factor in the cabbage trade, leading to heavy losses to shippers, and to the loss of all returns to growers in large areas, and all due to prejudice and not at all to any harmfulness whatsoever of this innocent little creature. It is well enough for every grower and every dealer to have the facts so as to stop hysteria at the start whenever hair worms are found in cabbage.

This worm is about the size of a corn silk and from two to nine inches long. It is white. It is a worm all its life and is not the larva or grub of any different shaped or appearing creature. It is the same thing as the horsehair worms often seem about watering troughs for cattle and horses and about which the wholly inaccurate stories are told that they are white horse hairs turned to life.

In the spring the little worms emerge from the ground and enter the bodies of any soft worms or insects that they take a fancy to, and inside their bodies live as parasites. They are especially devoted to grasshoppers and crickets and this year let us trust they have killed them by the millions. They sometimes live in apple worms and have emerged from them and been found inside of apples. It is possible that those found in cabbages have emerged there from grasshoppers, crickets or from cabbage worms.

At this time of year and earlier they live around in damp places and go into the ground. When they emerge they mate in knots of two coiled worms, lay eggs in the ground and die. They eat only while in the body of the insect on which each is parasitic. They do not eat cabbage or any other vegetable matter. They are not poisonous even if eaten.

Anyone interested to study the matter further, or to get authoritative government evidence that the cabbage hair worm is absolutely harmless should procure the free circular No. 62 from the Bureau of Entomology at Washington. It was printed 25 years ago after senseless press reports and popular fears based thereon had lost the sale of 85 per cent of cabbage crop of one important southern state.

The fears of cabbage snakes really are worse than fears of ghosts. We believe in the life of the spirit but the cabbage hairworm is neither a spirit nor an enemy. He and she are harmless and useful friends of ours.

SCHOOL TOO SMALL, SO STUDENTS ENLARGE IT

When the pupils of the Union Grove, Wis., high school found that their school needed more room and there was no other way of getting it, they built it themselves, reports the Milwaukee Journal.

A big freshman class this fall jammed an already overcrowded building. Union Grove taxpayers had previously voted down a proposition to enlarge the school. Unless more space was obtained the school's normal program was threatened. The pupils went to work.

John Giles, state high school supervisor, had suggested that some building might be used as an annex. Principal A. F. Ruzicka found an old horse barn that had possibilities.

The boys of the manual training classes took the barn and by weeks of effort converted it into a light airy and attractive 1-story building 16 by 60 feet. The boys enlarged the building, repaired the sides and the roof, put in a new floor, covered the interior walls and the ceiling with composition wallboard and wired and painted the building.

The building now has three rooms— a storeroom, a toolroom and a general room forty-five feet long which will be used as one of the manual training rooms. The manual training equipment already has been moved to the new building and classes are meeting there. The new building also serves for band practices and thereby permits schoolroom previously reserved for the band to be used for a much needed assembly hall.

The extra space made available by the pupils' efforts also permitted one of the former manual training rooms to be used as a gymnasium.

The boys, however, didn't do all the work on the building. The high school girls scrubbed and sanded the floor and prepared it for waxing.

Building material used in converting the barn into a schoolroom were paid for by the school board, but the pupils will pay for a part of the furnishings. They are planning a series of entertainments to raise the necessary money.

HOW TO PROLONG THE DEPRESSION

1. Go around with a long face.
2. Broadcast personal trouble.
3. Listen to every rumor you hear.
4. Pass the rumors around to others.
5. Hoard your money and refuse to buy.
6. Read all the bad news you can find.
7. Pass it along to somebody else.
8. Stall your creditors if you are able to pay.
9. Tell everybody how poor business is.
10. Explain why you think it will be worse.
11. If in business quit advertising and fire all your salesmen.
12. Wear the poorest clothes you can find.
13. Attack the public officials and your boss.
14. Talk about the terrible winter ahead.
15. Be sure all your employes are afraid of losing their jobs.

—Mabel.

Application for Membership

NATIONAL FEDERATION OF COLORED FARMERS

Vincennes Hotel, Chicago

As a farmer, I believe the time has arrived when the Colored Farmers should form a National Organization devoted to diversified production, grading, packing, shipping and marketing of farm products and to the purchase of needed farm supplies through co-operative methods, to the end that a more prosperous financial condition may result from their efforts as producers.
I hereby subscribe $5.00 for membership in the National Federation of Colored Farmers for a period of 12 months from date. Also $1.00 for an Annual Subscription to the Modern Farmer.

INCREASE IN PEANUT CROP OVER 1930 YIELD

Washington, D. C.— A peanut crop of 928,820,000 pounds of nuts gathered this year compared with 726,745,000 pounds in 1930 and a five-year average of 795,784,000 pounds, is indicated by the October reports to the Department of Agriculture of condition and probable yield per acre. Little change prospects occurred during September. Production in Virginia and North Carolina is estimated at 400,000,000 pounds compared with 275,000,000 last year. Georgia and Alabama show 348,000,000 pounds against 331,000,000 pounds in 1930 and Oklahoma and Texas 104,000,000 pounds against 65,000,000 in 1930.

Production by states is forecast as follows:

	Prod. 1930	Est. Prod. 1931
	Pounds	Pounds
Va.	83,790,000	120,930,000
N. C.	191,700,000	279,300,000
S. C.	8,400,000	8,960,000
Ga.	198,560,000	193,860,000
Fla...	20,720,000	26,400,000
Tenn.	10,000,000	12,800,000
Ala.	132,600,000	154,560,000
Miss.	5,200,00	8,190,000
Ark.	4,750,000	10,150,000
La.	6,225,000	9,350,000
Okla.	12,000,000	15,000,000
Tex.	52,800,000	89,320,000
U. S. ..	726,745,000	928,820,000

URGE 3c PRICE ON PEANUTS

Murfreesboro, N. C.—More than 200 peanut growers and others interested in the peanut crop of 1931, assembled in Murfreesboro in the auditorium of Chowan College at the call of the Eastern Carolina Chamber of Commerce passed resolntions parties to hold the peanuts off the market except at a price of at least 3c per pound. A tabulation showed that 300,000 bags of peanuts were represented by those present, which is more than 10 per cent of the entire peanut crop of the state.

A SIX-BILLION-DOLLAR CUSTOMER

Two months ago, the AFRO-AMERICAN, making nse of figures furnished by the W. B. Ziff Company, its national advertising representatives, estimated that 13,000,000 colored people in the U. S. represented 2,000,000 families each spending $2,000 a year.

Using these figures as a basis, we estimated that the colored race is a customer with $4,000,000,000 a year to spend.

New figures are available, however, from Dr. Julius Klein, white, assistant secretary of commerce, who, in a radio address on November 10, set down the following estimates for food, clothing and shoes.

Colored people, Dr. Klein said, spent in one year:

$1,200,000,000 for food.
1,400,000,000 for clothing.
550.000,000 for shoes.

Total $4,150,000,000.

Add to this what colored people spend for rent, cold tablets, carpet sweepers, hair tonic tobacco, dance halls, theatres, church and lodge dues and, yes, even for bootleg liquor and we increase the grand total to a figure well above six billion dollars.

Yes, sir, we are a bigger customer than we thought we were. This is something worth knowing, but equally as important is it to know that this six-billion-dollars spender is learning to spend his money with his friends instead of with his enemies.

His friends advertise for his trade, and give him a job. His enemies post two signs; "No Colored Trade Wanted," and "Help Wanted— White."

—Afro-American.

A red-haired boy applied for a job in a butcher shop. "How much will you give me?"

Three dollars a week; but what can you do to make yonrself useful aronnd a butcher shop?"

"Anything."

"Well, be specific. Can you dress a chicken?"

"Not on $3 a week," said the boy.— New York Watchman-Examiner.

Founders' Day at Bennett College for Women

To all those whose business it is to study the encourageing changes in our educational institutions, there comes home to us with startling the appropriateness of such work comes home t us with startling clearness, a time when we feel happy over the fact that such great things are being done by our people and for our people. Such a time came for us as I attended the Founders Day Exercises at Bennett College for Women. in Greensboro, North Carolina, on November 25. From its president, who makes a happy combination of youth, modern training, and deep religious conviction, down to its most humble student, Bennett College is a unique community. One has the impression that the setting is the stage of an immense theatre, and that every player has been chosen with painstaking care.

The campus plays its part in this creation of atmosphere. There are but eight buildings in all, and the entire plant is valued at just one-half million dollars, but those eight buildings, peopled as they are by conscientious students and workers, could, in their contribution to society, match arms with the magnificent halls of our greatest universities. An elegant simplicity mark both the dormitory and the President's home—all obviously furnished by one with a fine sense of the fitness of things.

On hearing the beautiful address of Dr. W. C. Jackson, vice chairman of the Board of Trustees, we became convinced that the great secret of the success of Bennett College had been discovered—that here was the personality which had transformed a struggling school into a modern college. "The Gods bring thread to a web begun." Now I like to think that here at Bennett College for Women we have a web begun,—that we are weaving a garment that shall be both beautiful and useful; nothing less, if you please, than a scarf for the Negro womanhood of the South. We would have it a thing of beauty and grace and usefulness, that it may truly adorn its wearer."

The touching sincerity of the alumni representative, Mrs. S. W. Wright and the stirring music of quartet and choir then gave reason for reflection—might not these organizations be responsible for that intangible something called "atmosphere?" More than one eye was filled with tears as those clear, sweet young voices proclaimed "There is a balm in Gilead . . ."

Many in the audience had listened before to Dr. Will W. Alexander, but on this occasion his rugged eloquence rose to new heights. We followed him in picture after picture of the remarkable life of Dr. Albert Sweitzer, theologian, philosopher, musician, medical and spiritual missionary—a man who, though perhaps better fitted than any of his contemporaries to enjoy the life of a cultured and distinguished European, chose rather to gvie his life to the black men of Africa, taking to them' the fullest meaning of true brotherhood.'

Followed the conferring of the degree of Master of Arts upon Mrs. R. R. Moton, wife of the Principal of Tuskegee Institute: "Jennie B. Moton, Director of Woman's Industries and the School of Home Economics of Tuskegee Institute; native of Virginia; loyal daughter of Hampton; teacher and worker with girls; exemplar of womanhood; leader and helper of women of high degree and lowly estate; strong factor for interracial understanding and good will; staunch and intrepid helpmeet amid threatening dangers; faithful and vigilant mother. By virtue of the authority vested in me by the Board of Trustees, I gladly admit you to the degree of Master of Arts in this college and confer upon you all the rights and privileges that belong thereto. In token whereof, I present you this diploma

NON-PARTISAN CONFERENCE

LEADERS FROM MANY STATES AT WASHINGTON, D. C.

Representatives from nearly every state in the Union attended the Non Partisan Conference held in Washington this past week. They had been invited by Hon. Oscar De-Priest, Member of Congress from the First Congressional District of Illinois, who felt that it was opportune time to make a survey of the needs and possibilities of a large group of American citizens, to put them into concrete form for presentation to the nation.

It was felt that this nation-wide conference was of great importance The promoter of it, in the person of the Congressman, is entering his second term as a representative in the National House. He was present at the opening of the Seventy-second Congress, witnessed the turning over of the machinery of that national lawmakers body to the Democrats of America. They outnumbered the Republicans by a slender margin.

The findings have not been published; they had not reached Nashville up to time of going to press, but the work, as it is understood here, had to do with momentous problems, the shaping of them and the handling of them for the incoming several years. It was expected that perhaps out of this Conference will come a permanent organization for civic improvement of the millions of Negroes in the United States.

APPLES HAVE NO SEEDS

Middlesport, O. — Apples without seeds or cores, which germinato on a tree that bears no blooms have been grown by T. W. Jones here. The freak of nature was transplanted from a wild tree at Kenova, W. Va., according to Mr. Jones.

VIRGINIA COLORED TEACHERS SEEK HIGHER PAY

Lynchburg, Va.—(CNS)—Mr. Thomas L. Dabney, president of the Colored Teachers Association of Buckingham County, announced last week that 1,671 Negro teachers in the State have signed the petition requesting a high wage scale. These signers represent 28 counties and five cities, it was said. The circulation of the petition began last spring and the movement for higher salaries has steadily increased in impetus since that time.

The sponsors of this movement are greatly encouraged by the progressive outlook of Dr. Sydney B. Hall, Virginia superintendent of public Instruction.

In several of his addresses Dr. Hall has expressed his desire for a larger sum for public education in Virginia, and it is expected that he will ask the State assembly to vote for $4,000,000 during the coming session for the public school system. It is also known that Dr. Hall favors a higher salary for Negro teachers, and that he is ready to endorse such an increase as soon as it is possible to do so.

Another encouraging development for the sponsors for a higher salary scale for Negro teachers is the growing conviction among the leading educators of the State and others that the quality of teaching is the most important single element in the public school system and that the higher salaries help to guarantee this higher type of teaching.

Use Sunday School Catechisms FOR THE LITTLE ONES

Select one of the three---First, Easy Lesson Primer 6c;
Second Child's Bible Question Book 5c;
Third Baptist Sunday School Catechism

After thirty-three years of actual Sunday School experience, after thirty-three years of developing a service for the Sunday School forces, we have been convinced that the Sunday School Catechisms, edited, published and printed by the National Baptist Publishing Board, will give help and instruct the children in a way far more advantageous than the Picture Lesson Cards. At the same time, they will save the Sunday Schools money, because there are thirty-two pages in each of these Catechisms, with illustrations, Bible questions and intensive study calculated to develop their minds. These Catechisms are described and priced on the order blanks.

In preparing your order for the next quarter, and from now on, give attention to the Sunday School Catechisms, substitute them for Picture Lesson Cards. We recommend them. We endorse them. We specialize in them.

A. AND I. STATE COLLEGE Y. M. C. A. HOST TO CONFERENCE

Nashville, Tennessee, December 7, 1931:—The First Middle Tennessee Older Boys Conference conducted by the State Y. M. C. A. in co-operation with A. and I. State College, December 5 and 6th, under the guidance of the student Y. M. C. A.

The conference was conducted in the usual conference procedure by T. R. Hartsfield, president of the Y. M. C. A. at A. and I. State College, who presided throughout the conference.

The theme of the conference was "Youth in a Changing World." Special speakers for the occasion were as follows:

Prof. J. J. Ray, Y. M. C. A. Graduate School, Nashville, Tennessee, who spoke on "The Purpose of the Conference and the Value of the Discussion Group Plan; Prof. J. A. Atkins A. & I. State College, "A Boy's Social Life; Prof. N. S. Holliday, Pearl High School, Nashville, Tennessee, "Choice of a Life Word". Prof. D. A. Forbes, A. & I. State College, "Christian Standards of Living"; Prof. A. V. Boswell, A. & I. State College, "Youth in a Changing World"; Prof. Merle Eppse, A. & I. State College, "A Challenge to Youth"; Mr. J. J. Muray, State Y. M. C. A. Field Agent, "Better Interracial Cooperation"; and Prof. Bertram Doyle, Fisk University, the main conference address "The Forgotten Age."

The conference was attended by six different schools, having from two to six delegates; Pearl High School, was represented by two students, J. T. Logue, president of Pearl Hi-Y Club. Burt High School, Clarksville, was headed by Prof. A. S. Sims and two students; O. H. Bernard School Centerville, Prof. M. L. Dabney and five students; O. H. Bernard School Centerville, Prof. M. L. Dabney and five students; Winchester Junior High School, Winchester, Tennessee, Prof. R. G. Johnson; Franklin Training School, Franklin, Tennessee. Mr. J. T. Patton, undertaker, and six students; and two students of the practice school of A. & I. State College.

The conference ended in high spirit and every group decided to bring more representatives to the conference next year, which is to be held at A. & I. State College. A conference committee was appointed, to make plans for next year's conference. Mr. Willard Powden, Burt High School, Clarksville, was elected President of the conference, Mr. J. T. Logue, Pearl High School, Nashville, was elected secretary, other members on the conference committee are T. J. Adair, A. & I. State College, (Practice School,) C. B. Biddle, Winchester School; Cyrus Booker, Franklin Training School, Franklin, and Mr. Martin L. Robinson, O. H. Bernard High School Centerville, Tennessee.

TEXAS NEGRO TURN DEMOCRATS

Refuse to Endorse Republican Candidate In Texas District In Recent Election

San Antonio, Texas — (Special) Negro voters of this district rebuke the Republican Party, exercised their franchise prerogativo and cast their votes for the Democratic nominee in the last congressional special election held in this district. By their vote, their suffrage and their suport they were able to send a Democrat to Washington to succeed the lone Republican who died some time ago. They, so it is said, knew that the contest was on between the Democrats and the Republicans for the control of the house.

The election of a Democrat for this district meant almost certain election of a Democrat speaker to the lower house. This arleaders, spell bounders, stump speakers and campaign workers rushed to this district by Republican National Committee to save the situation, but Negro voters of this southwest Texas district that was formerly headed up by James Slader a Democrat, and preceding him, by George H. Noonan, a Republican, decided that thy would take their chance with a Democratic nominee, with a Democratis in Congress with a man from their dis triet whom, it is said knows them, understands them and is not afraid to do for his constitueney when he reaches Congress.

The former Republican, so they claim, practically turned Lilly White. Leaders here say they used their vote and their influence right up to the nation's Congress, then turned their backs upon them when he got to Washington, voted them in straight a National Convention; hence, it is figured here that as a rebuke to the Republican Party as viewed from a Texas standpoint, they prefer to try an unknown, make a new line up and send a man from this district, whom, although representing another party, is more in sympathy with the principles of citizenship from the American standpoint, who came nearer working along the line laid down years ago by such leaders as Norris Wright Cuney, George H. Burkett, Charley and Henry Ferguson, the late H. M. Broiles and scores of others who took the same position when they sent R. B. Hauley, a Republican, from Galveston, Texas to the Lower House of Congress.

The Negro Republicans of this section knew and argued that if they support the Democratic nominee and sent a real Texean to Congress, though Democrat, he would look to the best interests of his district, and that would guarantee them a Texas Democratic speaker, as it is felt here that Congressman John Garner had the interest of Texas at heart, so the Negroes of this section, not only elected a Democrat to Congress, but guaranteed the election of a Democratic speaker to the Lower House of Congress.

FISK TRUSTEES IN SESSION

J. C. NAPIER, F. A. STEWART AND PRES. JONES ATTEND

Mr. J. C. Napier, the cashier of the Citizens Savings Bank and Trust Company, and Dr. F. A. Stewart, a practicing physician of this city, both of whom are members of the trustee board of Fisk University, left Tuesday to be present at the board meeting of the trustees being held at 15 Broadway, New York City, in the office of Mr. Paul Cravath, the chairman of the board. They were joined in New York by Dr. Thomas Elsa Jones, the president of the University, which gives Nashville three members of the board attending this very important meeting. Neither Mr. Napier, nor Dr. Stewart gave out any information as to what the board would take up at this session, nor did President Jones make a statement for publication, but it is understood here from close friends of the University, that this special meeting called in New York will have to do with the future expansion and enlargement of the University, but it could not be learned to what extent this improvement and this enlargement would go. Others are of the opinion that plans for the commencement as well as the winter semester will be gone into, and perhaps something will be announced within the next fortnight.

The recent completion of Fisk Library and the Science Hall has been accepted by the board, and other improvements, say many, are sure to follow.

This trio is expected to return to Nashville either the latter part of this week or early next week, when it is expected that the President might make a statement for publication.

SURVEY SHOWS HEALTH PREVENTIVE MEASURES ARE NEGLECTED

Of every 100 city children under six years of age in the United States, only 51 have at some time in their lives visited a doctor for a health examination and advice while they were well, only 21 have been immunized against diphtheria, only 21 have been vaccinated, and only 13 have visited a dentist for health care and advice when they have not been impelled to do so by an aching tooth or some other visible sign of trouble.

Of every 100 country children of immunized against diphtheria, a the same ages, only 37 have visited a doctor for a health examination and advice, only 18 have been mere 7 have been vaccinated, and only 13 have gone to a dentist for health advice.

This composite picture of preventive health measures for the preschool city and country child in the United States was presented by George Truman Palmer, Dr. P. H., Director of Research of the American Child Health Association. Dr. Palmer's report was based on a survey made especially for the White House Conference, of 146,000 children in 156 cities and 37,000 children in rural sections of 42 states. These children were all under six years of age. They represented approximately 2 per cent of the pre-school population in the surveyed states.

In each instance in the cities, family interviews were obtained by local residents. Home demonstration agents interview 23,000 rural familes living in the open country or in communities of less than 2,500 population to ascertain the health preventive measures for the rural children. Every effort was made to have the samples represent a cross section of conditions in the country as a whole, and it is believed that the survey findings, and especially the city findings, are generally applicable.

Preventive Measures in City and Country

The difference in preventive health measures for city and country children was not as great as was anticipated. The rural child is at some disadvantage in the matter of health examinations, inasmuch as half of the city children and only a little more than a third of the rural children have health examinations. The rural child is astonishingly close to his city cousin in immunization against diphtheria. Considering the difficulties of rural health work, this fact would almost seem to indicate that rural areas have been pushing the anti-diphtheria campaign with more vigor than have cities. The country child is definitely behind in vaccinations, a condition which should be given serious attention, but, surprising to say, he is shoulder to shoulder with the city child in health visits to the dentist.

Darrow Completes "Story of My Life"

Chicago—(CNS)—Clarence S. Darrow, veteran of many court battles, and the great champion of human rights, has completed his autobiography, which is to be published in February as "The Story of My Life."

"There will be no bragging in the book," he stated recently. "It will tell the experiences of almost seventy-five years of living, which might be of interest. There will be more than a half century of experience before the bar.

"There will be something—and a good bit of it—on my ideas. Such things I hold to be an integral part of a man's life. Religion and my agnosticism, prohibition, crime and the rest will be there."

ACQUITTED ON ATTACK CHARGE

Easton, Md.—(CNS)—William M. Randall, accused of attacking a white woman in Queen Anne's County last June was acquitted by a white jury here last week. Randall, following his arrest had been threatened with lynching and it was necessary to remove him to Baltimore secretly to escape a mob of white ruffians. Following a change of venue, the man's innocence of the charges was proved and he was dismissed.

National Postal Alliance Makes Plan For Expansion

Washington—(CNS)—The officers of the National Postal Alliance, an association of 5,000 Negro postal employees an members of the Negro press were present last Friday at a banquet given in their honor by their the local branch of the Association which has its national headquarters in this city. At this meeting the officers announced their intention of increasing membership to include at least ten thousand new postal employees. Roy D. Wilhoite, of St. Louis, the national president of the Organization, pointed out that it was the only one of its kind for colored postal workers. It served the purpose of bringing together in the common cause all employees of this branch of the Federal government.

V. David Bond, president of the Chicago branch of the organization spoke of the need of getting before the workers in the Post Office the essential facts relative to Negro workers. He said that in a number of instances the association had been able to accomplish real benefits for them and he felt that the acquisition of a Negro Supervisor in Chicago was largely due to the activity of the Association.

Other speakers at the meeting were Judge Edward W. Henry of Philadelphia, Colonel West A. Hamilton, Mr. Robert J. Nelson, Trezzant Anderson of the Associated Negro Press and John Davis of the Capital News Service

Judge Henry Boomed

At the meeting Judge Henry was introduced as the next Congressional representative fro mthe new second District of Pennsylvania. The representatives of the Association from Philadelphia, pledged their support to the campaign of the Quaker City jurist, and indicated that his nomination was almost a certaainty. This was the second time during the week that large organizations had endorsed the candidacy of Judge Henry. Earlier in the week J. Finley Wilson and other Elks leaders had issued public statements endorsing him. The fact that there are 1,500 colored postal employees in Judge Henry's district made the endorsement of the National Postal Alliance a valuable one.

NEW TYPE OF ECONOMIC PLANNING NEEDED FOR NEGRO SAYS DUBOIS

Washington—(CNS) — Speaking before the Non-Partisan Convention which met here last week, Dr. W. E. B. DuBois, editor of the Crisis ascribed the present economic plight of Negro labor, not so much to the filling of jobs formerly belonging by custom to Negro workers, but rather to the development in the South of new industries, where machinery is being used to displace labor and in which new industries the Negro is finding difficulty in admittance. Miss Nannie H. Burroughs, president of the National Training School for Women and Girls of Washington, D. C., was the other speaker at the Thursday evening session devoted to a discussion of economic opportunities.

Prosperity Not to Return to Losers

Prosperity may return to America, said Dr. DuBois, but it will not return to those who lost it. The people whose real estate is now not worth its cost will sell to those, who will reap the profits when a better day comes, the speaker declared.

"Taking over of Negro jobs is not the major thing which accounts for the present distressing condition among Negro labor in the South. The true reason is not to be found in displacement but in the building up a whole new series of industries in the South. These new industries bring with them deft and intricate machines, requiring a new way of achieving labor."

The speaker said that this new technique required in such industries as artificial silk and the making of furniture by machinery, an industry doing business in the South in total amount of eight hundred million dollars, could not be taught at Hampton and Tuskegee, but had to be learned in the factories. And it was difficult for Negroes to get into the factories. It was useless, therefore, to keep teaching Negro children outmoded methods of labor, when they would be called upon to meet these changing conditions.

What was needed, indicated the speaker, was a new way of economic planning, a new method of education for Negro children to improve the economic condition. It was not necessarily true, he said, that every one wanted to go into the professions, it was only true that the chances for earning a decent livlihood elsewhere were too limited.

Politics No Way Out

The way out of these difficulties was not through politics, for politics whether Republican or non-partisan means to most people simply getting political jobs or indirect income through politics. The true way out, the speaker declared, was to get as much Negro capital as possible out of the rule, control, organization and direction of white men who used it, not to help Negroes, but to help themselves. What most Negroes forget, he said, was that the real power of any group was the buying power. The Negro buying power of almost a billion dollars a year was almost wholly controlled by whites. It was necessary that Negro men and women realize that they could direct and control their own buying power.

"It may sound like a job," said Dr. DuBois, "but the Negro could, if he chose manufacture cigarettes and sell them to Negroes; he could make thesheets to be found in Negro homes, if the Negro buying power were exerted along the line of purchasing Negro products. And it is such jokes as these, by which the whole future of the Negro may be transformed.

Miss Bourroughs Speaks

Miss Burroughs said that she believed that the ballot could be made a great power to gain for the colored man his fair share of economic opportunity. She said that the dollar and the ballot were the only two things the white man feared.

What we need is to make the ballot a force all over this country to gain our economic rights, said the speaker. In addition she advocated the slogan, "Don't buy where you can't work," for only by the use of such an economic boycott could white men be made to give Negroes jobs.

"It doesn't take much," said Miss Burroughs," to make the white man respect your right to a job. All the folks out in Chicago had was a lot of banners and plenty of time to picket places that wouldn't employ Negroes. And they got what they went after."

Following Miss Burroughs, Major R. R. Wright of Philadelphia, made a short talk to the audience. He urged that Negroes have confidence in one another.

Wanted To Be Machinist But Fate Made Him Editor Says DuBois

Washington—(CNS)— Revelation that his boyhood desire to be a machinist had been the thwarted when he failed to get a box of tools for a Christmas present when a boy, was made here last Thursday by Dr. W. E. B. DuBois, distinguished editor of the Crisis magazine in his speech before the Non-Partisan Conference last week

"I shall remember with bitter disappointment all my life," said the veteran editor "the bleak Christmas, when I did not get a box of tools. I am not an editor because I believe that words are more important than machines, I simply didn't have the opportunity to become a machinist."

Dr. DuBois told an amused audience how he had driven a car in New York for 15 years without a collision. "I have a mechanical cast of mind," he said. "I know my car and when something goes wrong I know what the matter is."

To SAVE Something!

Join Our Dollar Per Week Savings Club Now Open

Every Citizen Is invited to Cooperate in a Definite Movement Where they Themselves will be the Recipients of all the Benefits Both Principal and Interest

Send $1.00 every week to the Citizens Savings Bank and Trust Company, at Nashville, Tennessee, either in cash or post office money order, or you may send your personal check, if it is certified. This will open a savings account on which we pay interest twice a year. It will make you a member of our "Save a Dollar a week Club." Every member of the club, who qualifies by sending the regular amount, will receive special recognition and an acknowledgement of their remittance when it arrives. You can deposit more than $1.00 per week if it is convenient. No matter where you live, in the United States, Canada or Mexico you can take out membership in this savings plan. The Citizens Savings Bank has been operating for twenty-seven years. Its capital is fully paid. Its officers and directors represent men and women who are nationally known. "Procrastination is the thief of time," so do not wait. Open your savings account at once.

GOVERNMENT AGAINST

(Continued from page 1.)

new methods of preserving edible products, but also of eliminating possible ill effects resulting from such preservation. Reports that botulinus poisoning might arise from consumption of spoiled defrosted vegetables were answered immediately by exhaustive chemical experiments, which proved that the reports were unfounded.

Agricultural waste is a constant problem for the federal experimenters who estimate that farmers fail to get returns commensurate with cost of soil fertility and labor expended on a quarter of a billion tons of farm products annually. Fertilizer research goes on constantly, and largely because of it, American production is now supplying 100,000 tons of cheap fertilizer salts annually, through imports are still the source of 80 percent of the potash used by American farmers.

PRESIDENT JAMES P. DAVIS

(Continued from page 1)

Chicago Tribune follows:

A number of leading agricultural economists delved deeper yesterday into the problems of an economic revolution going on in agriculture. Their discussions at the national land utilization conference which ends today at the Stevens hotel indicated a plan would be announced today on which the federal, state and county governments could base their politics regarding the best use of the great continental domain of nearly two billion acres that we call the United States.

The proposals of the conference are expected to affect not only farmers and owners of forest of waste lands, but possible drastic reforms in local governments and the basis of taxation for all property owners as well.

986,000,000 Acres in Farms

Of the 1,903,000,000 acres in the United States, only 986,000,000 acres are classed as farms. And on a little more than one-third of this farm land, 360 million acres, is being produced the food and fiber of the nation with what Secretary of Agriculture Hyde declares are "vast surpluses of crops in addition."

Already, according to Dr. Henry G. Knight, federal soil chemist, at least 21 million acres have gone out of cultivation in a generation because of destructive erosion. This is a loss in area greater than that of Japan's entire arable holdings.

Other economic forces such as the motorization of farms that depletes horse population, the increasing efficiencies in cultivation and production, make "new levels of competition in such crops as corn, wheat and cotton." This point was made by M. L. Wilson of Montana State college, who cited ample evidences that all foods and fibers would be produced in the future more economically than at the present low levels.

Less Land Is Needed

All this means that less land is constantly required in the nation's agricultural plant. Steps to correct this trend which has kept wasteful lands in cultivation were proposed by Eric England, federal farm economist, and by Dr. C. L. Holmes, federal farm management expert.

Dr. Holmes declared his studies had revealed that large scale farming "is not to become universal or even typical in American agriculture."

The federal farm board's economic studies into future trends in production were in contrast to those of Dr. Holmes. The board's chief economist, Dr. John D. Black, professor of economics at Harvard university, declard that "there are good reasons for thinking that the scale of production will increase in many lines of agriculture in spite of factors in the other directions."

"Two kinds of farms principally will increase in numbers, the small family residence type, and the farm of from a few hundred to several thousand acres," Dr. Black said.

JOB COMPETITION CONTINUES

(Continued from Page 1)

of this character. In Lexington, Ky., importation of Negro mechanics from North Carolina who are working for less than local white men, may be the beginning of difficulties for Negro building tradesmen who have been accustomed to work in all branches of the industry throughout the city. The organization of a local of Negro asphalt workers in St. Paul, Minnesota, has caused a dispute over the proverbial question of the use of Negro workers on the same jobs with white workers. Consideration is being given in Minneapolis to further unionization of Negro labor, the initiative apparently coming from within the group itself.

WHITES SUPPLANT NEGROES

Contrary to their former custom employers who discharge Negroes and turn their places over to whites are now offering excuses for so doing. Thus, in Austin, Texas, jobbing houses claim that they find it more profitable to use whites to deliver their goods because of the time consumed by Negro workers going to their homes and other places on personal missions. San Antonio reports losses in house hold employment due to the belief of the unreliability of Negro workers. Displacements have been reported in Toledo, O., where white elevator operators and stock girls are used in a department store because they can serve as clerks in an emergency. In Wilmington, Delaware, jobs formerly held by janitors and laborers have been turned over to whites. In Covington, Ky., similar displacement is noted. In Newark, New Jersey, a popular lunch company is using white buss girls in place of Negro boys, and in Chicago a large chain establishment, formerly employing many Negro cooks and buss boys has dismissed them.

NEW JOBS OPEN

These losses have been compensated for in whole or in part by gains in public works, building construction, and other fields that are being used to give work to unemployed men. Among the cities reporting gains of this character are Denver, Ft. Wayne, Newark, Springfield (Ill.), St. Paul, Warren (Ohio) and Hot Springs. Resumption of work in the automobile industry was responsible for from six hundred to eight hundred workers returning to their former jobs at the Ford Motor Company. The Mountain State Telephone and Telegraph Company has two salesmen soliciting new patrons for the company. A coal company in Akron, O., is employing six salesmen.

NEW FRUIT SIZER IS OFFERED TO THE TRADE

Chicago. — Arrangements have been completed by the Ben-Ess Company, Produce Exchange building, 1425 South Racine Avenue, Chicago, to fill orders for its new fruit sizer. As announced last week, this is a new fruit sizing device for fruits and vegetables. The machine has recently been invented and is on the market for the first time. It measures all kinds of fruit and vegetables as to sizes and fills a long-felt need in this field. Having been thoroughly tried out, it has met with the ready approval of those who have used it.

TEXAS PRESS IS ORGANIZED

Beaumont, Texas—Pursuant to a call issued by Prof. Napoleon B. Edwards, executive committeeman of the National Press Association, a number of newspaper men and other business and professional men met here November 27, for the purpose of considering the advisability of organizing a Negro Press Association of the Lone Star State.

Prof. Edwards stated the purpose for which the meeting had been called, and outlined what he considered the fundamental reasons for organizing the press of the state. Free and full discussions were had and the unanimous verdict was in favor of such an organization.

The individuals who compose the official staff of the first Negro Press Association ever organized in Texas are here given: President, Prof. Napoleon B. Edwards of Prairie View College; vice president, Miss Laly Hubert of Beaumont; secretary, Hon. W. L. Davis, B. S., principal of one of Houston's largest schools, grand master of the U. B. F., Grand Lodge of Texas, and president of the Texas Baptist State Sunday School Convention; assistant secretary, Mrs. R. L. Richards of Hempstead, directress of the Sam Schwartz High School News; treasurer, Prof. J. R. Lockett, president of Guadalupe Baptist College, Seguin; corresponding secretary, Walter Pace of the Dallas Express; attorney, J. Alston Atkins of Houston. Executive committee: Prof. R. L. Isaacs, principal of Chew Elementary School of Houston; O. A. Branch, Pt. Arthur, and J. T. Duncan, editor of the Register of San Antonio.—Exchange.

PLAN ACTIVITY FOR COMING YEAR

Washington—(CNS)—A meeting of the executive committee on the National Association of College Women was held here recently in the offices of Dean Lucy Slow of Howard University. Several reports were discussed by the group, including a plan for activity in Adult and preschool education. Bucknell and the University of Pennsylvania were placed on the accredited list of the association. The committee also made plans for a memorial tribute to be paid the memory of the late Miss Juliette Derricotte, a former member of the association.

Those present at the meeting were: Miss Juanita Howard, national president; Miss Nellie N. Taylor, president of the Delaware branch; Mrs. Vivian J. Cook, chairman of the committee on Standards and Recognition of Colleges and Universities; Mrs. C. L. Blanchet of Chicago; Miss S. I. Daniels; Dr. Georgianna Simpson; Dean Slowe and Mrs. E. P. Shaw.

Boys Use Heads And Get Balloon Netting Prize $25.00

Newark—(CNS)— William Smootz and William Ray two small boys of this city stalled a dragon ballon across the Newark flats on Thanksgiving, expertly charting their course by observing the wind.

Careful inspection of the helium inflated balloon as they lay in the street before the parade convinced the boys that the largest one, a forty-foot sphere representing the head of a dragon, was the least likely to fly far.

After a great chase the great dragon balloon evaded them and was blown across the Passaic River. A little later however a great yellow clown ballon flopped down and died with a grin at their very feet.

Next day they returned it to the L. Bamburg store and received a reward of twenty-five dollars.

COLLEGE STUDENTS PRESENT MACBETH

Atlanta—(CNS)— "Macbeth" in full costume was presented by Morehouse and Spelman College students at Sale Hall on Morehouse campus. The play was directed by Miss Anne Cook, head of the dramatic department of Spelman College.

THE MODERN FARMER

Vol. III. Nashville, Tenn., and Chicago, Illinois, January 15, 1932. No. 11

MISSISSIPPI UNITS TO HAVE CREDIT CORPORATION

JAN 22 1932 DEPT. OF AGRICULTURE

FARMERS MET AT MOUND BAYOU TO ORGANIZE

TWENTY-SEVEN UNITS REPRESENTED OVER TWO THOUSAND FROM FORTY COUNTIES

Mound Bayou, Miss. — Once more the organized colored farmers of Mississippi, assembled under the banner of the National Federation of Colored Farmers, Inc., have taken a forward step for their own welfare and progress and have put to rout the reactionary and skeptical forces who said "They won't do it." and "It can't be done." They met here December 11th, in this friendly little city which is destined to become the Negro farming capitol of the state, and laid on the table approximately a thousand cash dollars as first payment on the capital stock fund of the first Agricultural Credit Corporation organized solely by and for Negro farmers in the United States.

It was a meeting of men and women determined to do something for themselves and exhibiting a marvelous faith in each other. "This is what organization and co-operation has done for us," said an old farmer from Sunflower County. A few came to see and to scoff but they left soundly whipped and permanently converted.

The meeting, sponsored by the national officers and the executive board of the N. F. C. F., and called by the officers of the Mississippi State Federation of Colored Farmers, was called to order by Hon. B. A. Green, Mayor of Mount Bayou and a legal advisor of the N. F. C. F. Talks were made by Rev. I. Gray, chairman of Bethel Unit, Rev. B. W. Byram, chairman of

(Continued on Page 8)

N. F. C. F. Members Lease Fine Farm

Greenwood, Miss. — The Turnip farm, located 13 miles north of Greenwood, has been leased to twelve members of the N. F. C. F. for three years with the privilege of buying after the first year.

This is one of the finest farms in Mississippi. These are five good wells on the place and around forty tenant houses. It is well timbered also. The farm will be under the supervision of Gus Moore and G. W. Blackmon.

This farm was secured from its Memphis owners through the efforts of the national office of the organization. Three other farms in the same vicinity have been secured for leasing with the privilege of buying and other members of the N. F. C. F. are now preparing to move onto them. These members are all first class tenant farmers and are confident that they will soon have homes and farms they can call their own.

EIGHTEEN CAR LOADS SHIPPED

LIVE STOCK SENT THROUGH LOCAL CO-OPERATIVE ASSOCIATION

Prophestown. — Livestock shipment through the local cooperative association was unusually large this week. Five carloads of hogs and thirteen carloads of cattle were sent.

Two carloads of hogs and twelve of cattle were sent Monday and three carloads of hogs and one car of cattle went out Wednesday.

Everett Brooks shipped 100 cattle and James Mosher had seventy animals. Breed & Whitmore shipped seventy-nine animals and Charles Sandrock had twenty-five, making a total of 274.

White farmers in this small western community know how to co-operate and stick together when it comes to buying and selling farm and home products. Eighteen carloads of stock shipped and sold in one week! Just think of it! This is a very small community— no larger than many colored farm communities. Colored farmers should get a lesson

(Continued on Page 6)

AVERAGE PRICES ON ANIMALS LISTED IN ROCK ISLAND COUNTY REPORT.

Colored farmers are requested to read the following prices of farm animals of Rock Island county, Illinois, and compare them with the prices of animals in theirown commuuities. All the farmers of this county are organized and buy and sell co-operatively.

"Weather conditions of the fall and early winter have beeu ideal for farm animals, according to Charles O. Campbell in his Rock Island county crop report to the United States department of agriculture. Only routine farm work is being done, he reports.

The January report to the department gives average prices on animals. Mr. Campbell lists horses under 1 year old at $15; 1 to 2 years at $30; 2 years and older, $60; milk cows and heifers 2 years old and older at $40; other cows and heifers at $25; all heifers 1 year old and under 2 years, $15; all steers 1 years and older, $30; bulls, $15, calves under 1 year and older, $10; rams $5; sows and gilts, $15; pigs under six months, $5; all other hogs, $12; hens and pullets of laying age $1; all other chickens, 50 cents; turkeys, $2.25; ducks, 75 cents; geese, $1. Honey sold in 1931 averaged 10 cents a pound. Farm wages average $25 a month with board and $38 without board, or $1.50 a day with board and $2 a day without board. Mr. Campbell reports a 150-percent supply of farm labor and 10 percent demand now, compared to normal conditions.

PEANUT HAMS AND BACON

WRITER SAYS THEY ARE SUPERIOR, SOUTH SHOULD LEAD

There will come a time some day when the delicious flavor of peanut hams and peanut bacon, cured right and prepared right will make for them a big, preferred place in the markets. This is inevitable.

The writer's conviction is that peanut bacon is superior to any other sort. At an official test in Washington a peanut ham was selected from among a whole line of hams and adjudged first in point of quality and flavor by experts. The judges did not know whence any of the hams had come, so they were neither prejudiced for nor against the peanut product. The peanut product had free opportunity and won because of sheer merit —because it was more delicious than any others. And yet Southern soft pork is still penalized in the great livestock receiving centers! But that will all be changed by and by. A supperior product, like truth, cannot be permanently suppressed.

Here in the South our packing plants have done much to popularize peanut pork products and are preparing to do more. One trouble has been that there were not enough hogs available to make it safe to go in for the popularization of the product. Packers did not wish to run the risk of not being able to keep peanut-fed pork constantly before the public, once the public was won to its value. Yet since pork can and is being produced so cheaply on peanuts, and realizing that the peanut produces its largest yield here

(Continued on Page 8)

A Settin' Set

"Where were you boys when I called for you to help me an hour ago?" asked Farmer Jones at the supper table.

"I was in the barn, settin' a hen," said one.

"And I was in the loft, settin' a saw," answered another.

"I was in grandma's room settin' the clock," came from the third boy.

"I was up in the pantry settin' a trap, ," said the fourth.

"You're a fine set," remarked the farmer. "And where were you?" he asked, turning to the youngest.

"I was on the doorstep, settin' still," was the reply.

SPRINGLIKE WEATHER DELUDES VEGETATION

DAWSON, Ga., Dec. 26—While many sections of the state are reporting unusual things in the way of vegetation for this time of the year, Dawson also can boast of several Christmas season novelties in the form of plant life.

In one flower gardeu of the city violets, morning glories, thrift, petunias, zinnias, marigolds, carnation pinks and phlox are defying winter by blooming profusely. Cotton stalks which have not been cut are putting on the second crop of blooms in some sections of the county. Sweet potato vines have taken on new growth and a number have reported that their seed cane is spouting.

NINE HUNDRED THOUSAND FARMERS AFFECTED

THE BYRAM BATTLE CALL

CHAIRMAN OF BOLIVAR COUNTY UNIT'S APPEAL

Below we publish a "call" sent out through the pages of the Baptist Gazette, of Mound Bayou, Miss., by Rev. B. W. Byram, Chairman of our Bolivar Unit. Bro. Byram is calling upon all the farmers in old Bolivar to wake up and be men and get into the N. F. C. F. before it is eternally too late. It is his ambition, and the desire of all his associate officers, to make Bolivar Unit the biggest and best Unit in the Federation. We take off our hat to him and wish him all success. May the brethren listen to his call that his great faith and hard work may be abundantly rewarded. Don't let him fall down, Brothers. Join and get busy. A brighter day is coming and we must be ready at the suurise. — The Editor.

TO THE FARMERS

Mound Bayou, Miss.— Hellow Colored Farmers. Have you joined the Federation of Colored is the time. There are great opportunities rapping at your

(Continued on page 8)

FARMER-BORROWERS TO RECEIVE MORE HELP

Land Bank Bill Figure Increased

A senate subcommittee has increased the figures provided in the house land bank bill from one hundred million to one hundred twenty-five million dollars. The extra twenty-five million will be used to provide funds to extend mortgage payments to farmers over a period of five years.

Many farmers are unable to pay mortgage installments this year. It is reported that in some instances the land bank have used harsh measures, forceclosing on farmers who were unable to pay. The bill when passed will strengthen the land bank and enable them to extend further credit facilities to farmers who have purchased farms.

Colored farmers are advised to sit tight and wait on the results due to follow the bill's passage. It should get through Congress and be approved by President Hoover by not later than Jan. 10th.

SILVER FOX INDUSTRY GROWS

Silver fox farming, which got under way only ten years ago in Great Britain, has mae big strides since then. There are now more than 100 breeders, some of the most successful being women. Farms in Scotland Norfolk, Yorkshire, Devon, Surrey, Kent, Sussex and Wales are stocked with foxes ranging in value from a few dollars to as much as $600 to $800 It is estimated that thera are about 2000 pedigreed foxes in the country. Foxes valued at more than $100,000 were shown at the annual exposition.

PRESIDENT JAMES P. DAVIS VERY OPTIMISTIC

HEAD OF NATIONAL FEDERATION OF COLORED FARMERS STARTS INVESTIGATION

Chicago, Ill.— (Special) — "Few people who belong to the race known as Negroes, living in the United States realize that there are more than 900,000 colored farmers in the United States," said Mr. James Perry Davis, president of the National Federation of Colored Farmers, on his return to this city from the nation's capital where he was invited by President Hoover, on the Home Conference Proposition, and where he had accepted and filled an engagement with the Secretary of Agricultnre, and where at the same time he took an occasion to visit the Farm Board headquarters.

Mr. Davis let it be known while in Washington that the Better Homes and the Home Conference was welcomed and would be a great thing for the Negro farmers, who, he said, number more than 900,000. They are located in every state in the Union, even up in Maine, New Hempshire and Vermont, he said there are Negro farmers, they are in North and South Dakota. Their spreading out over the Union has been slow, but constant. Some have gone across the borders into Canada, especially in the northwest section, noted for its fertility and wheat growing. They have gone into Mexico to tackle and develop the virgin soil in that Republic. He declared that if the movement contemplated gains headway, Mr. Hoover's plan of extended home wondership is welcome.

"The National Federation has advocated this all along," said Mr. Davis. "We have felt that if proper homes and housing conditions could be made possible, then

Sorghum Yield Is Unusually Large In Peoria County

Peoria, Dec. — With farmers making more sorghum this fall than during the last forty-one years they aren't worrying about winter food, in the opinion of Albert McDonald, veteran farmer and sorghum mill operator of Peoria county.

"It looks as if many farmers will live cheaply and well this winter on sorghum, wheat cakes and corn bread," commented the farm adviser, J. W. Whisenand. "Add some sausage and eggs and milk and a cellar full of potatoes and canned fruit and vegetables and the family ought to come through in pretty good shape. Sort of makes your mouth water just to think of it." Whisenand formerly was adviser of Henry county.

McDonald has been running his

(Continued on page 6)

TALKS TO COLORED FARMERS

By Leon R. Harris, Secretary The National Federation of Colored Farmers

We have received hundreds of letters recently from tenant farmers living in all sections of the country, complaining about the treatment they have received from their landlords this past season. We know you are telling the truth and we wish we were able to do something for everyone who has written. You certainly have our sympathy and we are willing and anxious to help you. We can help you if you will take our advice and try to help your own selves a little bit.

We find that most of you who have written us, worked last year under verbal contracts and agreements. That is, you promised to make a crop for the landlord and he promised to give you a share of the crop you made. He also promised, in most cases, to supply you with food, feed for your stock if you had stock, and probably he promised to allow you to raise a garden and some chickens and pigs for your own food supply. When the crop was sold, the landlord was to have his part of the crop and was to receive from your part enough to repay him for the food you ate, for the food your stock ate, and etc. You had some sort of an agreement like this. You promised something and the landlord promised something. You said so-and-so and the landlord said so-and-so and that was the agreement under which you worked.

The facts are that you and your landlord did not make any agreements or contracts that were worth a dime. VERBAL agreements and contracts are no good at all. The only kind of an agreement or contract that will stand in court is a WRITTEN agreement or contract. Why didn't you get one before you started making your crops?

Some of you have written and said that your landlord would not give you a written agreement to sign. Then you should have known right then that such a landlord was expecting to skin you. You should have found another landlord immediately. No landlord who means to treat his tenants right will object to giving them contracts in writing. No fair-minded tenant will object to signing a plainly worded contract or agreement.

We know that no landlord who has a human heart in him will do what some of you say your landlords have done this past season, but there are some who have no hearts. You are dogs and slaves in their eyes and they want to keep you dogs and slaves. Take for instance, the landlord who took from his tenant 18 bales of cotton—two stacks of feed—all of his corn—two fat hogs from the pen—four hills of potatoes—all the collards and turnips out of his garden—ordered him out on the highway—then stopped this tenant's wife at the door of the cabin—opened her trunk and took out of it her dishes, quilts, clothes and everything she possessed, even down to the clothes of her four year old child. That landlord had no heart or soul and we will be surprised if he is living a year from now for a good God does not let such a person stay here on earth long. They soon go where they belong. We are glad such landlords are dying out and you must do all you can to keep away from them. When they cannot get tenants they will mend thier ways or sell out.

Do not work for a landlord this year who will not give you a written contract. Write to the national office of your organization, the N. F. C. F., or have your secretary to write for you, and get a sample contract and study it. Be sure you understand what you are signing.

And another thing:—if you can possibly do so, buy your farm and home supplies through your local Unit—not through your landlord. Its so easy to get in debt to a good, kind landlord who is willing to let you have just about everything you ask for. Of course he is willing. The more you owe him, the more he can take away from you for the debts. Here is an itemized statement sent to us from Leflore county, Mississippi. It is a member's yearly account:

Cash—$50.00. Interest, $12.50	$62.50
Labor when moving	2.00
Order for groceries, $5.00. Interest, $1.25	6.25
Order for groceries, $5.00. Interest, $1.25	6.25
Shoes and clothes, $42.00. Interest, $10.50	52.50
Cash, Christmas, $33.00. Interest, $8.25	41.25
Box of medicine	5.00
½ of Twelve sack soda, $2.00 per sack	12.00
Rations	288.75
2 Mosquito bars	5.00
Antiseptic 50c. Castor oil 25c. Potash 50c, 2 Black Draught 50c	2.75
Potash, $1.50. QB. 75c. Cas. Oil 25c. Turpentine, 25c.	2.75
QB, 75c. Castor oil, 25c. Quinine, $1.00. Slats, 25c.	2.25
38 yards lowells, 4 spools threa	6.10
$2.50 per bale on 13 bales cotton	$32.50

No wonder the landlord took everything from this tenant. Look at the interest and the prices. $33.75 interest on $135.00 for about nine months! $1.25 interest on $5.00 worth of groceries! And we will bet our bottom dollar that all the rations consumed could have been bought anywhere else for two-thirds what they cost this tenant, or less. Two mosquito bars for $5.00! Anyone can buy them at a dollar or $1.25 each! $6.10 for 38 yards of cloth which can be purchased most anywhere at ten cents a yard or for $3.80! Twenty-five cents for ten cents worth of castor oil! No wonder the man came out considerably in debt. Who wouldn't?

We are trying to get agricultural credit corporations established so colored farmers may be freed from such conditions but unless you do what you can—try and live within your means—learn to be thrifty—learn to work your head as well as your muscles—learn to make legal contracts with your landlords—you will never get out of debt-slavery no matter how many agricultural credit corporations are established.

Watch your step this year. Don't try and get everything you want unless you are able to pay for it. Find a good landlord who will give you a written contract—treat him right—work hard, be honest, don't get discouraged and stick to your Unit. You are gaining more good friends every day and if you will endure these present hardships like a good soldier you will win in the end.

WOMAN FARMER LEADS

Seed so valuable that it sells for $10.00 a pound, or $1 an ounce is smaller than pound lots were harvested from a crop of perennial lespedeza by Mrs. D. S. Lyles, who lives on the upper edge of Robeson. From one-fifth of an acre she gathered 140 pounds of seed, and she is offered $10 a pound, off $1,4000 for the lot, which is at the rate of $7,000 from an acre. Sounds too good to be true. She paid $10 for a pound of seed last spring—Lumberton Robesonian.

	Baptist Sunday School Catechism, by R. H. Boyd, D. D., 5c each; 60c per dozen.			
	National Baptist Union-Review **A Religious Weekly Newspaper** An eight page weekly; $2.00 per Year; $1.25 for six months.			
	In ordering these supplies if you want Metoka, mark out Galeda and if Galeda, mark out Metoka			
	Metoka and Galeda Magazine Quarterly. Used for Study of Sunday School Lesson, 20c per copy, $1.80 per dozen			
	Metoka or Galeda Hand Book—Gives methods of organizing and conducting Classes, with Constitution, 10c per copy, $1.00 per dozen			
	Metoka or Galeda Chart—Entitles Class to Membership in the National Metoka and Galeda Departments. Printed in colors 14x17 (in ordering charters give name of Sunday School) $1.00			
	Metoka or Galeda Class Button—For Class Members in three colors 5c each, 50c per doz.			
	Metoka or Galeda Class Pin—Gold plated. Price 50 cents each			
	Metoka or Galeda Watch Fob—A Useful as well as ornamental Class Emblem, 40 cents each			
	Metoka or Galeda Pledge Cards—Beautifully printed in three colors Will certainly increase the interest and loyalty of the members, 1c each, $1.00 per hundred.			
	Metoka or Galeda Invitation Cards—Attractively printed in colors to be sent to visitors and prospective members, 1c each, $1.00 per hundred			
	My Brother and I. Metoka Class Book--Gives the spirit of the class and a great book for young men. Price 60 cents			
	God and Me—A study book for the Galeda classes. Price 60 cents			
	Metoka or Galeda Wall Object and Pledge Charts—Printed on cloth in colors. Price $1.50			
	Hand Book with Drill Manual, 10 cents			
	B. Y. P. U. MAGAZINE (Quarterly) 12 cents per copy; $1.44 per dozen			
	SENIOR TOPIC CARDS 20c per dozen; $1.50 per hundred			
	JUNIOR B. Y. P. U. MAGAZINE (Quarterly) 10 cents per copy; $1.20 per dozen			
	Junior B. Y. P. U. Topic Cards 20c per doz., $1.50 per 100.			
	INVITATION CARDS 50 cents per hundred.			
	PLEDGE CARDS 50 cents per hundred.			
	CELLULOID BUTTONS 5 cents each or 60 cents per dozen Gold filled pins 40 cents each.			
	Suggested Constitution and Guide 15 cents each or 2 for 25 cents.			
	B. Y. P. U. Manual 60c (Board) $1.00.			
	B. Y. P. U. Record and Roll Book, $1.00			
	B. Y. P. U. Object Wall Charts, $1.50			
	B. Y. P. U. Pledge Charts, at $1.50			

INTERESTING NEWS AND NOTES

One-fourth of all the Negro members of the M. E. Church live in the states of Mississippi and South Carolina. Of the 2,093 appointments in its twenty Negro Conferences, 1,661 are rural appointments.

Some authorities believe that consumption of cotton may increase and become larger during the next ten years than ever before, but colored farmers are determined to reduce their acreage next year.

Toombs county, Georgia, farmers are curing sweet potatoes this winter in their tobacco barns and report that potatoes so cured sell more rapidly than those stored in the old fashioned banks.

Bears in northern Minnesota are attacking farmers' stock. The bears have left the wilderness on account of the failure of the berry crop.

Mrs. Lee, of Oklahoma, had a very poor tomato crop on account of dry weather. She extracted the juice from the small tomatoes, bottled it and sold it to restaurants and hotels. She realized a larger profit than she would have made off a good crop.

The Indiana vegetable growers' state association has awarded this last year's onion growing championship to two Noble county farmers. They produced 993 bushels of onions per acre. Several years ago, colored farmers owned some fine land in this county, but the younger people would not stay on the farms and sold them as they came in possession. There are only a few colored farmers there now.

The Commission on Race Relations of the Federal Council of Churches unanimously adopted a resolution at its last meeting that it undertake a study of agricultural conditions in selected districts of the cotton growing areas of the South.

It is estimated that four-fifths of the cotton produced in this country is produced by Negro farmers but that only a little more than one-fifth of these farmers own their farms.

Mt. Olive Unit members of the National Federation of Colored Farmers have more than two cars of Spanish peanuts for sale. The quality is good. They plan to grade and pack in new even weight bags. These farmers practiced co-operative production and this enabled them to have enough to sell in carlots.

In 55 Arkansas counties, 250,000 families have canned enough fruits and vegetables to tide them over the winter. They also dried more than 400,000 pounds of fruits and vegetables and put up nearly a million glasses of jelly.

Speaking at the banquet of the National American Farm Bureau organization, Secretary of Agriculture Arthur M. Hyde asked the delegates to "speak the mind of agriculture as a single organization, or, if not that, as a featured group with a single purpose." "If American agriculture would get behind the Farm Board solidly," he said, "no other remedy for its ills would be needed."

E. F. Creekmore, general manager of the American Cotton Co-operative Association, has announced that the association on behalf of its 200,000 members would ask Congress to pass a bill providing for grading of cottonseed. He says that cotton growers are selling $75,000,000 worth of cottonseed annually without receiving premiums and that no grading service has resulted in exploitation of growers.

Price of hogs has risen slightly since December 1st, but is still low.

Dry summers of recent years have stopped the advance of the European corn borer, the insect the government has spent more than ten million dollars fighting.

Strawberries were reported in bloom in Arkansas during the recent Christmas holidays and there was some ripe fruit. Warm days and nights have caused the plants to put forth abnormal growth. Growers fear that freezes in Jan. and Feb. will do much damage.

An Iowa poultry raiser claims that hens will lay better if kept on a twelve hour day and not allowed to loaf. At five a. m. in the winter he turns on the electric lights in his hen houses thus making the days equal those of summer. He sells every hen that does not lay as many as 288 eggs a year. He uses trap nests and keeps a strict record.

The 1931 sweet potato crop is lighter than the 1929 crop although the acreage was one-fifth greater. Prices are the lowest in thirty years, almost forty per cent lower than in 1929.

The wreathing of cedar tree foliage which was developed by a Springfield, Mo., seed concern, has grown into a large business. The shipments this past Christmas season totaled 1,250,000 linear feet. A machine has been invented to do the weaving of the wreaths which are used to decorate streets and buildings in states where the cedar does not grow.

A LAY OF THE FOWL THAT DOESN'T

(From King City Rustler)

Swat the rooster!
He don't pay!
He's no booster!
He don't lay!
Nerves are shaken;
We can't dream
When we waken
At his scream!

Swat the rooster!
He's our foe!
Can't get uster
His loud crow!
Every morning
He, you'll note,
Without warning
Gets our goat!

Swat the rooster
Off his legs!
He's no booster
Raising eggs!
Folks that uster
Back him say:
"Swat the rooster!
He don't lay."

SHELL-TAX MAY BE METHOD OF SAVING MIGRATORY FOWLS

Placing of a 1-cent tax on every shotgun shell sold for the hunting of wild game is a proposal which probably will be submitted to congress for consideration soon. Another proposal, with a similar object, is that hunters of ducks and geese be required to secure federal permits costing $1. These proposal have been originated by More Game Birds of America, an organization.

Some means of raising money for propagation of wild fowl—especially ducks and geese—obviously is necessary. If the cent-a-shell tax is approved, 50 per cent of the money will be used for assistance of migatory fowl, and the other half will be returned to states for propagation of upland game. These facts are asserted by the game organization and are backed by hunters.

Measures will be taken to return the shell tax where the ammunition is used for trapshooting.

Money raised for preservation of wild fowl can advantageously be spent in purchasing and maintaining game preserves, reflooding of lakes which—in large numbers, were emptied in false belief that their bottoms would make good farm land, more rigid enforcement of game laws, education of the public and segregation of the natural nesting grounds of the birds, sportsmen agree.

VEGETABLE OUTLOOK IN COPIAH COUNTY MISS

Crystal Srings, Miss.—The spring vegetable outlook in Copiah County, as forecast from preparations and intentions to plant at this date, is as follows:

It is indicated that the cabbage acreage in the county will likely be up to normal with about 3,000 acres to be set out. Some authorities hold the acreage will be a little short of that with others seeing signs of a slight increase. Cabbage is already planted in the cold frames and is up and coming along. It will go into the fields about January 20.

The tomato acreage is a little uncertain at this time. It is believed, however, that plantings will likely be about normal, with 10,000 to 12,000 acres going in. Tomatoes go into the hot beds January 5 to 10 and out into the cold frames around January 25.

A 25 per cent increase over last year's acreage in peas is seen and it is anticipated some 2,500 acres will be in this crop.

Interest in carrots and beets is light and these crops will be curtailed this coming season in Copiah County from indications.

Fertilizer is due to go into the ground for cabbage and peas about February 1, and tomato ffertilizer will go in the latter part of February or ealy in March. Splendid rains have visited the county the past two weeks, following lack of any amount of rainfall for the past two months.

REGULATIONS ON CABBAGE SALES IN SOUTH CAROLINA

Columbia, S. C., Dec. 24—Restrictions upon the sale of cabbage in South Carolina have been ordered into force by the State Board of Health. Dr. James A. Hayne, state health officer, announced that no cabbage can be sold or transported in the states unless it has been stripped of arsenic laden outer leaves or certified as free from poison.

The regulation promulgated under the code of 1922 with the approval of Dr. Wiliam Eggleston, of Hartsville, chairman of the state board of health, include a statutory penalty of $100 or 30 days imprisonment for violations.

The state hoard of health acted when J. J. McManus, federal pure food inspector, announced that he had discovered cabbage upon which the absence of a normal rainfall had caused a dangerous amount off arsenic insecticide to accumulate.

A. Coke Summers, state chemists, tested cabbage in Columbia and others picked in Charleston County. He reported that the majority was contaminated by arsenic to a dangerous degree, though some had escaped it.

Rural policemen will be instructed to seize trucks of cabbage which had not been stripped or certified.

Mr. Summers is to decide whether the cabbage is fit to be certified pure, Dr. Hayne said, and the regulations will be enforced through the State Department of Agriculture after copies have been sent health officers and sheriffs.

AFRICAN PROVERBS

By Dwight Summer

A Senior in the School of Education, Hampton Institute

The African, like the Frenchman, is very rich in provebrs. He makes frequent use ot them in his speech when he wants to heighten the effect of a statement or to add force to some point of argument. While some proverbs may sound comical they ring with a profound philosophy, the African's own philosophy. They are capable of almost infinite interpretation even as are scriptural texts. Their natives idom, adapted to the life and environment of the African redner them rather difficult for translation into English. Some of them may even seem without sense to the foreigner, but to the African they are pregnant with meaning. Here are a few of the innumerable proverbs common among my tribe, the Mende of Sierra Leone. I have translated them as nearly as I can into English without destroying their native flavor, adding an explanation where I deem it necessary:

1. A hill which does not want to be trodden on should not grow edible plants.

2. A messenger does not come to disgrace. For example, if Kapana asks Sao (not as an ac complice) to tell Joima to do something which results in disgrace, Sao is free of the consequences.

3. However high a tree is an ant can climb it.

4. Salt excels salt in quantity but not in taste.

5. Whichever way a doy lies (beside a fire) he gets warm.

6. When a young bird is sitting on the branch of its birth he sings all kinds of songs.

7. Put a stone under a setting hen and she will know when hatching time comes.

8. Water (tide) rises little by little.

9. Every sunset has its dawn.

10. Free a dog from a trap and he bites you on your heel.

11. One should not send a chicken to call a cockroach.

12. A stone cast at one in revenge misses.

13. Whether the farm produces cotton or not is of no consequence to the dog, because he wears no clothes.

14. Do not dig a hole to fill in another hole.

15. When once a snake has bitten you even a worm frightens you.

16. One does not know from what direction a wind may come that would twist a chicken's tail.

This means that one never can tell when good luck will come one's way.

17. When you play with a pup he tries to lick your mouth.

—Reprinted from the Hampton Script.

MORE VALUABLE THAN GOLD

"More to Be Desired Than Much Fine Gold."

The worshippers of the golden calf have seen their idol cast down from the exalted place it has occupied during the last decade. And with what a crash! Like an avalanche on the mountainside, released without warning, it has buried its helpless devotees beneath the very stuff of the material world they had clung to so confidently in their godless philosophy. And thousands of innocent victims are buried with them.

What shall emerge from the ruins to take the place of the golden calf? Some of the survivors will still try in vain to reinstate the old idol but they who have been sufficiently chastened by adversity are likely to open their ears and their hearts to the words of the Lord Himself when He spoke to the children of Israel saying, "Thou shalt have no other gods before me." They will "Seek the Lord while He may be found and call upon Him while He is near."

"Forward with the Bible" is the slogan of these times. Gold has been given a fair chance. The prophets of Baal have had their day. In the time of testing their money gods have been "weighed in the balance and found wanting." They have called upon them in the day of trouble and they have not answered. Is it not high time to give a fair trial to the Lord God Jehovah?

"Gold, silver, precious stones, wood, hay, stubble,"—the physical stuff of the world has been used as foundation stones for civilization and the structure totters when it is exposed to the storms of hard times. "But whosoever heareth these sayings of mine, and doeth them, I will liken him unto a wise man which built his house upon a rock: And the rain descended, and the floods came, and the winds blew, and beat upon that house; and it fell not; for it was founded upon a rock."

"The judgments of the Lord are true and righteous altogether. More to be desired are they than gold, yea, than much fine gold." Let us build upon the Bible remembering the promise of Jesus when He said, "Seek ye first the kingdom of God, and his righteousness and all these things shalt be added unto you."

—Bible in New York.

ATTENTION COLORED FARMERS

The National Federation of Colored Farmers is receiving hundreds of letters from Colored farmers requesting all kinds of aid and information. We are willing to do everything we can for all the Colored farmers of America. It costs money, however, to maintain offices and our expenses are becoming so heavy that we are compelled to discontinue supplying information to those who request it who are not members of the Federation. If you have faith enough in the organization to believe that it can aid you, then you should be willing to join it and help support it. Isn't that so?

Several County Units have organized and elected officers but have not sent in their membership dues. These units are eligible to membership in the Federation until dues are paid. Be helpful. Co-operate. Pay up. "All for each and each for all"

THE MODERN FARMER

Official organ of the National Federation of Colored Farmers

Leon R. Harris - - Editor

Published Monthly by the Modern Farmer at Nashville, Tennessee, and Chicago, Ill.

Nashville, Tenn., Office. 447 4th Avenue, North.

Chicago, Ill., Office: Vincennes Hotel, 36th and Vincennes Avenue.

Devoted to the interests of the Farmer, Truck Gardener, Livestock and Poultry Breeder, the Home and the People.

Entered as Second Class Matter, April 10, 1929, at the Post Office at Nashville, Tenn., under act of March 3, 1879.

All contributions for publication in the Modern Farmer should be addressed to The Modern Farmer, 447 4th Avenue, North, Nashville, Tenn.

No libelous matter will be published. Unsigned articles or letters, and those written on both sides of the paper will not be used.

Subscription price $1.00 per year, payable in advance. Personal checks must be certified. Make all checks or money orders payable to The Modern Farmer.

Advertising rates and sworn circulation figures presented upon application.

"OUR SLOGAN"

STAY ON THE FARM IF YOU'RE ON IT! GO BACK TO THE FARM IF YOU'RE OFF IT!

THE LAW

"It is hereby declared to be the policy of Congress to promote the effective merchandising of agricultural commodities by encouraging the organization of producers into effective associations under their own control.

The Board is authorized and directed—to promote education in the principles and practices of cooperative marketing—to encourage the organization, improvement in methods, and development of effective cooperative associations." (Public—No. 10—71st Congress. Sec. 1-5.)

THE GOSPEL

"This law is predicated upon the ability of the farmer to manage his own business, once he is organized to do so. Cooperation is the key to it and only in exceptional cases can the Federal Farm Board have any dealings with a farmer who is not a member of a producer-owned and producer-controlled marketing unit." Hon. Sam'l R. McKelvie, Member, Federal Farm Board.

The National Federation of Colored Farmers believes that the Colored Farmers of America should own and control their own co-operative associations.

"Co-operation With All—Affiliation With None."

A THOUGHT

The deeper the darkness,
The brighter the morn;
The spirit's rare gladness
Of sorrow is born.
The fiercer the tempest,
The sooner the calm;
The sharper a wound,
The more soothing the balm.
The brightest of blossoms
Lie close to the sod;
The lowliest hearts
Are dearest to God.
The heaviest cross
That to earth bows us down
If patiently borne
Wins a glorious crown.

—Unknown.

SAY "I WILL" TO 1932

(Reprinted from last January's edition by request.)

I will be an industrious, thoughtful, progressive farmer this year. I will work hard for hard work keeps my body healthy, my mind free from worry and my conscience clear. I will plan my work,—I will save my time and energy,—I will accept advice from those qualified to teach me. I will join a co-operative organization of farmers in my neighborhood or attempt to build such an organization. I will imitate the work and methods of those who are succeeding around me. I will read more and will strive to originate some thing myself.

I will be a thrifty farmer this year. I will not borrow more than I can reasonably hope to earn. I will make a budget,—I will start a banking account,— I will spend wisely and not foolishly.

I will be a good American farmer this year. I will have faith in my country,—in her institutions,—in her opportunities. I will be proud of my citizenship,—I will pay my taxes,—I will vote and I will take an interest in public affairs so I can vote intelligently.

I will be a good Christian farmer this year. I will remember the faith of my fathers. I will be true to my family and to friends. I will speak the truth,—I will be honest,—I will be courageous. I will keep the Ten Commandments and the Greatest Commandment. I will be a good man for a good God has promised to bless only those who do right and serve.

THAT MISSISIPPI CREDIT CORPORATION

For several years past, Intermediate Credit Banks have been urging Negro farmers to organize and form Agricultural Credit Corporations as they could borrow money at 6 and 7 per cent interest and give crop notes and livestock mortgages as security. How to get the farmers together was the big problem. This has been solved by the officers of the National Federation of Colored Farmers.

Following a well-formed plan worked out by these officials, delegates from a majority of the Mississippi Units met in Mound Bayou last month and for the first time in history laid down a fair portion of the cash necessary to pay for capital stock in an agricultural Credit corporation organized by Negro farmers for the benefit of Negro farmers. It is expected that this corporation will be doing business by April 1st.

Negro farmers can get together and stick together if they want to do so. They are doing it in Mississippi now. Negro farmers in this state are running so far ahead of their brethren in the other southern states that we are afraid the latter will never catch up. And here are the reasons why. These Mississippi colored farmers have been willing to follow their leaders—have been willing to accept advice—and they have opened their eyes and imitated the activities of their neighbor white farmers who were doing progressive things.

A very prominent white southern statesman—an authority on farm organization—exclaimed when the N. F. C. F. plan was explained to him: "IT IS THE BEST PLAN FOR THE ORGANIZATION OF AGRICULTURAL CREDIT CORPORATIONS I HAVE EVER HEARD OF THE WHITE FARMERS OF THE SOUTH OUGHT TO KNOW ABOUT YOUR PLAN."

It may take the colored farmer a long time to find the way but when he does find it he is going to go some. Organization and co-operation is working wonders for the Negro farmers of Mississippi. We hope the brethren in some of the other states will stop snoring and whining and begging and clench termine to do something for themselves as the Mississippi farmers are doing. Why don't you, Brethren?

PRESIDENT HOOVER SAYS, "HOMES FOR ALL"

An Associated Press Dispatch of Dec. 5th, says:

"President Hoover today enlisted 3000 delegates to his Home Building and Home Ownership Conference in a war against bad housing. Through Sec. Wilbur, the President told them that "the war is not to stop until every American home is clean, a fit place for a mother and father convenient, wholesome, sanitary and to bring to maturity young citizens who will keep our Nation strong."

This real news should interest every colored farmer who desires a home of his own. The United States is destined to become a Nation of homeowners. When that time comes there will also come greater prosperity and happiness.

We trust that every farmer will take advantage of any opportunity to purchase a home that may come his way. The National Federation of Colored Farmers is helping many of its members to become homeowners and the officers of this organization will gladly give colored farmers advice and assistance.

A FINE RECORD, BUT STOP BORROWING!

We are informed that in two Mississippi counties where the government loaned $92,000 to colored farmers from the drouth loan fund, 98 per cent of the loans were repaid by these farmers before they fell due. Most of these farmers are organized —are members of the N. F. C. F. At the same time, the white farmers of these two counties had repaid only 20 per cent of their loans.

These colored farmers have made an enviable record and have a right to be proud of it. A high official remarked that it would be easy from now on for them to receive consideration and assistance from the federal agricultural department. This official was plainly surprised. He had been informed, probably that colored farmers were poor risks, were slow to pay, and often forgot to pay at all.

But the officials of the N. F. C. F. were not surprised. First of all,—they told these farmers when, where and how they should go about applying for loans and in many cases they helped them make out their applications. They also told them something else. They told them that this money had to be repaid—that the government came first. They told them if they had to have $50 to borrow only $25—if they had to have $200 to borrow only $100. They advised them to apply for small loans, stretch them out and be satisfied. These farmers accepted this advice and the results have been fine.

These same leaders and officials of the N. F. C. F. are now advising colored farmers to get off the "borrowing wagon" and stay off it. Loan sharks and interest hogs filch millions of dollars from the pockets of colored farmers every year. Loans and mortgages put more Negro farmers in holes than they pull out of holes. We should stop borrowing. We should stop being like a flock of fool pigeons—expecting some one to "carry us" all the time. Better to live on corn-bread, molasses and sweet potatoes a year and get out of debt than to live off borrowed money and remain in slavery to creditors.

TOO MANY LARGE FARMS

More than half of the farms in the Irish Free State cover thirty acres or less. Denmark is another nation of small farms. There is less poverty among the farm population of these two countries than there is in the southern portion of this country.

Too many own large farms in the South and many who desire to purchase small farms in certain sections cannot do so because the large landowners will not sell off any of their holdings.

We regret this state of things. It is not a healthy state by any means. We hope something may be done about it. Many who desire homes of their own would appreciate the opportunity to buy where they desire to live. As homeowners, they might add much to the prosperity and welfare of the community.

BACK TO SANITY

Now that the legislators and all the other various kinds of "planners" of the cotton-growing states have returned to sanity, it might be well for us to take a retrospective view and try and discover just how crazy we were a few months ago and just how we happened to get that way.

We know we were crazy enough to start a drive against the production of food when at the same time millions of the world's population did not have enough to eat. We were crazy enough to talk about making it illegal to produce cotton when we knew millions were going about over the earth half-clothed. We were crazy enough to talk about cutting down production in order to stimulate consumption. We were crazy enough to plan on promoting prosperity by making food and clothing scarce, hard to obtain and high in price.

O we were crazy all right, and we got that way simply because the old spirit of selfishness and greed was abroad in the land and most everyone was thinking a lot about himself and a very little about the other fellow. Those who had possession of what had been produced, still could not get enough, so they continued to accumulate and act the hog until those who needed what had been produced had nothing left with which to purchase what was needed. Now we are all about in the same place. The rich can't get any richer and the poor can't get any poorer and everyone is sitting still singing the blues.

And right there we are all going to sit until most of us decide to pay higher wages of all kinds—decide to pay more for honest labor—decide to give more honest labor for the pay received—decide to be just and honorable and unselfish. We do not need a change of government or of our economic system or of our educational system or of our farming system. What we all need most is a change of heart.

REDUCE RENTS

A large Illinois landowner has reduced rents to his tenants this year $1.50 an acre. He has 250 tenants. He is convinced that the fall in prices of farm products is working a hardship upon his tenants, so he has been good enough to lighten the burden.

We trust that many other planters and landlords will do likewise. Rent is too high—has been too high for several years. The tenants deserve a reduction, so let it come.

A GOOD BEGINNING

We are glad to note that several of the large religious and social organizations are planning to investigate conditions in agricultural sections, especially in the South. The Interracial Commission and the Federal Council of Churches announce that a study will be made by their respective organizations.

We have often wondered why the colored migrant and urban dweller received so much consideration from such organizations and the colored rural dweller so little. Sometimes we have believed that the trained investigators and specialists in social work were afraid to leave the pavements for fear of getting their feet damp. Recently we invited a prominent director of one of the "Funds" to accompany us on a trip 20 miles off the railroad in North Carolina. He refused, for fear he would catch cold changing beds.

We trust these organizations will find some hardy pioneers to send to the "backwoods" to do the investigating but many personal experiences remind us that hardy pioneers are few and far between. But not much gold, or brass either, will be found at the end of any rainbow by a seeker who looks for it at a distance of fifty miles.

THE LATEST PERSECUTION

Here is the latest—received as we go to press. Naked and starving tenants on a flooded plantation apply to the Red Cross for relief. The planter informs the Red Cross that he can take care of them so the local chapter turns them down. Then the planter informs his tenants that he will give them some clothes and ra-

Application for Membership

NATIONAL FEDERATION OF COLORED FARMERS

Vincennes Hotel, Chicago

As a farmer, I believe the time has arrived when the Colored Farmers should form a National Organization devoted to diversified production, grading, packing, shipping and marketing of farm products and to the purchase of needed farm supplies through co-operative methods, to the end that a more prosperous financial condition may result from their efforts as producers.
I hereby subscribe $5.00 for membership in the National Federation of Colored Farmers for a period of 12 months from date. Also $1.00 for an Annual Subscription to the Modern Farmer.

Name .... Address .....

City ..... County .....

State ..... Date .....

tions if they will agree to work for him under conditions that will keep them indebted to him probably for the remainder of their lives! The planter remarks, on the side, that the reason why he can't rule his N————s any more is because that when he puts them down where they belong the Red Cross comes along and picks them up. This planter and his tenants are citizens of the United States! The planter is also a prominent church member!

Subscribe for the MODERN FARMER.

Join a Unit of the N. F. C. F. or organize one in your community.

Don't forget to prepare to plant a patch for your church and another one for your school. You might add another patch for your Unit. You won't miss the time or labor and these institutions deserve your support.

Talk about co-operative production at your next Unit meeting. Your Unit should produce enough of some extra crop this year so you can sell a carlot or two. How about peas, beans, collards, turnip or mustard greens, watermelons, early Irish potatoes?

HOW TO GET OUT OF DEBT

Original Plan of A. R. Reese

By A. R. Reese, Prentiss, Miss.

(Special to Modern Farmer)

I want to call the attention of all farmers who want to get out of debt,—keep out of debt—and not want to be always trying to find out where they can borrow some money, to this plan of mine. One of the best plans to help the farmer and bring relief is for the farmer to get busy and do something for himself. Here is my plan and it has brought independence.

I plant a full crop of corn and in this crop of corn I plant every third row in four varieties of seeds—namely,—sunflower, velvet beans, sorghum and cowpeas. I find that I get more profit from this third row than I do from the other two. The sunflower and sorghum stalks will hold up the bean vines and beans. All are money crops and the beans and cowpeas are land building crops. Everything on the farm loves the sunflower. It is a good fattening food for cattle, horses, mules and cows and chickens and turkeys love the seed. This plant makes good medicine for them.

You can cut the sorghum seed and ten bushels of them are equal to nine bushels of corn. When you have cut the tops the cows, mules and hogs will eat the stalk down to the very roots, until all of the stalk is gone.

I am the only one I know of who has followed this plan. I started it and it has been a success. I have no need to borrow money. I don't buy meat, lard, corn, milk or sorghum. I have these things to sell. If the farmer will raise enough food for himself and stock, no one can keep a dollar from his pocket, and too, he will not have to give his products away like so many are doing now.

I advise all formers who want to improve their condition to try my "third row" plan. It will improve their land and also their pocketbooks. And if they want sunflower seed, I have it to sell at $2.00 a bushel—60 cents a peck as long as it lasts.

EGGS ARE HIGH NOW

A Scotchman had ageed to deliver twenty hens to the local market. Only nineteen, however, were sent, and it was almost evening before the twentieth bird was brought in by the farmer.

"Man," said the butcher, "you're late with this one!"

"Aye," agreed the Scotchman, "but she dinna lay until this afternoon."

"ELDER" PRAYS, SOUTH GEORGIA GETS RAIN

ATLANTA, Ga.—After three days of prayer by Elder Casear Mee rain fell in south Georgia for the first time in five months, last week.

The drought and incidental forest fires were the severest in Georgia's history.

In a futile attempt to quench fires the Forest Rangers had water hauled from wells—ere they dried up. From Valdosta to Gomorrah not a tree was left standing from which to lynch a black man, nor to shelter a lone bird.

Elder Prayed

With moisture gone from the earth and the air heavy with smoke and acrid fumes of burning pine, breathing became exceedingly difficult. All creatures of the air, from the tinest to the mightiest, offered a pitiful sight in fruitless quests for food and water, and the wailing, screeching, flapping of wings, set up such a continuous din as to give life the garb of uncanniness.

Finally, Elder Mee "hit his knees" and, coincidence or not, the rain came—to the relief of South Georgia from its greatest of tribulations.

Told that Wm. Pickens of the N. A. A. C. P., had said prayer was all right, but social force is needed to carry on, Elder Mee replied, "Yes sir, that's what they tried to stamp out the burning woods with —social forces. We got the rain after we prayed."

—Baltimore Afro-American

NEW MACHINE WILL DISPLACE NEGRO LABOR

WASHINGTON, (C. N. S.)—A cotton-picking machine, which will displace four out of every five cotton pickers and which will do in three hours what it takes human labor 77 hours to do, was announced last week by the United States Labor Department here.

The department quoted mechanical experts of agricultural experiment stations as authority for the statement that practical perfection of cotton harvesting machinery has arrived. It is the first great improvement in methods of handling cotton since Eli Whitney invented the cotton gin, more than a century ago. Not only had the machine for picking cotton arrived, but the cotton gin has been more fully perfected to prevent loss of quality by machine picking.

FARMER CAPTURES LARGE BALD EAGLE

Kewanee, Ill.,—John Lempke, farmer living near the Henry-Bruceau County Line, captured a bald eagle with a wing spread of 8 feet and 6 inches yesterday.

THE COST OF FIGHTING A FOREST FIRE

Approximately 25,000 acres were affected by the recent forest fire, which started last week in the vicinity of Rockford, according to a statement from the forest office here. It is roughly estimated that not less than $100,000 was expended in fighting this fire. The cost includes, besides the actual time of the fire fighters, food blankets, cooks, transportation of men and provisions—Sioux Falls Argus-Leader.

RIPE STRAWBERRIES IN NORTH CAROLINA

Goldsboro, N. C., Jan. 1—Strawberry growers in Duplin County said this week if warm weather continues a few more days, shipments will be made to markets. Reports from Warsaw are that some strawberry fields are almost white with blossoms. Herman H. Hines, of Warsaw, already has picked ripe berries

"BLEEDING" DOES NOT DAMAGE GRAPE VINES

Ames, Ia., Dec. 18—Grape vines that begin to bleed after being pruned seem to concern many growers, judging from the inquiries received by T. J. Maney, chief pomologist at Iowa State College..

"Shall I prune them or let them go?" is the frequent question asked of Mr. Maney. He says the profuse bleeding is not very injurious and advises pruning. If pruning is not done, the vine tends to over-produce and is thereby weakened.

Whether the vine is pruned to the ordinary fan-shaped system or any of the approved systems, he suggests leaving 40 to 50 buds on canes of last season's growth.

"Prune so that if the vine is making a vigorous growth a large amount of wood may be left for production," he says. "If the vine is weak it should be cut back rather severely."

Over-production of weak vines tends to weaken the whole plant.

'2 HORNED RABBITS' KILLED BY MINNESOTA HUNTERS

Minneapolis, Minn., (Special.)—Rabbits with deer horns protruding from their heads are scampering through the woods in Minnesota these days. Two of them have just bagged. Francis Johnson, son of former United States Senator Magnus Johnson, shot the first while hunting near Kimball, Minn. The horns are an inch in diameter and two inches long.

PARASITE PLANTS

Air plants of the pineapple family, growing in British Guiana, are perched in tree tops. They grow in a mass, particularly on fig trees and exist as parasites until their long roots reach the ground.

AIRPLANE CROP DUSTING GROWING

Sacramento, Calif.,—Dusting of crops by airplane is said to be a rapidly growing enterprise in California, approximately 140,000 acres of California farm lands having been dusted by planes last year, according to director Dudley Moulton of the state department of agriculture.

LAMP CHIMNEY BREAKS

After being in constant use for 25 years in the Roy Grabtree home in Albany, Ore., a lamp chimney finally decided to "commit suicide." One evening it fell apart of its own accord, although often when disaster threatened the chimney had survived without flaw.

If Senator Caraway is ike other members of her sex she shouldn't have any trouble introducing bills —The Pathfinder.

SPRAY OLD ORCHARDS BEFORE GROWTH BEGINS

Raleigh, N. C.,—"Many North Carolina orchards are suffering from scale damage and should be thoroughly sprayed before growth sets in. Examine the trees carefully and see how far the scale infestation has proceeded. It increases at a rapid rate and may spread over a large area before being noticed."

The above statements were made by C. H. Brannon, extension entomologist at State College. He says that the old time-sulphur spray was the standard for years and when thoroughly applied at proper strength did much good in controlling ordinary infestations. However, where scale infestation is heavy, it may be best to use an oil spray. Oil is more efficient as a scale-killer than the old lime-sulphur.

Particularly should the oil spray be used where scurfy scale or oyster-shell scale are found. These are hard to kill and lime-sulphur is not equal to the task, he says.

Mr. Brannon has found that the soft maple trees growing over the state are heavily infested with gloomy scale and cannot be protected from this trouble by any other spray than oil. Good results with the oil spray, however, depend upon three things. The proper material must be used; it must be correctly mixed, and must be carefully and thoroughly applied. A great deal also depends on the spray rig. Good results are never obtained with a broken down worn out machine, he adds.

Scale is easier to kill in the spring, says Mr. Brannon, but to wait until growth gets too far along will mean that the foliage will be severely damaged by the spray solution.

EIGHTEEN CAR LOADS

(Continued from page 1)

from this and realize that organization and co-operation means more dollars in their pockets.

SEED CATALOGUE TIME NOW

Most of us wait until late to write for our seed catalogues. Even if the seed houses do not run short of catalogues before you write for yours, they always are running out of certain kinds of garden seeds before the planting season is over— possibly the very kind you want most. And that is only part of the story— there are a dozen reasons why you should write today to a reputable seed house asking for its latest catalogue and any other garden pamphlets issued.

Warts are supposed to be cured in Kishu, Japan, by touching them with a stick, the other end of which touches a tree. The stick is then tapped with the injunction, "warts, passed over the bridge." This is uttered three times. The warts are then supposed to pass into the tree.

SORGHUM YIELD IS UNUSUALLY LARGE IN PEORIA COUNTY

(Continued from Page 1)

sorghum mill for forty-one years, and this is a record year, he said.

He is the only one who can boil it down just the way he likes it done, so he watched the themometer at the vats from daylight tc dark for months.

Power and heat are furnished by a big steam boiler. The sorghum stalks are run through a crusher and the syrup then is boiled down through successive vats to just the desired thickness, determined by the temperature at which it boils. The boiling is done with copper coils carrying steam so that there is no chance of burning.

Mrs. William Sipp, McDonald's daughter, is looking out for the egg end of the sorghum-wheat cake combination. The Sipps, on whose farm the sorghum mill is located are cooperators in the poultry flock record project being sponsored through the state by the extension service of the college of the college of agriculture of the University of Illinois. That Mrs. Sipp handles her chickens just as carefully as her father does his sorghum mill was brought home to 191 neighbors in a pullet management demonstration which the college and Mr. Whisenand recently held on the farm. Her early pullets were laying about 30 per cent and her old hens about 50 percent at that time

To see what is right and not to do is want of courage.—Confucius.

STATE CHAIRMAN RICHARDSON MUCH IMPROVED

C. C. Richardson, State Chairman of the Mississippi F. C. F., who has been quite ill the past few weeks, is now much improved in health and expects to be at work again in a few days. He was unable to attend the recent meeting in Mound Bayon.

Mr. Richardson owns one of the finest farms in Holmes county. It is efficiently managed and has brought to its owner, in spite of drouth and unfavorable conditions, the title of a successful farmer. He is also a good business man.

As a state officer of the N. F. C. F., Mr. Richardson has been more than loyal and faithful. He has brought the farmers of his state out of the slough of despondency until now, they have the enviable record of being the best organized farmers of any southern state, colored or white. He is a powerful leader who does not know what selfishness is. He is a genuine co-operator. His many friends are glad to know he is improving in health and hope the time will soon come when they may again received the benefit of his advice and encouragement.

ALABAMA'S STRAWBERRY GRADE REQUIREMENTS TO BE IN EFFECT FOR 1932

Editor's Note—Members of the N. F. C. F. who plan to ship strawberries this year should note the following article and preserve it for future reference. This law is effective only in the state of Alabama.

Castleberry, Ala.—An act providing for the creation of official state grades for strawberries and prescribing the marking of containers therefore, has been passed by the Alabama Legislature and will be in effect for the 1932 season.

The law states that "the grades for strawberries recommended by the Bureau of Agricultural Economics of the United States Department of Agriculture and recognized in the central markets of the country as Government Grades with an additional grade to be known as Alabama combination grade, it being an intermediate grade between U. S. No. 1 and U. S. No. 2, are hereby made the official state grades for all strawberries in the State of Alabama presented for intrastate or interstate shipment, and that all containers so presented for shipment, whether by truck, train, or boat, shall have stamped thereon the name, address or serial number of the person producing or marketing the strawberries, as well as the name and grade of the strawberries contained therein.

"No standard established under this section for the grade of strawberries shall effect the right of any person to dispose of such strawberries without conforming to the standards set forth in such, but when such strawberries are presented for shipment without having been graded to conform to such standards, such person shall be required to mark or stamp in a conspicuous place on each crate or container, in dark colored letters not less than one inch in height the word 'Unclassified,' or the word 'Ungraded,' as the case may be."

Section 2 of the law provides that "any person violating any of the provisions of this Act shall be guilty of a misdemeanor and upon conviction thereof shall be fined not less than $25 nor more than $500, and may also be sentenced to imprisonment in the county jail or hard labor for the county for not more than six months, one or both, in the discretion of the court."

HENS WILL PRODUCE EGGS WITHOUT FIRE DURING COLD WEEKS

Fine laying records have been made by chickens under weather conditions far more severe than they ever get in Illinois, and these records have been made without the use of artificial heat, says H. H. Alp, poultry extension specialist of the college of agriculture, University of Illinois. There is little evidence to prove that it would pay the average farm flock owner to install a regular heating system in his poultry houses.

"However, a flock that is laying heavily should be protected from several cold weather. Some houses are considerably colder than others, and in such cases it might be well to set up the brooder stove during a cold spell.

Curtains made from feed sacks and dropped in front of the roosts during cold weather are a help. Diving the roosts into sections by means of patitions also will help protect the birds. The partitions are built from the top of the droppings board to the ceiling of the house and extend in width only a little beyond the first roost.

"In a house with a high ceiling a small straw loft put in just above the roosts and extending the width of the droppings board is of real value in cold weather.

"If a cold spell is reported to be on its way, the flock owner should think as much about his pullets and hens as he does to prevent egg car. One way to prevent egg production dropping off in a cold wave is to give an extra feeding of gain either in the early morning or late evening.

A warm, moist mash also may be used. The feeding of hot mashes makes the flock feel the cold a little more than it otherwise would.

"An combination of a dirty house and severe cold weather is especially hard on egg production. The house should be cleaned out and fresh clean little put in. This helps make the hens more contended and keeps them a little more active. The droppings board should be kept clean all winter. Too often it is not cleaned until spring. This favors the spread of roup and colds. During cold weather it is much easier to clean the droppings boards if after each cleaning they are covered with rock phosphate, gypsum, ashes, sand, ground corn cobs or similar material."

Our acts our angels are, or good or ill
Our fatal shadows that walk by us still.

—Fletcher.

MODERN FURNISHINGS MAKE FARM HOMES ATTRACTIVE

While the rugged sturdy farm home of the 19th century had a charm of its own, modern equipment makes the present farmhouse a far more pleasant place in which to live. This is the opinion of M. S. Winder, of Chicago, Executive Secretary, American Farm Bureau Federation.

"Furnishings of moderate price selected with care and arranged for the greatest beauty, now adorn most farm rooms," Mr. Winder said. "Bleak parlors drove many families into the kitchen, in former years, but interesting living rooms which are both comfortable and useful have supplanted these. Twentieth century efficiency which pervades the business world has invaded the home in both city and countryside."

Mr. Winder, member of a subcommittee of the National Committee on Wood Utilization of the Department of Commerce, which sponsored a recent booklet "Furniture, Its Selection and Use," feels that there is an increasing farm interests in the subject of home planning and furnishing. He cited the use of this buletin by 1400 home demonstration agents of the U. S. Department of Agriculture, as proof of his contention.

"Because of the deep desire for real facts, together with the many opportunities now offered rural home-makers, you will find most of the women of our farms well informed on home furnishing and decoration," he pointed out. "They have found that the time and energy spent in acquiring knowledge of wise selection and good arrangement is well expended; that pleasing homes attract interesting people, and that families reflect the warmth and charm of their surroundings."

"Men and women of the farms appreciate this booklet, because it helps them to secure comfortable, correctly furnished, homes, satisfying to their artistic senses and their needs."

"Furniture, Its Selection and Use," can be obtained from the Superintendent of Documents, Washington, D. C., or from district of the Bureau of Foreign and Domestic Commerce, in principal cities. It sells for 20 cents a copy. The National Committee on Wood Utilization has prepared a study course based on the bulletin, which it will supply to leaders of groups which care to study the subject.—W. U. P.—PR92

COTTON EVOLUTION SHOWN IN DISPLAY

Steps From Boll to Finished Cloth Illustrated at Union Trust Co.

Evolution of cotton from the boll to the finished cloth to be used as lining for shoes is illustrated by a display in a showcase at the entrance to the Union Trust Company. The display shows the cotton in the various steps of its manufacture from open bolls on a cotton stalk, to ginned cotton, then through several cleaning processes, a combing process to straighten fibers, and through several spinning processes which evolve a more tightly wound thread to the glazing of the thread and its weaving into cloth.

The display was arranged by the Agricultural Development Department of the Missouri Pacific Lines through the courtesy of the International Shoe Company Textile Plant No. 1 at Malvern. The plant employs 200 persons with an annual payroll of $13,0000 and consumes 7,000 bales of cotton annually, it was said.

Wabbaeka, Ark.

To the editor of the Modern Farmer will you allow me space in your valuable paper to say the following.

The Negro race as a whole are wake and being awaken along many lines pertaining to his material welfare in this world, but when we consider his religious position he is dead asleep. Now there isn't but one way to find out whether a thing is right or wrong and that is to measure it by a rule. If it comes up to the measurement it is right and if it doesn't, it is wrong. Any matter constructed without a rule is certainly a matter of no importance. The Bible says that God so loved the world that he gave his only begotten son that whosoever believe on him should not perish but have eternal life. St. John 3:16. Man has lost his life and fellowship with God. by his disobedience and it took the love of God to give his son to die for the world to give us life and bring us in fellowship with him again. Not only to bring us in fellowship with him but also to bring us in fellowship one with another. The knowledge of this fellowship comes to us through the gospel of the son of God. John says that which was from the beginning that which we have heard that which we have seen with our eyes that which we beheld and our hands handle of the word of life that which we have seen and heard declare we unto you also, that ye also may have fellowship with us; yea and our fellowship is with the father and with his Son Jesus Christ and this is the message which we have heard from him, and announced unto you that God is light and in him is no darkness (in his is no misunderstanding) that will cause disfellowship, if we say we have fellowship with him and walk in darkness we lie and follows not the truth, but if we walk in the light as he is in the light we have fellowship one with another and the blood of Jesus clearseth us from all our sins. 1 John 1 1-7 to walk in the light of God eventually means to walk in the light of his teaching if we do this we have fellowship with God and with one another let us now consider the application of the rule after Jesus had fulfilled the request of his father and the father had given all powers in to his hand. He came to his disciples and said unto them go ye into all the world and preach the gospel to every creature he that believeth and is baptized shall be saved. Mark 16:15 readers have you once thought that the attitude of Christ today is just as it was the day he told his disciples to go and preach the gospel to every creature. He means for his preachers whither white or black to preach to all the people whether they be white or black, Jew or Gentile. Paul says I am debted both to Greeks and to barbarian both to the wise and to the foolish. Rom. 1:14. The next thing I want you to notice is did the Apostles do as they were commanded. Did they preach to every nation in the world. Luke says in Acts. there were dwelling at Jerusalem devoutment out of every nation under heaven and that they heard the apostles speak in their tongue the wonderful works of God. Act 2:5-11. Not only so but some of the blackest people that were there converted and made Christians and that was Cyreneans we know they were black people because they were natives of Africa 11:9-20. Not only were they converted but they were preachers. Christ told Peter he would give to him the key of the kingdom and whatever he would bound on earth would be bound in heaven. Matt. 79:19. So he bound both white and Black in the same church. These peoble doubtless were walking in the light of God (that is in the light of his teaching) and were having fellowship one with another. There was no race or color line to keep them from communicating or fellowship together. This was all torn down and taken away. Eph. 2: 14-16 denominational names were unknown among them they were called Christians. Acts 11:26.

Collectively the church of Christ. Rom. 16:16. They were disciples according to the scripture. 2 Timothy 3:14-17.

E. L. Turner.

ON SHOOTING THE PIANIST

By William Allen White in Emporia Gazette: Since March 4, 1929, when Herbert Hoover stood on the front steps of the White House and swore to enforce the laws and maintain the constitution of the United States, every mean thing possible has happened to this country. Came the dawn of the devil's own day. Drouth, depression and calamity upon calamity rose up for which he had no more responsibility than he has for the wind or the tides. As a result, this country is in a sad way and so is the world. It is a phase of the war. We don't ogranize and murder ten million men on this planet and put out of commission fifteen million more and saddled fifty billions dollars of debt upon the world, without consequences. Wars of that magnitude do not stop when the boys cease firing. The late war will be going on pretty well through into the 1940's when Hoover is gone from the White House and his successor is in his second term.

But Herbert Hoover has done in this great emergency the thing for which he was sent of heaven.

He kept an even keel at the White House.

He has organized the world for peace.

He has cut down taxes as no other president has ever cut them down.

Under his counsel and at his suggestion, the hourly wage scale of labor was mantained even though the annual wage was cut down by the depression.

He did all that could be done, which was precious little, in the world agricultural prices.

He has kept a banker's panic from devastating the country in time of depression.

He has organized the latent credit of the land in one ministering corporation.

Under an organization set up by his leadership in every American city funds are growing into the hundreds of millions of dollars to furnish emergency work for every unemployed American this winter.

And his latest act is to further mobilize that latent credit into a home building corporation to put life into the building trades.

Everything that man can do he has done. He has done it bravely. He has done it wisely, with an intellectual honesty that shrank from demagogy. History will mark him for a great figure in this world of these times.

It is the American habit to shoot the pianist when we don't like the temp or the tune. Now is a good time to break the habit. For heaven's sake gentlemen, quit shooting the pianist, he is doing his best.

And let the dance go on.

GAGE SPRING UNIT NOTES

(Special to Modern Farmer)

Gage Spring unit, R. 3, Durant, Miss., broke all records of the race in this section of the country, on December 9th when they made a carload shipment of sweet potatoes from Owens Wells, Miss., to Mr. J. P. Davis, President, N. F. C. F., Chicago, Ill., and the glad souls who took part in the shipment were S. H. Redmond, Cisero, Pepper, Isabella Hayward, Jessie Foster. T. B. Brooks, Nellie Thomas, Mariah Griffin. I am glad to say that the R. R. inspector and Mr. Truel the Depot agents both showed us a deal of kindness by holding the car over time to give us a chance to load, and I must say that Miss Rosa Fauler, the storekeeper at Owens Wells showed us no little kindness in every way she could to encourage us in making the shipment.

This lets us know that the white people around Owens Wells are no enemies to the N. F. C. F.

J. B. Baughns, Secretary.

R. E. Durhams, Market Agt.

R. W. Griffin, chairman.

To SAVE Something!

Join Our Dollar Per Week Savings Club Now Open

Every Citizen Is invited to Cooperate in a Definite Movement Where they Themselves will be the Recipients of all the Benefits Both Principal and Interest

Send $1.00 every week to the Citizens Savings Bank and Trust Company, at Nashville, Tennessee, either in cash or post office money order, or you may send your personal check, if it is certified. This will open a savings account on which we pay interest twice a year. It will make you a member of our "Save a Dollar a week Club." Every member of the club, who qualifies by sending the regular amount, will receive special recognition and an acknowledgement of their remittance when it arrives. You can deposit more than $1.00 per week if it is convenient. No matter where you live, in the United States, Canada or Mexico you can take out membership in this savings plan. The Citizens Savings Bank has been operating for twenty-seven years. Its capital is fully paid. Its officers and directors represent men and women who are nationally known. "Procrastination is the thief of time," so do not wait. Open your savings account at once.

MISSISSIPPI UNITS

(Continued from Page 1)

Bolivar Unit, Prof. Robert Booker, of Mt. Olive Unit and Rev. C. L. Mabry, of Shaw, Miss., Pres. J. P. Davis, of the national office, Chicago, was present and anounced that the purpose of the meeting was to organize the first Agricultural Credit Corporation sponsored by the Federation. He explained that the officers and delegates of all Units represented understood the plans and program of the organization relative to the business of the meeting and then called on the treasurers of the Units to pay in what had been collected to apply on capital stock. Amid enthusiasm reminiscent of an old time "big meeting," the following Units reported and paid: Helm, Mount Olive, Whitman, Lebanon, St. James, Pace, Heard's Chapel Mt. Carmel, Swiftown, Bethel, Dundee, Baldwin, Carroll-Good Hope, Good Hope, Gallilee, Pride of Delta, New Foundation, Pilgrim Rest, Springhill, Brown, Choctaw, Modernize, Africa, Shady Grove, Meek's Chapel, Bolivar and Holiday Chapel. Approximately one thousand dollars was paid in by these Units. The money was turned over to Mr. Green, as attorney, to hold until balance is available. About thirty other Mississippi Units were unable to be represented at this meeting on account of mud and high water. These Units are now reporting their stock subscriptions. All the Units are working hard and the ten thousand dollars necessary will soon be raised.

A representative from the New Orleans Federal Land Bank was present and talked to our farmers about buying Federal Land Bank foreclosed farms on long time payments. He said there were any number of fine farms in Mississippi they could buy with a very small down payment and the balance running over a period of 10, 15 and 20 years. He also told them that an Agricultural Credit Corporation was essential and that they were wise in preparing to organize it.

Under the N. F. C. F. plan, all Units that pay in for stock will have a borrowing power of about ten times as much as they invest. Units not purchasing stock will be unable to borrow. Neither will individual farmers who are not members be able to borrow nor will farmer members be able to borrow unless their Units have stock in the Corporation. All loans must come through the stock-owning Units.

Regional meetings of all Units in Mississippi will be held during the latter part of January and the first half of February and efforts will be continued to get all Units to participate in securing stock. When organization is completed and the Corporation begins business members will be able to file their applications for loans when in need of money with the assurance that if their security is sufficient they can obtain loans at not more than six to seven per cent. Members are now paying at from ten to forty per cent for loans. for loans.

Over forty counties in the state were represented and delegates vied with each other in making addresses. Credit is due all who attended and who, during the past nine months have worked so hard for success. We mention here some of the most prominent and loyal supporters of the N. F. C. F. These are not all by any means but space will not permit us to mention others now.

Unfortunately, State Chairman C. C. Richardson of Lexington could not be present on account of illness. His presence was keenly missed and resolutions of regret were passed on account of his absence.

Other state officers, W. Moore, Louis Irving and Tom Sewart were present and were kept busy handling the crowd. Prof. Booth, of Harper Unit, Bassfield, Jeff Davis county, on hand and promised to have his Unit well represented in stock subscriptions. Prof. Booth is a fine man and a diligent worker. Rev. I. Gray who made one of the opening addresses, is the Chairman of Bethel Unit. His Unit has the largest membership of organized farmers in the state of Mississippi, white or colored. Rev. B. W. Byram, a big farmer as well as a good preacher, chairman of Bolivar Unit, deserves great credit for the hard and faithful work he is doing in his large field. His Unit is destined to go over the top and that before long.

Rev. W. M. Barrett and T. F. Brown of Mt. Pleasant and Dave Caldwell and others from Sunshine, were unusually active. T. M. Blackmon, the hustler from Swiftown, and Charlie Ashley and his associate officers from New Foundation were on hand and made a most excellent showing. Mt. Carmel Unit, represented by R. B. Carpenter and A. D. Banks, led all the Unit in paid-in subscriptions, with Heard's Chapel Unit, represented by W. G. Woodard, P. S. Stapler, Gus Moore and W. Blackmon running a close second. Rev. Bryant and R. C. Conley from the old reliable Whiman, were there with a large crowd from their Unit. They have been working very hard. Rev. W. C. Bell, of Beulah, stepped on the gas in lining up his members and brought in a fine representation.

R. E. Cash and P. Jordan from Galilee were on hand as usual. and brought in excellent reports. No members worked harder than Rev. Morris and the bunch from around Africa. Mrs. Rachel Cooper, one of the Federation's most loyal supporters, from Sunflower county, was on hand and did much to add pep to the meeting. The old reliable Simeon Coleman, from Sunflower, was on hand, mingling among the crowd and speaking words of confidence. Simeon Coleman is every inch a man and can always be depended upon.

The little Napoleon, Newt Williamson, from Dundee, with the Hon. William H. Harrison, brought in a good report from their Unit. Rev. B. J. Franklin, from Hyman's Chapel was present and worked faithfully. His Unit is expecting to do big things. W. M. Hughes, of Springhill Unit deserves much praise for his loyalty and hard work. Pinckney Benson and Bro. Woodard, of Lebanon, were on hand and brought in good reports. Sister Haynes and Brother Shepherd, of Pilgrim Rest Unit, Merigold, were also present and very active. R. W. Griffin and his bunch brought in some good news from Gage Spring Unit. Isaac Randall, Market Agent of Mt. Olive Unit was on hand. His Unit is one of the most progressive in the Federation. Parker Carter, of Yazoo Mt. Zion, near Vaughn and H. W. Fairley, of Sledge, were also present. Bro. Fairley is one of our oldest and most faithful members.

No one regretted the effort made to be present and big things are sure to result fro mthis meeting.

PEANUT HAMS AND BACON

(Continued from Page 1)

in the South, effort has been made to build up the hog industry and Farmers? If you have not, now to work out processes that will bring out the peculiarly declicious flavor of peanut meat so the trade will find it acceptable. Most of the troubles first discovered have been overcome. A problem now seems to be to secure enough peanut fed hogs to meet the growing demand.

In recent years the penalty against peanut fed hogs has greatly decreased. One of our leading Southern packers said a few days ago that it is only a matter of a short time until such hogs will actually bring a premium. That is good news. It means a type of diversification that will help balance up Southern agriculture and make it safer and more profitable.

As we have already said, no section can produce pork more cheaply than it can be produced right here in Dixie, and our farmers have gone on producing it on peanuts and other crops peculiar to the South in spite of the penalty. The handicap, or penalty, however, has been severe. It has helped to hold back progress in building the hog population to what it should be. The packers have demanded "corn-fed" hard hogs. But the situation is changing. Soybeans in the North and peanuts in the South are forcing it. As to the peanut product, we have the verdict of a packer as to the opportunity and the verdict of Washington as to quality.

We might point out that here in the South of today we are still importing something over two-thirds of the pork we consume. This indicates what our opportunity is in a market right at our doors.

—Exchange.

NINE HUNDRED THOUSAND

(Continued from Page 1)

there would be sure a real "back to the soil" movement, and that many of the congested cities and districts would be less congested, because there are those who would go back, would take up rural life if better homes could be prepared."

"It is the plan of the National Federation of Colored Farmers, said he in conclusion, "to make a nation-wide survey to assertain just how many farmers would be willing to go into the Home Proposition if the government finances it and stands by it.

— Nashville Globe.

THE BYRAM BATTLE CALL

(Continued from Page 1)

door; saying decide and join. Don't think about past failures. This is the Farmer's concern and it can be made one of the greatest concerns that you have ever invested a dollar in. It costs a very small amount to join this old reliable Federation. It is your own. It will help in the time of need. Watch the Federation grow. We have 11,000 Colored Farmers in Bolivar County. We hope to have 2,000 members by Dec. 4th. Come and join this happy band of men and women. Come and join this group and help the boys and girls to see the visions awaiting them. We have same great men in our race, but the time has come when al can be great, because this Federation takes all. There is no difference. All you have to do is pay the joining fee and we will show to all, that there is no difference. We are looking forward. We are hoping to have every Negro in Bolivar County to join this Federation. It stands for Right. It stands for Peace; It stands up and tells you it is a reliable concern and will speak for you.

JOIN! JOIN! JOIN!

Rev. B. W. Byram,

Mound Bayou, Miss.

DIES AT AGE OF 119

BALTIMORE, (CNS)—Frances Guy, 119-year-old ex-slave, is dead. She was once the slave of Greenwood Leflore, the last chief of the famous Choctaw tribe of Indians..

She had seven sons and daughters. There were thirty-two grandchildren, 17 great grandchildren. She did her own housework until a month ago.

POTATO CROP VALUE IS LOWEST IN 25 YEARS

The government bureau of agricultural economics reports that the country's 1931 crop of potatoes had the lowest farm value in a quarter of a century, 45 per cent less than last year. The farm value of apples is the lowest since first records were kept in 1910, and pears are the lowest ever. Citrus fruits are aso sharply under last year's values.

Use Sunday School Catechisms
FOR THE LITTLE ONES
Select one of the three---First, Easy Lesson Primer 6c;
Second Child's Bible Question Book 5c;
Third Baptist Sunday School Catechism

After thirty-three years of actual Sunday School experience, after thirty-three years of developing a service for the Sunday School forces, we have been convinced that the Sunday School Catechisms, edited, published and printed by the National Baptist Publishing Board, will give help and instruct the children in a way far more advantageous than the Picture Lesson Cards. At the same time, they will save the Sunday Schools money, because there are thirty-two pages in each of these Catechisms, with illustrations, Bible questions and intensive study calculated to develop their minds. These Catechisms are described and priced on the order blanks.

In preparing your order for the next quarter, and from now on, give attention to the Sunday School Catechisms, substitute them for Picture Lesson Cards. We recommend them. We endorse them. We specialize in them.

Car Load Sweet Potatoes Donated to Flood Sufferers by Farmers

Biggest Fund In United States History Athorized By Senate

TWO BILLION DOLLAR CREDIT ASSURES REAL RELIEF

Farmers Will be Aided by Reconstruction Measure Is Belief of Many Leaders

Washington—The senate by a large majority has passed the President's finance corporation bill which will extend two billion dollars credit to banks, railroads, insurance companies, mortgage loan companies and farm credit associations. This is the largest amount of government credit ever extended in the history of the country. It even exceeds the credit extended the War Finance Corporation during the World War.

The bill will not help cities now in need of money for salaries of employees and teachers. Loans to states, which, like Mississippi, have set up rural credit systems, were not allowed in the bill. An amendment to aid closed banks which could readily be restored to solvency, was passed.

Farmers will be particularly aided by the bill through an amendment introduced by Sen. Smith, of South Carolina, which appropriates $50,000,000 for use by the Sec. of Agriculture to extend loans to small farmers. It also stated further that the $45,000,000 now remaining in the drouth fund should be applied to these loans.

Farmers will also be aided by the loans to be extended to mortgage loan companies. It is known that many of these small companies hold notes against farmers' homes and are pushing farmers to meet their payments which they cannot possibly do. The bill should be a God-send to many Negro farmers and it is expected that many will seek to take advantage of the opportunities it offers.

Develops New Current

St. Paul, Minn.—The fruit breeding farm of the University of Minnesota has developed a new currant which, it is believed, will become a favorite with fruit growers of the northwest and perhaps of the entire north. The currant is now known as Minnesota No. 25, but Prof. W. H. Alderman, head of the division of horticultnre, University Farm, says that soon will be given a distinctive name.

The new currant has been on trial at the station and elsewhere for five years, and propagating stock has been distributed to nurseries. The trials have shown that the fruit is large in size and fine in quality, that the clusters are long and full, and that the stem is of sufficient length to make pickings easy. Professor Alderman believes it is the largest and highest yielding currant in Minnesota.

Every Family Should Have Good Vegetable Garden

RAISES NATIONAL CROP

Minnesota Farmers Product Helps Nation

As a farmer, Upsher Smith of St. Paul might be considered downright eccentric. He does not plant wheat, rye, flax or barley, as well regulated farmers do, nor does he have dealings in cows, pigs or poultry writes Fred Heaberlin in the St. Paul Dispatch. The output of Mr. Smith's farm does not cut a big figure in the Minnesota crop reports and it does not make the federal farm board sit up nights worrying.

But just the same it does a person's heart good, the kind of stuff he grows on his little parcel of land at Lake Minnetonka. This is meant literally. It does do a heart good. Mr. Smith is a one-crop farmer and his corp is digitalis, used as cardiac medicine—tonic for tired tickers.

Mr. Smith not only grows digitalis, he processes it into marketable form of capsules and tincture. The finished product serves the drug trade throughout the United States. A similar farm at Vancouver, B. C., also owned by Mr. Smith supplies Canada and Great Britian. The Lake Minnetonka farm is less than seven acres and the one at Vancouver is only sightly larger, but these fourteen acres have one of the world's responsible jobs.

Powerful Heart Remedy.

Digitalis is prescribed to tone and stimulate the heart, but it must be administered carefully under doctor's orders. The medicine has the peculiar power of making heart action slower and more powerful, although the first small doses are likely to speed up the beat. If too much is taken, then the heart will run away beating rapidly and irregularly until it stops.

Mr. Smith has spent only the last twelve or thirteen years growing digitalis, before that being a chemist in a large St. Paul wholesale drug house. While he was working among the test tubes and retorts of he drug company's laboratory, University of Minnesota men were experimenting in cultivation of digitalis.

The United State's chief source of supply was central and southern Europe, where in is native mountains digitalis or fox glove, as householders know it, grows wild, shooting up brilliant flowered racemes five feet high. In autumn, peasants gather the leaves which eventually find their way to Hamburg for shipment to world markets.

Better Than European Product

The University of Minnesota experiments with the plant conduct-

(Continued on page 8)

L. A. HAWKINS RECOMMENDS THIS MEASURE

Horticulturist Agricultural Extension Department Writes This Article

A Good vegetable garden is needed for every home, especially during these times of depression. By utilizing vacant lots and other available space, millions of dollars worth of food products can be raised at very little cash expense.

In the face of the present situation the least people can do is to make all effort possible to be sure of having a supply of food. With a good garden, an abundance of healthful foods is assured and none need go hungry.

Even in prosperous times no one should buy food that can be produced at home. Back yard gardens, vacant lot spaces, and other land may be made to produce the family vegetable foods.

The soil should be put in the best possible shape for planting and growing crops. Fertile soil is essential for attaining high quality in vegetables. If it not fertile to begin with, it should be made so by applyng manure. A good supply of humus is neccessary in any garden soil. Humus is organic matter that may come from manure or vegetation that is plowed under.

Manure and Plow in the Fall

Spread on a good covering of manure and plow it under this Fall, if possible. Garden soil ought to be plowed at least seven inches deep enough to permit. It is unwise to turn up more than an inch of subsoil.

Plowing the manure under puts it down into the soil where it decays faster. Some manure is not available for town gardens, and commercial fertilizers have to be used to get results. In such cases it is advisable to plow or spade the ground in the Fall, and

(Continued on page 8)

A PLENTY

Perhaps many of our famers in the flood districts think like the colored soldier boy whom Secretary of Agriculture Hyde tells about.

It was raining and Secretary Heyd agreed that it would be good for crops. "But," he added, "crops remind me of the colored boy on a war transport who was leaning over the rail all day long, looking down in the water. Some one asked him why he was doing so and he replied: "I ve seen a lot of things in my life but that's the only thing I ever seen there was enough of."

DEPLORABLE CONDITIONS

Some Landlords Said to Be Driving Tenants

Chicago, Ill., From N. F. C. F Aiding Unfortunate (Special to Modern Farmer)—The National Federation of Colored Farmer has released excerpts from a few of many letters being received daily, reciting conditions effecting Negro tenant farmers in some sections that are almost unbelievable. Instances of farmers being forced from their homes and some landlords taking from them their winter food supply, furniture and, in some cases, even bed clothing and dishes, are reported.

Many of these farmers report that landlords have not settled with them for two years.

The N. F. C. F. reports that these letters are arriving at the rate of an average of more than one-hundred daily. These letters are all on file and officials assert that many of these reports will be investigated and the evidence turned over to the Federal Department of Justice Some of the excerpts follows:

From a State Officer of the N. F. C. F.

"Something certainly needs to be done around here. The poor people are in a needy condition. They made good crops but the landlords have taken everything and in some places have moved away themselves and left the people sitting without anything at all."

Another:

"I am a member of the N. F. C. F. I made a crop on the old .....place, operated by Mr..... I have harvested my crops, corn and cotton. Now I want to tell you what happened a few days ago. Mr.....the book-keeper, commanded me to get my wearing clothes and hit the highway. He drove me off the place, took all my winter supply of groceries, two fattening hogs from the pen, 15 head of chickens, 50 bushels of corn, a bank of sweet potatoes, all my household goods, and worst of all he met my wife at the door with her trunk and made her open it and took from it her quilts, sheets, pillow-cases, her glassware and all the dishes, and put myself, and wife and I have a small child, out of doors without a pieces of bread to eat, or an ear of corn to parch or a potato to roast. I am out of doors with nothing to eat, no money and no job. I worked hard this year and made a faithful tenant, but tonight I am in a worse condition than the unemployed because the Red Cross will aid the unemployed but there is no one to aid us here. Is there any law by

(Continued on Page 8)

LEXINGTON, MISS. ADVERTISER COMMENDS THIS GENEROSITY

Great Victory Won by Local Unit for Extending Needed Relief

Below we reproduce a clipping from the ADVERTISER, of Lexington, Miss., commenting on the shipment of a car of sweet potatoes by a Unit of the National Federation of Colored Farmers, Inc. This paper says both white and colored farmers would do well to begin the practice of perfecting an organization and establishing outlets for farm products raised in its territory."

This shipment was made through the national office of the N. F. C. F. and the members were well pleased with the service and he price received. Approximately forty per cent of the colored farmers in Holmes county are organized. The white farmers are not organized to any extent.

At one time the ADVERTISER could not see how the N. F. C. F. could be of any benefit to the colored farmers of Holmes County and it was one of our severest critics. It is now urging WHITE FARMERS TO GET TOGETHER AND DO JUST WHAT THE COLORED FARMERS ARE DOING THROUGH THE N. F. C. F. We are thankful. "When a man's ways please the Lord, he maketh even his enemies to be at peace with him." Proverbs 1:7.

Cooperative shipments of sweet potatoes were made by colored farmers the past week at Owens Wells for the first time in the history of Holmes County, according to advices of railroad agents at Lexington and Owens Wells, who

(Continued on page 8)

Rev. S. York Wanted

Rev. S. York has been travelling through Mississippi telling colored farmers that he is representative of the National Federation of Colored Farmers and, in some instances, has collected money from them in the name of the N. F. C. F.

The National office has had no correspondence with this gentle man. We do not know him at all. He is obtaining money under false pretenses and a warrant has been issued for his arrest. Members are warned to beware of him and if he appears in your neighborhood please send at once a collect telegram to our office or to Atty. B. A. Green, Mound Bayou, Miss., that we may have him arrested and lodged in jail. When last heard of he was in the neighborhood of Madison Station.

Our Mississippi representatives are state officers of the organization, —all live in the state and are well known. We have no other representatives there.

The National Federation of Colored Farmers, Inc. Vincennes Hotel, Chicago, Ill.

BREAD AND BUTTER WITH SUGAR STILL AS TASTY AS EVER

A habit that has changed with the passing years must have been observed by those whose memories run back several decades, namely that the sweet tooth or our childhood does not exist among the young of today to make appeal: "Mama, gimme a slice of 'n' butter 'n' sugar." The idea of spreading just plain sugar on the sliced loaf has grown unusual, though we vividly recall when this was indeed otherwise, says the New Orleans Times-Picayune. That was at a time when the nickel candy bar was still unknown and when pulling your own taffy was too slow a task, and the candy pull too formal a rite to be celebrated to assuage the daily sugar hunger of the kid between school end and supper hour.

We might never have thought of the old bread, butter and sugar custom but for a slogan that has just been adopted by one of the larger sugar companies of the Philippine islands. This concern's publicity now says it with posters handsome and glass covered: "Spread it on bread. It is worth trying here also by lots of children who may never have thought of that use for granulated or, better still, brown sugar.

GARDEN TOPICS

By Floyd Bralliar

Almost every householder desires information as to what shrubbery to plant about the foundation of his house. We shall discuss this briefly today.

First, we must get the soil ready before planting anything. With other conditions unfavorable, surely we should give the plants good soil . Dig beds eighteen inches deep where the shrubbery is to be planted and work in good soil with plenty of vegetable matter to decay. Even brush may be used in the bottom of these beds. Old bones from the table are also good to mix in this soil. The roots of the plants will find these later and feed on them.

Seldom should a permanent plant be set closer than thirty inches of the house and three feet is usually better. This will give the plant a chance to grow and "brush out."

In Nashville we should plant only those plants that thrive in lime stone soil. Elsewhere in the yard we may make beds with our soil in them where other plants will thrive, but not against the side of the house where other conditions are unnatural at best.

Evergreen plants or plants with brightly colored bark are to be preferred to deciduous plants with dull barks. For those who love evergreens with broad leaves the choice is a rather narrow one. Where a plant is desired that will ultimately grow fifteen feet tall, there is nothing so good as the "cherry laurel." It should be trimmed enough to keep it from becoming sprangly, but this needs attention only once a year just as growth starts. Shear into the shape desired and it will keep it well.

PYRAMIDAL PLANTS

If formal pyramidal plants are desired use the yews, both English and Japanese . The latter are to be preferred here. All grow very slowly and hold their form even better than do box.

Box are always desirable and there are three varieties, one dwarf that never makes a height of over three feet and seldom over two, a medium box will make six or seven feet in time, and the tree box that may reach a height of twenty feet. All grow slowly, but the tree box grows much faster than the others and the medium box will grow at least twice as fast as the dwarf.

Even box trees should be pruned every spring to insure their growing dense and in the proper shape. If rapid growth is desired give them a little nitrate of soda twice every spring.

For low irregular growth there are few plants better than the Oregon grape, Mahaonia acquifolia. If fertilized every spring and given a little care it becomes very desirable. The yellow flowers in the early spring, the blue black berries and the bronze red foliage in the winter are unusually attractive.

The there is the new barberris juliana. This plant is one of the very most ornamental broadleafed evergreens we know, and is as hardy as an oak. It is still rare and but little known.

Belia grandiflora is an excellent evergreen flowering shrub if fertilized and cared for. Its natural habit of growth is pendulent and it should be allowed room to droop if it is to be decorative. It is hardy even in middle Ohio, but will lose its foliage if the thermometer falls much below zero, and will sometimes kill to the ground if it is too dry when it goes into the winter. A light mulch of leaves over the roots is desirable where it can be used without becoming unsightly, and if the plants are allowed to grow properly this can be done.

DECORATIVE VALUE

Nandina domestica is a rather new plant in this ciuntry, but any reader who will drive out to the Madison Rural Sanitarium and see a large circular bed of it there will never doubt its decorative value. In our soil or where it freezes well the leaves turn brilliant red all winter. It bears turkey red berries as large as shoe buttons in large clusters. These berries turn red yearly in the fal. and hang on till the following May. It colors best in full sunshine. Its maximus height is five or six feet.

This list practically completes the list of broadleafed evergreens that are hard here and that will thrive in limestone soil. There are several more of high decorative value but of doubtful hardiness and so we are not recommending them here. Next week we will consider the cone-bearing evergreens.

—Nashville Banner.

CAT MOTHERS RAT

Acting as mother to a rat, whose family she had eaten, is the odd role assumed by a cat at Sheba, Transvaal. A native boy working in a shop found a nest of seven rats and set the shop's cat on them. The cat ate six of the rats, but carried the seventh away with her alive. Now the rat is living in a box with the cat's own kittens. It eats and drinks at the same time as the kittens, and the mother cat licks and cleans it with the same care she devotes to her own offspring. If the rat is taken away from the box the cat retrieves it and takes it back to its play mates.

A REPUTATION

Emanuel Jackson, mule tender, appeared one morning on crutches.

"Lawsy," exclaimed a friend. "Ah thought yo' was one o' de bes mule handlers in de business."

"So ah is," affirmed Emanuel proudly, "but we got a mule in dis mo'nin' dat didn't know ma reppitation."

INTERESTING NEWS AND NOTES

A movement has been started by the white women of California to urge the wearing of cotton stockings and cotton underwear as an aid in using up a part of the surplus cotton crop. Twenty years ago when we had no cotton surplus, hundreds of thousands of bales of cotton were used in the manufacture of cotton stockings. Today, we find women in the cotton field of the South wearing silk stockings. Thirty-five million women in this country could aid the cotton farmers by buying more cotton goods and less silk.

Gov. Frank O. Lowden of Illinois told the American Farm Bureau Federation that America would never return to prosperity until it again becomes respectable to own land. He said that bankers have been driven to withdraw their investments from farmers to invest in bonds and they consider mortgages as "frozen assets. "But" said he, "although these bonds may never freeze, they often evaporate in thin air."

Sec. Hyde says in his annual report that crossbred hogs are not always superior to purebreds in vigor and gains. Fertility and low mortality are more important factors than differences in type and rate of gain.

President Hoover has submitted to Congress the Federal-State Muscle Shoals Commission report which suggests the leasing of the project to a corporation which would operate primarily as a fertilizer plant of benefit to the farmer.

More than 700 sheep were killed by hailstones, which fell for an hour until they covered the ground a foot deep, in South Africa recently.

Two-fifths of the $500,000,000 appropriation for the reconstruction corporation was proposed, in an amendment offered by Congressman Jones, to be used for the benefit of agriculture. An amendment offered by Senator Smith of South Carolina, would provide $50,000,000 as a permanent revolving fund for feed, seed and fertilizer loans in drough and flood areas.

Fur buyers report that trappers are getting good prices for pelts brought in this year and are finding them of excellent quality in spite of the warm winter.

Residents of Norfolk, Va., report that on January 24th this year, a ripe eight pound watermelon was picked, ripe tomatoes were found in gardens and fishermen reported catching herring and shad.

The first crop of Illinois Irish potatoes was dug by a farm boy from seedlings left in the patch when the 1931 crop was harvested. He got six potatoes from one hill weighing 13 ounces on the average.

Mrs. Frank Evans, wife of the new member of the Federal Farm Board, is a graduate of the law department of the University of Utah. Recently she was honored as the single speaker on the program of the annual banquet of the American Farm Bureau Federation. This organization reveals how important her work has been in a statement which tells that she, jointly with her husband, conducted investigation into the legal phases of co-operative marketing when it was new in this country, and as a result a book on co-operative law was published by the Bureau.

The Senate passed the Capper resolution authorizing the distribution of 40,000,000 bushels of farm board wheat to the needy of the Nation, — through the Red Cross and other organizations.

An investigator reports that a vast majority of colored migrants in the big cities of the East and Middle West have come from the small towns of the South and not from the large cities or the rural districts.

It is stated that the average farm family can save $4.00 a year on laundry soap and more than that on toilet soap if the farm wife will learn to manufacture soap in her own kitchen. The method is easily to learn.

Eighty per cent of the $21,000,000 drouth loans made to farmers of five southern states by the Memphis federal seed loan office has been repaid either in cash or cotton collateral deposits.

United States fall sown wheat acreage is estimated at 10:4 per cent less than what upas planted a year ago.

Mississippi's 1931 Irish potato yield was 100 per cent greater than that of 1930.

A Wake county, North Carolina farmer planted four acres in Coker's Gold Dollar tobacco and secured an average production of 1033 pounds an acre. His profit was $175.55 an acre after deducting garding and selling costs.

A jealous mule landed a colored wagon driver in New Orleans in a hospital with a punctured lung and broken ribs. The driver said that when he fed apples to one mule its team-mate caught him in the back with its teeth and then threw him on the ground.

Welfare associations in many large northern cities are appealing for old-fashioned kerosene lamps for needy families. Gas and electric light bills must be paid monthly and these families, who are living on charity, can be provided with free kerosene if the lamps can be found.

BACK TO THE SOIL

Writing to the Chicago Defender, Mr. H. Washington, Sr. a colored farmer of Oxford, Miss., says a big month in the following letter:

Allow me to express my opinion on what was said about Race farmers not paying high rent in 1932. It seems to me that we are letting a great opportunity pass at the present time. I think that our leading men should get together and invest their means in some of the cheap land that is being offered for sale throughout the South for the future benefit of the Race.

We spend millions on colleges and churches, so why not divide the investment so all can have a chance to work together? I believe in building first class churches and schools for my Race, but what is the use of preparing a place to get our learning and not preparing a place to get our bread?

I think we are sleeping on our rights. I may be wrong, but I believe the time is not far distant when we will have many mere Race farmers out of a home and looking for somewhere to live than we have today."

MANY LOCAL FARMERS HAVE LONG-TERM FARM LOANS

The Davidson County National Farm Loan Association with headquarters at Nashville, has long-term, first farm mortgage loans outstanding, amounting to $251,000 acording to figures made available by the Federal Land Bank of Louisville. These loans are held by 77 farmers. This money was brought into this country by this association endorsing its members' notes and putting up first mortgages on the farms with the In other words, these farmers co- Federal Land Bank of Louisville. operative loans which run for long periods and which are paid back over a series of years by including in the semi-annual installations the interest plus one percent of the original loan. Thus, the loans are amortized or killed off within the contract period.

Back in 1916 Congress devised this method of adopting credit to the farmers' ability to pay. The farmer-borrower is not limited to pay one per cent of the original principal annually, in fact, he can pay any multiple of that he desires at any interest-due date. Many of the borrowers have done this. It does afford, however, a method of funding the farm mortgage debt over a lifetime and the elimination of the worry caused by short-term mortgages falling due every few years. It also eliminates commissions and fluctuation in interest rates, for, once the borrower has his loan, it runs for the full period and is paid off automatically, provided he pays his instalment promptly and does not allow his property to depreciate.

It is estimated that the 400,000 or more borrowers from the 12 Federal Land Banks in the United States are saving approximately 2 per cent per annum on the more than a billion dollars which are now outstanding in such loans, when compared with the rate of interest which they formerly paid on their short-terms loans.

In obtaining money to loan to farmers the Federal Land Bank of Louisville has issued tax-exempt Federal Land Bank bonds and these have been guaranteed jointly by the other eleven Federal Land Banks so that the rate of interest charged borrowers by these co-operative institutions always has been low. With the insurance companies and the joint stock land banks pulling out of the first farm mortgage field, it is all the more imperative that the cooperative Federal Land Banks and the 4,650 national farm loan associations continue to function.

FALL IS TIME TO MANURE AND PLOW GARDEN

By D. C. Mooring

Extension Horticulturist, A. and M. Sillwater, Okla.

The most important step to take at the present time in making a garden for another year is the manuring and plowing of the ground at the earliest possible date. This is very important and should not be put off any longer than necessary. Where it is convenient, it is snggested that the garden be manured, and the manure worked into the soil to the breaking of the garden. In this way the manure will be more thoroughly mixed with the soil.

There are a number of advantages of fall or winter manuring and plowing of the garden. In the first place the manure will add the three most important elements of plant food that are more apt to be absent from the soil, namely nitrogen, phosphorus and potash. Thus it is seen the fertility of the soil will be increased at practically no expense as the lot can be cleaned up or a few stalls, cleaned out which will make the barnyard more sanitary. Again, the manure will add organic matter to the soil which will make the ground more easily worked during the regular garden season and at the same time increase the soil's capacity for catching and retaining moisture, as a rule, is a crop limiting factor in Oklahoma.

The decomposition of the manure will also render other food material available in the soil that might stay locked up during the growing season were it not for the effect produced by the decomposition of the manure. It should be borne in mind that the plants take all the food maternal from the soil in the form of a solution, therefore, the elements in the soil, or a combination of the same, must be soluble which may be brought about as metioned above.

No doubt it has been noted in walking across ground that has been plowed during the fall or winter and left rough until spring that the plowed ground is much softer and more springy than spring plowed ground. The physical condition is considerably improved.

The question of destroying insects, especially the cut worms, in the garden is important and this plowing of the ground in the fall or winter and leaving it exposed will destroy many insects. Where sod land surrounds the garden it would be well to plow a strip of ground several feet wide around the outside of the garden.

It is a well recognized fact that the earliest gardens in this state as a whole, are the most satisfactory ones and where the soil is ready for early planting it is of material advantage. Quite frequently where the garden is left until planting time with the expectation of plowing and planting the same day, a rain comes which may cause a delay of several days and sometimes even extending into weeks.

In conclusion—now is the opportune time. Do not delay the manuring and plowing of the garden any longer than is absolutely necessary.

SCHOOL TERMS CUT AS ECONOMY MOVE

(Special to The Christian Science Monitor)

Little Rock, Ark.,—In working out a solution for the financial situation confronting Arkansas public schools, the State Board of Education received yesterday a report of a special survey committee which said that from six to 12 weeks are being clipped off the average school term this year as an economy move.

Based on a study of 15 of the State's 75 counties, declining revenues and other factors will leave nearly $2,500,000 less than necessary to maintain the high standards attained last year. A majority of the school districts are levying the maximum legal tax and further retrenchment appears essential. It is recommended that every district adopt a budget and live within it.

"The decrease in teachers' salarics seems to indicate that the greater part of the reduction in the running expenses of the schools is being borne by the teachers," the committee reported.

I have no faith in that proverb about all things coming to him who waits. My experience proves that the only things that come to the man who waits are the cast-off things of somebody else.

—John D. Rockefeller, Jr.

DEPOSITS OF POTASH FOUND IN WEST TEXAS

While it is true that French and German potash producers now hold a monopoly on world potash supplies, no very serious complaints have been brought against them for fixing excessive prices on their product. The price of potash hasn't been much of an issue, says the Houston Post-Dispatch.

Nevertheless, it is desirable for the United States to be free of foreign dependence for its potash requirements, and for that reason the announcement by Senator Sheppard that exploratory work in west Texas and New Mexico has revealed the existence of the mineral in commercial quantities at various points in the regions is gratifying. Especially is the senator's statement gratifying to Texas for it probably means that a new and profitable industry will be developed in the western part of the state.

The credit for securing the exploratory work which has proved successful goes to Senator Sheppard, who five years ago secured passage in congress of a measure appropriating funds for financing tests in west Texas. Twenty-four test wells have been sunk, all of which revealed deposits of potash and eleven of which indicate veins of sufficient richness and thickness to have commercial possibilities.

The senator ventures the opinion that there is enough potash in the beds discovered to provide for all the supplies this country needs for fertilizer making. Since fertilizer is being used on larger scale, as more and more land wears out, the importance of having an adequate domestic ingredient of fertilizer is apparent.

ATTENTION COLORED FARMERS

The National Federation of Colored Farmers is receiving hundreds of letters from Colored farmers requesting all kinds of aid and information. We are willing to do everything we can for all the Colored farmers of America. It costs money, however, to maintain offices and our expenses are becoming so heavy that we are compelled to discontinue supplying information to those who request it who are not members of the Federation. If you have faith enough in the organization to believe that it can aid you, then you should be willing to join it and help support it. Isn't that so?

Several County Units have organized and elected officers but have not sent in their membership dues. These units are eligible to membership in the Federation until dues are paid. Be helpful. Co-operate. Pay up. "All for each and each for all"

THE MODERN FARMER

Official organ of the National Federation of Colored Farmers

Leon R. Harris - - Editor

Published Monthly by the Modern Farmer at Nashville, Tennessee, and Chicago, Ill.

Nashville, Tenn., Office 447 4th Avenue, North.

Chicago, Ill., Office: Vincennes Hotel, 36th and Vincennes Avenue.

Devoted to the interests of the Farmer, Truck Gardener Livestock and Poultry Breeder, the Home and the People.

Entered as Second Class Matter, April 10, 1929, at the Post Office at Nashville, Tenn., under act of March 3, 1879.

All contributions for publication in the Modern Farmer should be addressed to The Modern Farmer, 447 4th Avenue, North, Nashville, Tenn.

No libelous matter will be published. Unsigned articles or letters, and those written on both sides of the paper will not be used.

Subscription price $1.00 per year, payable in advance. Personal checks must be certified. Make all checks or money orders payable to The Modern Farmer.

Advertising rates and sworn circulation figures presented upon application.

"OUR SLOGAN"

STAY ON THE FARM IF YOU'RE ON IT! GO BACK TO THE FARM IF YOU'RE OFF IT!

THE LAW

"It is hereby declared to be the policy of Congress to promote the effective merchandising of agricultural commodities by encouraging the organization of producers into effective associations under their own control.

The Board is authorized and directed—to promote education in the principles and practices of cooperative marketing—to encourage the organization, improvement in methods, and development of effective cooperative associations." (Public—No. 10—71st Congress. Sec. 1-5.)

THE GOSPEL

"This law is predicated upon the ability of the farmer to manage his own business, once he is organized to do so. Cooperation is the key to it and only in exceptional cases can the Federal Farm Board have any dealings with a farmer who is not a member of a producer-owned and producer-controlled marketing unit." Hon. Sam'l R. McKelvie, Member, Federal Farm Board.

The National Federation of Colored Farmers believes that the Colored Farmers of America should own and control their own co-operative associations.

"Co-operation With All—Affiliation With None."

GEORGE WASHINGTON—PLANTER

Before the Revolutionary War, George Washington was a Virginia planter. He was a slaveholder. He was probably a good master to his good slaves and a bad master to those who were not good and peaceable. Those slaves who stayed on the plantation and worked and caused no trouble were treated well by him and those who were lazy and disobedient were whipped and otherwise punished. As a member of the Virginia Militia, he was often called upon to run down and capture slaves who had escaped from their owners, just as all farmers today run down and capture stray pigs and cattle. George Washington never discovered that Negroes were human beings until he was placed at the head of the Colonial army was compelled to enlist Negroes as soldiers in the cause of Independence, and came in contact with free Negroes who at that time conducting businesses and practicing professions successfully in New York, Philadelphia and Boston. He became convinced before he died that slavery was an evil institution and provided in his will that his own slaves should be set free. But he never had courage enough to join the forces of freedom as did Jefferson and Lafayette.

If George Washington was a planter of today—living at this time fourteen years after the World War—he would realize that Negro tenancy and debt-slavery are evil institutions as detrimental to the progress of his country as was the institution of chattel slavery. If he had that courage of his convictions he would join, and would encourage his tenants to join any movement that has the abolishment of these evils as an objective. He would support the efforts of the National Federation of Colored Farmers, the American Farm Bureau Federation, and the work of the farm and home demonstration agents. He would treat his tenants as human beings and would encourage them to be industrious, thrifty and independent. He would not deny to others that to which all American citizens are entitled,—FREEDOM, INDEPENDENCE AND EQUAL OPPORTUNITY.

ABRAHAM LINCOLN—TENANT

Abraham Lincoln split rails, plowed corn, educated himself, became a good, sensible man and was elected President of his country. His father was as poor as "Job's turkey hen, and was all the time moving from place to place just as many tenant farmers do today. Some historians tell us that this father was lazy and shiftless. Probably he was and again, probably he was not. We are inclined to believe he was restless soul who was always seeking a chance to better his condition. His son was such a man.

Abraham Lincoln was never satisfied with himself. He rose to the presidency and had no desire to become a greater man, but he always longed to become a better man. Naturally he was unselfish and a friend to all who were afflicted and persecuted. He believed in helping others in a way that would enable them to get in the condition or situation where they could help themselves.

Tenant farmers should read all they can about Lincoln and have their children read about him. He had a hard time but he overcame his difficulties and won out in the end. Irrespective of race, color or creed, he is the POOR MAN'S FRIEND AND GREAT EXAMPLE. No matter how poor, illiterate or friendless you may be, if Abraham Lincoln succeeded you also can succeeded.

RESCUED FOR WHAT?

Associated Press dispatches from the flood district around Sumner-Webb, Mississippi, state that "When some of the Negro tenants found that the Red Cross had not assumed charge to provide food and clothing, they lost interest in being rescured" This statement tells a tale few readers know anything about.

These tenant refused to be rescured because they thought they might as well stay where they were and suffer as be taken somewhere else and made to suffer worse. They have been "rescued" before and know all about it. They knew that some of the would-be-rescuers simply wanted to get them in a position where they would have to accept the food, clothing and shelter given them and then be compelled to pay three prices for it afterwards. They knew that some of those rescuers were adepts at getting them OUT of knee-deep water and getting them in neck-deep water. So they refused to be "rescued." They did right.

These colored flood sufferers have faith in the Red Cross when relief is distributed by someone from "headquarters," but they have no faith in the Red Cross when the relief is distributed by someone from "local-quarters." They have discovered that the local Red Cross relief has strings tied to it almost impossible to the plant and at the conclusion break. They know this and refuse either to sink or swim. They simply sit still and float. They know.

NO "Co-op Selling" Here

Strictly fresh eggs were being sold in Chicago last month at 29 to 35 cents per dozen. Some of the larger dairy companies were selling them at a slightly advanced figure. At the same time fresh eggs were being offered at 11 and 12 cents a dozen at Danville, Ill., around 200 miles distant.

The farmers were being stung and also the housewives. Such a spread between the price paid the farmer and the price the housewives had to pay is unreasonable. Evidently the eggs were not being sold throught a co-operative.

ABSENTEE OWNERSHIP—ANOTHER CURSE

We know a good preacher who owns two plantations in a southern state upon which live approximately one hundred tenant families. He inherited these plantations and manages to visit them a few weeks every year. He knows the first names of a few of the tenants and as he is a good man, at least once a year he attends a church service in their little meeting-house and makes a talk. Then he leaves them in the hands of the Lord and the manager.

He is satisfied with his manager. This manager sends him some big checks occasionally and always manages to send him something, no matter how poor the season and crops. The preacher is satisfied that his manager is honest and efficient. He has no reason to doubt it because he receives tangible proof . . . .checks. . . . . money. The tenants tell a different story.

They tell us that this manager forces them to trade at his private store,—run by the manager's cousin,—and overcharges them for everything they purchase. They tell us that this year he took half the sweet potatoes raised on the farms although he forced the tenants to purchase the seed and fertlizer used and promised them they could have all they produced. They tell us that he won't give them written contracts and settles with them when he gets ready—sometimes not at all. They tell us that he won't give them enough garden acreage. They tell us that he has even threatened to whip and run off the place any tenants who join a local co-operative association and try to improve their condition.

The absent landlord is a good man—where he is. He is a good preacher. But he is a mighty bad evil, wicked farmer. He may get to heaven from his pulpit but he'll never get to heaven from his farm. He is like the idol old King David talked about. He has eyes that see not and ears that hear not. He wouldn't believe a colored tenant farmer on his oath, for—hasn't he got a good manager?

The absent landlord is an unnecessary evil that should be done away with. He is one sinner that destroyeth much good even though he may be a big city preacher. He has no love for his land nor for those who try to live on it. We would have some patience with him if he would only try to manage his manager. But show us one who will or does?

WE NEED MORE LEES

Some time ago we read some press comments on an address delivered by Dr. J. R. E. Lee to the visitors at the Leon, Florida livestock and farm show. Dr. Lee is president of the Florida A. and M. College. It was stated that his address was the finest heard at the show because the speaker talked plainly and forcibly and brought along the facts and figures to back up every word he said. Dr. Lee surrounded himself with a variety of canned and preserved products, fruits and vegetables—told where they came from—how much they cost—and told his hearers how foolish they were to send money away from their own town to purchase such articles when all of them could have been grown and processed right there. He told them they were ruining their own farms and farmers by so doing.

We have a lot of colored farm leaders and we need all of them, but some of them should be leading mules and cows and not farmers. Farm leaders who can wake up farmers, farm communities and the people in the contiguous cities who eat or who should eat, what their neighbor farmers produce, are worth their weight in gold nowadays and may their tribe increase. The time has come when facts have got to be driven into peoples' heads—not whispered into their ears. Colored farm-leaders must be worked WITH—not for, or on. Colored farm leaders must have a vision of the prosperous colored farm community—not a vision of a few prosperous farms in the community. They must be big enough and tactful enough to get for our farmers the support of all his city and town neighbors irrespective of race.

During the peach harvest, a colored physician we know met a farmer friend in front of the courthouse. The farmer was trying to sell two bushels of peaches—all he had. They were peaches of all shapes and sizes and degrees of ripeness. "How much you want for them?" inquired the doctor. "Two dollars," said the farmer. The doctor jumped up in the wagon, emptied all tthe peaches out in the bed and began to refill one empty basket with all the largest and finest. The farmer protested. "Shut up," said Dr., "I'm doing this. You won't lose anything."

After the basket was filled the doctor poured half of them into the other empty basket, jumped to the ground, lifted out one basket, told the farmer to bring the other one along, and together they went inside a nearby drugstore. "Here are some fine peaches," the doctor said to the druggist. "Want half a bushel for a dollar? I'm taking a half." "Sure," said the druggist. "My wife wants to can a few." The doctor paid his farmer friend two dollars and followed him back to the wagon. "Take the rest of 'em back home and make some peach butter for winter. And if I ever again catch you trying to sell such stuff I'll run you out of town. See how it's done?" he asked, as he slapped him on the back.

That doctor was what we call a good farm leader. We need more such "doctors" who can drive facts into heads. We need more Dr. Lees

With this issue the Modern Farmer winds up its third year of service. In spite of trials and tribulations it is still here and hasn't missed a note. Are you a subscriber? If not, help out a little. It will do you good.

Be like the youngster who, when asked how he learned to skate so well, replied, "By getting up every time I fell down."

And while you are thinking of great men and their birthdays this month don't forget to tell your children the stories of Frederick 400,000,000 bushels of grain, and another 100,0,000 bushels in the

Application for Membership

NATIONAL FEDERATION OF COLORED FARMERS (Inc.)

Vincennes Hotel, Chicago

As a farmer, I believe the time has arrived when the Colored Farmers should form a National Organization devoted to diversified production, grading, packing, shipping and marketing of farm products and to the purchase of needed farm supplies through co-operative methods, to the end that a more prosperous financial condition may result from their efforts as producers.

I hereby subscribe $5.00 for membership in the National Federation of Colored Farmers for a period of 12 months from date. Also $1.00 for an Annual Subscription to the Modern Farmer.

Name .... Address .....

Douglas and Richard Allen two great colored Americans born in February. Ever hear of them?

If you have some time on your hands this month start fixing up the old place a little, whether you own it or are renting it. A little paint and whitewash will help. Then you might fix the steps, porches, outbuildings and fences and remove the trash lying about. Have a front yard with flowers if it's only a few square-feet.

THE TENTH BAG OF BEANS

Editorial From Christian Science Monitor

Since 1920 American agriculture has struggled with the problem of what to do with its surplus production. Export outlets have been shrinking and the foreign market has become more and more unsatisfactory.

It was Adam Smith who said that if ten bags of beans are offered for sale when only nine are needed, the tenth bag will have to be sold at a discount sufficient to attract an unwilling buyer, and the price of that tenth bag will determine the price of the other nine.

That has been the farmer's difficulty. The export surplus of his principal crops has had to be sold on the world market, and that market has fixed the price of his entire production. Hence the statement by Mr. Arthur M. Hyde, United States Secretary of Agri- readjustment of world markets to culture, in his annual report that provide outlets for surplus farm goods is essential to rural prosperity in America.

Against this situation the tariff, notwithstanding Mr. Hyde's rather forced espousal of it, has been virtually powerless to help. The farmer has had to sell at world prices and buy at a higher level in a protected domestic market. The exchange value of his products is grately diminished as compared with their prewar value, and therein lies the farm problem about which has been said and written during the last ten years.

The export debenture was proposed as a means of paying an indirect premium on exports, at the exepnse of Treasury revenue, in order that a higher price level might be maintained at home. The qeualization fee had a similar purpose in view, but the loss on exports was ta be paid from an excise tax on the entire crop benefited instead of from the Federal Treasury. It is doubtful either of these plans could succeed at the present time in face of higher foreign tariffs and antidumping laws.

The stabilization corporation sections of the Agricultural Marketing Act had a similar purpose inview, but experience those provisions had not ben satisfectory. Advice to farmers by the Federal Farm Board to restrict production voluntarily has not produced the hoped-for results, nor is it likely to. No farmer can afford to restrict production unless he can be assured that enough others will lo likewise to reduce the total volume of that crop . That assurance cannot he given as long as restriction is voluntary. Add to that the variations in yield due to weather, and the difficulty of controlling production in apparent.

If the surprise problem is to be solved, it appears that a new method will have to be found. One of the most promising sugestions is that the surplus above domestic requirements be direced into some noncompetitive channel, and the loss, if any, charged back to the producers.

So far as food and feed crops are concerned, the export surplus amounts t obetween 300,000,000 and ferm of pork products . A limited amount of that surplus can perhaps continue to be exported at a profit. The balance might well be made into industrial alcohol, to be returned to the farmers themselves for use as motor fuel. It is estimated that the feed value of the residue would pay the cost of distilling, and that the value of the alchohol as motor fuel might amount to perhaps 25 cents a bushel for the grain so used.

There are doubtless other noncompetitive uses that might be found for surplus farm products. At any rate, there is offered an interesting field for research, and it may well be that along this line the answer to the farm surplus problem untimately will be found.

FAIR CROPS, LOW PRICES REPORTED BY U. S. AFTER FARM SURVEY

The farmer situation on Oct. 1, the United States Department of agriculture, bureau of economics said, may be summarized in four words, "fair crops,, low prices."

"The central fact in the season now drawing toward a close," the bureau said, "is that notwithstanding production on a fairly even keel the prices of farm products have suffered a further serious slump.

"Hog production has decreased steadily since 1928, so that at the beginning of this year we had 8,-300,000 (or 14 per cent) fewer hogs than three years earlier. In the first ten months of the current marketing year, five per cent fewer hogs went to slaughter than a year ago.

"Despite all this reduction in supply, the average price paid for hogs by the packers declined from $9.57 last year to $7.43 this year There is evidence that the abundance and relative cheapness of feed grains are stimulating an expansion in hog production.
it became due, more than $1,000,-000 of the money loaned them this year by the government for the purchase of the seed and feed for rehabilitation. The first loans were due September 1.

"The repayment of this large amount before any of it was due was very gratifying, "Secretary Hyde said, "It justifies the faith of fears of foreign buyers that debenture or similar measures would serve to depress rather than increase prices to American producers, told exporters that the price of cotton is now below the cost of production and that it was inconceivable that congress would take any action, the benefits of which would accrue to the buyers rather than the producers of American cotton.

The secretary said he had advised the foreign buyers that "the present administraion of this government has repeatedly opposed the enactment of such measures and made public announcement of its opposition."

Secretary Hyde has also announced from Washington that farmers have repaid, before any of

Summarizing the general production situation, the bureau said that "harvest time finds crop conditions fairly good over most of the east, the central states and the southwest, but during the month much of the south has been too hot and dry.

Information from Washington is to the effect that Secretary of Agriculture Arthur M. Hyde has taken steps to stimulate the export trade of American cotton.

Secretary Hyde, according to dispatches, in an attempt to allay the government in advancing money to the farmers who needed it to tide them over a period when they could not get money elsewhere. The early repayments have been profitable to the farmers also, as it has allowed them to reduce their interest charges."

The last loans to come due this year are due November 30 from the States of Texas, Oklahoma, New Mexico, Missouri, Georgia, South Carolina, Florida, Virginia and others.

Georgia, since January 1, has paid, back $78,965.92 of its loans from three government issues.

FARM NO SUCH PARADISE

Columbus Dispatch: A current magazine contains an article about a farmer and his wife in northern Indiana, which is typical of a lot of such literature now appearing regarding rural conditions showing that the writers know nothing t all about their subject and are either being imposed upon by rural jokers or are simply drawing the long bow in a feat of pure imagination.

This farmer, we are told, owns 160 acres of land which he with his wife's help, farms. He seems to be doing general farming, and also truck farming—pretty busy people, a real farmer would conclude. They also keep cows and chickens and the wife makes butter for the market. She is a good cook, cans fruit, makes jellies, etc., and goes to town three times a week wih garden truck, butter, eggs, bread, pies and cakes of her own kitchen, which she sells from her own booth, and always comes home with about $100 in her pocket.

Let's see how this figures out: Three trips to town a week; $100 profits each time; fifty-two weeks in the year; $15,000 a year from the trips of the little spring wagon to the city. That Indiana farmer, most anyone would say, has a jewel for a wife. She's more. She is a wonder! ....

In the first place, no spring wagon—no 7-ton truck—could haul $100 worth of garden truck at present prices. It is not possible for one woman to do all the work that would be necessary to carry on these various lines of work at home and spend half the day in her booth in town disposing of her wares. No; if this Indiana farmer and his wife exist at all, they probably are working hard, early and late, and only getting a living out of it; not much more.

WILD RICE

Today wild rice provides food for various types of water fowls, but not so many years ago when the Indian roamed over North America, it was one of his staple foods. It was gathered in a canoe, the harvester paddling the panicles as they hung over the craft. (When ripe, the plants drop their seeds at the slightest touch, and so the crop was easily gathered.) The toug outer hulls the Indians removed by charring, after which water was poured in. This resulted in the formation of lye, which finished removing the hard awns and bracts, leaving the kernel.

It is a fine sweet rich, much more tasty than the market variety, but because the seed when ripe drops so earily, it has proved impossible to cultivate with any profit . The southern variety is the "folle avoine" of the early pioneers of Louisiana. Like many other grasses, **Zizania** is an important source of hay, yielding two crops annually. Cattle will eat it greedily when green.

Not only are grasses important for fodder (their place can only be taken by a few legumess), but to man himself they serve as chief articles of food . Nearly all cereals are products of grasses, and likewise most of the sugar except what is obtained from the sugar beet. Certainly, perennial grasses are the true basis of man's oldest known profession, agriculture. Grass to a certain recent French writer is just another name for beef, mutton, bread, or clothing.

Rice which one finds in the market, the common cultivated variety, is of another group. Though still a member of the grass family, **Gramineae**, it is not native to America, but to India and the tropical parts of Australia, whence it was introduced into China and Japan and later into Europe. Quite by chance it was brought into South Carolina in 1700. Since then the United States has gone on record as producing a large person of the world's supply.

She: "Haven't I always been fair to you?"

He: "Yes, but I wanted you to be fair and warmer."

Some have walked within th mire.
Spotless, upright and with honor
May I pass the coming year,
And make glad my Heavenly Father

UNITED STATES DEPARTMENT OF COMMERCE BUREAU OF FOREIGN AND DOMESTIC COMMERCE, WASHINGTON, D. C.

A BRIEF COMMENT UPON NEGRO BUSINESS

Prepared by James A. Jackson, Business Specialist. In charge of the Small Business Section Marketing Service Division

Washington, D. C.—Information in this office reveals that Negroes are engaged as owners in about 30,000 commodity-selling enterprises, and about 70,000 personal-service forms of business, viz., those in which some merchandise is sold in connection with a professional or personal service, as the undertaker, dentist, barber, hairdresser, etc. The oldest known business of a strictly commodity character is a feed store in Washington, D. C., which has been in one family for three generations and is still doing business.

Carded information discloses that there are more than 1500 Negro manufacturers in the country. More than 30 per cent of these are engaged in the production of hair and facial preparations. However, a substantial number are producing commodities which find a market with the general public without regard to racial lines. One, in fact, dominates its field. Some few of the toilet preparation concerns have ventured into the export fields.

The foregoing information is based upon estimates and definite information combined, but is incomplete. The complete tabulation of the Census of Distribution will doubtlessly give a considerably more accurate picture of the Negro in business.

The Small Business Section card files contain the names of more than 600 Negro druggists, 1,100 undertakers, 700 grocers, 300 manufacturers. 35 wholesalers and jobbers, more than 100 dealers in women's wear articles such as millinery, furs, dresses, etc. In all there has been found to be a substantial representation of the race in 183 different lines of business.

The financial interests of the group, such as is not being cared for through the more general agencies include: 28 banks, 68 insurance companies, 82 finance and investment companies, 10 credit unions and 6 farm loan societies. They have 50 building and loan associations listed, though there are known to be more in the country. The funds of about 40 benevolent societies and a score of burial aid associations constitute other sources of financial support.

The Negro is becoming better trained in merchandising through the employment of colored sales people by chainstore managements, independent merchants, and public utilities for service in neighborhoods where the Negro population predominates. This practice has been reported as prevailing in 47 different cities and it is not confined to any particular part of the country. Chicago however, leads with more than 4,100 Negro clerks employed in about 400 different places of business. Durham, N. C., with due regard to population ratio, ranks next. Detroit, Cleveland, and Indianapolis exhibit some examples of the practice.

The Negro is making serious effort to become more familiar with the complexities of business, and he is resorting to cooperative effort to a greater extent than heretofore. This attitude finds expression in 281 local commercial and industrial organizations located in 84 different cities.

The following national associations engage in consolidating effort on a country wide basis in the lines indicated by their titles:

COMMERCIAL ASSOCIATIONS

NATIONAL TRADE BODIES

Associated Negro Press, Claude Parnet, Director, 3423 Indiana Ave., Chicago, Ill.

Association of Beauty Culture Schools, Mme. E. N. Scott, Secretary, 104 East 51st Street, Chicago, Ill.

Colored Merchants' Association, Albon L. Hosley, Mgr., 145 West 41st Street, New York City, N. Y.

National Beauty Culture League, Mme. G. S. Morgan Young, Pres., 432 Beale Ave., Memphis, Tenn.

National Builders' Association, William L. Courtney, Pres., 178 Bailey Street, Atlanta, Ga.

Harmon Foundation, (White Philanthropy interested in Negroes), George E. Haynes, 105 East 22nd Street, New York City, N. Y.

While it is known that the foregoing lists are not complete, they represent a conscientious effort to assemble knowledge that will be serviceable. Perhaps the officials of other organizations or persons familiar of them will provide additions to this list.

In addition to these national bodies, there are nearly a hundred state, tri-state, and district organizations affiliated with one or the other of the national associations.

For the information of those interested this office annually compiles a list of Negro conventions for release after February 1st of each year. These conventions with the fairs constitute very definite possibilities for the introduction of new commodities and the demonstration of products essential to the work of those in attendance at the conventions, or through them to the Negro market as a whole.

Inasmuch as the newspaper is an important accepted channel of approach to all markets, a person giving consideration to the Negro market would be interested to know that there are 144 Negro newspapers published each week, three of which are issued twice each week. There are more than 200 other publications, including a number of generally distributed monthlies and about 10 trade journals. A substantial portion of the monthlies are church and school organs, six being the official publications of Greek-letter fraternities, and more than a score being published in the interest of benevolent societies and lodges. Seven press services, a feature syndicate, and several advertising agencies serve these publications. A list of the publications is available from this office.

Together with the more than 100 fairs and two score food shows and style shows, the newspapers and magazines represent definite approaches to the consumers of the race. These fairs flourish in the states where segregated interest mostly prevails.

There are more than 300 Negro hotels in the country. A list containing the names and locations of 212 of these has been prepared for free distribution.

This office has complete surveys of the Negro interests in a half dozen cities and about 30 smaller towns. Each of these has been made by a reliable agency. This information is for free distribution to interested persons in response to requests for specific data.

The Small Business Section of the Bureau of Foreign and Domestic Commerce is at the service of those interested in such further information pertaining to this group as may be available.

THE APPEAL FOR ASSISTANCE IN THE STUDY OF NEGRO LIFE AND HISTORY

Washington, D. C.—One of the purposes of Negro History Week is to secure more support for the work of the Association for the Study of Negro Life and History. This organization is not endowed, and only a limited number of persons are interested in this scientific method of approaching the race problem in this country. A friend of the cause, however, is now giving the work a dollar for every dollar given by others. This comes as a challenge to the Negro to do something for himself.

The Association deserves support because it publishes a magazine, researches in Negro History, directs studies in clubs and schools, promotes the home study of the Negro by mail, produces textbooks on the Negro for schools and colleges, collects and preserves valuable documents of Negro History, supplies libraries with special collections of rare books on the Negro, and educates enterprising young men for service in historical research.

To enable the Association to carry forward this much needed educational work we are asking every pupil and teacher in the schools of the United States to contribute at least one penny and as much more as possible during Negro History Week. Others in advantageous positions in life are respectfully requested to give larger amounts. The Association is fearlessly telling the truth in fighting the battles of the Negro, and the race should support it. We cannot expect others to do for us what we should do for ourselves.

In spite of its scant resources the Association has done some things which may seem incredible. During the past few years the staff has collected more than three thousand rare manuscripts bearing upon the Negro and deposited them in the Library of Congress. There they are now being used by students in this country and others from abroad in documenting the history of the race. Other manuscript materials of the sort are being added to increase this collection that it may give a new view of the past of the Negro race in order to understand it as it was rather than as the propagandists have portrayed it.

It is not a mean achievement, too, that during the last generation the Association has been successful in publishing seventeen volumes of a scientific magazine, the **JOURNAL OF NEGRO HISTORY**, which is subscribed to by all of the accredited universities of the whites in the South as well as in the North. Heads of departments of history in the universities of Georgia and Mississippi, for example, say that they find this and other publications of the Association helpful in the prosecution of their studies and in the instruction of students. One Southern white scholar states that, if the Association had done no more than to establish this one connection for cooperation in the promotion of the truth, this single achievement would justify its existence.

The reports and monographs of the Association dealing with special aspects of Negro life and history have also been highly evaluated by scholars in this country and abroad. For example, the Association has just received from the History Department of the University of Dublin an unusually liberal appraisal of its productions. The head professor refers to the "Negro in our History," now in its sixth edition, "as a most remarkably effective textbook." The **JOURNAL OF NEGRO HISTORY** is regarded as "clear and succinct with readable articles showing a definiteness of purpose." Of "The Negro Wage Earner" this historian says he knows of no volume on what may be called "Economic History of a class of workers in any English-speaking country, better planned and executed, or more really helpful to the student investigator than this remarkably independent and objective treatise."

The Association renders another timely service in supplying schools and colleges with rare books on the Negro. This particular phase of the work cannot be appreciated unless we remember that during the years of social repression the Negro has been forgotten by the educators of both races. The schools have books on everything but the Negro. When an institution becomes convinced of the importance of studying the Negro it usually finds that it has practically no literature to enlighten and guide the student. The controversal works portraying the Negro as a saint or branding him as the pariah of society are worthless. The students need the truth set forth in books written according to scientific requirements. The Association is supplying such treatises in new or out-of-print form whether published in this country or abroad.

It is significant, too, that the Association has succeeded in awakening such interest in Negro literature abroad. From European Universities and centers of culture like those of England, Germany, Austria, and Czechslovekia have come numerous requests for the publications of the Association, and foreign scholars thus concerned report that they make extensive use of them in instructing their students in social science. Similar expressions come from parts of China, Japan, and Australia where the study of all races seems to be supplanting the idea of concentrating altogether on the achievements and the program of one particular race. These persons and agencies are not only purchasing certain books which appeal to them, but at most of these points they are building up valuable reference collections for more extensive use in the future.

Nothing can do more to continue the effort of discovering the truth about the Negro and popularizing it in the modern world than the education of young men for historical research. For this reason the Association granted this year two scholarships amounting altogether to $2,000 to provide such opportunities for Lorenzo J. Greene at Columbia and for Rayford W. Logan at Harvard, who are completing the residential requirements for the doctorate in history and political science. We need such men to produce treatises setting forth hitherto unknown facts in the life and history of the Negro and also for the development of popular books for children and texts for students in colleges and universities. One writer or several writers cannot supply these needs. We must have scores

of them to provide for the youth a new literature of social science.

Institutions becoming interested in the Negro and having nothing better to use have placed in the hands of the students such pernicious publications as Jerome Dowd's NEGRO IN AMERICAN LIFE, which teaches by inuendo that the Negro is inferior to the white man, and T. JUSTMENT, which upholds a hard and fast line in segregation beyond which the Negro cannot hope to go. Both of these gentlemen, however, are great figures in what we call interracial cooperation, and Negro schools as well as white institutions have used these books to assist them in carrying out the well defined plans of keeping the Negro satisfied in a certain place. Why not help the Association, then, in combatting this propaganda? Whatever is contributed should be sent to C. G. Woodson, 1538 Ninth Street, N. W., Washington, D. C.

PETRIFIED APPLES FOUND IN ALBERTA

Farmer Discovers Fruit While Digging New Well

Olds, Alberta, Jan. 7.—Petrified apples on a petrified branch, broken and plucked from their age-long niche, have been discovered here. Figs and fig leases and palm leaves of the tropical variety have been found in deep formations and in the Bad Lands of the Red Deer river.

Evidence is said to abound of a torrid climate in the swamp lands there millions of years ago and that dinosaurs roamed there. As far south as Cardston, where a lad with a shotgun recently dislodged a dinosaur bone, and in the eastern resents a loss to the race of apart of Southwestern Saskatchewan, many traces of prehistoric reptiles and vegetation have been found.

The high tops of the Rocky Mountains have given up shellfish and other sea creatures of an ancient period, and deep in the mines at Canmore fossilized ferns and petrified fish have been uncovered.

The apples and the apple branch, discovered as a well was being dug by a farmer near here, are the first ancient fruit species found in the province. Awaiting the arrival of Calgary Museum Officials, the well has been refilled with earth and the area marked for excavation. The branch and apples were badly damaged through lack of care when taken from the ground.

HORSE THOUGHT RABIES VICTIM

Ophiem Has Another Scare When Man Is Forced to Shoot Animal.

Ophiem, Ill. —Strange behaviour of a blind horse belonging to Eric Streed, after being slow and gentle for several years, suddenly became so vicious and unruly that it had to be shot, is believed by Ophiem residents to be another indication that hydrophobia danger is not over in this locality.

The blind hourse first became unruly Wednesday evening . It ran about, heedless of the fact that it could not see where it was going, and jumped and kicked. Mr. Streed managed to tie it in its stall and give it medicine. The next day, however, it was chewing and bitting the manager and apparently was dangerously vicious. Mr. Streed, taking no chances, shot the animal.

Several weeks ago an Ophiem man died from rabies contacted through the bit of a stray dog. Since then scores of dogs in this locality have been vaccinated, and other precautions have been taken. Although there is no official proof yet, it is believed that the horse's strange behaviour was caused by an attack of the dreaded disease.

Mr. Streed is being given immunizing treatments and buildings on his farm are being disinfected.

AGRICULTURE IN MARYLAND

By Chas. E. Hall
(In Afro-American)

The largest business investment of Maryland Negroes is in the ownership of farm land and buildings, but this investment showed a drop from $7,280,262 in 1925 to $6,706,219 in 1930, which represents a decrease during the five years of $584,043, or over one-half a MILLION DOLLARS. In checking up these returns we find that there was a decrease of 1,165 colored farm owners, and a loss to the race of 12,192 owned acres.

The only counties that did not show a decrease in colored ownership were Prince Georges and Queen Annes. Alleghany, Garrett, and Montgomery counties remained as in 1925. In the number of acres owned there were slight gains in Alleghany, Caroline Carroll, Frederick, Howard, Prince Georges, Queen Annes, and Talbot counties, but these gains were insufficient to offset the acreage losses inthe other counties. Owned acres fell from 120,127 in 1925 to 107,935 in 1930, which represents a loss to the race of approximately NINETEEN SQUARE MILES of land in a state where ten or fifteen years hence the man who owns a productive farm will be able to live like a prince.

In connection with the agricultural situation in Maryland it has been suggested that our group can ill afford to sustain such losses in this important state, over whose splendid rail, water, and public highway transportation facilities farm products can be easily and quickly transported to such great nearly market as Baltimore, Washington, Wilmington, Philadelphia and New York with their millions of people absolutely dependent upon the outside world for food. It might not be a difficult undertaking to organize in Baltimore some kind of a co-operative financial group, a Consumers' League or what-not to connect up with the nearly 3,000 colored farm owners in the state for the purpose of better marketing their products, also for the purpose of selling to other colored farmers of Maryland, or elsewhere, all farm land that is offered for sale by members of the group. There are a number of ways to get in touch with the key colored farm owners in each county, chiefly through church and fraternal organizations.

COW ON WILD ADVENTURE

Making a fight for liberty, a cow upheld the honor of the Hereford breed when it broke out of a livestock market in Hereford, England. First it tossed and injured a drover. Then it rushed out into the street, which happened to be crowded. As the throngs scattered the cow knocked over a woman cyclist and continued its mad course. It entered a lawn tennis court in the Herefordshire Hospital grounds, terrifying men and women patients, escaped from a policeman who tried to shoot it, regained the street and, after being three hours on the rampage, collapsed near the center of the town.

TELLS HOW TO KILL COMMON PLANT PESTS

St. Paul, Minn., —To help gardeners and fruit growers protect their plants against insects, A. G. Ruggles, state entomologist and professor of entomology at University Farm, has outlined the principal control measures for some common pests.

His suggestion for the control of the cabbage or radish maggot is as follows: Dissolve one ounce of corrosive sublimate in warm water in a wooden or crockery container and dilute to eight or ten gallons. Pour about 1-2 cup around each plant next to the root, three to five days after planting. Two or more applications should follow at weekly intervals.

Cucumber beetles may be controlled by the following proceedure: Dust the plants with a mixture of one pound of calcium arsenate to 20 pounds of gypsum or land plaster. Apply as soon as the plants are up and dust often enough to keep the leaves covered.

WANT A CHEAP HORSE?

The offer of good horses for sale at 75 cents or $1 a head is one of teh features of the economic depression in Czecho-Slovakia and other countries of eastern Europe. Sheep are being sold at times for less than 65 cents, but such is the poverty of peasantry that it is hard to find buyers.

SAVE Something!

-:- YOU OWE IT TO YOURSELF -:-

Join Our Dollar Per Week Savings Club Now Open

Every Citizen Is invited to Cooperate in a Definite Movement Where they Themselves will be the Recipients of all the Benefits Both Principal and Interest

Send $1.00 every week to the Citizens Savings Bank and Trust Company, at Nashville, Tennessee, either in cash or post office money order, or you may send your personal check, if it is certified. This will open a savings account on which we pay interest twice a year. It will make you a member of our "Save a Dollar a week Club." Every member of the club, who qualifies by sending the regular amount, will receive special recognition and an acknowledgement of their remittance when it arrives. You can deposit more than $1.00 per week if it is convenient. No matter where you live, in the United States, Canada or Mexico you can take out membership in this savings plan. The Citizens Savings Bank has been operating for twenty-seven years. Its capital is fully paid. Its officers and directors represent men and women who are nationally known. "Procrastination is the thief of time," so do not wait. Open your savings account at once.

ed by Dr. E. L. Newcomb, showed that leaves grown here were more active than most others, the bulk of which came from Europe. The United States war department promptly arranged to take the entire output of the college and in this way the potency of Minnesota digitalis became known.

Meanwhile, professors at the university urged Mr. Smith to grow the plant and at the conclusion of the World War, he did.

"After considerable experiment," Mr. Smith said, "I purchased a farm by the shores of Lake Minnetonka, near Holdridge, and planted two acres of digitalis in a rich, chocolate-colored soil." The venture was a success. Another farm was acquired at Vancouver. And Mr. Smith's enterprise assumed international proportions.

The property at Lake Minnetonka was named Foxglove farm, Machinery was bought, a sprinkling system installed, a drying shed erected and a laboratory was opened in Minneapolis for final preparation of the drug. It was a complete organization, equipped to tend the plant in every sage of its life from seed to the ultimate capsule.

An entire year is required to produce marketable digitalis.

Troubles on His Farm, Too.

"The seedlings are raised in a greenhouse from February to May," Mr. Smith explained, "and are set out in the open fields in May and June. Careful experiments have shown that the leaf gains in potency as the summer wanes, reaching its maximum strength in September."

Because his farm is unique, Mr. Smith has received inquiries about digitalis cultivation from many persons who believe this crop would afford a refuge from the financial woes of wheat, potatoes, and livestock. But the digitalis farmer has his troubles, too.

"No one outside the business would realize the immense amount of anxiety connected with a work of this kind," he said. "Best laid plans may be disarranged by late springs, early frosts, storm, rain or hail. Hence, it is easy to see that cultivation of a useful and potest drug is not as easy a matter as growing potaotes.

"If I had only gone in for potatoes," sighed Mr. Smith, "maybe I would have made a lot of money."

But being a chemist, he went in for digitalis. That left potatoes out.

L. A. HAWKINS RECOMMENDS

(Continued from Page 1)

then applying the fertilizer in the Spring before harrowing or raking. Fall plowing also exposes grubs and insect eggs to the weather and birds. A great many of these garden pests may be destroyed in this way.

By deep Fall plowing, many weeds will be turned deep enough to prevent their germinating in the Spring, thus doing away with a lot of weed trouble. In heavy soils, Fall plowing improves the physical condition, as the lumps turned up will be broken and pulverized by weathering during the Winter.

In regions of snowfall or where soil blows it is better to leave the rough plowed surface to collect snow and prevent drifting. Where the soil surface is hard, discing before plowing will be worth while, as the soil that is turned under will be fine. In sections of light rainfall, but where there is snow in the Winter, Fall-plowed land will absorb more moisture than where the surface had not been broken.

Early Planting for Early Harvest

The earlier vegetables can be used from the garden, the greater the value of the garden. Fall plowing enables earlier planting in the Spring, as plowed land dries out more quickly than unplowed land. This is important, as we want as long a harvest period as possible. As soon as the ground has dried out enough in the Spring, disc or harrow thoroughly to start the seedbed. Garden seedbeds should be deep, fine, and firm for best results.

Get the ground manured and plowed in the Fall, and the next Spring prepared a good seedbed as early as soil and weather conditions will permit in order that early vegetables may be planted on time. Don't wait until too late to start the garden and suffer the consequences of delay through not having a bounteous supply of vegetables to eat.

Make plans, now for a good living next year, regardless of conditions.

DEPLORABLE CONDITIONS

(Continued from page 1)

which I could get back my furniture and the food I had stored for winter? I have no money with which to put in a suit against him. If you can't help me please get a job for me somewhere and send me transportation for myself, wife and four year old child and I will work and pay you for the transportation wherever it may be."

Another:

"Many of our members are being put out of doors. Some are being tied up to make the 1932 crop who don't owe their landlords more than the price of a twelve pound sack of flower. 200 Members of my Unit are depending on me to find homes for them. I tried to get a hundred men to raise four dollars each to enter the.... ..plantation but only eighteen could raise it. The landlords are hard on us here bu that don't stop us."

Another:

"I was born a slave and know slavery conditions but present conditions are harder than they were then. We were furnished rations from Jan. 1st. to Sept. 1st. and then we were given from three to five dollars per bale to gather crops. We made plenty of cotton but have had no settlement. Our condition is deplorable as we are both barefooted and naked and it has been raining here for three weeks; the white farmers don't know nothing about the Constitution. In reference to the Red Cross,—we have been loyal to it but have received nothing from it as all was given to poor white people."

CAR LOAD SWEET POTATOES

(Continued from page 1)

superintended the loadings and report that 100 bushels made up the lot that was consigned to a Chicago market.

The colored farmers of Owens Wells vicinity numbering around twelve or fifteen pooled their holdings in this shipment and made up this lot of the famous product known to every Southern home. It is an initial step by them in selling to northern firms and if the price proves satisfactory, it is learned that more will be made as the surplus of this crop will afford a nice income to raisers of this famous edible.

It is also stated that the colored farmers of the Lexington territory are planning on a cooperative shipmen of sweet potatoes to a firm in Tennessee, having listed between five and six hundred bushels at present, and it is expected when the time arrives that a carload will be collected.

If these shipments turn out profitable for the colored farmers it will open an avenue of income to thousands in Holmes County, as sweet potatoes of the finest kind, perfect in size and flavor, are raised in this section and the county boasts of some of the best potato growers in Mississippi.

Cooperative shipments of all kinds of farm products are going to be the only means of profitable farming in the future, it is freely stated, and both white and colored farmers would do well to begin the practice of perfecting an organization and establishing outlets for the many products that are raised on Holmes county farms that will bring in money for what has heretofore been a loss in surplus, unless consumed at home or sold at a loss locally.

TALKS TO COLORED FARMERS

By Leon R. Harris, Secretary, National Federation of Colored Farmers.

I receive a good many letters from farmers and have just about gotten wise enough to judge the age of the farmer by the letter he writes. Most of the old farmers write "fussing letters" and most of the young farmers write "whining letters.." These letters tell me there is something wrong somewhere.

The "fussing letters" bring me a great deal of pleasure and satisfaction. I admire a man who will fuss. It is proof that he is alive, is thinking, is working, is courageous, is dissatisfied and is going to do his best to improve his condition and circumstances. I don't like the "whining letters." I am afraid those who write them have lost their nerve and are expecting of trying, are discouraged, have lost their nerve and are expecting others to pick them up gently and PUT THEM where they want to get. I feel sorry for the whiners for they are bound to meet disappointment.

The old farmers take chances. They buy farms and work and pay for them. They back up their schools, churches and farmers' organizations and get along fairly well with their neighbors . They are shrewd enough to save something for a rainy day and are smart enough to keep what they earn and save. They love their farms and their crops, their cows, pigs and orchards. They talk about these things they know something about. They help out their neighbors when in need without excepting money as pay. They rear a half-dozen or more boys and girls and teach them how to work and really live. So nowadays, these old farmers fuss. They rise in wrath when they know things are going wrong. They prove they are real men.

The young farmers are afraid to take chances. They stick close to home, stay where they are and complain because the good things they see others enjoying do not come to them. They talk about prohibition and fine new cars and war and evolution and things they know nothing about. They are afraid to give away anything—to be generous— for fear they will not get it back a hundred-fold. They bring two or three children into the world and fret because they fear they will not be able to send them to college to become lawyers and doctors. The young farmers "whine." They complain. They talk about advantages they should have and act like babies.

When a farmer loses his nerve he is down in the mud and can see nothing but mud around him. When he is afraid to take chances he is bound to sit still or go backward. When he is afraid to give he will never GET. A farmer will never become independent who is always looking for the other fellow to carry him along and help him out.

Stop whining. Start to fussing. Open your eyes and look for the good things and the things you might have that are right where your are. If anyone else around you has those good things, you can get them too. Go after them. Make a start. Take chances. But look before you leap and plan and think for as far as two years anyhow. Most of us only plan for one season or for one year.

Use Sunday School Catechisms
FOR THE LITTLE ONES
Select one of the three---First, Easy Lesson Primer 6c;
Second Child's Bible Question Book 5c;
Third Baptist Sunday School Catechism

After thirty-three years of actual Sunday School experience, after thirty-three years of developing a service for the Sunday School forces, we have been convinced that the Sunday School Catechisms, edited, published and printed by the National Baptist Publishing Board, will give help and instruct the children in a way far more advantageous than the Picture Lesson Cards. At the same time, they will save the Sunday Schools money, because there are thirty-two pages in each of these Catechisms, with illustrations, Bible questions and intensive study calculated to develop their minds. These Catechisms are described and priced on the order blanks.

In preparing your order for the next quarter, and from now on, give attention to the Sunday School Catechisms, substitute them for Picture Lesson Cards. We recommend them. We endorse them. We specialize in them.

SILENCE NO MORE

(An Editorial By Leon Harris)

We have faith in everything American because we love our country. We have faith in American humaneness—in American Christianity—in American honor—yes, even in American justice. We believe there are more good Americans than bad Americans just as we believe there are more good Christians than bad Christians. We believe Americans will not let WRONG trample RIGHT in the dust—will not let INJUSTICE triumph over JUSTICE—will not let MISERY live long where there should be HAPPINESS.

We therefore ask all true Americans to look with mercy and compassion on the plight of thoussands of their fellow-citizens and be, at this time, what true Americans should be, and do, at this time, what true Americans should do.

We can keep silent no longer. In this crisis, SILENCE IS A SIN! Thousands of Negro tenant farmers and small farm owners—good Americans all—are wallowing in the slough of subject misery. You Americans, white and black, who have brains and money and power,—open your eyes and see—open your ears and hear—and give unto the least of those, thy brethren, a chance to live. THEY ASK NO MORE!

Some thirty-odd thousand Negro farmers of America have banded themselves together in an organization known as the National Federation of Colored Farmers, Inc. Organized in Units, scattered throughout sixteen states, they have been persuaded thus to band together that collectively they might develop strength enough to secure relief from unbearable conditions. Organization and co-op-

COMMUNICATION FROM LEXINGTON

American Red Cross Chapter from Holmes County

Lexington, Miss., January 22, 1932—To Whom It May Concern: —This is to certify that on January 22, 1932, the Holmes County Chapter of the American Red Cross accepted a gift of sweet potatoes from the National Federation of Colored Farmers, Inc. This matter was directed by C. C. Richardson and J. H. Hayes of Lexington, Miss. The amount of potatoes is estimated at 159 bushels, more or less.

The Units of the Federation contributing and amounts are as follows:

Mt. Olive, 43 bushels.
Holly Grove, 29 bushels.
Galilee, 30 bushels.
Lebanon, 18 bushels.
Good Hope, 10 bushels.
Gages Springs, 11 bushels.
Sweet Home, 6 bushels.
Spring Hill, 8 bushels.
Mt. Zion, 4 bushels.

This shipment of potatoes except one sack of two bushels was sent on this date to the American Red Cross at Sumner, Miss., for the relief of the flood sufferers of that section of Tallahatchie County.

(Signed) J. E. Stephens,
Chairman Holmes County Chapter.

(This is the car of potatoes mentioned in headline, last issue. The car shipped co-operatively by the Owens Wells Unit, was sold in Chicago through the offices of the N. F. C. F.)

Farmers' Co-op Business Large

SALES OF HENRY COUNTY SUPPLY COMPANY DURING YEAR TOTAL $98,314

Cambridge,—More than 60,000 Illinois farmers every day of the year purchase in excess of $15,000 worth of petroleum products through the forty-seven county service companies associated with the Illinois Farm Supply company, L. R. Marchant, the manager, reported at the annual meeting of the farm bureau purchasing agency in Bloomington today.

With an annual business of more than $5,000,000 the company has set a new mark in this field of agricultural cooperation.

The Henry County Supply company, one of the forty-seven farm bureau companies cooperating in centralized purchasing of oil and other farm supplies, did a total business of $98,314.24 during the last year. The local company began operating as a part of the state organization in 1929.

The state farm supply company began the year with thirty-six member companies, operating ninety-two bulk storage stations and 243 truck tanks. At the close of the period forty-seven companies were in operation with 120 bulk stations and 351 truck tanks.

New counties in the state organization are Greene, Champaign, Iroquois, Jo Daviess, Macoupin, Monroe, Randolph, St. Clair, Step-

HOW TO SECURE SEED LOAN FUNDS

BULLETIN FROM HEADQUARTERS

National Federation of Colored Farmers Quotation

NEWS BULLLETIN

National Federation of Colored Farmers Inc., Main Offices Vincennes Hotel, Chicago, Ill., Feb. 15th 1932—To be read to members in meeting.

We give herewith a clipping taken from a recent edition of the Chicago Tribune, giving regulations governing the administration of loans to be made to farmers this spring, by the Secretary of Agriculture.

Chairman of all units are urged to see that this bulletin is read and explained to the members, in order that they may fully understand.

Our next bulletin will give further information regarding these loans. In the meantime, officers of all units may write this office relative to any part of this announcement that is not clearly understood.

U. S. WILL LIMIT CROP LOANS TO $400 TO FARMER

Money to come from fifty million Fund

Chicago Tribune Press Service. Washington, D. C., Feb. 11th. (Special)—Regulations governing

(Continued on page 8)

Garden Topics

By Floyd Bralliar

Plant gladiolus bulbs for the first early bloom at once. One can hardly get these bulbs in the ground too early. We prefer planting them in the vegetable garden or in some other out of the way place for cut flowers only. Plant the bulbs about three inches deep for the early crop and set them three or four inches apart in the row. If the rows are to be cultivated by hand, they need not be further than eighteen inches apart but we prefer two feet. When we grow them as a cash crop we plant thirty inches apart so they can be plowed with a horse, and set the bulbs thick enough in the row to touch each other.

It will pay, unless the soil is unusually rich. To put cotton seed meal, bone meal, or a potato grower such as is handled by all seed stores in the bottom of the trench and cover it an inch before planting the bulbs, Spread this at the rate of one pound to every twenty-five feet of row.

Cultivate as you would potatoes and cut the flowers as fast as the spikes show the first bloom. In cutting do not remove the foliage from the plant if it is desired to have the bulbs grow and be fit to use another year.

For a second planting plant gladiolus bulbs about eight inches

SEC'Y OF AGRICULTURE AT WASHINGTON GIVES PLAN

Government Regulations Governing Crop Production Loans for this Year

The regulations governing crop production loans in 1932, to be made by the Secretary of Agriculture under the provision of the Reconstruction Finance Corporation Act authorizing the allocation of fifty million dollars for these loans, were made public by Hon. Arthur M. Hyde, Secretary of Agriculture late last week.

These regulations provide that loans may be made by Representatives of the Secretary of Agriculture, in all states except Connecticutt and Pennsylvania, to farmers who cannot obtain crop production credit from other sources. The amount of each loan will be based on the acreage of specific crops to be planted by the borrower in the spring of 1932 and on the requirements of individual borrowers for supplies necessary in the production of these crops. For instance, some borrowers will have feed for work stock, but will need to purchase seed. Others will have seed but need funds to purchase fuel and oil for their tractors.

The maximum loan to any borrower will be four hundred dollars and the total of loans of the ten-

FLASH EXTRA

(By wire to Modern Farmer)

Offices National Federation of Colored Farmers, Chicago, Ill., March 10 1932—A large plantation owner in southern, Mississippi, who has more than three thousand acres under cultivation, has instructed his manager to employ no tenant farmers, share-croppers or hired hands this season who are not members of the local Unit of the National Federation of Colored Farmers. Says that such members are the best workmen obtainable and that he wants to help them all he can. Will give them decent contracts and make prompt settlement at the end of the season. It is believed that the best and largest planters in adjacent communities will also employ only Unit members this year.

A large corporation in Memphis, Tenn., has agreed to let members of Units of the N. F. C. F. have a 2600 acre plantation in Mississippi at a rental of five dollars per acre. Operations will be under members own managements and control.

PERENNIAL FOOD PLANT PAY REAL PROFIT IN GARDEN

When you start a vegetable garden this year select a place for those few vegetables which are permanent features of the garden. The two important ones are asparagus and rhubarb, the former far the more important. It will last a lifetime if properly cared for.

Only a few clumps of rhubard will be needed and they may be planted in any convenient corner of the domain, as their season is brief and use limited. A third perennial is the multiplier onion, which gives the earliest of all young onions and may become a garden standby and obviate the planting of sets each year.

The home asparagus bed is one of the real economies computed on a cash basis that the vegetable garden can provide. Universally liked, its purchase in the course of a season means real money. A supply of plants sufficient to establish a big bed costs less than two or three bunches of the vegetable in the market. Once established you will always have a supply.

Select a spot for an asparagus bed. If no space seems convenient to give up for this purpose the asparagus can be planted in a row slung along a boundary line or fence and utilized as a hedge of no mean ornamental quality later in the season.

Asparagus requires soil as rich and deep as you can make it at the start. The roots require deep and careful planting to become established with reasonable speed. They should not be closer than two feet apart in the row with rows three feet apart for their best development. This plant is a heavy feeder. Dig a wide hole a foot deep and from a mound six inches tall in the center of the hole. Set the plant on this and spread the roots out like the spokes of a wheel. Fill in the soil and firm it well and the asparagus bed is started. Do not start cutting until its second season.

The new rust proof varieties originated by the United States department of agriculture are excellent types for the home garden. Conover's Colossal and Bonvallet's Giant are other staple and standard varieties. Plan to start an asparagus bed this year. You can look over the premises and select a convenient place for it now.

The bed should be started as early the ground can be worked to get the plants established and in vigorous growth their first season.

Minnesota's poultry business is placed at more than $6,000,000 annually by the state university.

SUPPLY AND DEMAND STILL IN THE SADDLE

That the old law of supply and demand has not been repealed is well illustrated by A. E. Prugh of the Bureau of Agricultural Economics Department of Agriculture, who comments on the fall lettuce deal in Arizona in the following words:

'The 1931 fall lettuce deal in Arizona furnishes just one more proof that you never know what will happeu next in the produce industry, but lettuce selling as high as $3.75 per crate at shipping point in December in a period of one of our worst business depressions demonstrates that now and in the centuries to come, the one irrevocable law of marketing— the Law of Supply and Demand— will control economic destines and continue to write profit or loss into the records.

"Even when business skies are the darkest, provide a commodity such as lettuce that many people really want, and they will pay any reasonable price to get it. They will buy as cheap as possible, however, depending on available supplies.

"The market price of lettuce, like that of other fruits and vegetables, is comparable to a piece of rubber. Crush it down to the depths with the weight of overproduction, then remove the burden, and it will fly back to the heights with a resiliency that is surprising."

FOOD AUTHORITY EXTOLS VIRTUES OF THE POTATO

Ithaca, N. Y., Jan. 29. — The plain, unassuming potato might blush or burst if it could know its virtues as a food as extolled by Prof. E. V. Hardenburg of the New York State College of Agriculture, who quotes the opinions of several authorities to show the potato as one of the most healthful and cheapest of foods.

Residents of the United States eat about three bushels of potatoes to the person each year, less than for any other country in the north temperate zone, where the crop is grown commercially, he says.

The potato possesses certain qualities that tend to maintain health. The human blood is naturally alkaline, and when normal alkalinity is maintained, the resistance to disease is high. Many of the ordinary diets load the blood with acids and the result is seen in the vast number of persons who are chronically tired. The potato, he says, is one of the most highly alkaline foods and also one of the most easily digestible. Cooked potato starch digests in one-sixth of the time required for the digestion of oatmeal, and in less time than any cereal.

"The typical bill of fare," he says "is deficient in vitamin C, the scurry prevention, vitamin, which the potato supplies in aboundance," Howe attributes the almost universal permature decay of teeth to the lack of this vitamin.

McCarrison and others hold that this vitamin deficency is the leading cause of much of the semi-invalidism in every community. Adults, they say, should eat one pound of potatoes daily. Infants of six months may be given potato puree, especially as a protection against acidosis, which often manifests itself in children as cyclic or regularly recurring vomiting.

Many persons do not eat potatoes because of their alleged fattening properties. This prejudice against the potato has little scientific foundation, he says. The potato, like other foods, is fattening when eaten in quantity more than sufficient to meet the body needs, and it is no more fattening than any other food that is so rich in starch.

DROUGHT KILLS ZULU CATTLE

Twelve thousand cattle have died in the drought which has swept two districts in Zululand. Natives are reported to be showing signs of desperation, and are committing wholesale thefts of sheep. The drought has been so severe that practically every sign of plant life has disappeared.

DOG DISLIKES FALSE TEETH

Because a dog took out its false teeth every time it got round a corner he had to be fitted with a gold bridge, declares Professor Bobday of the London Veterinary college. Another dog he says, lost his glass eye so often that he was allowed to wear it only in company, and a third used to drive off other dogs with its wooden leg. Professor Hobday has pictures of the cannies to confirm his stories.

FRESH VEGETABLES ARE ECONOMY, ALSO BEST ONE CAN FIND

Vegetable gardens in the home grounds serve two very different purposes— a substantial economy and a luxury. Vegetables vary widely in quality when they come to the table. This is dependent on their culture in the first place, their freshness, and the method employed in cooking them.

High quality is dependent chiefly on freshness. This can be obtained certainly only in the home garden. Vegetables with a large sugar content, such as corn and peas, lose it through natural chemical action within a few hours after they are taken from the plant Sugar will have to be added to them in cooking to bring back a semblance of their natural flavor. It is never quite the same delicious flavor.

Fresh pulled radishes are crisper and snappier than those which have stood in the market and which must be iced and soaked in cold water for some time before serving to bring back a semblance of their original quality. Fresh lettuce is of finer quality than lettuce from the market, no matter how well refrigerated.

The humblest garden can grow fancy vegetables as well as that of a millionaire. Seeds of the higher quality vegetables and which may need a little extra care to bring the plants through successfully can be bought as cheaply as the staples.

Commercial growers are conservative. They cannot afford to experiment much with new varieties. They grow the reliable old timers that they know will thrive and produce abundant crops for market. A home gardener can make experiments for improved varieties at little loss even if the vegetable tried does not pan out. In the majority of cases they will prove to be all that is represented for them. They have been given severe and scientific tests before being placed on the market.

Each seed merchant has his special lines. They are worth trying for the production of better quality vegetables, production of better quality vegetables. There is a great variety of peas, sweet corn and tomatoes offered each year. The individual test may be consulted. Some persons prefer a certain type of tomato. Others prefer another. It is an easy matter to select the quality desired.

Grow vegetables as a luxury and for superior quality that can not be obtained in any other way. Make it a point to grow better vegetables this year than you did last.

HOME CANNING OF GARDEN PRODUCTS IS BACK IN STYLE

With economy being the general watchword, many a garden owner plans to can as much from the home garden as possible. The vegetable garden provides an abundance of vegetables most useful for the purpose are beans, corn peas, and tomatoes.

The wartime vegetable economy program disseminated knowledge of efficient canning widely. A newer generation will find these directions available with more modern improvements in technique in cookbooks, at cooking schools, and on inquiry for government bulletins, and from newspaper cooking departments.

Plan to grow an extra supply of each vegetable needed for canning in addition to the daily needs for family consumption. Each vegetable must be canned in its season which distributes the work well over the summer from July on.

Many of the common vegetables, such as beets and carrots, are now canned by the big canning industries. They are more conveniently and readily stored by the housewife, particularly in urban communities, canned and ready for use than in bulk where cool cellar facilities are lacking. All of these vegetables can be home canned if proper methods are used.

Begin collecting recipts for canning vegetables with directions for the proper method of cold packing or whatever method is deemed best. With a garden growing in the home yard the house may be well stocked with canned vegetables for the coming winter.

Some of the vegetables products may be dried. Corn was dried in the older days and still is so handled and makes an excellent dish for the winter months, sugar being added when it is cooked.

It is a simple matter to grow the seasoning herbs and dry them for storage such as sage, thyme, marjoram and others which are always needed for the stuffing of fowls and the flavoring of soups and stews. The leaves of celery and parsley give a much stronger flavor dried than they do when used fresh and given. Cans of dried parsley and celery leaves are a culinary convenience when recipes call for the fresh vegetable.

UNITED STATES USES 110 FOOD PLANTS

(Christian Science Monitor)

Washington, Feb. 15— For every two acres of crops it takes to produce food for an American, it takes only one acre for a German, one-half for a Chinese and only one-fourth an acre to feed a Japanese, according to Dr. O. E. Baker, economist of the Department of Agriculture.

These differences in the acreage of crops needed to feed one person are due principally to differences in diet, Dr. Baker points out. While most Orientals during all their days consume scarcely anything but rice and a handful of other products of the soil, there are approximately 110 kinds of vegetables now listed in the tables of American food material prepared by the Department of Agriculture.

The producing power of the soil in the various countries is also an important factor in the land area required. The reason twice as much land is necessary to produce food for a Chinese as for a Japanese is because crop yields are much higher in Japan.

ON THE FARM

"What does your father do when one of his horses is ill "

"Do you mean just unwell or very ill?"

"Very ill. Why do you ask?"

"When a horse is just unwell, dad gives it medicine but when it is very ill, he sells it."

GARDEN REDUCES ONE'S GIRTH; ALSO PROFITABLE

Physical training experts charge around $50 a month or more for courses of treatment to reduce the human figure to proper proportions and vigorous health. You can do better with a garden. You can get all the bending, pushing, pulling and flexing of muscles necessary or that you will get in an hour with a physical culture instructor in attending a garden daily and without the consciousness of irksome routine.

The garden will not give you a bath or a rubdown with which the physical culture expert finishes off the day's treatment. You will have to do that yourself. The exercise, out in the open air and sunlight, will be vastly better and worth more money, and there will be something to show for the work besides a record of weight.

In addition to the healthy exercising necessary in conducting a garden, the produce of the garden is essential in a properly regulated diet. Vegetables must be depended upon to give the various vitamins without which robust health and condition can not be maintained. Every vegetable in the garden is a vitamin plant. It is also a storehouse of various mineral salts necessary for maintaining healthy muscles and blood streams.

The vegetable garden is a good family doctor, faithful, reliable and always at hand. Bending and stretching over the rows of vegetables is an excellent exercise for the reduction of a "German goiter." It will shrink to a obstrusive midriff in the course of a few weeks. Green vegetables are not fattening and may be consumed without fear of putting on extra poundage.

Green vegetables in the spring are worth gallons of the so-called "spring tonics." The basic idea of the spring tonic was correct. It was designed to correct deficiencies of diet during the winter months at a period when green vegetables were not available in the winter months as they are now.

Instead of a spring tonic green vegetables the year around are prescribed for general upbuilding. Not until science discovered these mysterious substances, the vitamins, not yet definitely identified, was the need for tonics scientifically explained. It is now known that rundown conditions are very often due to lack of vitamins in the diet. A vegetable gardener will not be short on the vitamins he needs.

PASSING THE BUCK

Los Angeles Times: When some folks pray they always bring up a lot of trifling things which they could take care of themselves if they weren't too tired.

If you believe in peace and you preach peace, do that thing which will permit its realization.— Alfred E. Smith.

ATTENTION COLORED FARMERS

The National Federation of Colored Farmers is receiving hundreds of letters from Colored farmers requesting all kinds of aid and information. We are willing to do everything we can for all the Colored farmers of America. It costs money, however, to maintain offices and our expenses are becoming so heavy that we are compelled to discontinue supplying information to those who request it who are not members of the Federation. If you have faith enough in the organization to believe that it can aid you, then you should be willing to join it and help support it. Isn't that so?

Several County Units have organized and elected officers but have not sent in their membership dues. These units are eligible to membership in the Federation until dues are paid. Be helpful. Co-operate. Pay up. "All for each and each for all "

WE MAY BE ABLE SOON TO CONSUME VITAMINE TABLETS

Perhaps the most important investigation now being conducted in the name of science is the search for "pure" vitamins, according to the Omaha World Herald. Two of the alphabetical series are already reported isolated and the hunt goes merrily on for the other four. Or is it today?

At all events it is safe to predict that A, B, C, D and E, and perhaps F, G, H, I, J, K, and L, will one day yield their secrets. When that happy times comes we shall be able to carry our day's supply of vitamins in our pockets, munching them like salted peanuts while we stroll down the street.

And if that can be done with vitamins, why can't it also be done with mineral salts, enabling us to take, in perhaps two or three capsules, a day's supply of iron, copper, calcium, iodine and all the other earthly elements necessary for the proper functioning of human interiors? That would reduce normal dietary demands to the one requirement for roughage —a demand which is adequately provided for by appetite.

Think of what that would mean to human happiness! Once more we would be able to eat with relish those delicious foods which have been spoiled for us by the semicompulsion of dietetic advice. Without police authority, repugnant to every good American, "healthful" foods might again become attractive to our palates, by the merit of their flavor or succulence.

Take orange juice, for example. The oft repeated phrase, "Now you must finish every drop of your orange juice," must inevitably produce a race of orange haters in America. It has become a medicine, and it is not in human nature to like medicine. Yet a brief generation ago, when vitamins were unidentified agents of good, orange juice was one of Nature's finest delicacies. Diamand Jim Brady, probably the most capacious gourmet the republic has ever known, drank literally quarts of it every day. His servants placed a huge decanterful on his table for every dinner, and all through the evening, while his friends drank their wines, Diamond Jim guzzled orange juice. He died without knowing that California's gift to the world had prabably prolonged his life many, many years.

So it goes with many other foods. Milk was once consumed for pleasure. Now no one, sentenced to drink it, would think of enjoying it. Lettuce, whole wheat, tomatoes, raisins and sauerkraut once had their enthusiastic devotees. Now they are becoming just so many flavorless vitamin-carriers. In the old days there were even people who ate spinach for pleasure. Try to find one now.

More power to the scientists. And after they have found out how to feed us pure vitamins perhaps they will find a means for internal administration of ultra-violet rays so that a day out of doors, in the sunshine, may again become a pleasurable experience, not an experiment on therapy.

FIND FREAK CHICKEN WITH 1—POUND LIVER

Rock Island— Andy Lewis, Fort Armstrong hotel chef, discovered a freak chicken this afternoon. It had only one heart, lungs and a one pound liver in its abdomen. The usual weight of a chicken's liver is two ounces. Before being killed the chicken was only slighty deformed.

COTTON'S VICIOUS CIRCLE

(From Memphis Commercial-Appeal).

An Associated Press Staff writer, after studying the story of cotton as the records tell it, concludes that there will be widspread acreage reduction this year and next and that the price of cotton will go up smartly. Records of the Department of Agriculture and the New Orleans Cotton Exchange for 40 years show that there have been nine bumper crops of cotton produced planting, with the invariable crops just before depression started and two in normal times. Following years of overproduction have been invarably years of reduced planting, with the invariable consequence that cotton went up in price. In 1920, for example, a 13,000,000 bale crop caused a movement toward acreage reduction which was so successful that the acreage in 1921 was 40 per cent less than in 1920. Because of this effective acreage reduction the price of cotton was as high as 31 cents a pound in 1915.

The vicious circle is inescapable, however. The fancy price of cotton in 1923 was so attractive to farmers that they over-planted the next year, and kept on over-planting until they produced the tremendous total of 17,977,000 bales in 1926. Again cotton went down in price and again there was a voluntary reduction of acreage, but when the 1927 price went above 23 cents, the growers reasoned as they had always reasoned in similar years and planted heavily. The story of cotton during the last five years is well known to all. The records indicate that production will be greatly diminished in 1932 and that next year the price of cotton will be considerably advanced, which means simply that 1933 or or 1934 will see further over-production. There is probably no way to get aronnd it. It is the unalterable nature of the genus homo species cotton farmer, which is responsible for it.

MANY STRANGE, VALUABLE FRUIT GROW IN FLORIDA

Howey-in-the-Hills, Fla., Mary A. Stennis, consultant nutritionists, Florida department of agriculture, in a publication, "Florida Fruits and Vegetables in the Family Menu," says the Howey Tribune, reveals interesting facts concerning unusnal fruits and vegetables raised in Florida.

It is explained that the jackfruit is the largest of tropical fruits, sometimes two feet long and weighing 40 pounds. It grows from the trunk of a tree. Its rind has to be cut with an ax. Inside are numerous cavities, each with a seed, surrounded by soft pulp somewhat suggestive of banana. It is eaten fresh or preserved.

Monistera Deliciosa is perhaps most appetizing of the tropical fruits. Is a monster vine-plant with openwork leaf resembling Battenberg lace. The plant has a lily-like blossom. The fruit resembles a large ear of corn. The big plump kernels, juicy and sweet, are in a case that is edible. The arrangement is like corn on a cob. The flavor is a combination of ripe banana, a fresh strawberry and with a little snap of pineapple.

Jerusalem artichokes grow in Florida but they are not artichokes and they are not from Jerusalem. They are underground tubers of the sunflower family, native of the United States. They differ from the potato being abont 14.7 per cent sugar with no starch.

Breadfruit grows on a chestnut-like tree, 40 feet high. The fruit is oval, like a melon and contains starch and a higher caloric value than the banana. It is baked in [illegible] and when cooked, flavored [illegible] pepper and salt.

The [illegible], similar to the [illegible], has less water and more starch and protein. Boiled or baked, it has the flavor of boiled chestnuts.

Chayote, still another of the unusual products of Florida, grows on a clinging vine. The fruit is pear-shaped and has one big seed. It is cut into slices and steamed and may be used for pie.

While Florida does not grow bananas prolifically, there are many banana plants in the state. The Cavendish banana, brownish in color, is a dwarf variety bearing dense bunches of small fruit of high quality.

GINNERS TO FIGHT FRAUDS IN PACKING

Shipment of Damaged Cotton Report Prevalent This Year.

Low cotton prices and heavy damage to cotton because of the wet whether has encouraged farmers and ginners to indulge in "false packs," according to Sam G. Loring, secretary, Southern Cotton Shippers Association.

Mr. Loring yesterday conferred with C. M. Watson, Huntingdon, Tenn., president of the Mid-South Ginners' Association, and was assured of the ginners' cooperation in stamping the practice ont. Arkansas and Tennessee have laws making fraudulent packing of cotton a misdemeanor, punishable by fines and jail sentences.

"Two common forms of false packs are unusually prevalent this year," Mr. Loring said. "In one, the farmers alone are guilty. Some of them are attempting to recondition cotton that has been damaged in the bale themselves by opening the bale and putting the stained outside cotton in the middle, then closing the bale again.

"By far the more serious matter, though, is false packing by the ginner. A layer of high- grade cotton is placed in the bottom of the gin box, then snaps and damaged cotton, about 400 pounds of it , is pnt in the box and another layer of highgrade cotton placed on top.

"Since coring cotton has long been abandoned and grading from samples from top and bottom is now the practice, the fraud is seldom detected until the cotton reaches the mill and the bale is opened."

In one instance seven out of 12 bales from a West Tennessee gin were found to have been "false packed." The firm to which the bales were consigned has not decided yet whether to prosecute.

The Arkansas Cotton Trade Association has offered a reward of $50 for any information leading to conviction of any one making "false packs."

Egypt has appointed a committee to select substitute crops for acreas which will not be permitted to raise cotton this year.

"BUY PEAS BY LABEL" FOOD OFFICIAL URGES

(Read the Label Series No. 18)

"Peas are not just peas to the discerning housewife," says Dr. P. B. Dunbar, assistant chief of the Federal Food and Drug Administration. "One of the first vegetables to be canned, peas remain one of the most popnlar with consumers. Canners generally are helping the housewife make her choice by making their labels more informative."

The buyer who consistently reads labels will soon come to know the difference between such terms, for example, as "early peas" and "sweet peas," according to Doctor Dunbar. The former are early June peas having a smooth skin. Sweet or sugar peas mature later, have a wrinkled skin and a sweet taste.

When canned, early peas usnally are separated into various sizes by the sieve method. The small No 1's are called "small peas," or "petit pois." The next, or No. 2's, are called "early Jnne extra sifted." No 3's called "early June sifted," and the large peas, 4's or larger, are generally labeled merely "early June." Some peas, when not graded as to size, are called the "run of the pod."

"The national pure food law does not require canners to label their peas as to variety or as to size, but when such labels appear they must be accurate," states Doctor Dunbar. "Canners, recognizing that buyers are rapidly learning to buy by label more and more, are adding to the information which they print upon their labels. The law does require that the manufacturer print upon his labels the statement as to the quantity contained in the can, and this statement must be truthful."

The canners' bill, a recent amendment to the Federal food and drugs act, requires that canned peas, as well as other foods, which do not meet certain defined standards, be labeled with the wording, "Below U. S. Standard, Low Quality But Not Illegal." Under this law, the canner who does not fill his cans to at least 90 per cent of their capacity is required to brand the goods as "slack filled." The buyer may find on some canned foods both of the above designations, but she need have no fear that she is getting an unwholesome or inedible product.

NATION'S COLLECTIVE DIET IS UNDERGOING A CHANGE

Washington, D. C., Jan. 29.—The foodstuffs division of the Department of Commerce ascribes at least a portion of the recent changes in the nation's collective diet to a growing desire on the part of the public to avoid those foods which tend to add weight.

All kinds of fruit, with the exception of apples, have registered large per capita consumption gains in the three decades of the present century. In this connection the department said that apples reached their peak of popularity at the beginning of 1900, due to large gains in production, particular on the Pacific coast, and to improved methods of transportation, which made it possible to distribute the fruit in good condition throughout the country.

Increased consumption of all other fruits was laid to educational measures conducted by producers and distribntors, based on the healthful qualities of the products themselves.

Milk and cream consumption showed heavy gains, but consumption of eggs and meats remained about steady, although different varieties of meats showed tendencies to vary as to amounts consumed.

Largest per cent consumption figures on the principal articles of food, as noted by the Department of Commerce, follow in pounds:

	1931	1899
Wheat	177	222
Rice	5	4
Rye flour	3	5
Breakfast foods	12	....
Beef	61	67
Veal	8	8
Mntton and lamb	5	7
Pork	70	65
Fats and oils	44	34
Oleo	2	7
Corn meal	22	177
Butter	18	20
Cheese	4	4
Milk and cream	1,016	775

Application for Membership

NATIONAL FEDERATION OF COLORED FARMERS (Inc.)

Vincennes Hotel, Chicago

As a member I believe the time has arrived when the Colored Farmers should [illegible] National Organization devoted to diversified production, grading, packing, shipping and marketing of farm products and to the purchase of needed farm supplies through co-operative methods, to the end that a more prosperous financial condition may result from their efforts as producers. I hereby subscribe $5.00 for membership in the National Federation of Colored Farmers for a period of 12 months from date. Also $1.00 for an Annual Subscription to the Modern Farmer.

THE MODERN FARMER

Official organ of the National Federation of Colored Farmers

Leon R. Harris - - Editor

Published Monthly by the Modern Farmer at Nashville, Tennessee, and Chicago, Ill.

Nashville, Tenn., Office, 447 4th Avenue, North.

Chicago, Ill., Office: Vincennes Hotel, 36th and Vincennes Avenue.

Devoted to the interests of the Farmer, Truck Gardener Livestock and Poultry Breeder, the Home and the People.

Entered as Second Class Matter, April 10, 1929, at the Post Office at Nashville, Tenn., under act of March 3, 1879.

All contributions for publication in the Modern Farmer should be addressed to The Modern Farmer, 447 4th Avenue, North, Nashville, Tenn.

No libelous matter will be published. Unsigned articles or letters, and those written on both sides of the paper will not be used.

Subscription price $1.00 per year, payable in advance. Personal checks must be certified. Make all checks or money orders payable to The Modern Farmer.

Advertising rates and sworn circulation figures presented upon application.

"OUR SLOGAN"

STAY ON THE FARM IF YOU'RE ON IT! GO BACK TO THE FARM IF YOU'RE OFF IT!

THE LAW

"It is hereby declared to be the policy of Congress to promote the effective merchandising of agricultural commodities by encouraging the organization of producers into effective associations under their own control.

The Board is authorized and directed—to promote education in the principles and practices of co-operative marketing—to encourage the organization, improvement in methods, and development of effective cooperative associations." (Public—No. 10—71st Congress. Sec. 1-5.)

THE GOSPEL

"This law is predicated upon the ability of the farmer to manage his own business, once he is organized to do so. Cooperation is the key to it and only in exceptional cases can the Federal Farm Board have any dealings with a farmer who is not a member of a producer-owned and producer-controlled marketing unit." Hon. Sam'l R. McKelvie, Member, Federal Farm Board.

The National Federation of Colored Farmers believes that the Colored Farmers of America should own and control their own co-operative associations.

"Co-operation With All—Affiliation With None."

MESSAGE FROM PRESIDENT DAVIS, N. F. C. F.

Plant Large Gardens

For over a year we have been urging our members to plant large gardens, and we cannot make this request too strong. Have a supply of cans or jars on hand and put up all that you cannot use on your table or sell to advantage.

With a large flock of good hens, and a garden you can live at home.

It will be impossible for you to secure a government loan unless you agree to plant a garden this year.

Avoid Discord and Envy

To cultivate a beautiful garden you must uproot all weeds and diligent work in pulling them up by the roots and riading your garden of them forever. Likewise to cultivate a beautiful mind you must uproot and cast from you all mental weeds and other unlovely thoughts, such as envy, gossip, impatience, jealousy and selfishness.

Then you must plant and carefully cultivate in your mental garden, seeds of kindness, goodness, love, purity reverence and righteousness.

As you persevere in this work, your mind will gradually unfold into beauty and fragrance and your life will be blest.

Credit Corporation

Continue to work on your credit corporation fund. We are making fine headway.

BE CAREFUL AND UNDERSTAND WHAT YOU SIGN.

FARMING—A LIBERAL INDUSTRY

(Special to Modern Farmer)

By Preston Robenson

In my opinion, farming is a liberal education if it is intelligent farming, done under scientific instruction. We will have to know more and do better this year than ever before. We must plant a good grain crop, soy beans, velvet beans, peas, sweet potatoes, Irish potatoes, sugar and sorghum cane, a patch of turnips for our hogs and a good garden. We should raise plenty of chickens and turkeys and keep a good milk cow. If we kept more cows we could ship butter fat and milk, live at home and not have to buy so much from the store.

We can build up our land and not have to buy so much fertilizer if, when we run our last furrow in our cotton, we would plant some unknown peas. When we pick our cotton we should cut the stalks down and along in the fall, throw a furrow on them so they can rot.

When we learn to farm better and practice what we know is good farming, we will be able to keep out of debt and pay the debts we owe now.

A HARD LANGUAGE

A Belgian student was relating his experience in studying the English language. He said:

"When I discovered that when I was quick I was fast, if I spent too freely I was fast, and that not to eat was to fast, I was discouraged; but when I came across the sentence "The first one won one one dollar prize, and that a blackberry is red when it is green,' I gave up trying to learn English."—California Retail Grocers Advocate.

REV. YORK ARRESTED

We are informed that the Rev. S. York, for whom we inquired in our last issue, was arrested in Learned, Miss. This gentleman never represented the National Federation of Colored Farmers, and those he duped into believing he was a representative of that organization and paid him a few nickles as membership dues, simply gave away their money. The Mississippi attorney for the N. F. C. F. swore out the warrant for his arrest.

Rev. York will get his just deserts. The N. F. C. F. is not a secret organization and needs no secret representatives. It is legally organized, is incorporated, and its representatives in Miss., and everywhere else are well known to colored farmers. If you know nothing about a representative of the N. F. C. F. it is a pretty good sign that he is trying to fool you and the organization. Let him alone until you find out from the national office just who he is. The National Federational of Colored Farmers, Inc., Vincennes Hotel, Chicago, Illinois, is the address.

GARDEN TOPICS

By Floyd Brilliar

One of the best deciduous shrubs for foundation planting is the winter blooming jasamine (nudiflorum). It is graceful in growth, does not grow too tall, and has green bark, so gives the appearance of being evergreen. Besides, the yellow blossoms are delightfully fragrant. Its logical place is under windows and similar locations.

Japanese barberry (barberries thunbergia) is another ideal plant for foundations as it does not grow tall, thrives when the soil is too dry for most other plants, and has the further advantages of bright red berries in abundance throughout the winter and purple leaves in the early spring as new growth starts. The foliage turns very bright in the autumn and hangs on a long time.

For contrast, where larger shrubs may be used, yet those that are really tall are not desired, the red twigged dogwoods and the golden twigged dogwood give fine color effects all winter when a little color is badly needed.

Philadelphus, bouquet blanche, philadelphus lemoine, deutzia crenata and deutzia pride of Rochester, are four flowering shrubs that are not too large to use in foundation plantings, and where a brilliant color is desired with height of six or seven feet, cydonia or Japanese quince is effective. Many of the spirea, particularly van houtii, anthony waterer, spirea arguta, spirea frobell, spirea thunbergia, and spirea trichocarpa are all good for this purpose and several of them are especially desirable. Trichocarpa is even finer than the well known van houtii and has the added advantage of blooming two or three weeks later and so never has its buds killed by late frosts.

In yellows the frosythias or golden bells in their eight or more varieties are hard to improve upon. Those with golden bark are especially desirable as they give color all the year.

Where really tall shrubs are needed at corners or in recesses, the weigelias, and particularly rosea and hendersoni, are unusually desirable, the former being pink and the latter a very free blooming red.

Naturally there are many more deciduous shrubs that might be used for foundation plantings but this list includes most of the most desirable ones for our locality. Personally we prefer broadleafed evergreens for the major part of such plantings with a few good conifers and deciduous flowering shrubs for contrast.—Nashville Banner.

GARDEN TOPICS

(Continued from page 1)

each way in the zinnia bed. Do this when the zinnia plants are about two inches high. The zinnias will come on an bloom just as well as if the gladiolus were not there and will act as a support for the gladiolus. These may be either cut or allowed to bloom where they are. If desired plant among any of the marigolds rather than zinnias.

This is the time to fertilize the lawn and get it ready for the summer. There is no rush about planting the flower garden, but get the lawn in shape at once. It is easier to kill dandelion now than later with the ammoninm sulfate treatment recommended some weeks ago.

Two or three have written in to ask how to get rid of Bermuda grass. This is easier to as than to answer. Unless every care is taken it cannot be done. The one chance of success lies in the fact that Bermuda starts late in the spring. If we will rake all of the stems of Bermuda off the surface of the lawn, and this can be done without killing the blue grass, it will not start growth for two or three weeks later than it would start if this is not done.

If there is a part stand of blue grass among the Bermuda, as is often the case, sow nitrate of soda over the lawn at the rate of a pound to every twenty feet square and water well. This of course after the Bermuda has been raked out as well as can be. In two weeks give another application of the soda and a third two weeks later. Keep well watered all the time. Lime with air slacked lime at the rate of one pound to every ten feet square (not every ten square feet) before applying the first soda. This treatment will encourage the growth of the blue grass and will cause it to spread rapidly and smother the Bermuda. Blue grass demands a great deal of lime, Bermuda prefers the soil a little sour. By persistant liming and fertilizing one may make the bluegrass smother the Bermuda.

Of course there is a preparation that can be bought at your seed house that can be sprayed on the ground that will kill every living plant and nothing will grow on this soil before late fall unless it is carefully plowed first. If one is really desperate, he can use this spray once or twice and kill all Bermuda. Then after two or three weeks he may flood the ground, and as soon as it is dry enough, either plow or spade the soil over deeply work it down and sow grass seed, but it is difficult to get the seed to grow in hot weather.

—Nashville Banner

BLACK LOCUST HAS MANY USES

Black locust is a 4-purpose tree, says the United States Forest Service. It quickly produces good timber for posts and other uses; it roots strongly, thereby checking soil erosion; its flowers enable bees to make a good quality of honey; and it is a legume. The nodules on its roots store nitrogen in the soil, enriching it for future crops. In addition, it is a tree of beauty and is valuable for shade.

ADVISES WILT-FREE STAINS

Manhattan, Kan., According to E. H. Leker, Kansas State Agricultural College plant pathologist, one of the best control measures for tomato wilt is the ulilization of resistant varieties. Some of the varieties that are wilt resistant are the Kanora, Norduke, Marvana, Marvel, Marglobe, Norton, Louisiana Red, and Louisiana Pink, he advises.

Lexington, Miss. (CNS)—Stranded in the flood region of the delta near here, a colored farmer nevertheless trusted to the United States mails to carry his remittance for taxes to the county sheriff. The farmer wrote asking the sheriff to kindly pay his taxes for him. He wrote: "Here is haff of it. Haff of it $8.64. I am in water and kant get to town hardly no way."

The prompt taxpayer was assured that his remittance would be promptly attended to.

FARMERS' CO-OP BUSINESS LARGE

(Continued from Page 1)

henson, Whiteside and Handcock.

The earnings of the company on a basis of paid-in capital stock held by member companies represent a profit of 115.15 percent on the investment. Patronage refunds amounted to $73,394.82 and capital stock dividends amounting to $5,337:68 have been declared payable this year. This represents 60 percent of the gross income. An additional 15 per cent or $19,510,01, was placed in the surplus fund.

Patronage dividends have beer substantial enough for every company organized prior to 1931 to pay off balances due on notes covering stock subscriptions in the Farm Supply company from these funds. An aggregate sum of $156,259.01 has been paid back to shareholders during the five years the company has been operating.

FEED THE BABY COD-LIVER OIL

By the Bureau of Home Economics, United States Department of Agriculture, and the Woman's Division of the President's Emergency Committee for Employment

For children under 2 years of age, cod-liver oil, with its high content of vitamin A. and vitamin D. is not a medicine, nor a luxury, but an indispensable food. This is the emphatic statement of Dr. Martha M. Eliot, director of the child hygiene division of the Children's Bureau of the United States Department of Labor, and Dr. Hazel K. Stiebeling, senior food economics of the United States Department of Agriculture.

Mothers are therefore urged to provide three or four teaspoonfuls of Cod-liver oil every day for each child under 2 years old. This will cost about 15 to 25 cents a week per child. But it is vital to the children's health in winter time, and for city children it is good advice for all the year.

These statements are based on scientific studies which have shown the relation of vitamin D to the normal development of bones.

"In all temperate climates," says Dr. Eliot, "very many babies will develop rickets during the winter months unless some substitute for sunlight, some food that contains large quantities of vitamin D is given every day. Most mothers know that cod-liver oil is the best food substitute for sunlight that is on the market today. It contains naturally much of the same vitamin D that is formed in our skin when we expose ourselves to the direct rays of the sun. Cod-liver oil may well be started before the baby is a month old, often at two weeks, and if continued regularly throughout the first two years of life, it will keep most babies from developing the deformities and the complications of rickets. Breast-fed babies as well as artificially-fed babies need cod-liver oil.

"Cod-liver oil, how ever, has more than the one virtue of preventing or curing rickets. With every teaspoonful of cod-liver oil, if it is of good grade, you give your baby many units of vitamin A—the vitamin that helps growth, prevents a certain eye disease, and probably does much to keep off infections of various sorts.

"Cod-liver oil is the chief food on the market today that is naturally very rich in both vitamin A and vitamin D. Milk and its products are rich in vitamin A, but can not be depended on for vitamin D. Eggs contain both vitamins, but in considerably smaller quantities than does cod-liver oil. Cod-liver oil, then, because of its double value in vitamins is a highly important food. Babies need the vitamin D part of cod-liver oil more than do older children because it is while they are growing fast that they are most likely to develop rickets. Older children, especially those who are poorly nourished, need the vitamin A part to help them grow and resist infections.

"Cod-liver oil has still another food value. With every teaspoonful of cod-liver oil the baby received 4 to 5 grams of easily digested fat, which is about the equivalent in energy of the fat in a teaspoonful of butter. The baby or child who is given 3 or 4 teaspoonfuls of cod-liver oil a day receives a very appreciable addition to the value of his diet not only in those indispensable vitamins A and D, but also in energy providing food.

"But you may say, 'how can I teach my baby or my child to take cod-liver oil?" Much perhaps everything, depends on the attitude of the mother. If cod-liver oil is begun very early in infancy and the mother always assumes the attitude that the baby will like it, nine times out of ten he will grow up to really like it and will want to lick the spoon. It is begun when the baby is older, the mother's attitude is even more important. She must not laugh or scold if the baby makes a face the first time he gets it. She must not say 'I don't believe he will like it' or 'I wonder if he will like it.' She must honestly expect him to like it, for most babies do."

In the recent leaflet put out by the Children's Bureau and the Bureau of Home Economics for the guidance of relief workers, entitled "Emergency Food Relief and Child Health," the foods listed as indispensable for a child under 2 years old are as follows:

At least 1 pint of milk. He should have 1 1-2 or 2 pints.

At least 2 teaspoonfuls of cod-liver oil. He should have 3 or 4 teaspoonfuls.

At least one vegetable or fruit (tomato juice, orange juice or greens). He should have three or four.

In addition, the child should have plenty of bread, cereals, and other energy and body-building foods. With children in the family says this leaflet, one-fourth of the money that goes for food should be spent for milk, one-fifth for vegetables, one-fifth for bread, cereals, and legumes, one-fifth for fats and sugars, and the rest for eggs, cheese, meat or fish and other things.

SILENCE? NO MORE!

(An Editorial By Leon Harris)

(Continued from page 1)

eration they knew brought some relief for white farmers, so why could it not bring relief also for colored farmers?

Although these Negro farmers have only been able to pay around an average of ten cents per member annually for the support of their organization and for the help their organization has given them, still their organization has performed what many of them have considered to be miracles. Their organization taught them to buy co-operatively. They have bought needed food supplies at a saving of from 25 to 50 per cent. They have bought stock feed at a saving of 40 per cent. They have bought fertilizer at a saving of 30 per cent. They have been taught to practice co-operative production—to raise enough of one product so they could ship and sell in carlots and thus get the benefits of the best market prices. Their organization has helped many of them who are tenant farmers to purchase small farms on reasonable terms, has helped many to obtain government loans—has helped many who were destitute to obtain relief. Their organization has started many of them on the road to independence and happiness. They have learned to depend on their organization for help in every emergency.

The leaders of their organization have sacrificed time and money to help these most afflicted of all American farmers to the place where they would be able to help themselves. These leaders have done what they could. Their record is clean. And, by helping their members and followers to do more for themselves—to have more and to be more—they have also helped the communities in which these members live. They have helped counties, states and the Nation.

These leaders are not responsible for tho present crisis. They have not led their followers like lambs to the slaughter. But the wolves have entered the fold. The wolves have pounced upon this feeble prey and are sucking the life-blood of thousands. Hence, this call for HELP. This appeal to the conscience of all real Americans. SILENCE? NO MORE!

Read these excerpts from letters recently received at the national offices of the National Federation of Colored Farmers. Such letters are pouring in—an avalanche of them—often as many as 150 a day. Read these excerpts and know the TRUTH. YOU will not wonder why the N. F. C. F. requests your assistance. Honest, intelligent Negro leaders are trying hard to keep the masses of their racial group from turning RED. But if such conditions continue to prevail, how can they prevent such a catastrophe? READ ON! SILENCE? NO MORE!

From a State Officer of the N. F. C. F.

Another:

"Something certainly needs to be done around here. The poor people are in a needy condition. They made good crops but the landlords have taken everything and in some places have moved away themselves and left the people sitting without anything at all."

Another:

"I am a member of the N. F. C. F. I made a crop on the old———plantation, operated by Mr.———. I have harvested my crops, corn and Mr.———, the book-keeper, commanded me to get my wearing clothes and hit the highway. He drove me off the place, took all my winter supply of groceries, two fattening hogs from the pen, 15 head of chickens, 50 bushels of corn, a bank of sweet potatoes, all my household goods and the worst of all he met my wife at the door with her trunk and made her open it and took from it her quilts, sheets, pillow-cases, her glassware and all the dishes, and put myself, wife, and I have a small child, out of doors without a piece of bread to eat, or an ear of corn to parch or a potato to roast. I am out of doors with nothing to eat, no money and no job. I worked hard this year and made a faithful tenant, but tonight I am in a worse condition than the unemployed because the Red Cross will aid the unemployed but there is no one to aid us here. Is there any law by which I could get back my furniture and the food I had stored for winter? I have no money with which to put in a suit against him. If you can't help me, please get a job for me somewhere and send me transportation for myself, wife and four year old child and I will work and pay you for the transportation wherever it may be."

Another:

"Many of our members are being put out of doors. Some are being tied up to make the 1932 crop who don't owe their landlords more than the price of a twelve pound sack of flour. 200 members of my Unit are depending on me to find homes for them. I tried to get a hundred men to raise four dollars each to enter the———plantation but only eighteen could raise it. The landlords are hard on us here but that don't stop us."

Another:

"I was born a slave and knew slavery conditions, but present conditions are harder than they were then. We were furnished rations from Jan. 1st to Sept. 1st and then we were given from three to five dollars per bale to gather crops. We had plenty of cotton but have had no settlement. Our condition is deplorable as we are both barefooted and naked and it has been raining here for three weeks. The white farmers don't know nothing about the Constitution. In reference to the Red Cross,—we have been loyal to it but have received nothing from it as all was given to poor white people."

Another:

"I feel bad over the condition we poor farmers are facing. Our Unit is all right and what you tell us is right. What you tell us to do is just fine and I am glad we have leaders to go before us and give us consolation and information because if we didn't we would be in a bad fix. Every landower around here wants the tenants to sign a contract to crop this year just for their groceries, I mean just for bread and meat,—no clothing, no shoes, nothing else but food. Every farmer around here says he will die before he will sign such a contract. The landowner then will get all the money for our crops and just issue us groceries. Thats about the way they have been doing the past two years and we poor colored people are tired of it. I am tired of it myself. I have never had a settlement for my last two crops. I am not going to sign no such contract altho they have a way of taking our hogs, cows, mules, corn, and chickens and putting us out in the road if we don't sign. I have worked hard for what me and my family have saved to eat. Our landlord would not even give us a boat to get about in the flood waters in so we could help ourselves and now he wants us to sign up for our food. It is bad when a fellow has to move and leave everything he has raised and saved and hasn't a penny to move with and no work to do so he can help himself, but if we work for some of these landlords we won't get anything for it but groceries."

Another:

I was up to———plantation today and they are trying to get our Unit members in that section to sign contracts to make crops this year just for meat and bread. You ought to have seen how those Unit members stood up and stuck together for a decent contract. One manager said he had been boss since he had been there and was going to keep on being boss till he left and that he would not give them any other contract and that he wanted his houses by Monday morning and they were to bring him everything they had on the outside of the house. They told him they had not given him a deed of trust on their cows, hogs and other stock. He told them they didn't have nothing, that all they had was his anyhow. They told him that if he wanted it he would have to come and take it. At our last meeting we decided we would not work for no landlord this year who would not give us a decent contract. We may have to fight for it but we mean to get it. All tenant farmers here are standing up against these bread and meat contracts. Some of these landlords have not settled with their tenants for the past two years and have burnt up their books."

Another:

Our men and women here are starving because the landlords have put them out on the road and taken everything they had saved up for winter. I took a bunch of them before the local Red Cross here for aid and they were turned down. It seems that the landlords here are handling the Chapter too. They won't let them have aid unless they sign contracts to stay and work this year for groceries only. Most of us are very much in need. We can't get no aid from no source. We have petitioned the Red Cross the third time and been refused and that leaves us with nothing. They mean us no good here. Working and making crops and then seeing them take them and sell them and only allow us a little something to eat is worse than slavery."

The National Federation of Colored Farmers is not an organization of croakers and beggars. There are too many whining, indigent Negro organizations in existence now. So far, the N. F. C. F. has been able to stand on its own feet and paddle its own boat. It has been able to protect itself form a few foes without and a few traitors within. It has many powerful and faithful friends in all sections of the country. Some of them are colored and some are white. These friends know it is doing a good work and merits sympathy and support.

But its officers now realize that it has a larger work to do. Last year it spent more than a thousand dollars to free from jail, prosecution and persecution, ONE MEMBER who was arrested for preaching the gospel of organization and co-operation to a community of colored farmers in a benighted section where even the white farmers had never heard this gospel preached. Its larger work is to succor and protect these thousands—members and non-members—who have been caught in this raging torrent of persecution, despair and misery and know not what to do.

The N. F. C. F. is working for the salvation of thousands of Negro farmers.—Americans all—who have never had a chance to live as Americans should live in America. These farmers must be set free from tenancy—from debt—slavery—from ignorance—from the two-room shack. The National Federation of Colored Farmers wants to do for these neglected ones what the American Farm Bureau Federation, the National Farmers Union and the National Grange have done for millions of white farmers.

Elsewhere in this paper you will find a special membership application bank. If you are an American, and colored, fill it out for yourself, if a farmer, or for a relative or friend who is a farmer. If you are an American, and white, and want to help, fill it out and the officers of the organization will inform you immediately what

(Continued on page 7.)

REVOLVER BULLET STRIKES FARMER

David Haller of Rose Hill Seriously Injured as He Cleans Weapon

Rose Hill, David Haller, 68-year-old farmer living near Route 3 a half-mile east of Rose Hill church, is in serious condition in the Moline city hospital as result of gunshot wounds accidently incurred about 2 yesterday afternoon when he was cleaning his .38 caliber revolver.

Mr. Haller was sitting on the back porch of his home with the revolver between his knees and the muzzle toward him. He evidently did not know it was loaded. When it discharged, the bullet entered his left side below the heart, penetrating upward and leaving his body near his left shoulder. It had sufficient force to strike the roof of the house after passing through his body.

Mr. Haller telephoned neighbors and they called a Port Byron physician, wha ordered the wounded man taken to a hospital.

AFRICAN COLLEGE 'BUILDING' CHAPEL OUT OF FLOWERS

(Christian Science Monitor)

London— A chapel which is expected to be one of the most beautiful in the world is being "grown" at Achimota. the African college at Accra on the Gold Coast. The materials are not stone and marble, but pink and purple bougainvillea and morning glory.

The college, which has nearly 500 native men and women students, needed a new chapel. But the financial crisis made any great expenditure impossible.

Then someone had an inspiration. A site of 120 by 60 feet was cleared in the middle of the college compound.

At one end a raised platform of earth was made. The floor is of firm, close turf. Long rows of stately royal palm have been planted to form the pillar of the new church.

The wall will be made of pink bougainvillea and morning glory, vines growing between palm and palm. The roof will be of purple bougainvillea. All vines and flowers have been planted and are growing.

BOND LISTS 10 GREAT SCHOOLMASTERS OUR COUNTRY HAS PRODUCED

The List Includes Booker T., DuBois, Crogman, John F. Cook, Carter Woodson and Fannie Williams.

(From Baltimore Afro-American)

In the celebration of History Week, school teachers might well remember the great schoolmasters of the race. Some day one of our normal schools or colleges might well build a Hall of Fame in which the figures and records of these great pioneers would stand as mute testimonials to the need and desire of colored folk for education. As a beginner, a list of ten great colored schoolmasters including several schoolmistresses—is nominated here.

1. JOHN CHAVIS, of North Carolina. Thousands of devoted white men and women have helped educate colored children and adults, but since this list includes only colored, why not include a schoolmaster who educated white people?

Born in 1763 in North Carolina, educated at Princeton University, John Chavis opened a classical school for white boys in Granville, Wake and Chatham Counties. Among his students were: W. P. Mangum, later United States Senator from North Carolina; two sons of Chief Justice Henderson of the State Supreme Court, Charles Manly, later governor, and numerous other white boys who later became leading figures in state and national life.

2. JOHN PETERSON, of New York. Peterson was made principal of Colored Grammar School No. 1, on Mulberry Street, New York, in 1836. In 1883 he became principal of the first normal school for colored teachers in New York, and the first in the United States.

3. MARIE BECRAFT, who had charge of the first school for colored girls, established in 1827 on Dunbarton Street. Georgetown, District of Columbia. Born in 1805. Miss Becraft died in 1833 as Sister Aloysius of the Sisters of Providence.

4. JOHN F. COOK, of the District of Columbia. He taught a Sunday school in the District of Columbia, and was forced to leave Washington in 1834 when riots broke out against colored schools. He returned in 1836, and opened Union Seminary. He died in 1855.

5. MARY L. PEAKE, of Philadelphia. "free woman of colour," who became the first teacher of freed slaves when a school was opened at Fortress Monroe on September 17, 1861. This was the beginning of Hampton Institute. Mrs. Peake did not live to see the end of the war and final freedom of her people.

6. WILLIAM HENRY CROGMAN, born in the Virgin Islands in 1841, died in Kansas City in 1931. sity in 1876 with the first college sity in 1876 with the first college class. Dr. Crogman was professor of Latin and Greek from 1878 to 1903 at Clark University, in Atlanta, and president of the University to his retirement in 1910.

In the opinion of the writer, this was the noblest Roman of them all. a good man and a great schoolmaster. He inspired every one who knew him. Schools with teachers like Dr. Crogman have more than endowments and buildings can give.

7. BOOKER T. WASHINGTON, born in Virginia in 1856, died at Tuskegee Institute in 1915. He taught a rural school in West Virginia, at Hampton Institute, and during the first few years at Tuskegee handled much of the teaching himself. His whole life was an adventure in education. Eulogies of the man are superfluous.

8. William Edward Burghardt Du Bois, born on February 23, 1868, in Massachusetts. As a student at Fisk University DuBois taught vacation schools in rural Tennessee. Of that experience he has written, in "The Souls of Black Folk," the most intimate essay ever penned by a colored schoolmaster, later at Atlanta University, he carried on studies of colored education which have not been surpassed since, while a teacher there.

9. FANNIE WILLIAMS, of New Orleans, principal of the Valena C. Jones School in that city. Miss Williams is a worthy descendant of Marie Becraft and Mary Peake. Her school does not teach; it educates, from the tiny tots to the cynical visitors like the writer who once visited that school.

10. CARTER G. WOODSON, formerly Professor of History at Howard University, inspirer of many able historical students, who has taught a race its history. As author of "The Education of the Negro Before 1860," as teacher, and as present head of the Association for the Study of Negro Life and History, Dr. Woodson takes rank as one of the greatest of our living educators.

SUDDEN WEALTH HAS ITS PROBLEMS FOR NOUVEAU RICHE TAR HEEL NEGRO

Raleigh.— Sudden wealth has its difficulties just as surely as poverty has its sting, according to John B. Ford, local Negro who was wounded in France during the war who has just recently collected in excess of $9,000 in disability compensation from the U. S. Veterans Bureau in Washington.

Ever since the news of his sudden wealth became known, Ford has been receiving letters from all sections of the country, asking for donations or personal gifts. Since news stories of the $9,000 check he received were carried by news services throughout the United States, he has received telegrams or letters from New York, Ohio, Oklahoma, Texas, California and many other states, from persons wanting to sell him real estate, stocks in various undertakings or what not. His little home on South Persons street has been besieged with callers seeking alms or gifts for charity.

With the exception of only three letters, all the "fan" letters have been from femine admirers, Ford says. They all end with a request for some money or some gift. One letter from Illinois asks Ford to send the writer a camera, coat, hat, stockings and a wrist watch. This modest "Madam Queen" graciously extended the privilege to Ford to selecting all the wearing apparel but reserved the right to select the wrist watch.

In many of the letters are requests for money for medicine, taxes, food, to help pay church debts and many other things. Many of his dusky feminine admirers have offered their services as housekeepers, companions or otherwise.

But Ford wants it understood that he is no public benefactor and that he has no intention of giving away any of his new found wealth. So far his only gifts to charity have been $1 he gave to an old Negro woman and a promise to give 25c to a debt-ridden church in West Virginia, which asked him to give at least that much if he felt he could not give more. He is considering helping an 11-year-old Negro boy, who has a widowed mother who is not able to care for her large family.

The only one of the scores of feminine admirers who has written to him that Ford has any desire to meet is the only one that wrote to congratulate him without asking for a gift or some of his money.

After being wounded in the war, Ford spent four years in U. S. Veteran Hospital No. 91 in Tuskegee, Ala., where he was unconscious most of the time and where his recovery from the severe wounds he had received was considered remarkable by the physicians in charge.

NITROGEN PLANT IN AFRICA

The first nitrogen-fixation plant in the southern hemisphere has just been completed near Johannesburg, South Africa. Costing more than $2,000,000, it is the largest single industrial plant in the country. At first it will employ eighty white men and a large number of natives. Interest in the enterprise is great because of the novelty of extracting nitrogen from the air, and because it will render South Africa practically independent of the 20,000 tons on nitrate hitherto imported annually from Chile at a cost of approximately $1,250.00.

CHEMISTS DEVELOP A NEW CONCENTRATED FERTILIZER

New York, Jan. 22. —A new type of concentrated fertilizer produced in granular form non-caking, dustless, and drillable with simple mechanical distributors at a rate as low as five pounds to the acre has been developed by chemists of the Swann Chemical Company, Anniston, Ala., that organization announces.

"One hundred pounds of the new fertilizer has the same fertilizing value as 400 pounds of the old." said Theodore Swann, president of the company, in discussing the new development, adding that therefore savings in transporting and handling fertilizer should be substantial. "Actually, the new fertilizer contains 64 per cent or more of plant food — nitrogen, phosphoric acid, and potash—against the 16 per cent found in ordinary fertilizers.

"A special feature of this new fertilizer is that it can be readily drilled into pasture land with the ordinary type of seed drill, thus applying it well under the sod where it is far more efficient than fertilizer spread on the surface. Tests carried out last summer indicate that the results obtained from drilling the concentrated granular fertilizer in quantities of from five to ten pounds per acre were superior to those obtained from broadcasting ordinary fertilizer in quantities of from 100 to 200 pounds per acre.

"An experimental plant to manufacture this fertilizer has been erected at Anniston, Ala. All of the fertilizer that has so far been produced has been sent to experiment stations, agricultural colleges and agencies for test purposes."

BID BUGGIES GOODBYE

Decatur Review: If there are any buggies in Nebraska they will be given special distinction this year by being left off the tax list. W. H. Smith, state tax commissioner, believes that the few buggies left in the state are not of sufficient value to be taxed. Thus we are cutting off more and more trappings of other days.

While buggies have been omitted, milking machines and dairy equipment are new items on the tax schedule. Other new items are electric refrigerators, electric washers and ironers. There is a special line for radios but pianos, organs and phonographs are to be listed under "other musical instrments."

The gasoline engine has changed the entire complexion of tangible property. Besides the automobile and tractor, if there is not a power line to the farm, the home plant provides the current for considerable more electrical eqnipment. Wagons continue to be generally used on farms, trucks not having made them as obsolete as the auto has made the buggy.

It took hard roads along with the gasoline engine to put the buggy out of business, for it is practically out of business when the tax collector decides that they are so scarce or old as to be of no taxable value.

WISCONSIN AND OHIO ERADICATE BOVINE TB

By completing state-wide tuberculin testing of their cattle and reducing the degree of infection of one-half of 1 per cent, Wisconsin, and Ohio have been designated by the United States Department of Agriculture as modified accedited areas. The recognition of these important cattle breeding and dairy States is a culmination of 13 years' effort during which more than 10,000,000 tuberculin tests were made in Wisconsin and 4,000,00 in Ohio.

Four other States—North Carolina, Maine, Michigan, and Indiana —previously freed their herds of this disease. With the addition of Wisconsin and Ohio the tuberculosis-free area of the country is materially increased. More-over, in the east central region most of the free areas adjoin. Though highly gratified by the rapid progress of bovine-tuberculosis eradication, the cooperating veterinary officials warn that vigilance against the introduction of infection, together with periodic retesting if herds that have contained reactors, is essential.

FREEZE TREE LIMBS IN STUDY OF DISEASE

Freezing apple trees is one of the most recent developments of the United States Department of Agriculture in its study of plant bedepartment studying the connechavior.

Apple disease specialists of the tion between low temperatures and perennial canker in the Hood River Valley in Oregon have frozen limbs of trees to very low ten peratures, using a device made especially for that purpose.

The freezing apparatus consisted of an insulated box which was fitted around a limb. Freezing was brought about by using snow and salt in a mixture in the box and also by using solid carbon dioxide. Temperatures as low as 40 degrees below zero were reached. The freezings were made at the beginning, middle, and end of the winter.

These studies provide a unique method of studying the effect of cold on fruit trees. It is very significant that low temperatures in November or March caused much more killing than in January. The most significant discovery in the experiment was that fresh pruning wounds are very susceptible to cold injury. Canker follows cold injury. It is important, therefore, in perennial canker control that pruning be delayed until the danger of low temperatures is past.

PROFITABLE LABOR

The Irishman came home beaming.

"Bridget," said he, "I've got a job."

"Glory be!" said Bridget, who was tired of supporting the family.

"I shall want a new suit," said Murphy then. "An' yez can pawn me night shirts to get it."

"Your night shirts!" grasped Briget,

"Sure," said Pat. "An' what for should I be wanting them when I've got a job as night watchman and can only sleep in the daytime?"—W. R.

KENTUCKY LAYING RECORD

Lexington, Ky., Jan. 29.— Laying 336 eggs in a year, a Rhode Island Red owned by D. D. Slade, a Fayette county poultryman, has set a new record for all breeds in Kentucky. This is an official record of performance figure, checked by poultry specialists from the College of Agriculture, University of Kentucky. Another Rhode Island Red hen in the Slade flock laid 310 eggs, and a third held laid 300 eggs in a year.

"Worm or beetle, dought or tempest
On a farmer's land may fall;
But for first-class rmination
Trust a mortgage 'gainst them all."

NEWS-BULLETIN USEFULNESS

Feb. 8th, 1932

Doing good is the only certain happy action in a man's life. How often do we sigh for opportunities of doing good while we neglect the many openings of providence in little things, which would frequently lead to the accomplishments of most important usefulness.

It is the plain duty of each of us to try and make the little corner we can influence somewhat less miserable and less ignorant than it was before we entered it.

Thousands of men breathe, move and live: pass off the stage of life and are heard of no more. They did not one particle of good in the world; none were helped by them, none could point at them and say; "That man's example and advice helped make me a better man and citizen. Their light went out in darkness and they were not remembered more than insects of yesterday.

Let us all live for something.

Federal Loans

The Reconstruction Corporation has been effected. An amount

We will give our members full more than 200 millions of dollars may be loaned at the discretion of the Secretary of Agriculture to farmers in need of credit for ordinary farm operations this year.

This Finance Corporation will also loan to agricultural credit corporations.

We will give our members full details of these loans in our next bulletin.

Federal Land Bank Loans

There has been an appropriation of 125 millions of dollars granted by Congress for extra capital for Federal Land Banks, which will enable these banks to grant extensions to farmers who are unable to meet their land notes.

Farm Land For Sale and For Rent

Our next bulletin will give a list of farms located in Missouri, Arkansas, Tennessee, Mississippi and Georgia that can be bought on very easy terms or leased this year.

Supplies

The markets continue at about the same prices. Members can buy good Patent flour in plain at 3.05 per barrel and the self-rising 3.30 per barrel. This figures about 36 cents and 41 cents for a 24 pound sack.

Five string brooms 2.19 per dozen or less than 20 cents per broom.

Lamp chimneys number 2 size 1.85 per case of 3 dozen or about 5 cents each.

Fancy cheese 13 cents per pound.

Grey wheat shorts 75 cents per hundred pound sack.

Clear Belly side meat 7 1-2 cents per pound.

Boiling Bacon 5 3-4 cents per pound.

Cotton plow lines packed one dozen 36 foot pair to the carton at 2.00. This figures about 17 cents per pair.

The Chairman of each unit should see that this bulletin is read out in open meeting and fully explained to the members.

Plant Early Gardens

Every member is urged to plant larger gardens this year than last. It will be needed to lower the cost of farming. Your wholesale list shows seed potatoes at 96 cents per bushel and red and yellow onion sets at 1.20 per bu. This figures about 24 cents per peck for the potatoes and less than four cents per quart for the onion sets.

All hardy vegetables may be planted in February as soon as the ground is dry enough to work, such as Irish Potatoes, Purple Top Turnip, Swiss Chard, Beets, Cabbage, Carrots, English peas, Kale, Rape Spinach, Lettuce, Mustard, Onions, Parsley, Radishes and Salsify.

You should not expect any high prices for farm product this year, and your success will depend upon your living at home and reducing the cost of running the farm.

Continue to use your chickens and eggs on your own table.

Buy one or two extra pigs and plan for a large supply of meat this fall and winter.

The Agricultural Credit Corporation. Our Mississippi units should continue to work on the capital stock fund for their agricultural credit corporation. We are hoping that we will be able to have it in working on agricultural credit corporations for other states and our plans will be announced in a week or two.

Contracting

Members should be careful about signing up their contracts this year and be sure to see that they are perfectly familiar with what they are signing. We are sending to our Mississippi units a sample of the regular Mississippi Share Croppers Contract. This contract is said to have been adopted by the state.

Dry Goods and Shoes.

Dry Goods and Shoes have never been as cheap as now.

Write in for prices.

SILENCE? NO MORE

(Continued from Page 5)

colored farmers are the recipients of your generosity.

The N. F. C. F. has tackled a big job. It is not going to do it or die trying. IT IS GOING TO LIVE —AND DO IT—AND DO IT RIGHT!

Another:

"I wish you could have an officer to come to————————section and demand peace and protect the colored people. They are treated everyway but the right way. Some of the landlords are putting them outdoors and taking everything they have, some of them without a fair settlement. Whatever they do, they must not ask for a contract for this year. In some places they are just made to take groceries so the landlord can hold them. Some of them are just taking what they can to eat and walking out. The tenants are asking for contracts but they won't give them. Please try to do something to aid us in our distress. The people have done what they were advised to do.—have taken care of themselves all winter so as to keep out of debt to the merchants and landlords and now they are forcing them to take groceries so they can get them in debt and hold them."

From a Secretary, Unit of N. F. C. F:

"Am writing you in regards to our meeting at our church. Some threats have been made against our Unit meeting there any more by Mr.———————— a white man. He said we had better not meet there anymore. We can meet at some of our houses if this is satisfactory."

SAVE Something!

-:- YOU OWE IT TO YOURSELF -:-

Join Our Dollar Per Week Savings Club Now Open

Every Citizen Is invited to Cooperate in a Definite Movement Where they Themselves will be the Recipients of all the Benefits Both Principal and Interest

Send $1.00 every week to the Citizens Savings Bank and Trust Company, at Nashville, Tennessee, either in cash or post office money order, or you may send your personal check, if it is certified. This will open a savings account on which we pay interest twice a year. It will make you a member of our "Save a Dollar a week Club." Every member of the club, who qualifies by sending the regular amount, will receive special recognition and an acknowledgement of their remittance when it arrives. You can deposit more than $1.00 per week if it is convenient. No matter where you live, in the United States, Canada or Mexico you can take out membership in this savings plan. The Citizens Savings Bank has been operating for twenty-seven years. Its capital is fully paid. Its officers and directors represent men and women who are nationally known. "Procrastination is the thief of time," so do not wait. Open your savings account at once.

spending ten minutes in a baker's oven. This happened in Italy. It is evident that colored people are not the only ones who believe in fake cures.

William Stanton, of Adell, Wisconsin, who is 107 years old, quit his job on a farm so he can go into business for himself. He wants to start a tree trimming business.

Colored citizens of St. Louis are to have a new, modern hospital. It will cost over half a million dollars.

Southern Texas gardeners received higher prices for carrots this year than ever before known. The lowly carrot has gotten many of them out of debt. They are still selling high in the north and are in demand.

For the eighth successive year the co-operative association of the Wenatchee District in the state of Washington has secured crop production financing from the Federal Intermediate Credit Bank of Spokane. Colored farmers of southern states will also be able to secure reasonable financing facilities as soon as they get their agricultural credit corporations organized.

Twenty-five thousand refugees of five states have been fed by the Red Cross during the recent flood disaster.

Hog prices are nearly fifty per cent less than one year ago.

Many western farmers are discarding tractors and going back to horses. Good hired labor can now be secured at reasonable wages and it is estimated that a horse can be fed for as cheap as twenty-five cents a day. Many farmers claim that the horse is the best farm power machine obtainable.

For the first time in over a year American cotton is ahead of foreign grown cotton in the world's trade. Japan, China and Europe are now buying our cotton. Indian and other foreign crops are reported as being below normal.

Bands of night riders are reported as terrifying Negro tenant farmers near Humboldt, Tenn., The sheriff reports that white farmers, unable to pay rent, are attempting to seize Negro farms.

Judge Davis, of Franklin, Texas, has ruled that the cotton acreage reduction law of that state is unconstitutional. This ruling was expected.

The great-grandson of a Negro cannibal chief of the Fiji Islands is now attending school at one of Australia's exclusive colleges, preparing for Oxford, the greatest college in the British empire. He will specialize in law.

BULLETIN FROM

(Continued from page 1)

the administration of loans to farmer from the fifty million dollar fund set aside for that purpose, under section two of the act creating the reconstruction finance corporation were issued today by Secretary of Agriculture Arthur M. Hyde.

The act establishing the reconstruction corporation and authorizing the 500 million dollar appropriation for its operation, provided that fifty million dollars of the amount so subscribed shall be allocated to the secretary of agriculture for "loans or advances to farmers in cases where an emergency exists as a result of which farmers are unable to obtain loans for crop production during the year 1932."

The maximum loan which may be granted to any applicant under the rules promulgated today by Secretary of Agriculture Hyde, is $400, while not more than $1,600 will be loaned to the tenants of any one landowner in a single county. All loans are to be based on a stipulated rate per acre, with the rate varying according to agricultural conditions and the purposes for which the loan is made

Borrowers from the fund, under the department's regulation must agree to "use seed and methods approved by the department of agriculture" and must also agree to plant a garden for home use and a sufficient acreage of feed crops to supply feed to their livestock."

All borrowers are required to execute a promissory note for the amount of the loan, payable to the Secretary of Agriculture at a 5 1-4 per cent rate of interest, to mature on Nov. 30, 1932.

In addition the loans will be secured by crop mortgages, crop liens, or other similar instruments according to the laws of the state in which the applicant is a resident, which will enable the secretary of agriculture, in event of failure to pay the promissory note, to harvest the crop and sell it to satisfy the debt to the government.

Loans to Illinois farmers from the new fund will be made through the department's office in St. Louis, Mo.

Cotton has advanced fully 1.25 per bale since our last bulletin, due mainly to the trade in general, and the easing of the credit situation in this country.

Foreign reports reflect that American cotton of higher quality is regaining its place as King of the cotton world.

China and Japan, as well as England have placed American cotton ahead of the foreign in the world's trade.

We urge our members to plant the best varieties and seed.

Groceries Feed Seed and Supplies

Your list this week will show flour and meat at the same prices. Wheat shorts now 80 cents per hundred. Horse and Mule feed 90 per cent grain 1.20 per hundred.

Begin your Gardens Now

White or Yellow Onion plants, 6,000 to the crate, 2.55. This is a good price.

Red or Yellow Onion sets 2 bushell bags, 1.20 per bushel. This is less than four cents per quart.

Early Burt or Texas Red Rust Proof Oats packed five bushels to the bag, 37 cents per bu. Be sure to sow some seed oats.

Bliss Triumph seed potatoes, packed 2 1-2 bu. to the bag. 96 cents per bushel. This is less than 25 cents per peck.

Cotton plow lines 1 dozen pair to the carton, 1.75.

Two ply roofing, 45 and 3 ply 1.80 per roll.

Back Bands with buckles 2.10 per dozen or 18 cents apiece. 36 inch single bit ax handles packed 2 dozen to the crate 1.75 per doz. This is 15 cents per handle.

Hooker Lye 48 cans per case, 2,85 or about 6 cents a can.

Diamond R Axle Grease; thirty-six pound cans to the case, 2.40. This is slightly less than 7 cents per can.

Farm Lands Available for Rent and Purchase. We are now working on an 1800 acre tract of fine land in Washington County Miss near Greenville. Also a thousand acre tract near Clarksdale, and 1150 acres in Chicot County Arkansas, with mules, cotton-seed and implements. Complete details next week.

Members in Georgia, South Carolina, Tenn., Missouri and North Carolina may write in to this office for information on farm lands in their states for rent, and for sale.

BE CAREFUL AND UNDERSTAND WHAT YOU SIGN

Don't forget to continue and work hard on your credit corporation stock fund. We hope to have everything ready in a short time.

SEC'Y OF AGRICULTURE

(Continued from page 1)

ants of any landowner in any one country will be sixteen hundred dollars. The interest rate will be five and one-half per cent.

Loans for financing the planting of cotton and tobacco will be made on acreage not more than 65 per cent of the acreage devoted to these crops in 1931, if the owner, share cropper or tenant planted more than ten acres of cotton or more than three acres of tobacco last year.

In counties in which fertilizer is not commonly used the maximum loan per acre will be 3 dollars for all crops except truck crops, including Irish potatoes and sweet potatoes, on which a maximum rate of twelve dollars is allowed.

Where fertilizer is necessary for crop production the maximum rates are six dollars for all crops except tobacco and truck crops, the rate for tobacco being ten dollars and for trucks twenty dollars.

Not to exceed one dollar per acre of loans made at any of these rates may be used for repairs and miscellaneous expenses of crop production other than seed, fertilizer feed for workstock and fuel and oil for tractors.

Special provision is made for additional loans for the purchase of materials to protect crops from insects and plant diseases where spraying or dusting is necessary. These loans will be at rates of not to exceed two dollars for cotton and tobacco and four dollars for truck crops. Fruit growers may borrow not more than twenty-five dollars per acre for fertilizer and spraying materials for orchards and vineyards. All loans for these purposes are included in the limit of four hundred dollars on the individual loan.

Loans will not be made to persons who did not engage in farming in 1931, nor to minors.

Loans for summer following are not authorized.

The money loaned from this appropriation may not be used for the purchase of livestock, the feeding of livestock other than workstock, the purchase of machinery, or for the payment of taxes, or interest on debts.

Any one who desires to obtain a loan, will make application on a form provided by the Secretary of Agriculture, and at the same time will execute a note in the amount of his loan and will give as security a first mortgage on his crop to be produced in 1932. Application blanks and other necessary forms will be sent, as soon as they can be printed to County Agents or County Advisory Committeees to be set up in each county.

Members of the N. F. C. F. who receive loans should purchase their seed and fertilizer co-operatively at wholesale prices and reduce the cost of farming.

Members who apply for loans should be careful and see that checks are made payable to them.

ALFALFA

Leafy alfalfa hay is an excellent addition to the poultry ration in winter. A good way to feed it is in a cylindrical frame made of poultry netting, about 1 foot in diameter and 3 feet high. Fasten it to the wall or set it on the floor.

OUR YOUNG FARMERS

Missouri Boy and Girl Writes on Agriculture

We are indebted to Miss A. A. Evans, principal of Ward School, Morley, Mo., for the following essays on "Agriculture," which she informs us were the best written by boy and girl pupils. Miss Evans is a very progressive rural school teacher who is doing good work in a wide-awake community. She is a staunch supporter of the N. F. C. F., a Unit of which exists in Morley.

Ward School is the only brick school building for Negro children in southeast Missouri. It is located on an acre of land facing the main highway. The attendance averages 36 plus.

The following essays tell a much bigger story than one might surmise. They tell what the pupils of this progressive school are being well trained for rural leadership—that this training is being given by a teacher who is giving much higher and better service than she is getting paid to give, and that the community of Morley is fortunate in having such service and such leadership.—The Editor.

AGRICULTURE

By Henrietta Sanders,

Grade 6th, Ward School.

Before attempting to discuss Agriculture I will separate the word, "Agriculture" into its various parts and tell what each means. "Ager" is a field and "Culture" means cultivation. Therefore the word "Agriculture" means the art, science or practice of cultivating land.

Knowing that "Agriculture" means the cultivation of land and that without land there would not be any foundation for man to work, I consider it important. As we know, the greatest amount of our food comes from the soil. Our houses are built on the soil and the material of which we build our houses and other buildings comes from the soil.

To my mind, Agriculture is one of the most important studies in rural and other schools. In order to have successful crops the farmer should at least know what to plant, how to plant and when to plant. If he has not studied agriculture he has a poor outlook for the future.

The farmer's wife should know agriculture so she will know the right stock of chickens to raise and also the right kind of grain to feed her hens so they will produce more eggs. She can also help her husband in points he does not fully understand.

The children of today should spare more time in the study of "Agriculture" and also on the farms, watching their parents plant various crops and handling livestock. If they will do this, when they are grown they will know what to do and how to do it.

In conclusion I will say that the National Federation of Colored Farmers is one of the biggest helps our farmers have. Had our farmers not received good advice the depression would have been harder

(Continued on page 6)

OWNERSHIP OF LAND

LOUISIANA STATE COLLEGE OF AGRICULTURE MAY 11 1932

Prof. Chas. Stone Makes Terse Remarks

(Special to Modern Farmer)

We should urge our people to redouble their efforts to become landowners. Landowners means comfort and every individual has a God-given right to live as comfortably as possible. Ownership of land is a prerequisite of a condition of legitimate comfort. The man who owns land and successfully tills it is indispensable to the world's industrial life,—he is progressive—and this fact alone is proof of his individual progress.

Landownership means independence for the successful farmer. It means freedom from an objectional condition brought about by an unreasonable exaction imposed by an unsympathetic landlord or employer. The man who owns the soil and tills it is indeed a free man.

Landowners command the respect of their fellow citizens. They live in reasonable comfort and present a picture of intelligence and progress. They are ideal citizens. Our people should acquire more land and cultivate it intelligently.

The renter and sharecropper must not be overlooked for this class of our people are an important body of toilers. We commend them to considerate landlords. Upon all tenants we would impress the idea of faithful and earnest toil. We would urge them to practice modern framing methods. Above all, we would advise them to be thrifty and frugal for what one makes does not count but what one saves helps him along on the road to independence.

COURT ACCEPTS PLAN TO SAVE NATIONAL BENEFIT FOR THE POLICY HOLDERS

RECEIVERS ANNOUNCE PROGRAM WITH VIEW TO CONSERVING INTEREST OF POLICYHOLDERS

Washington, D. C.—By order of the Supreme Court of the District of Columbia the Receivers of The National Benefit Life Insurance Company have been authorized to proceed with a plan whereby policyholders who continue the payment of premiums may secure an equitable adjustment of the insurance on their lives. The order provides that under such a plan of adjustment the stockholders shall not gain in any way by any sacrifices or waivers that the policyholders may make temporarily and therefore this continued adjusted insurance is to be participating and the Receivers look forward to actual earnings thereon to be distributed among those policyholders in the form of increased insurance.

The program, as announced by the Receivers calls for the payment of the same premium as previously paid by the policyholders, which premium will purchase for them 100

(Continued on page 6)

TALKS TO COLORED FARMERS

Leon Harris Addresses Himself to Constituents

Big things are going to happen within the next fifteen years. The business of farming is going to become sure enough the "biggest American business" and the farming group is going to become the most powerful group in the Nation. In spite of present conditions,—hard and discouraging though they are,—Negro tillers of the soil must now get busy and prepare to become full-fledged members of this group and not just "hangers on."

In course of time, all American farmers are going to be organized in federations and associations for their own protection and welfare. There will never be just one big organization for all farmers, but all farm organizations, both white and colored, will eventually learn to co-operate and work together.

Big corporation farming and chain-farming will never make much headway in the United States. We Americans, black or white, don't make very good hired hands, and chain-farms and farm corporations can't succeed unless good hired hands can be found. The American system of farming will eventually be CO-OPERATIVE FARMING.

The cropper-system and tenant system of farming is doomed. This system of farming is old enough to die and should die. Large plantations and farms must be broken up. As long as we have them, we will have tenancy and share-croppers and tenants are not real farmers. Real farmers own the land they plow and plow the land they own. Negro share-croppers and tenants must prepare and strive to become farm-owners.

First of all, Farmers, it is your duty to join or build up a Negro farm organization in your community—in the place where you live or want to live. The National Federation of Colored Farmers is striving with all its power to help colored farmers become farmowners. This organization is having some success and will have better success in the future. Some large farms and plantations have already been purchased on easy terms by groups of members and these buyers will eventually pay for them and own them. I know of no better start you can make toward becoming a farm-owner than by becoming a member of the N. F. C. F. The officers of this organization are constantly looking out for opportunities for members to get homes and farms of their own. Only today, while I am writing this "talk" the N. F. C. F. has been offered a chance to buy one of the finest plantations in the South for $15,000 down payment. If we had that much money today we could grab that bargain and more than 200 tenant-farmers or share-croppers could take possession of it. In a year or two it would be divided into small farms and the 200 share-croppers or tenants would eventually become full fledged farm owners.

After you join a farm organization you should strive to get other farmers to join. You should be a

NEW METHODS ADOPTED

One-Variety Plan—Cotton on Profitable Basis

(From the Commercial Appeal)

Hattiesburg, Miss.—When several hundred farmers of Forrest and Simpson counties last year added an average of $4 a bale to the value of their cotton, and at the same time cut down production costs, through one-variety communities, they gave a practical demonstration of the means by which agricultural leaders assert the south's cotton industry must be rebuilt to reach a profitable basis.

This week, Forrest and Simpson are perfecting the south's first county-wide one-variety project, expanding and consolidating the smaller projects of last session, with a unanimity and enthusiasm which causes prominent leaders to express hope that the new movement will sweep over the south. Planting time is close at hand, but it was still later last season when the successful projects of this section were undertaken.

"Only One End."

In previous years, cotton of this section was so short in staple length that buyers said it had "only one end.' When rare lots of better cotton were grown, it was shipped elsewhere and sold as Arkansas cotton, to avoid the bad name which clung to local staple. Back of the re-birth which took place last year lies a story of eight years educational labor and community effort, starting with the day when the county agricultural agent was

GROWTH OF LINCOLN NATIONAL LIFE INSURANCE COMPANY

AS REVIEWED BY LOCAL AGENT

The Lincoln National Life Insurance Company, is now America's nineteenth largest life insurance Company, according to a statement received by L. C. Evans, Nashville, Tenn., local representative of the Company, whose home office is in Fort Wayne, Ind.

The company's growth is really phenominal when it is realized that it is less than thirty years old—a mere youngster, as age is looked upon in the insurance industry. The company was organized in 1905. The youngest of the 18 companies larger than Lincoln National Life began business in 1892 and now ranks sixteenth in size.

During 1931, according to the statement, the company scored a gain of more than $33,000,000 in total insurance in force and is now approaching the charmed circle of $1,000,000,000,000 life insurance companies. This goal will likely be attained in the next two years. The company's report for 1931 showed $924,000,000 of life insurance in force. Admitted assets jumped from $76,259,170 in 1930 to $83,189,326 at

EX-SLAVE PENSION BILL

Oscar DePriest Offers Measure in Congress

(From Chicago Defender)

Washington, D. C.—A bill calling for pensions to ex-slave citizens of the United States or of its territorial or insular possessions was introduced into the United States house of representatives last Thursday by Representative Oscar Depriest of the First Congressional district of Illinois.

The bill was referred to the committee on invalid pensions of which Congressman Depriest is a member.

The bill provides that any person who was freed by the Emancipation Proclamation of President Lincoln on January 1, 1863, and who is eligible under further provisions of the act, shall receive a pension which equals but does not exceed $30 per month when added to the monthly net income of the applicant. The money is to be paid by the administrator of veterans affairs.

Those eligible to receive the pension under the act are persons 75 years of age and over, who have continuously resided in the United States, its territories or possessions, and who are not inmates of any prison, insane asylum or other public correctional institution. Also excelled from eligibility are persons otherwise coming within its terms who have been in prison for a crime involving moral turpitude during the ten-year period prior to the enactment of the measure, or who under any existing state or federal laws are entitled to support by living children or relatives.

Additional Provisions

Further provisions of the bill provide that no pension shall be payable "(1) during the period such person or an inmate of and receiving the necessities of life from, any charitable institution maintained by the United States or by a state or any political subdivision thereof; or (2) to any person who has divested himself, directly or indirectly, of any property for the purpose of qualifying for pension under this act."

Additional stipulations of the bill provide for the modification or revocation by the administrator of veterans' affairs of any pension granted in order to conform to a possible changed status of the pensioner. The pension is payable monthly under the bill, and applications for pension are to be in writing on forms provided by the veterans bureau. In addition to the monthly pension, it is provided that the veterans administration shall defray the burial expenses of any indigent ex-slave in a sum not to exceed $100.

Creates New Federal Job

Under the bill a new federal position will be created to take care of the administration of the act. The job created is that of ex-slave counsel, who is to direct the administration of the act and is to have a complete office force, the salaries and number of whom are to be fixed by the administrator of veterans affairs. The ex-slave counsel is to be appointed by the president, and

CONTROL MEASURES FOR TOMATO FRUIT WORM

Gainesville, Fla.—A double row of corn planted around the edge of tomato fields and an occasional double row through the field will serve as a trap crop for the tomato fruit worms, says J. R. Watson, entomologist with the Florida experiment station.

The same worm that bores into the tomatoes is also known as the corn ear worm and the corn budworm. It prefers corn and will thus leave the tomatoes for the corn. Mr. Watson advises planting the corn so that it would come into silk at about the time the first tomatoes are forming. The moth that lays the egg which causes the worm prefers shade, so a row of peas between the double row of corn is suggested.

If it is not practical to have the corn come into silk when the first tomatoes are forming, corn that is knee high will give some protection. The moth will lay her eggs in the buds, to produce what we know as the corn budworm. At this stage the worm in the corn should be poisoned. A dust made by mixing one pound of lead arsenate to ten pounds of lime is recommended.

When the corn begins to silk it should be dusted every three days, providing one wants to get roasting ears free of worms. The removal of the ears from the field will destroy many worms that might emerge and attack the tomatoes later.

This trap crop will greatly diminish the worm-damage to the tomatoes but may not entirely control it, Mr. Watson said. Since the tomatoes are usually sprayed for fungus diseases with bordeaux mixture, he advised adding one pound of lead arsenate to each 50 gallons of bordeaux. Spraying should begin when the tomatoes begin to form and continue until just before they are ready for market.

Picking all wormy tomatoes from the field and destroying them will also help to control the pest.

CROSS BREEDING IS FOUND SUCCESSFUL IN BETTERING CORN

Promising results in the farmer's problem of eliminating the many barren and otherwise low producing stalks that cut the yield and limit the profits from corn have been obtained by the college of agriculture, University of Illinois, through crossing ordinary open pollinated varieties with certain good inbred lines, it is reported by W. J. Mumm, associate in plant breeding This method decreased the percentage of barren stalks from 7.4 percent to 4.2 percent as an average of several crosses and several varieties in 1931, he said.

Another method that may help is selecting seed ears from plants in which the shoots are ready to pollinate at about the same time that the pollen is shed, Mumm said. This was indicated by the results of a 1931 study in which the college plant breeders found that 143, or 4.2 percent out of 3400 plants of an ordinary strain of Reid Yellow Dent corn put out the silks of the shoot at least eight or ten days after the tassel had shed its pollen. Fifty-eight, or 40 percent, of such plants were barren, and the total yield was only about one-fourth what it was from the desirable plants.

Seriousness of the "boarder" plant problem, however, takes in more than just the plants that are late in putting out the silks of the shoot, the 1931 study indicated. Approximately 22 percent, or about one plant in five out of the 3400, was rated as undesirable for one reason or another. Ears from these plants averaged only three-fifths as heavy as those from the desirable plants. Plants that for one reason or another were barren or practically so, reduced the yield more than 9 percent, or about 4.6 bushels an acre. The plot yielded 49 bushels an acre.

Plants that were classified as weak were next to the most numerous among the undesirable plants and were the poorest yielders. Out of the 3400 plants in the plot, 180, or 5.3 percent, were rated as weak and they yielded only 35 percent as much as the desirable plants. Almost 38 percent of these weak plants were barren. Roll-leaf plants, the most numerous of the undesirable plants, with a total of 281, or 8.3 percent, and yielded only 80 percent as much as the desirable plants. Plants that were small, smutted, leaning, very early or otherwise undesirable made up the remainder of the 22 percent that were classified as undesirable.

Gold is good in its place, but living brave and patriotic men are better than gold.—**Abraham Lincoln.**

FARMERS MAY STRIKE, WITNESS TELLS SENATORS

(Chicago Tribune Press Service)

Washington, D. C.—(Special)—Unless given further federal aid, American farmers may go on strike, the senate committee on agriculture was told today.

The witness was Paul Moore, a farmer from West Branch, Ia., President Hoover's birthplace. He was testifying in behalf of the Thomas bill to abolish the farm board, transfer its functions and its funds to the department of agriculture, and give the secretary of agriculture power to fix the prices of major farm commodities at the cost of production.

"Unless adequate relief legislation is passed," said Moore, "I believe the organized farmers may be led to strike, withholding their food products until the world has been shown that it must have them and is willing to pay for them."

T. E. Howard of Denver, representing the National Farmers' union, advocated passage of the Thomas bill.

While the senate committee was considering the Thomas bill with its provision for ascertainment of cost of production, the department of agriculture suddenly announced that henceforth it would make no public forecasts of the probable course of farm commodity prices.

Another measure to give the federal government regulatory power over agricultural production was introduced in the senate today when Senator Bankhead (Dem., Ala.) amended a former bill by adding a provision to give the secretary of agriculture authority to limit the shipment of cotton grown in 1932 to 50 per cent of that produced in 1931.

CAN YOU BEAT THIS?

First Farmer: I never saw such a bad season for crops. Our corn ain't an inch high."

Second Farmer: "An inch! Why, the sparrows have to kneel down to get at mine."

We have found out that we were not so big as we thought we were.—Calvin Coolidge.

KANSAS PONY 47 YEARS OLD, OWNER ESTIMATES

Wichita, Kans.—An Indian pony believed to be forty-seven years old is owned by Michael Reuger, a farmer near Marysville, Kans. The animal is said to have been one of a herd bought in 1885 by Charles Phillips. Although it cannot chew corn or prairie hay, the pony still eats oats and alfalfa. It is used to drive cows to and from pasture.

BLESSINGS OF THE DEPRESSION

Many of us are now unemployed. Some of us are in the bread line. Children are out of school for lack of clothing and funds to meet their expenses. A number of us have not only lost our jobs but also our homes which we could not refinance during the crisis. Such suffering and hardships have become so frequent that it is difficult to talk with a person five minutes without having to answer the inquiry as to how long this state of affairs will continue. No one knows. Beware of the prophets.

The depression, however, is not an unmixed evil. For the colored people it is a blessing in disguise. At last we have been hungry long enough to inquire why such a thing happens. When our stomachs are empty and there are no prospects of filling them soon we finally indulge in serious thinking, a thing which very few of us have taken the time to do. In the quietude of the cold room with the exhausted meal barrel we are beginning to discover that we have difficult problems which must be solved if we are to exist in this bread and butter struggle of today.

In the first place, the Negro has learned that although the race has many friends in other groups we must finally depend upon ourselves. We have profited by the intercession of these friends of other races at various times, and without their assistance our struggle upward would have been decidedly retarded; but this depression has driven home in sledge-hammer fashion the eloquent truth that in our extremity we cannot depend upon others. We must fall back on our own resources. If we have none we are of all men most miserable.

In various cities which I have visited this winter I find Negroes complaining that rich white business men who have regularly contributed to the Y. M. C. A., the Urban League, and our schools in the South will not employ colored men, although they must have thousands of hands in their establishments. Buffalo, New York, however, is apparently an exception. These businesses have never employed Negroes except in menial capacities, and some of the positions once available for them in this sphere have been taken over by whites displaced in the higher pursuits of labor.

The only thing the colored man can hope to receive from his best white friends, then, is sufficient charity to keep him alive in time of a crisis. Their more serious efforts for relief are restricted to their own race. This has become strikingly evident in New York City. The Negro thus consigned to the bread line, then, becomes and remains a nonentity in the social order.

A man dependent on charity is of no force in a community. Those who supply him will determine where he shall live, what he shall do, or whether he shall survive the ordeal to function at all along these lines. The friends of the Negro thus figure out that inasmuch as some element must constitute this lower stratum, these unfortunates of a race other than theirs be so consigned. The Negro, therefore, must find some way to help himself. There is not to reason why. The thing can be done, and the colored people must find some way to do it.

What resources has the Negro in the struggle to help himself? Roughly speaking, we say he has none, for he belongs to a class of serfs or paupers. While this condition as a rule may obtain among colored people, it is not due altogether to causes from without. We have pauperized ourselves. We do not use what we have to secure what we actually need. We walk over treasures looking for things which are worthless; and we fail to understand the possibilities of the times.

For example, a highly educated colored man, miseducated in economics in one of our "great universities" of the North, informed me the other day that the Negro has no chance in the commercial world because he has no capital to organize and promote large corporations which control both the raw materials and the market for the products produced therefrom.

Is is true that the Negro has practically no capital in the sense of having large sums of money at the disposal of a few outstanding members of the race? If you bring together at random a thousand white men and compare them with a similar number of colored men thus assembled, however, the colored group would represent about as much wealth as the white with the exception of the few who have induced their fellows to join with them in pooling their small earnings for cooperative enterprise. The colored people have this same opportunity, especially in supplying their own, but hitherto we have apparently existed only for the good we are to enrich others; and it is unfortunate that we do not embrace this opportunity.

Is it true that big business has made difficult such organizations for further enterprise among people who have not hitherto been alert in this sphere? Some of the thinking people of the country, however, have gone so far as to regard the effects of this depression as indicating the twilight of big business. Under certain circumstances, big business is ideal for amassing millions. Under other circumstances, like the present depression, it works like a millstone about the neck of the owner.

Big business has to provide a large and expensive executive force; it must pay for high rents, large commissions, and costly advertising, and consequently it must do a large volume of business or fail. Small business requires very little of such an outlay; and although the cost of production may be a little high the price may be made as low as that of large corporations and still have a fair profit. In case of a depression readjustment which is an easy matter for small business is an impossibility for the large enterprises and many of them become bankrupt in the effort. Statistics of the present crisis show that small businesses are succeeding in weathering the storm while large corporations in the same sphere are going into bankruptcy. This may offer the colored people a solution of their problem.

To say that there is no solution is both foolhardy and suicidal; and he who is so insufficiently read in history or who has such a little confidence in himself and his people as to despair should not be followed in this crisis. To keep such leadership of beggars before the race as ideal will be a fatal error. The Negro needs all of the help that other friends will give him, and he deserves it, but until he learns that a greater help must come from within, he will never amount to much in this country or anywhere else in this world.

C. G. WOODSON.

WISDOM

By Benjamin Franklin

Light purse, heavy heart.

Ne'er take a wife till thou hast a house to put her in.

To lengthen thy life, lessen thy meals.

The heart of a fool is in his mouth, but the mouth of a wise man is in his heart.

He that is rich need not live sparingly, and he that can live sparingly need not be rich.

He that waits upon fortune is never sure of a dinner.

NATIONAL FARMERS' EXCHANGE WOULD BE OF GREAT AID IN DISPOSING OF FARM PRODUCTS OF ALL KINDS

Editor Constitution: Last Sunday you published an article that I wrote advocating a national farmers' exchange, and on the same page I note your comments: "Western Foods on Georgia Farms."

I would like to correct any thought that your article might have conveyed that my farm is a customer of the western producers. The diet I said lack of distribution had imposed on my colored labor is produced on the farm, and not westerr products.

You also commented on the lack of milk and butter, which you said was a God-given opportunity to the colored people.

There are during all seasons of the year agents and the like riding up and down the roads, and when they see a cow in a Negro's back yard they stop and offer him their merchandise in exchange for a mortgage on the cow. Their merchandise chiefly consists of graphaphones, second-hand organs and pianos; and, in a great many instances they offer them enlarged photographs of their entire family. It is a case of the stronger personality playing on, imaginating for, and merchandising with a weaker personality resulting in liberal distribution of second-hand musical instruments and enlarged photographs instead of distribution of farm products.

Commenting on vegetables on the farm all the year around; any experienced farmer will tell you that Florida can grow vegetables in the winter season, but not in the summer. Georgia and all the southern states, the middle western and extreme western states are subject to drouths, and a six-week drouth will destroy any vegetable garden or crop that is exposed to such a climatic condition. Any farmer of experience will tell you that a dry year is a good crop year, especially for farmers growing crops on light lands. Give us a rainy season in the southern states and the cotton stalks will all go to vegetable growth. The peaches won't carry, the cover crops cannot be harvested on account of climatic conditions, peanuts, grain and oats will sprout in the stack; and, therefore, a dry season is much more desired than a wet season; whereas, vegetables thrive under moist conditions.

The only sections of the United States that can grow unirrigated quantities of vegetables with any measure of success is around the Chesapeake bay and the Great Lakes. All other sections more or less have to depend on irrigation, of which, you know, the cost runs into thousands of dollars per acre. The fact that Libby, McNeill and Libby, Beechnut and Heinz have all of their factories located in the territories referred to is a self-evident fact of the superior adaptability of these territories to vegetables over other sections of the country.

It is impractical to grow at all seasons of the year vegetables on the farm. It no doubt could be to a larger extent than is being done, but unprofitable experiences traceable to unfavorable climatic conditions has a tendency to detract the interest of the farmer to truck growing.

I have been experimenting with the suggestion that I made as to a national farmers' exchange by offering to exchange oats, pecans and sweet potatoes, which I have produced in large quantities, and on which is difficult to obtain an offer for such farm produce as I could to advantage merchandise on my farm; and in this morning's mail I was flooded with letters offering to swap peas, syrup, wheat, hogs, nursery stock and even patent medicines were offered, and I am satisfied that I could do several thousand dollars' worth of business a week on a national exchange basis, and I suggest that you give this plan much more publicity. Call it the Georgia plan, if you please. I do not deserve any credit for originating it. The thought came to me from my experience with the Market Bulletin.

J. D. DUKE.

Fort Valley, Ga., In Atlanta Constitution.

RABBIT MEAT GOOD SOURCE OF PROTEIN

Washington, D. C.—Recent tests made in the United States Department of Agriculture show that rabbit meat compares favorably with other meats as a source of protein. The moisture and protein content of rabbit meat are relatively high and the fat content is rather low.

In making the tests, department workers analyzed the flesh of four typical specimens of domestic rabbits, which included representatives of the American White, Chinchilla and New Zealand breeds. The rabbits varied in age from ten weeks to 18 months. The meat was stripped from the bones of the carcass and the heart, liver, and kidneys were removed.

The moisture and protein content of the specimens averaged 66 per cent and 20 per cent, respectively, whereas the fat content was rather low, slightly less than 12 per cent. The fuel value per pound was 1.011 calories in one experiment and 716 calories in another, with an average of 855 calories for all determinations.

Lynching Is Investigated

Sheriff Who Lost Prisoner Is Automotically Ousted

Atwood, Kan., April 19.—(AP) — An investigation started personally by Gov. Harry H. Woodring was underway here today in an attempt to learn the idenity of members of a mob that lynched Richard Read, slayer of 8-year-old Dorothy Hunter.

"Identity unknown" was the verdict o fa corner's jury after a brief inquest.

About 200 men heavily armed, were in the mob that hanged Read from a tree near here early yesterday after taking the confessed kidnaper and attacker of the Selden, Kan., school girl, from the Cheyenne county jail at St. Francis in the night.

Most of the mobsmen persumably were from Selden and vicinity.

Sheriff A. A. Bacon of Cheyenne county, who was overpowered by the mob, was automatically ousted from office under provision of the Kansas mob aw for the loss of his prisoner. — Jacksonville Journal.

Ex-Slave Dies

Atlanta, Ga.— Emily Starr, a Negro woman who was borned a slave of the Dillard Adams family, of Covington, and served all her life as a house servant of the Adamses, died here Tuesday afternoon. She was 72 years old and though freed when she was five, continued to serve her "white folks" throughout her life.

She was widely known in Newton county and her body will be taken Sunday to Covington for burial. She is susvived by four children, eight grandchildren and one great-grandchild.— Exchange

NEW KENTUCKY OLEO TAX LAW PROVIDES HEAVY PENALTIES

Louisville, Ky., Feb 26—The oleo tax bill passed by the Kentucky legislature February 10, provided that the tax and licensing be handled through the State Tax Commission, which will issue oleo stamps to be fixed to every package of the product sold. The law prohibits use of oleo in the state or publicly maintained institutions. Penalties for violation of the law range up to $50 for first offense and fines of not less than $25 or imprisonment of from 10 days to one year for each subsequent violation.

Application for Membership

NATIONAL FEDERATION OF COLORED FARMERS (Inc.)

Vincennes Hotel, Chicago

As a farmer, I believe the time has arrived when the Colored Farmers should form a National Organization devoted to diversified production, grading, packing, shipping and marketing of farm products and to the purchase of needed farm supplies through co-operative methods, to the end that a more prosperous financial condition may result from their efforts as producers.
I hereby subscribe $5.00 for membership in the National Federation of Colored Farmers for a period of 12 months from date. Also $1.00 for an Annual Subscription to the Modern Farmer.

"OUR SLOGAN"

STAY ON THE FARM IF YOU'RE ON IT! GO BACK TO THE FARM IF YOU'RE OFF IT!

THE LAW

"It is hereby declared to be the policy of Congress to promote the effective merchandising of agricultural commodities by encouraging the organization of producers into effective associations under their own control.

The Board is authorized and directed—to promote education in the principles and practices of cooperative marketing—to encourage the organization, improvement in methods, and development of effective cooperative associations." (Public—No. 10—71st Congress. Sec. 1-5.)

THE GOSPEL

"This law is predicated upon the ability of the farmer to manage his own business, once he is organized to do so. Cooperation is the key to it and only in exceptional cases can the Federal Farm Board have any dealings with a farmer who is not a member of a producer-owned and producer-controlled marketing unit." Hon. Sam'l R. McKelvie, Member, Federal Farm Board.

The National Federation of Colored Farmers believes that the Colored Farmers of America should own and control their own co-operative associations.

"Co-operation With All—Affiliation With None."

A LETTER

January 11, 1932.
The American Red Cross Society
Washington, D. C.

Gentlemen:

Tenants on a plantation owned by ..... and managed by a Mr. ..... of ....., Miss., write and inform me that they have been refused aid by the local Red Cross chapter. They say they have no food or clothing and that the manager of the plantation refuses to supply them although he promised the Red Cross chapter that he would do so. These tenants claim that their landlord will not settle with them,—will not advance them any food or clothing, and will not allow the Red Cross to give them anything until they sign up to work another year under contracts that will not net them a living.

Another tenant farmer writing from Route 1, ... (State), informs me that he made a crop on the ..... place, operated by..... ..... and managed by a Mr..... ..... He informs me that Mr. ..... has driven him and his family and other tenant families off the place,—has confiscated their meat, potatoes and other food supplies,—has taken the family dishes, quilts and clothing and forced them to the highway and that they are in desperate straits.

Another colored farmer, ... of ....., writes that 200 families in his section have been turned out of plantation homes and their food taken away from them by their landlords.

It appears that many are in destitute circumstances in this section, through no fault of their own, and should receive immediate assistance. If greedy and unprincipled landlords and plantation managers are making and keeping these people destitute for their own selfish interests, they certainly should be prevented from making the Red Cross a party in their nefarious plans. I suggest that you investigate these conditions and further suggest that local Red Cross chapters in this territory be instructed to find out at first hand the condition of Negro tenant farmers and cease relying upon the assertions and opinions of landlords and managers of plantations. It is evident that many of the latter believe that a state of debt-slavery and peonage is the price their tenants should pay for the necessities of life.

Trusting that you will give this matter consideration, I am

Sincerely yours,
(Signed).
Leon R. Harris, Editor.

A NEAR TRAGEDY

During the past two years, especially since the Farm Board has been functioning, the government has found a way to relieve and aid every class of American farmers except the Negro tenant class. A majority of Negro tenant farmers live in counties that have no farmers' organizations,—no farm or home demonstration agents,—in fact, no way to find out about relief or aid if there is any chance for them to get it.

Special representatives have been appointed by the Federal Farm Board to assist all classes of American farmers except the Negro tenant class,—the class of farmers who need this assistance the worst. The fact that no Negro special representatives have been appointed is an injustice and amounts to a near tragedy.

GOVERNMENT PENSIONS FOR EX-SLAVES

We agree with Rev. D. D. Crawford, prominent Georgia Baptist minister, that the government should pension our ex-slaves. The effort now being made to bring this matter before Congress, will receive our earnest support.

Writing to the Atlanta Constitution, Rev. Crawford says:

"I wonder if it is not time for the government to give some consideration to the ex-slaves? Every class of citizen in the country has been rewarded, supported and cared for except these poor unfortunates.

It has been 67 years since they were set free and very few of them can earn a competent support now, although most of them have served well and long. Ours is the richest country in the world, and how much of this wealth has been produced by them will never be known. For hundreds of years about all they received from their earnings were food and clothes. And now they should be allowed to spend their last days in comfort and ease.

For one, I believe the government should pension these faithful old souls before they are all gone. Not many remain to tell the story of long ago.

These old people are worthy objects of the country's care: they were not responsible for their plight then, they are not responsible for their situation today. They served their masters well then and protected their homes in times of danger and they have served their country well since and sacrificed themselves upon the altar in times of her danger since."

SEED LOAN FRAUDS

A statement issued by officials of the National Federation of Colored Farmers says that several members secured farm loans last spring but that their checks never reached them. It appears that other parties got the checks and spent the money. These cases have been reported to proper government authorities.

Recently 79 indictments in alleged seed loan frauds were returned by federal jurors sitting at Dothan, Alabama. Those indicted included two prominent lawyers, a county farm demonstration agent, a druggist and several widely known planters. All indicted were white.

If these men are guilty of the charges they should be punished and punished hard. The crime charged is the more contemptible because it is alleged they took advantage of the helplessness and lack of knowledge of poor Negro tenants. This kind of a crime is on the level with "stealing a penny off a dead man's eye," or "milk from a suckling baby."

The N. F. C. F. is again urging its members and all colored farmers, especially tenant farmers, to be careful what they sign and to know what they are signing. The government is loaning money again this season and there are plenty yet alive who will, by hook or crook, try to take advantage of ignorance and helplessness. Look at the figures on the application blank and on the check. Get your own check and cash it,—don't let anyone cash it for you. We know one tenant farmer who got a $150 loan and the "friend" who cashed it told him it was for fifty dollars. But the government is now demanding that he pay $150 and this he will have to do. He only got fifty of it—the friend got the other $100—the borrower has to pay the whole $150 back and the "friend" is grinning in his sleeve.

Brer Rabbit said: "Don't trust your brother. He may have a hound in his pocket." When it comes to checks, working agreements, contracts and etc., it's always best to use your own eyes and a plenty of common sense.

The MODERN FARMER is starting on its fourth year this month. "Through many dangers, toils and snares, we have already come." You know the rest of the old song.

Gen. Grant said at Vicksburg: "We are going to fight it out on this line if it takes all summer." Well, we are going to fight it out on this line if it takes the rest of our lives.

Approximately 250,000 colored farmers are owners. We want to see 500,000 colored farm owners in America by 1940.

Progress is made out of courage and faith. Don't be afraid. Go ahead. If you can't move a mile,—move an inch.

Misses Fannie Mai Brown and Lena G. Brooks of Orlinda spent the weekend with Mrs. Delphia Boyd.

New Sanitarium Head

Cordel, Ga., April 19. — Mrs. John Koenig, of Le Grange, has been selected superintendent of the Cordele sanitarium. Mrs. Koenig is a registered nurse who completed her training at Grady hospital, in Atlanta, and who has had several years' experience in some of the leading hospitals of Georgia.

—Exchange.

223,840 NEGROES LIVE IN STATE OF MISSOURI

The Negro population of Missouri is 223,340 or 6 per cent of the total population of the state, a survey made by R. S. Cobb, former executive secretary of the Missouri Negro Industrial Commission, reveals.

Of the total, 169,954 are listed as urban population, 132,154 residing in St. Louis and Kansas City. Among the rural communities Pemiscot county leads with 10,040 Negroes. An appreciable drift toward rural life is noted in the survey, due to the reduced price of farm land and the difficulty of maintaining themselves in large cities.

Politically the Negro is classed as a negligible factor in Missouri, due to lack of leadership.

Never joke with people who themselves do not joke; you may get your feelings hurt.

STATEMENT OF OWNERSHIP

The Modern Farmer as required by the Act of Congress, August 24, 1912.
State of Tennessee,
County of Davidson.

Personally appeared before me, a Notary Public in and for the State of Tennessee, County of Davidson, S. B. Wilson, who having been duly sworn according to law deposes and says that she is the Business Manager of the Modern Farmer, and the following is to her knowledge and belief, a true statement of the Ownership Management etc., of the said publication for the date sworn above caption requested by the Act of Congress, August 24, 1912, embodied in section 443 Post Office laws and regulations.

1. That the name and address of the publisher and business manager of the Modern Farmer, Nashville, Tenn., and Chicago, Ill., S. B. Wilson, Business Manager.

2. That the owners are Henry Allen Boyd and S. B. Wilson, both of Nashville, Tennessee.

3. That there are no known bonds, mortgages or other security holders or owners holding one per cent or more and that there are no bonds, mortgages or other securities on the corporation.

(Signed) M. G. FERGUSON, N. P.
Sworn before me the 15th day of April, 1932.
My commission expires January 10, 1939.

Interesting News & Notes

According to Paul K. Edwards in his new book, "The Southern Negro as a Consumer," the purchasing power of the colored population of 17 southern cities is $308,000,000. The buying power of colored people in these cities is larger than the American export trade to Mexico, the West Indies and Bermuda, and almost as large as that to South America.

The S. T. Philips family of Omaha, Neb., believe in the old slogan. "An apple a day keeps the doctor away." This family of seven have eaten seven bushels of apples the past winter. All are in good health.

The eighteenth award of the Spingarn medal, given annually through the National Association for the Advancement of Colored People to the United States citizen of African descent for highest achievement, goes to Major Robert Russa Moton, principal of Tuskegee Institute. The committee states, "This award is made for his thoughtful leadership of conservative opinion and action on the Negro in the United States, as shown in the U. S. Veterans Hospital controversy at Tuskegee; by his stand on education in Haiti; by his support of equal opportunity for the Negro in the American public school system; and by his expression of the best ideals of the Negro in his book, 'What The Negro Thinks.'"

Alabama raises approximately one-fifteenth of the cotton in the United States.

A writer in the Atlanta Constitution advocates the establishment of a national farmers' exchange. This organization would exchange farm products produced by farmers in one section of the country with other products of farmers located in other sections.

Records kept on 137 hogs in Currituck county, N. C., showed they paid $1.04 a bushel for all corn fed them.

The value of farm implements and machinery in Georgia in 1930 was $31,216,549 as compared with a valuation of $63,343,220 in 1920. This is plain proof that Georgia farmers have been having a hard time of it during the past ten years.

An experienced packer says that brown eggs from corn-fed hens are the best eggs in the world. These eggs are far superior to the standardized white eggs produced largely on the Pacific coast. These coast dealers however practically control the egg market because they advertise their product and produce and sell co-operatively.

Farmers throughout the country are protesting against the salaries of $75,000 and $50,000 a year paid respectively to Mr. Creekmore, of the Cotton Co-operative and Mr. Milnor, of the Wheat Co-operative. Colored farmers are helping pay these fat salaries and at the same time are wondering why the Farm Board professes to be unable to employ a single Negro farm representative at any kind of a salary.

Tomato juice consumption is increasing daily. Two years ago the beverage was seldom heard of. This brings us to a favorite theme; that of new or widened outlets to take care of an increased production.

PROMISES NO DISCRIMINATION

T. Arnold Hill Gets Assurance of Fair Treatment

T. Arnold Hill, Director of the Department of Industrial Relations of the National Urban League, asserts in a special release from the New York office that the American Legion had given the Urban League written assurance that no discrimination would be practiced against Negroes in the "War Again Depression Campaign now being conducted by that organization. He expressed surprise and concern about the reports of flagrant discrimination published in the Negro press, and gave out the following letters:

Office of National Employment Commission of American Legion
February 15, 1932.

"Mr. T. Arnold Hill
National Urban League,
1133 Broadway,
New York City.
"Dear Sir:

"Your letter to the National Commander in Indianapolis, has been referred to these headquarters.

"We start today, the nation wide drive throughout the posts in every department to obtain employment for a million men and women throughout the country.

"It is the purpose of this commission to not differentiate in any particular, our efforts to obtain employment for men and women, regardless of their race or color.

"You are correct in assuming that The American Legion is as much interested in all classes and groups, as it is in any one of them.

"I am very glad that your letter permits me in the name of The National Commander and The American Legion, to assure you of this policy. It is obvious that no such movement as we have instituted would hope to attain success unless our efforts were directed in taking care of all classes and conditions of people throughout the United States.

"Assuring you of our appreciation for the spirit shown in your letter, I am

Very truly yours,
(Signed)
MARK T. McKEE,
Executive Director."

War Against Depression Campaign Sponsored by The American Legion
February 15, 1932.

"Mr. T. Arnold Hill,
Department of Industrial Relations,
1133 Broadway,
New York City.
"Dear Sir:

"General Attorney has forwarded to me your letter with the enclosed report on 106 cities regarding the unemployment statns of Negroes.

"I assure you that the American Legion Employment Commission will see that the Negro is not excluded from benefits derived from the Commission's activities. We've a number of Negro posts in the American Legion who are organized and helping us carry this employment campaign to success.

"The first object of our drive is to put 1,000,000 wage earners back to work. We have not designated any class to receive the benefits from our campaign and I assure you that we are working in the interests of all persons and not for any particular class or individual.

"Thanking you, I am,
Very truly yours,
(Signed)
MARK T. McKEE,
Executive Director."

Before the American Legion job campaign began, T. Arnold Hill, following the employment program of the National Urban League, transmitted a request to high Legion officials that the Negro be given an equal chance.

This country imported 134,888 pounds of live turkeys valued at $25,734, and 5,298,994 pounds of dressed turkeys valued at $1,051,408 during the year 1931, figures recently released by the United States Department of Commerce reveal.

The U. S. Department of Agriculture reports that farm mortgage loans are decreasing.

CONTROL MEASURES FOR POULTRY TESTS

Lincoln, Neb.—The Nebraska College of Agriculture here says that nicotine sulfate will hold chicken lice in check but probably not exterminate them. It should be painted in a half inch strip on the upper surface of the roosts about 15 minutes to a half hour before the birds go to roost in the evening. The fumes will kill body lice but probably will not kill off the head lice on the birds, the college states, adding that chicken mites can be controlled by cleaning the house thoroughly and spraying the entire inside of it including the nests and floor with heavy coal tar creosote oil and kerosene mixed one part of oil to three or four parts of kerosene. Scaly leg mites can be controlled by dipping the fowls' feet and legs in crude oil or kerosene at ten day intervals until the scales are gone, according to the college.

100-Year-Old Plow Dug Up In Hancock

Sparta, Ga., April 19.—An antique ploy, thought to be at least 100 years old, formerly the property of the late David Dickson, one of the most progressive farmers in Georgia during the ante-bellum days, has been unearthed by S. D. Truitt, local county agent. The old farming implement is a two-horse "turning ploy" of the model used by Mr. Dickson to break his lands.

The plow is now on display in the office o fthe agent and is very well preserved. During his lifetime David Dickson owned over 10,000 acres of fertile lands in the county, and the plow is probably the last relic of implements used on his farms.

TOMATOES PACKED BY WHITES ONLY

Newark, N. J.—"Stony Ridge" brand of canned tomatoes packed by the Cross Roads Canning Company, of Berkeley Springs, Morgan County, West Virginia, are all right for colored people to buy and eat, but not to prepare.

On its can label appear these words: "Packed by white labor only."

Local colored buyers have declared a boycott on the product.

The same tomatoes sent to Harlem C.M.A. stores several weeks ago were sent back unused and the distributor apologized for having sent them to colored people.

MAYBE BUSINESS—BUT

Congress appropriated a 500 million dollar fund for the farm board and another two billion dollar fund for the business interests of the country. The main reason why all this money, which has come from the pockets of the common people, has not done the common people any good, is because it has been handled by those who profess to understand business better than the common people. They do—especially their own business. They understand their own business so well that they mean to protect it at the expense of all who are not members of their particular tribe.

The little common fellow is not one of them. A bank borrows a million dollars from the business fund but informs a factory hand, who wants to borrow $500 on a $2500 home so his family can exist during these times, that they cannot afford the loan. A Mississippi planter informs his tenants that he can only give them a little bread and meat for their labor this year because he can borrow no more from the farm fund on his cotton. Administrators of the funds pocket their fat salaries—talk about business and inform the little fellow that prosperity is just around the corner.

There are so many "business fingers" in the pie that we expect it will all be eaten up before the little farmer and the little workman get to taste a crumb of it.—Leon R. Harris.

OUR YOUNG FARMERS

(Continued from page 1)

than what it is. To agriculture I give my whole soul and body.

AGRICULTURE

By Conway McAlister,
8th Grade, Ward School.

We have learned that most people, as we say, are engaged in some industry. The most important of all industries is "Farming." Agriculture is carried on in many parts of the world.

In some countries, in the farming regions the homes of the people are close to one another, the land is divided into small farms and much of the work is done by hand labor. In other farming regions, there are fewer people,—the farms and fields are large and great machines are used in doing much of the work. Such farms are devoted almost entirely to a few crops. This kind of farming is seen in the great wheat farms and plantations of our own country.

In most farming regions, cattle, hogs, sheep and horses are raised. This part of the farming industry is called stock-raising.

There must be a foundation for all things, therefore the soil is the foundation on which man and animals depend for life. The soil supplies necessary food for plants and through them for animals and man. Soils are formed of fine pieces of rock and decayed vegetable matter mixed together. Such soils are better for growing plants than soil made up of rocks only. Soil can be kept fertile by rotating crops and by the use of fertilizer.

The earth is the home of man and the soil is his best friend. When the soil is depleted, plants cannot be produced and starvation and death will follow. It is well then to keep a bank account with the soil. We must feed the soil before it gets hungry. Individual farmers, communities and nations prosper as they husband the soil and they fail in direct proportion to the extent to which they suffer the soil to be depleted and neglected. If the farmer is to prosper he must receive prices for his products which are on a level with the prices he must pay for the commodities he buys.

If in vain we toil, we ought to blame the culture and not the soil. Every farmer should adopt a system of farming that is permanent—a system under which the land becomes better rather than poorer.

TALKS TO COLORED FARMERS

(Continued from Page 1)

missionary. The larger the membership, the more powerful becomes your organization and the more it can do for you and all. You should support it too, by paying your dues, even if it costs you some sacrifice. Remember, YOU CAN'T GET SOMETHING FOR NOTHING. No one can afford to give you something for nothing. When you pay your dues and do your duty as a faithful member, you are helping the other fellow and he is helping you. That is CO-OPERATION.

And as one desires to become a farm-owner and a respected and independent American citizen, you must do all you can to make a start. You must learn to sacrifice and save. You must work hard and be thrifty. You must use your head. If you can save up $100 or $200 to buy a second-hand car, surely you can save up that much to make a down payment on a farm of your own. I know of places that can be purchased at a very small down payment and if you had stock and feed and some food canned up or salted down, you could take possession. The first year is always the hardest. But if you have worked hard ten years for somebody else and have gotten nowhere, you can surely work hard one year for yourself. The change would help you, even if you fell through. But you won't fall through. God is mighty good to the fellow who tries to help himself. You have no idea what you can do until you try right hard. But if you never risk nothing you will never get nothing.

I know many of you are discouraged and feel that the N. F. C. F. is not doing as much for you as it should do. But what organization was doing anything for you at all before the N. F. C. F. was born? A calf isn't born a cow. It must grow to be a cow. Many organizations are started on money but the N. F. C. F. was started on faith. From the very beginning it has had to tackle the biggest job any colored organization ever had. What was that job? To free American Negro farmers from debt-slavery, persecution, tenancy and the two-room shack. Other organizations were trying to teach you how to farm. THE N. F. C. F. TRIES TO HELP YOU GET SOMETHING FOR YOUR LABOR—FROM YOUR FARMING EFFORTS. Other organizations were busy adopting resolutions and telling the world in whispers that you were being persecuted. THE N. F. C. F. IS TELLING YOUR GOVERNMENT AND THOSE IN AUTHORITY THAT YOU ARE BEING PERSECUTED—IS TELLING JUST WHO YOUR PERSECUTORS ARE, AND IS DEMANDING THAT THESE PERSECUTIONS CEASE. Other organizations were saying that Negro tenancy was on the increase but were doing nothing to stop its growth. THE N. F. C. F. IS BUSY FINDING FARMS YOU CAN PURCHASE ON EASY TERMS AND HELPING YOU GET ON THEM. Other organizations were saying that you were simple-minded and satisfied with any old way of living. THE N. F. C. F. PROCLAIMS TO THE WHOLE WORLD THAT YOU WANT DECENT HOUSES, MODERN CONVENIENCES, GOOD SCHOOLS, MONEY IN THE BANK, GOOD CLOTHES—THAT YOU WANT TO LIVE LIKE PROSPEROUS, AMBITIOUS, RESPECTABLE AMERICAN CITIZENS AND NOT LIKE AFRICAN SAVAGES, MEXICAN PEONS OR RUSSIAN SERFS. While other organizations are talking for you the N. F. C. F. is doing for you. Together, we are helping each other.

Don't get impatient or discouraged. Back up your organization. Help it all you can and it will help you help yourself.

NEW METHODS ADOPTED

(Continued from page 1).

charged with "just another book-farmer's lie" when he said a bale of cotton to the acre could be grown in Simpson County.

That year, the agent had 91 boys and girls of agricultural clubs growing that bale to the acre, and their cotton had a staple length that brought $7.50 a bale more than their father's cotton was bringing. Within four years, he had 800 boys and girls doing it. And he had shown, on almost every farm in the county, that the first essential was to keep the seed and the lint of the good cotton separate from "mongrel" varieties by ginning it separately.

Meanwhile, adult farmers of Simpson County, at Magee, had organized a co-operative gin, through which they had improved the quality of ginning, had cut ginning costs from $6 a bale to $3 a bale, maintained the highest local prices for cotton seed and had paid themselves dividends as high as 28 per cent per annum. Last season, the gin association undertook leadership of a project to use their plant for a one-variety cotton program such as the boys and girls' club had been practicing.

Ginned Separately

This called not only for ginning the cotton separately, but for growing it with "buffer crops" between it and other varieties of cotton since it will carry pollen and mix the varieties over a distance of a mile at times. Neighborhood groups were formed where these conditions of isolation could be obtained. Local committees, assisted by extension service, federal and state agencies and the cotton co-operatives, inspected the fields to assure that regulations were observed.

One gin out of the three owned by the Farmers Gin Co., was set aside to gin nothing but the DPL 4-8 cotton which the one-variety growers had centered upon. Sometimes this gin stood idle, while other gins had long waiting lines, and restless growers damned the Farmers gin for refusing to handle their mongrel breeds. But no cotton went through the restricted gin except from fields that were shown by the written record to be planted in DPL 4-8 direct from the breeder, and that had been inspected during the growing season. The written record alone was not held sufficient, and this vigilance was justified when a few loads of off varieties were stopped after starting through the gin.

Seed from this one-variety cotton is now being sold at $30 to $32.50 a ton, in quantities sufficient to plant all Simpson County, the price being held at oil mill prices plus cost of handling. Profit on more and better cotton, but no profit on the seed which will build a bigger enterprise, is the aim of the one-variety group.

Each of the participating farmers is keeping enough seed to plant his own crop, the remainder being sold co-operatively. New seed direct from the breeder is being placed in the hands of selected farmers, in the center of one-variety groups, where they will be best buffered from cross-pollination. These sected farmers will supply the whole project with seed next year, and so on year after year, the bulk of the growers thereby obtaining seed only one year removed from the breeder at low cost.

Similar Programs

Similar programs at other Forrest and Simpson County points last season paved the way for the county-wide projects now starting. They have solved the problem which has long been a stumbling block throughout the south, of how to maintain an excellent seed supply at reasonable cost, but this is merely the beginning.

They also are producing cotton that is uniform in each bale, instead of long and short staple mixed (cutting down by half the 30 per cent waste which mills suffer in spinning the ordinary staple). A further result is large lots of bales of uniform quality, such as mills prefer and for which they pay a premium.

Of the 1,200 bales from the one-variety gin at Magee last season, 1 000 were handled by the Mississippi Cooperative Cotton Association, at a premium of $4 a bale above the average cotton price in the community, the premium being due to uniformity of staple, as well as to its actual length. Leaders of the one-variety projects here and elsewhere say that the co-operative marketing system has removed the greatest obstacle in their path, which was the "hog-round' buying system, under which every bale, good or bad, was bought at an average price, killing the incentive to grow better cotton. The co-ops pay the mill premium for each bale, according to individual quality.

J. E. Hite, representing the Bureau of Plant Industry, U. S. Department of Agriculture, is making headquarters with the Mississippi Co-operative Cotton Association at Jackson, to supervise one-variety projects of this state. He says that while several hundred such projects have been undertaken in the south in the past years, most have been only partially successful, because of failure to understand or to practice close supervision of growing, ginning and marketing arrangements.

Through the co-operatives, mills are being requested to keep a record of spinning value of the one-variety cotton, in expectation that as mills use this cotton year after year, and are able to translate its superior quality into better products, and eliminate spinning waste, they will be able to pay a larger premium. It is believed this will open a new avenue of co-operation between the farmer and the textile mill, broaden the market for cotton products, lift the reputation of American cotton above much of its foreign competition, discourage large acreage in foreign lands, and eventually help the basic price of cotton as well as improve the comparative price of American.

Court Accepts Plan

(Continued from Page 1)

per cent value in insurance protection in accordance with their ages on the first premium payment date after September 9, 1931. In addition to this, the policyholders will receive credit for equities existing prior and up to September 9 in the form of paid-up insurance or cash dividends, such values to be ascertained by actuarial and accounting examination. The prominent actuarial firm of Fackler & Brieby of New York City, a firm noted for its conservative and sound procedure, has already been retained by the Receivers, and commenced their examination on March 9, 1932.

On the modified contracts, as determined by the premium payments made since September 9, 1931, all death claims will be paid promptly after receipt of the proof. The Receivers have stated that they believe the principal function of a life insurance company is to make prompt payment of proper claims for death benefits. While it is true that claims which have already occurred will necessarily have to await the determination of the proportionate share due in accordance with the examination now in process, the Receivers are making an effort to arrange for an immediate partial payment of these obligations.

In order to meet death claims promptly as they arise, the Court has authorized the Receivers to temporarily eliminate the immediate liabilities which may arise under the provisions for cash surrender and loan in the existing insurance. Total and Permanent Disability provisions, as well as additional accidental death benefits will also be temporarily eliminated, but suitable adjustments for the premiums paid therefor will be made in determining the amount of insurance on the modified contracts.

The premiums paid in the company since September 9, 1931, are being kept separate from those previously paid, and all expenses and investments made from them are subject to the approval of the Court. By this conservative and protected management of the policyholders' funds, it is hoped that surplus earnings, all of which will belong to the policyholders, will bring the amount of insurance of each policyholder up to the original coverage when combined with the paid-up insurance in settlement of rights prior to and up to September 9, and the modified insurance continued in force on the basis of present premium payments.

The plan, as authorized by the Court, has received the study and approval of the Receivers' actuaries, who state that the insurance will be immediately placed on a sound and secure legal reserve basis by this method.

The following statement comes from Gilbert A. Clark, Actuary for the Equitable Life Insurance Company and Frank B. Bryan, Jr., former Deputy Insurance Commissioner for the District of Columbia. Receivers in this case:

"We firmly believe that the plan as submitted to the policyholders is the most equitable plan. We hope that every policyholder will speedily give his consent to the plan as outlined."

I shall begrudge no reasonable expense that will contribute to the improvement and neatness of my farms—for nothing pleases me better than to see them in good order, and everything trim, handsome, and thriving about them.—George Washington.

Some people like the gospel full of the "Fire," while others like it served on "Ice." Strange to say however that those who like so much fire, never like to be responsible for the Fuel while those who like it on Ice but little how the Winds blow.

Have mercy.

ATTENTION COLORED FARMERS

The National Federation of Colored Farmers is receiving hundreds of letters from Colored farmers requesting all kinds of aid and information. We are willing to do everything we can for all the Colored farmers of America. It costs money, however, to maintain offices and our expenses are becoming so heavy that we are compelled to discontinue supplying information to those who request it who are not members of the Federation. If you have faith enough in the organization to believe that it can aid you, then you should be willing to join it and help support it Isn't that so?

Several County Units have organized and elected officers but have not sent in their membership dues. These units are eligible to membership in the Federation until dues are paid. Be helpful. Co-operate. Pay up. "All for each and each for all"

COTTON WILT DECREASED

Study Effect of Fertilizer On Land Infected At Station

Marianna, Ark.—For three years experiments have been conducted at the cotton branch experiment station near Marianna to determine the effect of fertilizers on land infested with cotton wilt.

Resoults so far show that under soil conditions at the station, fertilizers containing relatively high amounts of potash have greatly decreased cotton wilt and increased yields. The branch cotton station is looking toward still more definite information and will carry the experiments forward during the next few years, E. B. Whitaker, assistant director in charge, states.

So that there might be no mistake in the results, numerous unfertilized check plots were distributed through out the station and in every case during the entire three-year period the amount of cotton wilt was greatly reduced in the plots treated with fertilizers relative high in potash, either alone or with nitrogen and phosphorous. The reduction in some cases has been as much as 45 per cent, but ordinarily the decrease in cotton wilt, while sufficient to bring greatly increased yields has been less than that percentage.

The result is further confirmed by similar showing on some 10 fertilizer demonstrations in Central and Eastern Arkansas during 1930 and 1931, and it is believed that wherever cotton will respond markedly to the use of potash fertilizer the result will be the same unless root knot or nematode disease is present.

Soil conditions are so variable that no sweeping recommendation can be made at this time, Dr. V. H. Young of the Arkansas College of Agriculture, states.

Morgan College News

MORGAN DRAMATIC CLUB TO PRESENT A SUPER-PRODUCTION OF THREE ONE-ACT PLAYS AT DOUGLASS HIGH SCHOOL, FRIDAY, APRIL 22

The Morgan College Dramatic groupe which presents "A Message From Khuju", "The Man in the Stall" and "Dregs" at the Douglass High School Auditorium, Friday evening, has already successfully in-Hampton ann somewhat established itself there by winning first prize in the Negro Inter-Collegiate Dramatic Association Tournament. Aside from seeing three prize plays, the Baltimore public will also have an opportunity to see the three former Douglass High School students, Miss Irma Kellum, Robert Burrows and Charles Tartar who unanimously won the Inter-Collegiate Tournament.

Mr. Bernard Young of the Norfolk Journal and Guide made the following comments on the tournament plays: "Of the several Co-eds who tried valiantly to please the rather critical audience, Miss Irma Kellum was the only one who was able to create a pleasant illusion of reality that is so necessary to genuine stagecraft." "Mr. Robert Burrows", stated Mr. Young "enacted his role with vigor and skill. His was a difficult part, calling for quick changes of mood. He measured up to his role admirably."

Charles Tartar interpretation as a lover rounded out the most even performance of the entire group well enough to give it in its entirety a decided superiority. The other students who have received satisfactory comment from the press after their presentation at Union University were: Miss Fannie McGuin, Miss Eisie Bevans, Mr. Thomas Hawkins, Mr. Thomas Poag, Hopkins, and William Lewis.

MORGAN TRACK TEAM TO MAKE STRONG BID FOR RE-HONORS

Despite the fact that "Russ" Sterling, former Morgan College speedester, and present holder of the C. I. A. A. 100 yards dash record, will be missing from the Methodist line-up, the team is expected to make a strong bid for the one mile college relay honors.

Coach Hurt has developed a real fast team in Cottman, Thompson Hammond, and Gibbs with "Andy" Johnson and Lowery in reserve. Gibbs, the only new face on the mile relay team ,will find it to be no easy task in filling the gap left open by Sterling, but this chap has speed, and plenty of guts and, therefore, should prove himself to be a valuable man before the season is over. Clinton Taylor, Morgan's long distance runner, who has been runner up to "Bill" Agee on two occasions, will seek laurels in the 3,000 meter steeplechase meet, while Cottman will no dorbt be an outstanding contender in the 400 meter hurdle race.

In the field events much confidence will be placed in such men as "Tank" Conrad and "Whattaman" Trompe. All the men are reported as being in good condition at the present time, and unless something happens between now and the 28th. the team should easily walk away with honors.

TEXAS TURKEY BUSINESS NETS MILLIONS IN YEAR

Raising turkeys for market was a pin money activity for many years in Texas, but it has increased rapidly and now is an established business of importance to the state, according to the Ohio State Journal. During 1931 Texas marketed 2 1-2 million birds, with a wholesale value of 7 1-2 million dollars. It shipped to cities in other states 1316 car-loads, and marketed a large crop at home. Thus there was sent into Texas nearly 6 million dollars to pay for Thanksgiving and Christmas turkeys.

The growth of the turkey business is, perhaps, a good indication of what can be done when activities are diversified. Texas has been a state without wide diversification in the past; and now in the future, because she has developed a new line, may expect to be more continuously prosperous, come what may.

In Illinois there are 5000 more women than men above 65 years old.

WHOLE CHEESE A GOOD BUY

It pays the housewife to buy a five or ten pound whole cheese at one time. She not only pays less per pound but she also gets a more thoroughly ripened, better flavored product.

By storing in a cool, well-ventilated place, well-ripened cheese can be kept in good condition until the last bite has been eaten.

When a slice of cheese is cut from the end, it should be cut off squarely. The cut end may be preserved best by turning it down on a plate The room should not be too warm, or the exposed cut surface of the cheese becomes hard and dry; if the air is too damp, mold grows on it very readily.

Cheese needs to be aged and cured before it attains the body, texture, and flavor which classifies it as good cheese. Because of the rush business methods prevailing in America, it is often sent to market while still comparatively green, so that one needs to be discriminating in order to obtain really good cheese. The advantage of old, well-cured cheese is that it has a more intense and more pleasing flavor than does young cheese, and also dissolves or melts readily without becoming tough or stringy in cooking.

Hardened pieces of cheese may be grated, bottled and kept for several days or weeks in the refrigerator. This grated cheese is convenient for use in soups, to sprinkle over creamed vegetables or salads, or in scalloped dishes or sandwiches.—Home Economics Dept., University of Wisconsin.

SAYS EGG CONTAIN NECESSARY VITAMINS

Ithaca, N. Y., Feb. 16—Lewis Clevenger one of the New York State College of Agriculture discusses the food value of eggs as follows:

"During the World War it was found that children in Denmark developed a serious eye disease. It was found upon investigation that Denmark had been exporting nearly all its butter and eggs to other countries and substitutes were given to the children to eat.

"Egg yolk contains vitamin A, B, D, E and G. These vitamins are necessary for growth and proper development, hence, their value for children. Dr. H. C. Sherman, Columbia University, says, 'Because so many of our staple foods are poor in vitamins and because a shortage of these substances weakens the body, it appears probable that this shortage affects the general health and length of life of the people of today more than any other factor.' Eggs will supply this deficiency.

"Prof. H. L. Kempster of Missouri, says that eggs with rich golden yolks are more abundantly supplied with vitamin A than eggs with pale yolks."

Poultry raisers should be thinking about next year's laying flock. March and April are considered good months for hatching, and early hatched pullets are usually best.

Growth of Lincoln National

(Continued from page 1).

the end of 1931.

The statement also reviewed the company's history and emphasized that its founders and present officers have striven at all times to pattern the company's policies after the life and character of Abraham Lincoln. Because of this ideal, Robt. T. Lincoln, last surviving son of the Great Emancipator, granted special permission to the company to use his father s name and favorite photograph. In appreciation of this permission, the company endowed the Lincoln Historical Research Foundation to foster interest in Lincoln's life and to perpetuate Lincoln Lore.

A Negro Sergt. in the Civil War, while making his rounds one night, walked up to the door post of one of the camp tents to find a light shining therein; and thinking it a lamp he shouted: "Put out dat light in thar." One of the sleeping soldiers aroused and said:" "It aint no lamp Sergt., it is the moon." "Well, put dat out den." said the faithful Sergt.

So you see the Negro has always been loyal to his Trust. If he things Uncle Sam wants the moon light put out, he will try to executive the command.

ADVISE STRAW LOFTS FOR POULTRY HOUSES

Lincoln, Neb. Feb. 26.—According to experts at the Nebraska Agricultural College here, poultry houses are made more comfortable when insulated, and the use of straw provides a simple and inexpensive form of insulation that has given satisfaction in results. A common method of putting in the straw loft has been to put in a false ceiling of two-inch mesh wire netting and cover it with a layer of straw, they advise.

By putting in two by four supports from front to back and about four feet apart, the wire can be quite securely attached so that it will hold the straw without sagging. If the wire strips are placed two or three inches apart and then pulled together before being tacked through the center of the building, they can be made much tighter than when stretched from end to end.

Extension Circular No. 1441 illustrates several types of houses with straw lofts, they add.

SPEAKING OF CREDIT

Judge: Nowadays people not only refuse to give credit where credit is due, but they won't give credit where cash is due either.

Sometimes, engaged with my mail, I think men read mostly to discover the numbers of mistakes in the books they examine.—Joseph Hergesheimer.

DEVELOP IMPORTANT NEW USES FOR SWEET POTATOES

Washington, D. C., Feb. 26—A method for manufacturing sweet potato starch, which for textile purposes is equal in value to imported high-quality white potato starch, has been developed in the Bureau of Chemistry and Soils, United States Department of Agriculture.

Sweet potatoes constitute the second largest vegetable crop grown in the United States. Owing to the rigid requirements for market potatoes it is estimated that from 10 to 30 per cent of the entire crop is graded as culls. These culls are now wasted or inadequately utilized, states the department. The sweet potato is primarily a starch producer, and the new process offers the possibility of utilizing the cull and excess crop as a source of commercial starch, says H. S. Paine, of the Department's carbohydrate division, under whose direction this method was developed.

By utilizing sulphur dioxide in the water used in grinding the potatoes and treating the extracted starch with a dilute alkaline solution the objectionable color can be eliminated largely from the starch, regardless of the color of the potato flesh. The other operations were essentially the same as for production of white-potato starch.

The department is also studying the utilization as a stock feed of the starch factory by-products, consisting of the pulp, which contains a substantial percentage of starch, and the effluents, which contain valuable sugars and proteins. Further studies of starch extraction, the physical properties of sweet potato starch, the nature of the pigments present in the sweet potato, and the utilization of the by-products are now in progress.

C. Jackman, aged 88; his son, A. Jackman, aged 63; and George Lynes, aged 68, who have between them completed 173 years' service on the farm of H. Stilgoe at Adderbury, England, have been presented long-service medals by the Royal Agricultural society.

WILL SHIP BY RAIL

Andalusia, Ala.—Freight coming into Andalusia will be shipped by railroads, according to a petition circulated by business men. A recent request by the Louisville & Nashville Railroad to discontinue two passenger trains running through Andalusia brought about the petition, which states its undersigners will have their freight shipped by rail and thereby co-operate with the railroads in helping to bring about a better understanding between the business man and the railroad in order that their lines running through this section may continue to function.

SAYS POLICE DOG BIT HIM; SUES OWNERS FOR $3,500

Nashville, Ind., March 7—(Special.)—Earl Porter, 16, Helmsburg high school pupil today led suit against Mark Marmerlee and his wife, asking $3,500 for injuries alleged suffered when their police dog bit him.

ECONOMIC CHILD

Town Child: "Auntie, why are the hens making such a noise?"

Country Aunt: "They want their food."

Town Child: "Nonsense! If they are hungry they can lay themselves eggs."

STATIONERY MADE FROM COTTON NOW

Winston-Salem, N. C.—In line with the South's efforts to increase the use of cotton in all forms, R. J. Reynolds Tobacco Company, of Winston-Salem, N. C., has announced that its stationery is now being made of cotton cloth.

The Reynolds Company, manufacturers of Camel Cigarettes, Prince Albert Smoking Tobacco, and other tobacco products, does a world-wide business, and is one of the largest, if not the largest business firm in the country to go cotton.

The cotton cloth stationery is used exactly like paper and readily takes ink, typewriting, and printing. Cotton stationery used by the Reynolds Company is purchased in wholesale lots and advertises the United States' cotton crop to business associates in all parts of the world.

Use Sunday School Catechisms FOR THE LITTLE ONES

Select one of the three---First, Easy Lesson Primer 6c; Second Child's Bible Question Book 5c; Third Baptist Sunday School Catechism

After thirty-three years of actual Sunday School experience, after thirty-three years of developing a service for the Sunday School forces, we have been convinced that the Sunday School Catechisms, edited, published and printed by the National Baptist Publishing Board, will give help and instruct the children in a way far more advantageous than the Picture Lesson Cards. At the same time, they will save the Sunday Schools money, because there are thirty-two pages in each of these Catechisms, with illustrations, Bible questions and intensive study calculated to develop their minds. These Catechisms are described and priced on the order blanks.

In preparing your order for the next quarter, and from now on, give attention to the Sunday School Catechisms, substitute them for Picture Lesson Cards. We recommend them. We endorse them. We specialize in them.

EX-SLAVE PENSION BILL

(Continued from Page 1)

requires senatorial confirmation. His salary is fixed at $7,500 a year. The duties of the ex-slave counsel are prescribed to be: To direct the administration of the act, to represent "the ex-slave public" before the veterans administration, to hold any investigations or hearings necessary to the proper administration of his office.

Numbers Affected by Bill

Inquiry at the office of Congressman Depriest failed to reveal the exact number of persons eligible under the bill to receive pensions or the amount of federal funds involved. Morris Lewis, secretary to the congressman, stated that there were 118,446 Race persons in the United States, who were 75 years of age and over. What number of these persons would come within the eligibility rules provided by the act could not be estimated at this time he stated.

Jots of Daily Life

Two small boys were on the creek fishing, when one of them accidently fell into the deep stream; his companion threw aside his pole and line and plunged into the water and rescued his little pal. A great crowd of men who had heard the screams of the little drowning fellow, rushed to the scene just in time to see the little hero bring his buddy to shove.

One man amid the throng said to the little boy, "Why son you have played a bit of heroism, tell me why you took such a risk in saving your pal?" The little fellow stambering said:" Ah—ah—Mr. dat boy had the bate in his pocket."

And so the world goes- every body pulls for the man who has the "bate" in his pocket.

An old man walking down the road, came to a stream where he saw a little boy a fishing, "Are you doing any good my lad?" said the man "Not so that you can tell it" "Well, why don't you?" said the man. Well, said the boy," you know I can't get the fish unless I get a bit."

The old man dropped his head and walked on his way.

And so it goes, that there are so many folks in this world who if they could only get a "Bit" would draw the long line of success and haul the goal to shore.

Friends of today may be our vilest enemies tomorrow; it all depends upon who has the "Goat by the horns."

So many folks will do all that they can to promote a good cause, so long as they are made to feel that they are the "Big Cheese;" but as soon as they are asked to step down and help pull the wagon out of the rut, they throw a stick in the spokes of the wheel. Goodness gracious."

An old woman hungry, barefooted and cold went into a Jew store exclaiming: "Mr. please give me a pair of shoes." The merchant said to her "why sure, Auntie, sit thrite down. I will give you a pair of shoes." When the old woman had put the shoes on her feet, she arose and said: "Oh, thank you Jesus, thanky." The Jew with astonishing eyes said, "Why do you thank him, I gave you the shoes, thank me."

And that is the way some folks are, when they do a kindly deed, they want all the praise for themselves leaving Christ out as a disinterested party. Mercy."

BRO. MOSES BELL DIES

Bro. Moses Bell of Vaughan, Miss., a faithful member and officer of the N. F. C. F., has passed to his reward. Bro. Bell was sick only one day.

We extend our sympathy to the bereaved family and neighbors, friends and fellow-members of his Unit.

GERMAN TELLS OF SLAVE TRAFFIC IN BEAUTIFUL BROWN SKIN WOMEN

Traders Kidnap and Buy Hundreds and Slel Them for High Prices in Abyssinia, German Says

(Science and Research Service)

Berlin, Dec.—Despite decades of anti-slavery agitation, hundreds of Abyssinian women are smuggled yearly through the Straits of Bab-el-Mandeb. "The Gate of Tears," to be sold into slavery in Arabia and elsewhere.

So declares Her Gruehl, leader of the recent German expedition to Ethiopia, commenting on the news that a commission of the League of Nations has lately discovered a slave depot on an island in the Red Sea off the African Coast.

Prized As Mistresses

"The slave traders," he says, "chiefly get their 'goods' from the south and southwest parts of Abyssinia, their favorite areas being Galla and Shankalla.

"The elegant beautiful light brown complexioned girls of Galla, who have the grace of a gazelle, are those most treasured as wives and mistresses ad they fetch extremely high prices in Arabia and adjoining countries,' states Herr Gruehl.

Raids, he says, are constantly being made in the provinces of Shankalla when all the women of the raided villages are seized and led away in chains through dark primeval forests and then across the deserts and plains of Dankali and British Somaliland to the coast, where they are shipped to Arabian ports.

Depots on Red Sea

The much songht after Galla girls, however, he says, are bought singly by Arabian traders, who take them to hidden depots on the Red Sea coast, where they, too are shipped to Arabia.

Herr Gruehl says he sometimes saw hundreds of girl slaves on the march chained together and being whipped like cattle by traders...

As most of the territory from which the women are kidnaped is Abyssinian only in name. Herr Gruehl says that the Abyssinian Government, in its efforts to suppress the slave traffic, has not been able to achieve success.—The Argus.

Little Brother. "Do you know what they call small gray eats in Canada?"

Big Boy: "No."

Little Brother: 'Kittens."

People who can always find time to sit around other folks' homes discussing the domestic affairs of other people, are dangerous associates. They generally go right to the next door neighbor and repeat all that you say, and even what they can make the other fellow believe you have said. Then the next thing you will get a cold "Good morning" from your neighbor, and you often wonder why, Umph."

Avoid the habit being loud and boisterons. It makes folks call you "Common."

You are generally treated just as you treat. If you are cold and sullen aronnd people, they usually reciprocate.

Usual One-Third Lost On Pigs Too Great This Year

Soil Determines How People Live=Survey Shows

NATURE OF GROUND INFLUENCES INHABITANTS

Millions of People Throughout the World Modeled by Conditions

The character of the soil —the few inches or few feet of ground that from the outer skin of the earth — has very largely molded the way of life of millions of people throughout the world, says a bulletin from the Washington, D. C., headquarters of the National Geographic society.

Other factors, such as moisture and temperature, are important in plant growth, continues the bulletin, but the fundamental factor is the soil itself, the medium in which roots can anchor themselves, and from which they can draw their food supplies.

Northern Chinese Eat Wheat

The great loess region of north China is a striking example of the effect of soil on customs This light loam, deposited by the wind, is easily drained, and none too well supplied with moisture. It dictates the growth of wheat and other hardy grains instead of rice. The northern Chinese therefore, are non-rice-eating folks . Their dry soil also decrees the raising of livestock; so it is there that China has its greatest concentration of sheep and cattle. The loess soil of China even affects the type of dwelling over a large area. The deep, compacted soil forms sheer bluffs that are as stable as soft rock. In the faces of these bluffs rooms are hollowed out and fitted with doors and windows. Hundreds of thousands of Chinese make their homes in these half-subterranean abodes.

The lower Yangtze valley forms a marked contast to the loess region. With its basins of rich

(Continued on page 6)

FIRST FEW WEEKS CRITICAL FOR TURKEYS

The first ten to twelve weeks after hatching is the critical time with young turkeys. Once safely by this period, the birds grow well and if given reasonable care will return a profit.

"Raising poults is not so greatly different from raising chicks, except that more space is required for the young turkeys," says Bryan Nesbit, of the State College, Raleigh, N. C., poultry department. "Newly hatched poults do not learn to eat so early as baby chicks and few will begin to notice feed until at least thirty-six hours old. So instead of throwing the delicate poult a hunk of corn dough made of clear water and containing little food, give it a good palatable feed of chick start-

(Continued on page 3)

CONSIDER THE COW

NEW YORK STATE COLLEGE OF AGRICULTURE LIBRARY JUN 3 1932

She is Depicted by Swiss Student in Report

In the New York Times appeared the following contribution, translated by a correspondent fromt the French of a Neuchated (Switzerland) schoolboy:

An Opinion About the Cow.

"The cow is a mammal and tamed; she has six sides, right, left, front, back, top and bottom. At the back end, there is a tail from which hangs a plume with which she drives off the flies so that they can not fall in the milk. The head has for its aim to have horns and that the mouth can be somewhere. The horns are there for horning, the mouth for chewing a cud.

"Under the cow hangs the milk and it is arranged to be milked. When people milk, the milk comes and there is never an end to the reserve. I have never learned how she makes more and more milk.

"The cow has a good odor, one can smell her from far away; it is for this reason that there is fresh air out in the country. The mister cow is called a mammal.

"The cow does not eat much, but what she eats, she eats twice, that is why she has always enough. When she is hungry, she chews a cud and when she does not say anything, that is that her stomach is full of food."

MONUMENT RECORDS DEED OF CROSS-EYED HEROINE

A cross-eyed woman has been honored by a monument at Hartwell, Ga.

Nancy Hart, whose memory is thus preserved, and her husband built a cabin in the hills, and were rearing a family when the Revolutionary war broke out.

While the men were away five redcoats surprised Nancy and a little girl in the cabin and ordered the woman to prepare a meal for them. Nancy, watching for an opportunity, grabbed one of the muskets and killed one of the soldiers. She then seized another gun and threatened to shoot any of the four that made resistance.

Because of her crossed eyes, none of King George's men could tell which one Nancy was looking at so they all stood still until the men came back to see what all the shooting was for, and hanged the four soldiers. Subsequently the town of Hartwell and Hart county of which it is the county seat, were named for the cross-eyed heroine.

Congress voted a fund for the erection of a monument to Nancy Hart.

Easy times are over for a long time in this country. A new world is to be made and that is never an easy job.—Henry Ford

CHICKENS ESTABLISHED RECORD

Illinois Farm Owners Can Now Crow Louder

Chickens on Illinois farms can crow louder than ever now, for they came through the stress of 1931 with a profit record which can be matched in few other farm enterprises, according to figures announced by H. H. Alp, poultry extension specialist of the college of agriculture, University of Illinois.

Net profits of 57 cents a hen are shown on the records of seventy-eight flocks whose owners are cooperating in the college's flock record project which is designed to further more profitable production. This 1931 profit is only about 10 percent below the 1930 figure of 64 cents a hen, which is a better showing than can be put up by most other farm enterprises, Alp pointed out,

Had the twenty five million hens in the state produced profits at the rate the seventy-eight record flocks did, the total return to farmers would have been more than $14,000,000, Alps said. However this is more an indication of possibilities than an estimate of what actually happened, for the seventy-eight flocks have been developed until they are well above average.

The net profit of 57 cents a hen is clear, above all operating expenses, 6 per cent interest on investment and a labor wage for the flock owners. The total labor income a hen in the seventy-eight, flocks was $1.11.

Although there was a 24 percent drop in the selling price for market eggs in 1931, this was more than offset by a 38 percent decrease in feed costs, a 37 percent decrease in total cash expenses and an 8 percent increase in egg production a hen, Alp explained.

There was an average of 206 hens in each of the seventy-eight flocks and they laid an average of 136 eggs each during the year. There was an investment of $4.27 a hen, total cash receipts of $2.92 a hen and total cash expenses of $1.32 a hen. Owners of the flock got 52 cents an hour for their labor.

THEY HAD HEAVY TAX TO PAY FOR CIVIL WAR COST

Not many who were living and in business during the Civil War are here today to tell those who are complaining of the heavy tax burdens that are being laid upon us that we don't know what tax burdens are, says the Columbus Dispatch.

They could tell us that at that time anyone who received as much as $50 a month had to pay a tax on it. Every storekeeper had to pay $10 a year for a license to do business. Horse dealers (and that

(Continued on page 8)

MISSISSIPPI FARMS SOLD

Forty Thousand Owners Lose on Account Taxes

Jackson, Miss., April 5.— (Special) — One out of every four privately owned farms in Mississippi went on the auction block today for taxes, and found few takers. An average of 543 farms in each of the 82 counties, or more than 40,000, were offered for sale. State Land Commissioner R. D. Moore estimated that 25 per cent of the privately owned property in the state was sold, with nearly 20 per cent reverting to the state.

Sheriffs in 74 of the 82 counties reported that 39.699 farms went on the block, or 16.2 per cent of the total agricultural acreage of the state. Twelve per cent of city property was forfeited, according to estimates. The number of farms ranged from 16 in Franklin county to 1,946 farms in Leflore county in the heart of the delta, the long staple cotton area.

Leflore, Humphreys. Holmes. Tallahatchie and Yazoo had hundreds of acres under water during the three months of 1931 flood. Sales in each of the counties passed the 1,000 mark. One-third of Chicasaw county was sold for taxes.

(Continued on page 7)

DEVELOPING DISEASE RESISTANT SHALLOTS

Baton Rouge, La.,—The development of a disease resistant shallot is under way at the agricultural experiment station of the Louisiana State University.

The shallot industry is of great economic importance in all of the southern parrishes. During the winter and spring of 1930-31, shallots comprised the bulk of 1,000 cars of mixed vegetables shipped from the state.

However, pink root, an onion disease, is doing untold damage to the industry. During the past two years, Dr. J. C. Miller horticulturist, and J. M. Jenkins, Jr., student assistant, have sought a shallot variety resistant to the disease. Tho variety found most resistant is now being crossed with the Welsh onion, which is resistant to pink root, and it is believed that success will be achieved.

In the meantime, the experiment station is developing a hardy, disease free shallot that is proving of much value to growers when planted in an uninfected soil. The station has also demonstrated that it is possible and practicable to grow shallots from seed.

SCREECH OWL FRIEND OF FARMER, SAY STUDENTS

Both the barn or monkey-faced owl and the screech owl are declared to be good friends of the farmer by A. R. Cahn and Jack Kemp, of the University of Illinois who have been studying the diets of these birds.

CORN BELT HARD HIT SAYS R. H. WILCOX

Farm Organization and Management Department of University

Urbana,—This is one year when corn belt hog raisers can not afford to lose the usual one-third of their pigs which die between farrowing and weaning time, says R. H. Wilcox of the farm organization and management department, college of agriculture, University of Illinois.

"More pigs are lost by being lain on by the sow than from any other single cause. These losses result from carelessness on the part of the sow, from poor conditions in the pen and from weakness of the pigs. Guard rails on the sides of the pen often will save many pigs from being lain upon. The sow's pen should not be bedded with an excess of bulky bedding and care should be taken to see that the pens are large enough so that pigs can get away from the sow when she lies down.

"The fact that one-third of the farrowed pigs on corn belt farms never live to see the fattening pen is largely responsible for the fact that 30 percent of the cost of making pork on the average farm has already been charged up by the time the sow weans her pigs. This is too large a share of expense in pork production to take lightly. Any system that may be followed in feeding and handling a pig weaned from a small litter can scarcely ever overcome the bad start.

"The total cost of carrying a sow or gilt does not change in proportion to the number of pigs she weans. Farm figures show that it costs within a few cents as much to maintain a sow producing only two or three pigs ready for the fattening pen as it does a sow that weans six or seven in good condition. Figures show that the cost of a weaned pig is 25 percent lower in litters of six or seven than in litters of two or three."

FARMER KILLED HUNTING HAWKS

DRAGGING GUN THROUGH FENCE FATAL MISTAKE FOR BUREAU TOWNSHIP MAN

Sheffield,—George P. May, well-known Bureau township farmer, was killed Friday morning while he was hunting hawks. Circumstances indicate, according to testimony at the inquest, that he crawled through the fence and dragged his shotgun after him. The trigger of the weapon caught and the charge struck him. The coroner's jury returned a verdict of accidental death.

Mrs. May heard the shot, but thought her husband was firing at a hawk. Alarmed at his continued failure to return, however, she sent their son, Lee, to seek his father. Lee found the body beside the fence.

VOCATIONAL GUIDANCE

In view of the Negro's economic plight most of the schools are now worked up over what is called "vocational guidance." To what are they to guide the Negro students? Most Negroes now employed are going down blind alleys, and unfortunately some schools seem to do no more than to stimulate their going in that direction.

This may seem to be a rash statement, but a study of our educational system shows that our schools are daily teaching Negroes what they can never apply in life or what is no longer profitable because of the revolution of industry by the multiplication of mechanical appliances For example, some of our schools are still teaching tailoring which offers no future today except in catering to the privileged and rich classes. Some of these institutions still offer instruction in shoemaking when the technique developed under such handicaps makes impossible competition with that of the modern factory based upon the invention of a Negro, Jan Matzeliger.

These facts have been known for generations, but some of these institutions apparently change not. Education, like religion, is conservative. It makes haste slowly only, and sometimes not at all. Do not change the present order of thinking and doing, many say, for you disturb too many things long since regarded as ideal. The dead past, according to this view must be the main factor in determining the future. We should learn from the living past, but let the dead past remain dead.

A survey of employment of the Negroes in the District of Columbia, recently made by the Association for the study of Negro Life and History, shows a most undesirable situation. The education of the masses has not enabled them to advance very far in making a living and has not developed in the Negro the power to change this condition. It was revealed that in the industries of the capital of the nation the Negro when a young man starts as a janitor or porter and dies in old age in the same position. Tradition fixes his status as such, and both races feel satisfied.

When this janitor or porter dies the dailies headline the passing of this Negro who knew his place and rendered satisfactory service in it. "Distinguished" white men, for whom he ran errands and cleaned cuspidors, volunteer as honorary pall-bearers and follow his remains to the final resting place. Thoughtless Negro editors, instead of expressing their regret that such a life of usefulness was not rewarded by promotion, take up the refrain as some great honor bestored upon the race.

Among people thus satisfied in the lower pursuits of life sending their children to school to memorize theories which they never see applied in life there can be no such thing as vocational guidance. Such an effort implies an objective; and in the present plight of economic dependence there is no occupation for which the Negro may prepare himself with the assurance that he will find employment. Opportunities which he has today may be taken from him tomorrow; and schools changing their curcicula in hit-and miss fashion may soon find themselves on the wrong track just as they have been for generations.

Negroes do not need some one to guide them to what persons of another race have developed. They must be taught to think and develop something for themselves. It is mst pathetic to see Negroes begging others for a chance as we recently did during "Opportunity Week." "Do not force us into starvation," we said. "Let us come into your stores and factories and do a part of what you are doing to profit by our trade."

The Negro as a slave developed this fatal sort of dependency and, restricted mainly to menial service and drudgery during nominal freedom, he has not grown out of it. Now the Negro is facing the ordeal of either learning to do for himself or die out gradually in the bread line in the ghetto.

If the schools really mean to take a part in this movement they must first supply themselves with teachers. Unfortunately the schools have very few such workers. The large majority of persons supposedly teaching Negroes never carry to the schoolroom any thought as to improving their condition. From the point of view of these so-called teachers they have done their duty when in automaton fashion they give out in detail in the school room the particular facts which they wrote out in the examination when they "qualified" for their respective positions. Most of them are satisfied with receiving their pay and spending it for the toys of life.

For example, I am well acquainted with a Negro of this type, who is now serving as the head of one of the largest schools in the United States. From the point of view of our present system he is well educated. He holds advanced degress from one of the leading institutions of the world; and he is known to be well informed on all the educational theories developed from the time of Socrates down to the day of Dewey. Yet I have heard this man say repeatedly that in his daily operations he never has anything to do with Negroes because they are impossible. He says that he never buys any thing from a Negro store, and he would not dare to put a penny in a Negro bank.

From such teachers large numbers of Negroes learn this fateful lesson. For example, not long ago a committee of Negroes in a large city went to the owner of a chain store in their neighborhood and requested that he put a Negro manager in charge. This man replied that he put a Negro manager in charge. This man replied that he doubted that the Negroes themselves wanted such a thing. The Negroes Negroes urging him to make the change assured him that they were unanimously in favor of it.

The manager, however, asked them to be fair enough with his firm and themselves to investigate before pressing the matter any further. They did so and discovered that 137 Negro families in that neighborbood seriously objected to buying from Negroes and using articles handled by them. These Negroes, then, had to do the ground work of uprooting the inferiority idea which had resulted from their miseducation.

To what, then, can a Negro while despising the enterprise of his fellows guide the youth of his race; and where do you figure out that the youth thus guided will be by 1950 The whites are daily informing us that we need not come to them for opportunities. Can the Negro youth miseducated by persons who depreciate their efforts learn to make opportunities for themselves? This is the real problem which the Negroes must solve; and he who is not interested in it and makes no effort to solve it is worthless in the present struggle.

Our advanced teachers, like most highly educated Negroes, pay little attention to the things about them except when the shoe begins to pinch on one or the other side. Unless they happen to become naked they never think of the production of cotton or wool; unless they get hungry they never give any thought to the outpnt of wheat or corn; unless their friends lose their jobs they never enquire about the outlook for coal or steel. or how these things affect the children whom they are trying to teach. In other words, they live in a world, but they are not of it. How can such persons guide the youth?

C. G. Woodson.

For Immediate Release—

New York City—After an absence of seven weeks, T. Arnold Hill, Director of the National Urban League's Department of Industrial Relations, has returned from important cities on the Pacific Coast. He was also in Phoenix, Ariz., spending ten days to explain the work of the League in response to an urgent call for a branch of that organization. On the Pacific Coast Mr. Hill visited Los Angeles, Pasadena, Oakland, San Francisco, Berkeley, Portland, and Seattle.

"While the West knows that business is not normal," said Mr. Hill, "the depression has not dealt as severely with the Westerners as it has the Easterners. Committees are feeding and sleeping the unemployed, agencies are hard-pressed for funds, and workers are overtaxed; but neither the quantity nor the quality of unemployment constitutes the burden to which we in the East are accustomed now after two years of continuous relief-giving."

"One of the chief factors to occasion unemployment among Negroes has been the drop in passenger traffic in through trains to the coast. Few trains carry full crews of waiters. Where five were used before three and four are now used. I was reliably informed that one road which employed 130 waiters two years ago has but forty regularly employed and a few others held for occasional trips. On this road no waiter is employed at present who has less than nine years' service to his credit. Almost without exception Pullman car crews have been cut on all 'crack 'trains. Two railroads now carry one through train each from Seattle to Chicago and these have fewer sleepers than heretofore."

Remarking upon the psychology of Negroes Mr. Hill expressed himself emphatically as believing that the Negro is becoming conscious of the necessity for improving his occupational position. "All groups seemed interested in hearing of advances made by Negroes in business and industry in the East," said Mr. Hill. "On the coast opportunities are limited. Negroes do not have a chance to work at many of the things we do in the East. Seattle and Portland have no school teachers, and Oakland has but two."

He found much interest in the League's Vocational Opportunity Campaign which runs from April 17-24. It will be observed as an occasion to focus attention on the lack of diversified occupations to meet the ever-increasing number of graduates available for employment.

Editors have their troubles, too. One of them is bemoaning the loss of two subscribers. One wrote asking how to raise his twins safely, while the other wanted to know how to rid his orchard of grasshoppers. The answers were sent by mail but by accident the editor put them in the wrong envelopes, so that the man with the twins received the answer: "Cover them carefully with straw and set fire to it, and the little pests, after jumping into the flames for a few minutes, will be speedily settled." And the man with the grasshoppers was told to "Give them castor oil and rub their gums with a bone."

NO LACK OF TOE IN THIS FELINE FAMILY

A cat owned by Mrs. Maynard of Gilchrist, Ill,, which has five toes on each front foot and six on each hind foot, is the mother of six kittens, each of which has added pedal appendages, says the Chicago Tribune. Three of the kittens have six toes on front feet and five behind. The other three have five in front and six behind.

AND THE ROBIN CHEEPED

An old colored man was burning grass when a "wise guy" stopped and said, "You'er foolish to do that, Uncle Eb; it will make the meadow as black as you are."

"Don't worry 'bout dat, sah," responded Uncle Eb. "Dat grass will grow out an' be as green as yon is."—Montreal Star.

IS THE CHURCH "MOVING ON?"

We call Bishop J. A. Hamlett of the C. M .E. Church, who resides in Kansas City, Kans., one great church leader who is living at the present time and not back in the days of Moses and Elijah. The Conferences under his leadership have gone on record with a statement covering many phases of the church and community life

Everyone knows that our church organizations can make us a contented, progressive and happy people if the leaders of these organizations will get down to brass tacks and make practical the Christianity they theorize and orate so much about. Poverty-stricken and hungry people can't make good Christians no matter how much they are preached to The same Bible that says "Be fervent in spirit" also says "Be diligent in business"

Nearly seven million Negroes in this country still reside in rural districts. These people love their churches. They are a church-going and a church-supporting people The church organizations must find a large and a better way to serve these people— must take a larger interest in their farms and homes— must think more about what they can give to them and less about what they can get from them.

We call the attention of all church leaders to the following statement of the C. M. E. Church conferences. — The Editor.

We are fully aware of the fact that despite opposition a very great opportunity lies at our door, and that we need to measure up to it in every detail. As ministers and lay workers we insist upon; Zealous development of our rural church houses, and the stablization and contentment of our rural population; the beautifying of the grounds around our church houses, planting and pruning of trees and flowers, the proper arrangement of playgrounds, the erection of rest rooms, and the encouragement of our local congregations and pastors to buy small plots of land, build parsonages there on and give the ministers an opportunity to cultivate the land secured.

"Realizing that the carrying forward of such a program is well nigh impossible without the active cooperation of landlords, we recommend that our Bishops, Presiding Elders, Pastors and other leaders among us, establish conferences with our own people and invite the white owners of large estates to participate therein and set plans and put into operation the above proposition.

"Second, Fully conscious of the fact that the growth and expansion of our church membership and general community building we insist that our leaders be diligent in their efforts to establish Religious Training Schools of such practical nature that will reach the entire people through our several districts. We also urge a study of the State School question, and particularly as it pertains to the elementary and high schools. In this connection the ministers, through their local congregations, must encourage the erection of Rosenwald Schools and longer terms for said schools.

"As regards our high schools, for Negro people, in the States of Georgia and South Carolina, we face a most serious question. We shudder when we think of Georgia with a million population of Negro People having not a single high school in three important cities ranging from 60 000 to nearly 100,000 people Augusta, Macon and Savannah. That narly or quite 600,000 Negro citizens have left the State within the past decade as a result of this injustice and others too numerons to mention is a most natural course of action for a suffering and self-respecting people. A close study of facts and the calling together of the public school officials and patriotic citizens generally, for the purpose of correcting this evil, would be a most timely act upon our part as we see it.

Housing Conditions

"Third. The housing conditions of rural people should concern both the church and modern day civilization. In-so far as material side affects the situation there can be no effort or appeal sufficiently strong to stabilize the rural population unless landlords see to it that better houses are erected upon their large estates for the struggle tenants who bear the burden of the soil. Whatever.conferences held should give close attention to this fact.

Employment Situation

"Fourth: In the matter of employment of people of whatever race, we appeal to the employers to give work of every grade to all men on the basis of fitness and not that of race or color. That our long established system of employing and praying laborers upon the basis of color has been among the chief agencies retarding the growth of our section and fermenting racial antagonism goes without question. We do not wonder that the Communists are making strong appeals to Negro people in their attempts to stir up racial strife. In this they touch the "bread and butter" question. That they have failed in this in-so-far as the Negro people are concerned is due almost entirely to the patience and long suffering upon the part of the Negroes themselves. That the Negro has silently suffered inequality of wage and the refusal to allow him work only in a restricted sense, shutting him out from the marching army of general bread winners should constitute the most effective appeal to those who manage large industrial corporations and men who have the common elements of justice still remaining in their souls. No. 11,000,000 people in the world are so hedged about in matters of common labor as the 11,000,000 Negroes of America.

"Consuming a very large amount of food and clothing there is every reason that colored people should be employed and paid adequate wages in helping to sell the things that they consume. In this matter, we urge that Negro people help see to it as far as is practicable, that we trade with those firms and corporations that give employment and fair treatment upon the basis of merit.

A Plea To Railroads

"Fifth. As the above may concern the railroad see to it that Negroes get fair treatment in the matter of employment. We hope that railroad officials may never forget the life history of railroads and Negro laborers who cut the tunnels, fell the forest, constructed road beds and kept up the tracts through storm and rain. In the cutting down of their help, as economy demands, wo urge that it will be upon the basis of efficiency and not that of color. We maintain that Negro porters upon passenger trains are highly desirable. That several of the roads have taken them off is to be deplored, and we ask the gradual restoration of the Negro porter. To work them in common with white men is the only just thing that can be done by a fair-minded people.

Better Accommodation For Negroes Upon Railroads

"Sixth. In the matter of travel upon railroads we are insisting that Railroad and Pullman Companies see to it that Negro people are fed in dining cars and have sold to them berths in sleeping cars. Nothing is more inhuman than the fact; the Negro in most instances is denied the common and elementary rights of a diner and sleeper in a twentieth century civilization and in a country that boasts of freedom. This especially reprehensible and humiliating when we consider the fact that every other nationality in the world is accorded this right within our nation without question .

Patronize Railroads

"Seventh. On the other hand, we urge Negroes to patronize railroads in the matter of travel and for several reasons. Whatever their accommodations are they cannot be worse than the bus. Again we must realize that railroads are among the chief agencies supporting our governmental institutions such as schools and colleges, and at the same time will furnish employment to thousands of our group We view with grave apprehension any agency that has a tendency to displace railroads in our system of commence.

Restoration of the Ballot

"Eighth. That the Negro is scarcely more than a potential citizen goes without saying, and while he suffers this in patience we feel impelled to reiterate with all our soul that our section is doomed to disaster with retarded progress as long as the governing class will shamelessly design to nullify our federal constitution and deprive 11 000,000 people of their common citizenship. We urge our white statesmen, therefore, to open wide the ballot box and to abolish every substerfuge that deprives a deserving people of the common rights of man. The application of the fundamental laws as laid down in our federal constitution and the reversion of many of our State laws that prevent us sharing the benefits of what should be a common government for all, would write a new chapter in race relations and restore harmony in our great nation.

HOOVER, HYDE AND THE FARM BOARD

Out in the grain belt, where we are within sound of the groans of the grain speculators in Chicago and the moans of the millers in Minneapolis, we hear a predominating note of adverse criticism of the federal farm board. The board itself, of course, has set up some defense. What has come from the Hoover administration has been indefinite and by remote control.

It is refreshing to hear somethings definite concerning the opinion the administration has of its offspring . This law and its board belong to the administration and to the leaders in the cities. It is not a farm product.

Arthus M. Hyde, a Missourian, secretary of agriculture, speaks from the administration viewpoint in an article in the Country Home, an eastern farm publication.

"If the stablization venture was a mistake, it was a magnificient mistake from the standpoint of agriculture," says Hyde. "And the error was as to fundamental economic facts upon which every other financial and commercial concern in the United States equally was in error. Now that the price of wheat at least seems on the upgrade, it is safe, I think, to raise the question: Where, do you think, would the price of wheat have gone to if that 200,000,000 bushels of farm board wheat had been in hundreds or thousands of different hands, weak hands, under panic conditions? How many more banks and financial houses, do you think, would have been swept under?"

The question is a fair one

"The far-reaching extent to which agricultural influences make or break city businesses is yet little realized," he says further. "Without agriculture, even New York, which does not know it would be little more than a whistling post In time it will be more fully understood that in stabilizing the wheat and cotton market at a time when all human institutions seemed to be failing, the farm board served not only agriculture, but did more for American industry than American industry ever has done for the farmer."

Henry Ford, whose name is second to none in America, has advised American farmers that restricted production is wrong. At the very moment when he made this statement, his own plant was operating at 75 percent capacity.

'I say this not to find fault with Mr. Ford, but simply to illustrate another outgrowth of that curiosly shortsighted double standard to which I have referred

"When farmers of America, taking count, find themselves paying taxes on 986,000,000 acres of land at a time when 360,000,000 of this land are producing more than enough food and fibers to feed and clothe our people, and when for the first time, the farmers of America are urged to think in terms of an organized, orderly reduction, region by region, then expressions of honor resound from coast to coast."

It is clear that the administration stands ready to defend of trade and the Minneapolis millers. —From Moline Dispatch.

TREATING CABBAGE SEED FOR DISEASE

Rochester,—N. Y. Cabbage growers of Wayne county Wayne within the past ten days have had sufficient cabbage seed treated for blackleg and blackrot diseases to plant 800 acres. The work has been done at the Edgett-Burnham canning factory in Newark, N. Y., by Dr. Charles Chupp of the plant pathology department of the State College of Agriculture at Ithaca. Fifth growers, a produce dealer and one kraut factory operator furnished the seed for treatment.

Blackleg and blackrot have caused Wayne county cabbage growers heavy losses in the past. It is expected that proper seed treatment will eliminate such losses . Wayne county is one of the important cabbage producing areas in western and central New York. The state leads the country in commercial production of cabbage.

The treatment is simple. It consists of placing the seeds in cheese cloth bags, allowing enough room for the seed to swell, and then soaking the seed in hot water at a temperature of 122 degrees for 25 minutes . It is then taken out and dipped in cold water to cool it. The secret of the success of the process is to keep the temperatures constant for, according to Dr. Chupp, if the temperature goes up two degrees the sed may be badly injured and if it goes down two degrees, treatment may not be obtained.

MOREOVER PRODUCTION

Tall stories from Florida are pretty thick (in more ways than one) but this one from the Sanford, (Fla.) Herald, deserve repetition: "The soil around Sanford is so fertile the other day a fellow dropped his corncob pipe in the sand. Before he could pick it up it had sprouted and by the time he got it in his mouth he was eating roasting ears."

Matching this, an Edmonton, (Michigan) farmers claims to have grown two cabbages so large "that a stump puller had to be used to pull them, while a tractor dragged them to the house." —Exchange .

Application for Membership

NATIONAL FEDERATION OF COLORED FARMERS (Inc.)

Vincennes Hotel, Chicago

As a farmer, I believe the time has arrived when the Colored Farmers should form a National Organization devoted to diversified production, grading, packing, shipping and marketing of farm products and to the purchase of needed farm supplies through co-operative methods, to the end that a more prosperous financial condition may result from their efforts as producers.
I hereby subscribe $5.00 for membership in the National Federation of Colored Farmers for a period of 12 months from date. Also $1.00 for an Annual Subscription to the Modern Farmer.

Name .... Address .....

City ..... County .....

State ..... Date .....

THE MODERN FARMER

Official organ of the National Federation of Colored Farmers

Leon R. Harris - - Editor

Published Monthly by the Modern Farmer at Nashville, Tennessee, and Chicago, Ill.

Nashville, Tenn., Office, 447 4th Avenue, North.

Chicago, Ill., Office: Vincennes Hotel, 36th and Vincennes Avenue.

Devoted to the interests of the Farmer, Truck Gardener Livestock and Poultry Breeder, the Home and the People.

Entered as Second Class Matter, April 10, 1929, at the Post Office at Nashville, Tenn., under act of March 3, 1879.

All contributions for publication in the Modern Farmer should be addressed to The Modern Farmer, 447 4th Avenue, North, Nashville, Tenn.

No libelous matter will be published. Unsigned articles or letters, and those written on both sides of the paper will not be used.

Subscription price $1.00 per year, payable in advance. Personal checks must be certified. Make all checks or money orders payable to The Modern Farmer.

Advertising rates and sworn circulation figures presented upon application.

"OUR SLOGAN"

STAY ON THE FARM IF YOU'RE ON IT! GO BACK TO THE FARM IF YOU'RE OFF IT!

THE LAW

"It is hereby declared to be the policy of Congress to promote the effective merchandising of agricultural commodities by encouraging the organization of producers into effective associations under their own control.

The Board is authorized and directed—to promote education in the principles and practices of cooperative marketing—to encourage the organization, improvement in methods, and development of effective cooperative associations." (Public—No. 10—71st Congress. Sec. 1-5.)

THE GOSPEL

"This law is predicated upon the ability of the farmer to manage his own business, once he is organized to do so. Cooperation is the key to it and only in exceptional cases can the Federal Farm Board have any dealings with a farmer who is not a member of a producer-owned and producer-controlled marketing unit." Hon. Sam'l R. McKelvie, Member, Federal Farm Board.

The National Federation of Colored Farmers believes that the Colored Farmers of America should own and control their own co-operative associations.

"Co-operation With All—Affiliation With None."

A Garden is a lovesome thing,
God wot,
Rose plot,
Fringed pool,
Ferned grot',
The veriest school
Of peace, and yet the fool
Maintains that God is not.
Not God in gardens when the eve is cool?
Nay, but I have a sign;
'Tis very sure. He walks in mine.

—Thomas Edward Browne

THE COLORED FARMERS' VOTE

Colored farmers have a much bigger vote than politicians and leaders of either of the two major parties realize. It is a fact that a majority of American colored farmers live in the thirteen southern states but even there a fair per cent of them vote in presidential elections.

In 1928, Mr. Hoover carried Texas, Virginia, Florida, Maryland, Missouri, North Carolina and Tennessee by very small majorities. Whether his friends know it or not, it is a fact that he carried these states because he got the votes of Negro citizens. Had it not been for their votes he would have lost eighty-eight electoral votes of these states,—not enough to defeat him, but enough to make his victory much less prominent. In a closer contest, —as the next election undoubtedly will be,—we predict that the loss of eighty-eight electoral votes will defeat either of the candidates.

In the next election, colored farmers will also influence the vote of their group in many of the northern and border states. Negro voters in northern states are becoming "race-minded." They are not going to support any party candidate for high office who may be willing to give a little to the RACE in the NORTH where is it powerful enough to DEMAND, but ignores the interests of the RACE in the SOUTH where it can only REQUEST. Northern Negro voters are tired of seeing "sops" being handed around to Negro political leaders in their own section by the party in power,—whichever one it may be,—when at the same time they know that the masses of their group in the South continue to "get it in the neck."

Republican Party leaders believe the Negro is traditionally Republican. The "old" Negro was. The "new" Negro is not. The "new" Negro voter is an American first—a Negro second,—and something political last. That "last" all depends upon which Party adheres the closest to the principles of real Americanism, as the Negro sees it.—and shows its belief and confidence in those principles by the way it treats the Negro racial group. The Negro voter knows there cannot be two kinds of Americanism in this country—one kind for the white citizens and another kind for the colored citizen. The Party that is "white" in the daytime and "black" at night, or vice versa, need not expect the support of the Negro vote from now on.

Colored farmers, as a group, have gotten some sympathy from past administrations but little else. What relief they have gotten has been indirect, so indirect that often it was side-tracked. Many of the drouth loans they received were given them through landlords or county committees—all white—and in some instances only a small portion of the loan reached the individual who applied. They got drowned out by the flood in some sections and were promised relief through the officials of local Red Cross chapters and in some instances they were forced to pay for the relief given or to sign contracts with unscrupulous landlords to work a year for "bread and meat" before they were fed. They expected some help from the Federal Farm Board but that body has discouraged their organizations, has done nothing to educate them in the principles and practices of co-operative marketing,—has not even seen fit to appoint one Negro farm leader as its representative.

Colored farmers who vote in the South and their friends in northern and border states, will do well to remember some things this year and support candidates they believe will give them a little consideration they can see and feel. They may not gain much in the near future but after they defeat some of the "promise breakers" a few times a type of candidate will come to life who will realize that promises are sacred and must be kept.

SCRUB AMERICANS MUST GO

Farmers are fast getting rid of scrub stock and it is high time America should be getting rid of some of her scrub citizens. It is reported that many naturalized Americans who drive motor vehicles cannot read traffic signs. Their ignorance constitutes a public danger. About half of the gangsters now infesting our large cities can't read or write except in their native language and many others in none. These people cannot be naturalized until they have resided in the country five years and that is long enough for anyone who desires to become an American citizen to learn the American language. The fact that they don't learn it is proof that they are here for what they can get —not for what they can give.

Had these scrub Americans been any color but "whites" they would have been kicked out long ago. As it is, they are set up on a pedestal and given opportunities to work and accumulate and thrive better than any colored American can hope to do. Colored house servants and laborers and factory workers are being discharged and forced into the ranks of the unemployed by the thousands and the "scrubs' are getting their jobs. Colored Americans have given their all to their country. What have the scrubs given?

We colored Americans must wake up, organize and demand a better show. If we don't we might as well get ready to get out of here and hunt another home. The Mexicans are getting our railroad jobs, southern Europeans our steel mill jobs, Orientals, our jobs as servants and cooks,—foreigners are about to get all of our jobs. The white southerners have learned at last that any old kind of work is honorable for not long ago the Mississippi legislature discharged Negro porters who have served faithfully and hired young white men in their places. We are not saying that all of these who have taken our jobs are scrub Americans but we know that none of them are any better Americans than we are and we also know that a majority of them are not as good Americans as we are. We have been rooted out simply because we have been a bunch of disorganized easy-marks. Anything worth having is worth fighting for but we have not realized until now that it pays to fight to have and hold jobs.

We must re-sell our services and our worth to American white employers. We must talk for Buncombe—that means for ourselves. The heart of the native white American is just but he is a very forgeful soul and must often be reminded of his duty and promises. He certainly owes his colored fellow-citizens more than he owes the stranger and we expect him to favor us when it comes to providing employment.

The colored citizen is a thoroughbred American. Such stock is valuable. The farmer knows it and the white American employer must know it. The scrubs must get out.

THE NEGRO FARM MARKET

Negro farmers have little money and little credit now but they have had both in times past and will have again. Manufacturers and distributors of what the farmer wants and will buy should realize this fact and should be getting ready to take advantage of a market that has been neglected if not completely ignored. A big Negro farm market is right here in America—not in Europe, Asia, or Africa.

Colored farmers are learning how to live and they will live better as soon as economic conditions improve They are going to have some money to spend some day for telephones, electric motors, gas engines, lighting plants and a dozen and one other conveniences and improvements. The manufacturers who can visualize this market and have nerve enough to go after it are the ones who are going to get the profit.

Two years ago an enterprising sewing machine distributor sold twenty-two machines to residents of a small colored farm community in the North Carolina tobacco belt. He would have sold more had not a colored newspaper representative, who was a native of the community, persuaded them to cease buying that particular machine because its manufacturere would not advertise in the Negro press. This should be a pretty plain lesson to other manufacturers who desire to increase sale to colored buyers.

Colored farmers and their wives know the worth of farm and home labor-saving equipment and devices. They are not hard to talk into buying what they want but they would much rather buy from those who let them know they appreciate their trade and desire it enough to advertise for it in the papers they read which are published by representative of their own racial group.

HERE IS THE PROOF

No better evidence is needed to prove that the government of the state of Mississippi has gone to the bow-wows than the fact that one out of every four privately owned farm in that state went on the auction block to be sold for taxes last month. Those who have been criticising the oligarchy that has mis-ruled Mississippi for the past forty years can now point to this evidence and exclaim with good grace; "I told you so."

Such a situation was bound to develop sooner or later. And it was not brought about by drought, floods or depression. It would have happened eventually had these calamities not come. No misgoverned people have ever prospered.

Perhaps the good voting citizens will now awake and elect officials honorable and intelligent enough to use the resources of the state,—especially the tax funds,—for the benefit of all the people. Perhaps they will know now that the bombast who appeals the loudest to class and race prejudice is not always the greatest statesman. Perhaps this inexcusable predicament will convince them that SOME of the people can't be kept down ALL the time unless all of the people are kept down SOME of the time. Perhaps they will now realize that what old King Solomon said was true,—that "When the wicked are in authority the people mourn."

The good citizens of Mississippi are mourning now. We hope they know why and will do what they should do to turn their mourning into gladness.

Watch your garden, Brother Farmer, and can everything eatable. Next winter is coming. The way it looks now good prices for cotton or tobacco seem to be far away.

Keep some books and papers coming into the home for the children to read. Sacrifice for knowledge. The boy or girl who likes to read and can find nothing to read cannot help but be unhappy and dissatisfied.

Family prayer is a good custom. Don't forget to pray. Neither men nor devils can harm a praying people. God lives! Have faith. Only the fools say, "There is no God."

Interesting News & Notes

The four most important vegetable crops grown in Georgia last year were watermelons valued at $2,890,198, harvested from 73,436 acres; snap or string beans, valued at $526,829, harvested from 6,722 acres; tomatoes, valued at $435,365, harvested from 3,752 acres; and peppers, valued at $347,789, harvested from 4,646 acres.

36,000 farm children are out on vacation because local financial crises have closed down the schools. 1200 more schools are expected to close earlier this year than usual. More than fifty per cent are colored school children.

In full payment for four tons of cabbages which he had sent to the market at Sydney, Australia, a farmer received a six cent stamp. The balance of the sales price was consumed by transportation charges. America is not the only country where the farmer is working for nothing.

There are 159 colored farmers in the New England States. They cultivate 10,406 acres and the value of land and buildings is $941,895. This is from the 1930 census,— the latest statistics available. There are 17 colored farmers in Maine; 8 in New Hampshire; 22 in Vermont; 64 in Massachussetts; 11 in Rhode Island and 37 in Connecticut. It is a little known fact that colored farmers have fared well enough in New England to accumulate nearly a million dollars worth of property.

Two-thirds of all the farm equipment exported from the U. S. last year went to Russia. Our government has no dealings with the Russians but evidently think it is all right for Americans to take their money.

More cotton was exported from this country during February than any month since 1927. Exports totalled more than a million bales, nearly half of which went to Japan.

In spite of the depression, Illinois farm bureau federation is increasing its membership rapidly this spring. It has a larger membership now than at any time during the past three years. The National Federation of Colored Farmers' membership is also increasing in Missouri and South Carolina.

Crop production loans totaling $16,480,000 had been made by the U. S. agricultural department up to April 5th. The loans averaged $131 each. At that time the seven original seed loan offices were making approximately 15,000 loans daily.

A member of the National Federation of Colored Farmers, Mississippi Unit, reports that his merchant charged him $1.50 for fifteen pounds of rice, $1.25 for a 24 pound sack of flour and $1.50 for eight pounds of lard. The present prices of these provisions are 45 cents for the same grade of rice, 44 cents for the same grade of flour, 24 pounds, and 40 cents for the lard. This member paid his merchant $4.25 for provisions he could have bought for $1.29 had he purchased them co-operatively, through his Unit. He threw away $2.96. The N. F. C. F. is advising members not to patronize merchants who persist in charging them from three to four hundred per cent above market prices.

It is reported that food chain-stores that operate in the colored sections of some northern cities overcharge their customers and sell them stale and inferior goods. Second quality and slow-moving shelf goods are always sent to the stores in poorer sections where colored people live.

Congress has just appropriated over five thousand dollars to pay an Alabama church society for the destruction of the church building by Union soldiers during the Civil War.

It is reported that the disease pellagra, is gaining in the Southern states and is causing an increasing number of deaths. This disease is caused by a poorly balanced diet, such as cornbread, salt pork and molasses, and nothing else. Sufferers should eat plenty of fresh fruits and vegetables.

A farmer near Hattiesburg, Miss., has prepared a fish pond by building a dam of earth across a ravine. The pond is 75 by 110 yards and is stocked with bream, bass, white perch, buffalo, and cats. Some of the fish are quite large. When the farmer wants a certain kind of fish for a meal he changes bait. His family eats fish three times a week and he says the pond is as serviceable as a flock of chickens and the fish are less expense.

TALKS TO COLORED FARMERS

By Leon R. Harris, Secretary, The National Federation of Colored Farmers, Inc.

The colored farm owner who has managed to keep his head above water nowadays, and is still the sole boss of his acres, is a very important individual. He is in fact the most important member of our racial group in the United States at this time and he should know it and feel that way about it. He stands out as a shining success in the midst of dismal failures. The entire race can point to him with pride and say, "There is a real man!" He is an example and an inspiration to our young people. He is a success because he has stuck closely to those principles of conduct which make men, races and nations successful. Those principles are humility, patience, courage, industry, thrift and foresight.

The successful colored farmer is not a selfish individual. He never keeps his light under a bushel. He is willing at all times to speak right out in meeting and tell his "experience". He wants to help others. I wish I could devote an entire page of space in this paper to the publication of the many letters I have received from successful colored farmers, telling me how they have achieved success and offering advice that is well worth a dollar a word. I certainly appreciate such letters. They are encouraging and fill me full of hope and inspiration. For I know that if these thousands of successful colored farmers have accomplished so much, tens of thousands of colored tenant farmers and shareroppers could also accomplish much if they had the opportunity to become owners.

Our race is proud of you, Mr. Farm Owner, and we know you are going to hold fast to your principles and continue to lead us onward and upward. But the first thing you must think about now in this changing age is HOW YOU CAN KEEP YOUR INDEPENDENCE AND SECURITY AND SURVIVE.

You are now in a home of your own—you boss your own farm—you are a laborer and you are also a capitalist. You do not have to start and stop your work by the sound of a whistle as the factory worker does. But don't you know, there are some right now in this country who want to destroy you,—who want to make you the wage-hand of some big farm corporation,—who want you to give up your independence and security and become merely a little cog in a great machine? Yes, there are some who say that the small farm and the small farmer must go. They want to see farms of 150,000 or more acres,—run as great factories are run. Today you are your own boss, free and independent. Tomorrow, if you don't watch out, you are liable to be a hired hand.

I am warning you now to hold tight to your farm and home—to your independence—and join those forces that are opposing the farm corporation idea. Join with those who believe in and practice co-operation. The big farm plan would make a few more millionaires in this country but you would not be one of them. You would be a peon. Probably half of the time you would be unemployed—would be in the same situation millions of factory workers are in right now.

I predict that the advocates of the farm corporation idea will want to start their experiments in the cotton belt. There are many "too big" plantations in that section it would be easy to unite fifty or more of them into one big farm. Perhaps your seventy-five or hundred acres are located between two of these big plantations. They will try and talk you into selling out and working for the corporation. Don't do it. Hold fast to what you have.

Your best defense—your best security is your membership in the National Federation of Colored Farmers, Inc.,—an organization that believes in co-operation. Unite with it and let's stand together. No colored farm owner in this Nation can afford at this day and time to remain outside a farm organization and the best organization for the colored farmer is the N. F. C. F.

A PROPHET SPEAKS

Every once in a while, a prophet opens his mouth and speaks words of salvation to his people which it would pay them to hear and heed. Such a prophet is W. P Evans, noble character of Laurinburg, N. C. He addresses this prophecy to the white and black South through the pages of the Atlanta Constitution. May his message bring forth fruit, a hundred fold.— The Editor.

"Only Salvation for Negro Lies in Security of Farm

Editor Constitution: The industrial condition of the Negro leading to his self-support is more serious and menacing than at any time since the Civil War. Following the Civil War here was sympathetic north and the government and friendly southerners who aided the colored man gladly in his struggle upward and although he was ignorant he was not hungry. Then he controlled all the industrial activities of the south from the common laborer to the highest architect and builder; all the carpentry, brick masonry, plastering, blacksmithing and railroading were in his hands. And certainly he had a monopoly of all the barbershops. There were no labor unions then to bar him from none of these vocations or mediums to earn an honorable living.

The white south, failing to farm to make a living so that they could live on the farm, turned their attention to the industrial south and became competitors of the Negroes, who were always the menials as well as the contractors and builders of the south.

The economic complex of this newcomer naturally appealed to the employers of labor who were and are white, hence the Negro necessarily became the one last to be hired and the first to be fired. But taking over the Negroes' jobs is not the whole reason for this present distressed condition among them. The introduction of intricate machinery calling for expert operators and these operators could not learn in Hampton nor Tuskegee, but had to learn in the factories and the black men have no chance in the factories.

Therefore the only chance for the masses of the colored men is "back to the farm" and the government and philanthrophy should rehabilitate these farms that are deserted by the white men and prepare the Negro to "farm to make a living;" otherwise he will be forced into abject poverty or become wards of the government as are the American Indians.

W. P. Evans, Laurinburg, N. C."

NATURE OF GROUND

(Continued from Page 1)

alluvial soil, which responds well to wet culture, it is the center of China's rice production. In this region the soil condition has brought about dependence almost exclusively on rich as a vegetable food, the practice of food irrigation, and the raising of poultry rather than large farm animals.

In the United States the great "corn belt" near the center of the country has been marked out by deep, easily penetrated soil, although temperature and moisture conditions also are important factors in making this the greatest maize-producing region of the world. Corn is an excellent food for animals. It is largely because of its soil and temperature, therefore, that this region has become the great cattle-fattening and hog-raising section of the United States.

Tobacco and Wine

Two of men's chief luxuries, tobacco and wine, are more strongly affected by soil differences than almost any other agricultural products. In the United States cigar leaf tobacco is grown best on certain soils of the Connecticut valley, New York, Pennsylvania, Ohio and Wisconsin. The Burley types grow on the blue-grass soils of Kentucky and adjoining states to the north; and the bright tobaccos, used in cigarets, on the light soils of the Carolinas and nearby Virginia.

The most famous Cuban tobacco, which has at times sold as high as $20 a pound, can be grown only on soil in about twenty-five square miles. Two ther restricted areas produce the second and third most famous Cuban tobaccos. On special soils in Macedonia and Asia Minor are grown the celebrated Turkish tobaccos, with flavors and aromas that can not be duplicated elsewhere.

Each of the noted wines of France owes its special character to the soil on which the grapes grow. In some cases very small areas are utillized—little "Islands" of outcropping soil. The same grapes, grown on land between the soil patches will produce a wine wholly different from that made from the "island' grapes."

What Soil Is Made Of

This priceless soil layer, on which all of the world's land vegetation and land animals are dependent, is nothing more than broken up bits of rock into which the decayed remains of vegetable and animal forms have been mixed. Chemically, there are three broad types of soil: alkaline, neutral and acid. It is in accordance with their physical characteristics, however, that soils are usually classified.

Sand is the soil of coarsest particles . Through it water drains easily, little being imprisoned, and not much mineral matter goes into solution from its hard grains. Pure sand, therefore, does not make a satisfactory soil for growing crops.

At the other end of the scale, physically, is clay. Its particles are so fine that they are not found in a separate state, but stick together with water in large groups. Whereas pure sand is too "light" for satisfactory crop production, pure clay is too "heavy."

Between sand and clay lies the wide range of useful soils, made up of particles smaller than those of sand and larger than those of clay is known as loam. As loams of sand and clay, with the addition in most cases of mixtures of lime, other mineral salts, and decayed vegetable matter. A soil composed of; particles approximately midway in size between sand and clay is known as loam. As loams grade upward to sands, they are called sandy loams and loamy sands; as they grade downward, they are classed as clayey loams and loamy clays. When the percentage of any additional soil ingredient is very high, it alters the appearance and nature of the soil, and often gives it a distinctive name. Thus there are chalky-soils, containing much lime, and muck and peat soils, rich in humus or material of vegetable origin.

The soil, as the feeding ground of plant roots, is in truth much more than a mere group of fragments of rock and humus. It consists of soil "crumbs" composed of groups of microscopic particles; the obvious space between the crumbs; the unseen spaces within them; the water, air and other gases that circulate between the crumbs and are imprisoned in them; minerals in solution, and the bacteria and microscopic animal life that exist underground. It is from the mineral solutions that surround and permeate the soil crumbs that the tiny rootlets draw most of their nourishment.

Horse-growing organizations in Argentina are urging a return to the use of horses.

MISSISSIPPI FARM SOLD

(Continued from Page 1)

"The state already possesses 15,000 to 40,000 acres of land in each county taken over for delinquent taxes," said Commissioner Moore. "If the lands this year revert to the state and are not redeemed the state stands to take one-fourth of its property off the tax rolls in another two years—the period allowed for redemption."

—Chicago Tribune.

THE MEAGER CONTRIBUTION TO LEADERSHIP IN WASHINGTON.

Mordecai W. Johnson is having trouble with his educational leadership in Washington, but he should not consider his case exceptional. All men who have tried to do things in Washington have had the same experience. You always find here a number of persons who, although they have never done anything themselves, nevertheless belittle and oppose what you are doing until they secure a following large enough to block the path of progress For the support of his leadership Johnson, like others, must look beyond the borders of the District of Columbia.

Washington is a job-seeking and job-holding center. The people of the District of Columbia have have no time for any such thing as an education program. No body here quarrels about one's not knowing sufficient for a position. The chief complaint is that John is receiving more than James or that Williams should not have been advanced before Henry was rewarded. The people do not feel any need for an efficient school system or a great university. What they want is an increase in the number of available jobs, higher salaries for the job-holders, easier ways of securing such jobs. and additional opportunities for spending the money thus earned.

To insist upon high standards, ripe scholarship, and creative work makes an educator unpopular in the District of Columbia. He had better keep the noiseless tenor of his way that he may draw his own salary and enjoy it in peace as long as he can. If he starts too many reforms here and disturbs the well established agents for the distribution of local patronage he cannot long endure.

A great university, therefore. is impossible in Washington either among the whites or blacks I am surprised to see such a thing undertaken with the aid of politicians. I was sorry indeed when I heard that a useful and promising young man like Mordecai W. Johnson had decided to throw away valuable time trying to plow in the sea . John Hope at Atlanta University in Georgia, has a much better atmosphere in which to develop an institution of learning.

How many persons do you find in Washington who are studying physics or mathematics, for example, to learn about the subject all that men now know about it and to add to such knowledge by some great discovery? Such persons would be more acceptable here if they would forget research and specialize in auction bridge. To proceed otherwise will bring upon them the stigma of being freaks. George Washington Carver would be laughed at up and down the streets of Washington.

This situation explains why nothing outstanding has been achieved by the one hundred and thirty-two thousand Negroes in the District of Columbia. Those who have done well developed in other parts. Yet our trouble is due to an influx. We have too many leaders from without. Practically all persons in the foreground here were brought to the city to be rewarded in some way because of their successful leadership in smaller communities. We have, therefore, many who try to lead and few who desire to follow.

Here these politically selected Negroes have seen the "best producted in the country. They have seen legislators and diplomats come and go, and a few of them in menial capacity have walked and talked with presidents of the United States. Their time, then, has been consumed largely in admiring the great things being done by others of a different race; and, developing an inferority complex, they have always mocked any Negro who has come to town with the presumption that he can do something.

When I arrived in Washington in 1909 and began my researches in Negro history the people here laughed at me and especially at my "hayseed" clothes At that time I did not have enough money to pay for a haircut. I went to a barbershop and had the work done before I informed the tonsorial artist as to my impecunious condition. He became enraged and wanted to pound me, but I was out of the chair then; and he decided that he had better exercise a little patience until I could pay the bill. I borrowed some money from Wilson Bruce Evans and L. Melendez King, however, and paid this and other bills. That barber and I have become the best of friends.

When I in poverty had the "audacity" to write a book on the Negro the "scholarly" people of Washington laughed at it When I started the JOURNAL OF NEGRO HISTORY in January, 1916, a representatives of this same group, expressing an opinion of Kelly Miller, made fun of me in public soon thereafter, saying:

"I have known you as an author, and now I greet you as an editor; but you must remember that some magazines do not reach the second issue."

That man is now dead, but the JOURNAL OF NEGRO HISTORY is in its seventeenth year. The magazine, however, is not well suported by persons of African blood. Readers of the white race are more interestd in it than we are, and do more for this work than we do. Thousands of our highly educated Negroes do not know that such a magazine is being published; and they would not take the time to read it, if they had the opportunity.

The people in the District of Columbia, as a large majority, find no need for such an effort as that of the Association for the Study of Negro Life and History. Most of them do not know what I am doing. A Washington teachers whom I tanght in 1915, thinking that I am still marooned at the same place, recently asked me how I am getting on at the Armstrong High School.

A small number, however, have always stood by this work and have thus enabled the staff to make some headway in writing and popularizing the history of the Negro that the race may not become a negligible factor in the thought of the world. Kelly Miller's prediction of failure, supported by that of W. E. B. DuBois, therefore, has not yet come to pass. They could not see how the thing could be done.

I have seen too much of our people in the District of Columbia to become discouraged by anything which may happen here. When I first heard Roland Hayes in Washington he did not please his audience at all. The lady whom I accompanied to the recital tried to point out all of his defects, saying that most of the time he was off key . I did not know enough about music to understand when he was on or off, but even at that time he impressed me as being the prince of singers; and the world since then has so acclaimed him.

Some years ago Richard B. Harrison as a reader was regarded as a joke in Washington. He made no impression on these "intelligent" people. Believing that they knew everything, they saw nothing of merit in him . In another atmosphere, however, he has made himself immortal as the star of "Green Pasture;" and he is more than this, for, as Dr. E. W. Moore of Columbus says, "Harrison is the greatest ambassador of good-will from the people of African blood to the other races of the world."

—C. G. Woodson.

WILD GAME DELICACY OF PIONEERS IGNORED TODAY

Gourmets of the American Game association are wondering if farmers are not overlooking an easily-secured delicacy. A recent news bulletin of the organization observed that in pioneer days the ground hog, or woodchuck, played a more important part than its present mythical role of a weather prognosticator—and a more dignified part than that of a crop-eating villain, Pioneers considered the flesh of plump woodchucks to be a toothsome dish. Nowadays they are not generally eaten, although in many communities they are killed in every possible way, as they interfere with agricultural pursuits. They are strictly vegetable feeders.

The starling, a foreign bird in the English sparrow class, is also declared to be a delightfully toothsome food. These birds multiply rapidly and are spreading over the country in greater numbers every year. While they have a cheerful warble and are destroyers of insects, the rapid increase of starlings is being frowned upon by conservation departments and nature lovers because of their propensity for driving native birds from nesting places and their habit of gathering in flocks of thousands and overrunning communities.

COUNTY AGENT TO ASK FOR 15 ACRES TO GROW FOOD FOR THE NEEDY

Covington, Tenn., April 2—When the Tipton County magistrates gather here Monday, they will be asked to approve a novel plan evolved by County Agent T. H. Pollard, with a view toward caring for this county's needy next winter.

Under this plan Mr. Pollard would obtain one acre of land in each of the 15 civil districts of the county, the use of the land to be donated by the owner. This plot would be intensively cultivated in garden truck of the more substantial varieties. The labor would be donated by residents of the community and the project would be carried out under the direction of Mr. Pollard.

As the vegetables mature they would be canned or preserved for winter use. To take care of this phase of project, Miss Ivie Drake, county demonstration agent, has offered her services and has promised the co-operation of her community demonstration clubs.

On 15 acres of land, intensively cultivated, Mr. Pollard believes he can produce enough food to care for the needy next winter and provide hot lunches for many of the schools. The only cash outlay would be for jars to can the vegetables, and the Red Cross may provide these free.

Memphis Commercial Appeal.

Sophism

"Every man should have work to fit his brains," says an economist. But think how many people that would throw out of work

ATTENTION COLORED FARMERS

The National Federation of Colored Farmers is receiving hundreds of letters from Colored farmers requesting all kinds of aid and information. We are willing to do everything we can for all the Colored farmers of America. It costs money, however. to maintain offices and our expenses are becoming so heavy that we are compelled to discontinue supplying information to those who request it who are not members of the Federation. If you have faith enough in the organization to believe that it can aid you. then you should be willing to join it and help support it. Isn't that so?

Several County Units have organized and elected officers but have not sent in their membership dues. These units are eligible to membership in the Federation until dues are paid. Be helpful. Co-operate. Pay up. "All for each and each for all."

Address by Hon. William N. Doak

SECRETARY OF LABOR
"THE FEDERAL EMPLOYMENT SERVICE"

Washington, D. C., May 10, 1932

"Under the guiding hand of President Hoover, this Administration has done more to mitigate unemployment and suffering in this economic depression than was done by the federal government in all of the preceding fourteen major depressions combined.

"His was the influence which stayed for more than a year reductions in wages; which caused industries to expand their construction programs and to stagger employment so as to give jobs to a maximum number of persons; which brought about vastly extended public works programs, national, state anl local; and which organized the country on a volunteer basis both to relieve the suffering and to furnish employment

"President Hoover caused to be reorganized the United States Employment Service in the Department of Labor and he has staunchly supported this service in its efforts to supply jobs to the job less. And he has stood steadfast against movements to practically abolish this service which has operated with efficiency and effectiveness in these trying times in the nation's history.

"States' rights has long been a stock slogan of certain partisans, but when these partisans are in power we find this, like many another catch phrase, is more honored in the breach than in the observance. An illustration is furnished by the insistence upon enactment of the Wagner unemployment bill which would invade states' rights by setting up another bureaucracy to supervise state machinery and coerce the states into joining an employment system which would be wholly inadequate to meet the needs either of the present situation or the future.

"It would abolish the present service, which is operating at a cost of lest than $1,000,000 a year and would substitute a federal controlled state service at a cost of four million dollars a year. And this at a time when reduction in federal expenditures is recognized on all sides as the prime necessity if the whole people are to be saved from intolerable burdens of taxation.

"Under the proposed plan of employment service, twenty-seven states which now have no such service of their own would be coereced into joining a new system or else receive no aid from the federal service in finding jobs for their idle or in findng men to fill jobs that might be available within their borders.

"The Wagner bill proposes that in order to share in the employment service each state would be required to appropriate an amount of money equal to that apportioned by the federal government for that state. Thus the budgets of twenty-seven states would be increased at a time when state officials are making determined efforts to reduce their expenditures.

"Moreover, the states coud not share in the benefits of federal appropriations until their legislatures had submitted plans for the operation of their employment services which would be considered adequate and appropriate by a newly organized bureaucracy in Washington. Naturally some of the states at least, are vigorously resisting this proposiion.

"These two effects vividly illustrate the vice in an attempt to solve employment problems local in nature through Federal appropriations to be expendd by the states under a so-called plan of cooperation but rally one of a compulsory nature.

"From the point of view of the worker, the bill has other serious objections. For instance, no provision is made for the variation in employment in the different states arising from time to time. There would be no authority to increase expenses in states where employment might become extensive or use any of the funds apportioned to other states, though they may be in a better condition as to employment.

"in the matter of interstate placements, seasonal occupation placements, or veteran placements there seems to be a wide difference between Federal functions and state functions. There must necessarily be a flexibility as to the expenditure of Fedral money because frequently there is a local condition in a state or sub-division causing acute unemployment while at the same time, jobs are available in other states. Under the Wagner bill there would be no machinery under whch such situations could be taken care of, for interstate occupation placements are purely those for the Federal service.

"Railway and other interstate public service occupations have never been susceptible to state employment agencies; as a result private agencies have flourished in this particular field.

"This situation has been recognized by the American Federation of Labor declared that the enlargement of the Federal Employment Service (and I quote) 'will mark the beginning of an organization and establishment of a national employment system which will be serviceable and helpful in a most satisfactory way to every state and to every community.' (End quotation.)

"The work that has been accomplished by the reorganiized Federal Service has fully justified this prediction by the American Federation of Labor. Since the organization on April 1, 1931, approximately two million jobs actually have been furnished to those sadly in need of employment.

"As an indication of the additional efforts being made to find jobs for the unemployed during these perilous times, attention is called that during the first nine weeks of 1931, 186,614 prson, were placed in profitable employment; while during th first eight weeks of this year, 1932, 248,959 persons were placed in employment. These people were all placed by the direct efforts of the Federal Employment Service.

"It must be emphasized that these figures do not comprehend the efforts which have been made by committees and social organizations to help relieve the unemployment situation. We are working whole-heartedly with the American Legion Employment Commission which has as its objective the placement of at least one million workers in employment, with every indication that this objective will be attained.

"It is estimated that more than 100,000 veterans have been placed in positions by the Federal service and it must be borne in mind that the task of placing veterans in employment is more difficult than is ordinarily the case because so many of these placements represent efforts made in behalf of disabled former service men who are able to function in only specialized activities.

"The Federal Employment Service not only operates twenty-nine specialized veterans employment placement offices and twenty-two farm labor placement officers, but it also as ninety-eight other general placement offices scattered throughout the United States. These offices all cooperate with state and local officials in relieving unemployment as far as may be through jobs available, or through the creation of specal jobs.

"To sum up, the issue presented is whether there is to be voluntary cooperation between the Federal and state governments in the maintenance of a wholly flexible employment effort, or whether the states are to be coerced into establishing a system which would provide no machinery for bringing the unemployed in one state or section to jobs which might be available in other states or sections. The present ried and proven system meets the approval of those most directly interested—labor and the veteran. Naturally they prefer it to an untried plan which on its face has such inherent weaknesses as would seem to doom it to failure."

SAVE Something!

Join Our Dollar Per Week Savings Club Now Open

Every Citizen Is invited to Cooperate in a Definite Movement Where they Themselves will be the Recipients of all the Benefits Both Principal and Interest

Send $1.00 every week to the Citizens Savings Bank and Trust Company, at Nashville, Tennessee, either in cash or post office money order, or you may send your personal check, if it is certified. This will open a savings account on which we pay interest twice a year. It will make you a member of our "Save a Dollar a week Club." Every member of the club, who qualifies by sending the regular amount, will receive special recognition and an acknowledgement of their remittance when it arrives. You can deposit more than $1.00 per week if it is convenient. No matter where you live, in the United States, Canada or Mexico you can take out membership in this savings plan. The Citizens Savings Bank has been operating for twenty-seven years. Its capital is fully paid. Its officers and directors represent men and women who are nationally known. "Procrastination is the thief of time," so do not wait. Open your savings account at once.

CITIZENS SAVINGS BANK & TRUST COMPANY

In the Colored Y. M. C. A. Building

Fourth Avenue, N. and Cedar Street Nashville, Tennessee.

THEY HAD HEAVY TAX TC PAY FOR CIVIL WAR COST

(Continued from page 1).

included traders) and cattle buyers had to provide themselves with licenses costing $10 a year. Traveling entertainers had to pay $20 a year. Peddlers torring the country had to pay $25 a year if they had a one horse wagon and $50 a year if a team.

There also was a professional license schedule. Lawyers had to pay $10 a year. Doctors, surgeons, civil engineers, all had to pay for such an annual license. Only preachers seem to have been spared. Carpenters, contractors and builders also were taxed. There was a closing provision in the law that showed that it was intended to be an omnibus statute. It read:

"A license fee of $10 shall be required of every person, firm or corporation engaged in any business, trade or profession whatsoever for which no other license is herein rquired."

And all this was a sort of second swipe at the people to be taxed, for previously trade in general had been placed under a heavy load by requiring articles of common and necessary use to bear government stamps—the sales tax against which the house took a stand as if it were something unheard of in the country.

FIRST FEW WEEKS CRITICAL FOR TURKEYS

(Continued from page 1).

er or hard boiled egg to which has been added part of the egg shell, finely pulverized, and a few corn bread crumbs. The hunk of dough is likely to upset digestion and c use a sour craw. The other kind of feed contains protein, carbohydrate and fat to compose a balanced ration."

Mr. Nesbit says resistance to disease can be increased by breeding from strong, unrelated birds and by the use of good feeds and good methods.

The only insurance the turkey grower can take against blackhead is to keep the poults in partial confinement for the first ten or twelve weeks. As they grow older, they must have more space. The portable type of brooder house is best for poults and this house should be placed in strictly fresh soil and moved every eight or ten days. A low wire around the house will keep the young turkeys from ranging too far away. After the house has been moved six times, the poults may be transferred to a larger and practically free range where they can feed over the stubble fields, cow pastures or wooded land.

As fall approaches, the poults must be given more feed. All they can eat at least twice each day is a good practice.

THE ASSOCIATION FOR THE STUDY OF NEGRO LIFE AND HISTORY, INC.

YOUTH TRYING TO FIND A WAY

The other day a young business man approached me for my cut to appear in the first issue of a daily paper which he desires to start in Washington.

"A daily for the colored people of Washington!" I replied. "You cannot do it. You have not enough capital, and the business upon which such a newspaper would have to depend is inadequate."

Frankly rebuking me, the young man said:

"That's just the trouble with the older Negroes like you who will not break away from the slavery tradition that there are certain things which a Negro in this country cannot do. The only thing which educated men of your class can do is to teach, preach or beg some boss for a political job. Why cannot I run a daily? If the Negroes subscribed to it in sufficiently large numbers I can get just as much advertising as any newspaper in town. Of course, I was not taught such a thing in school. My education was largely negative, and to make a living I have had to forget what I was taught."

"When I met one of my former teachers the other day," continued the young man, "and in response to his inquiry began to tell him what I am doing, the first thing he had to say was, 'You cannot do that, and you should not be so foolish as to try it.' And yet at that very time I was doing the thing which he told me that I could not do.

"How can you or anybody else figure out beforehand what I can do? How can you truthfully say that the Negro cannot do this and that when he has never tried to do such things? An individual is the best judge of his own capacity: and so is it with a race. As long as Negroes must go to others to find out what they should do, just so long will the race be afflicted with serfdom and slavery."

"The old Negroes," said he, "are too timid. They are afraid to undertake this or that because they might fail, and the little money invested therein will be lost. The matter of failing or losing should be the least of the worries of the Negro. He has nothing to start with; and if he fails he has not lost anything. He has merely come back to the starting point. In undertaking things new the Negro has everything to gain and nothing to lose. Let him, therefore, go forward in the hope of a better day."

After this young man had talked to me in this fashion I was not sure that I could properly comply with the request to advise a group of young people of this type now doing a fine piece of work in a western city. They organized with persons not under twenty nor more than thirty-five, the aim being to exclude those who are too young to think and to keep out also those who are too old to get away from their warped education in the slavery setting.

At first these young people were criticised as foolish and dangerous. In the same city at this time a group of older Negroes were at work trying also to open up new avenues of employment for people of color; and it was feared that the more aggressive organization would ruffle the feelings of the employers and cause the Negroes to lose what jobs they have. The older heads believed that only the cautious and tactful should be allowed to approach the employers. The Uncle Toms were so scared that they would proceed only step by step and then in cringing fashion to the back door with hat under arm, and keeping the way of regress wide open so as to run back or to run out of town if necessary if the employers turned upon them.

While the older Negroes were doing nothing in this fashion, as most of us do, these younger people under a courageous leader made a survey of their neighborhood, found out how many patronized the stores of merchants on the corners, and secured the support of such persons in their campaign for recognition in the management and development of these businesses.

They did this too without begging. They merely went to these merchants in straightforward fashion saying, "You get our trade here. It is worth so much a year to you. We get nothing in return for what we give you. You bring into our community as helpers persons who do not give you this trade. You must let us share the prosperity which we bring you."

In this way this aggressive group in a small community has secured ten useful positions for Negroes who heretofore had never thought of working in such establishments. In the meantime the older Negroes who knew everything and did nothing are wondering how it happened.

This is the young Negro of today asserting himself. He has broken away from slavery and its traditions. He has recovered from the education imposed upon him by his traducers working through members of his own race. This young Negro does not understand every time exactly which way to go; but, believing that so far the race has not gone anywhere, the restless youth is ready to plunge to find a way out of the difficulties which beset his people.

And he is right. If you listen awhile to the advice that Negro leaders are now giving their people, if you carefully investigate the significance of what our teachers impart to students, if you examine closely what ministers are feeding their flocks with on Sunday morning—if you will look into these things, you will readily understand why Negroes are now groping in the dark to find the nearest bread line. These leaders have no program.

The message to the Negro has always been secondhand thought, long since discarded by the most progressive elements, but considered advisable in the case of the Negro to direct his course in a direction opposite to that pursued by others. No Negro should try to run a department store because he does not know the business, and the whites will not teach him. He must, therefore, stick to what his race was doing centuries ago. No Negro should open a factory because he does not control the raw materials, and he does not know the market. No Negro should try to run a daily because he cannot stand the competition of the better established journals. And so on we learn what we cannot do. When the educational process is finished, we are also finished.

To concede such preachments as true and despair will be suicidal., If the Negroes cannot do all of these things in spite of obstacles to be encountered, then, the race had just as well die. If the Negroes concede that their path upward is blocked and conduct themselves accordingly, then they have ceased to serve any useful purpose, and the world will devise means for their extermination.

Laymen Win Fight at A. M. E. Conference

Cleveland, Ohio, May—(By The Associated Negro Press)—The laymen of the A. M. E. Church made history at the General Conference this year. Having achieved equal representation of the floor of the conference four years ago, to be effective this year, efforts to extend their influence to the powerful Episcopal Committee which actually runs the conference were promptly put into action. The fight lasted during the entire first ten days of the conference. At times disturbance threatened as lay delegates waved red flags and interrupted proceedure.

The end came Friday when the conference voted by a huge majority in favor of equal lay representation on the Episcopal Committee. The number of the committee was reduced from 98 which was considered unweildly to 30. In the future there will be one lay delegate and one ministerial delegate from each district on the Episcopal Committee.

MISSISSIPPI NEGRO STATE FAIR ASSOCIATION

Jackson, Miss.—(CNS)—The Mississippi Negro State Fair Association having just completed plans for the 1932 Fair which promises to be the best in the history of the organization.

Officers of the association are: M. B. Brown, president; H. M. Harris, vice president; H. B. Leach, secretary; and R. L. Johnson, treasurer, and C. H. Chapman recording secretary. The board of directors is composed of the officers and the following members, Henry Fitzhugh, Pleas McCadney, William H. Holtzclaw, William Harper, and A. J. Bradley.

THE MODERN FARMER

Vol. V. Nashville, Tenn., and Chicago, Illinois, June 15, 1932. No. 2.

Cultivating The Garden And Setting Out Plants

L. A. HAWKINS OF INTERNATIONAL HARVESTER COMPANY WRITES

From the time of seeding to winter there is no "lay-by" season for crops in a real garden. Weeds are sure to show up, and we must keep fighting against them until they are killed by frost, if we want a good productive garden. Weed seeds usually sprout more quickly than most vegetable seeds, and some blind cultivation will generally prove worth while. In order to show where the vegetable row is at the time of this blind cultivation, radishes may be sown very thinly in the rows of slow germinating seeds, such as beets, parsnips, carrots, etc. Radish seeds germinate quickly and will be up in a few days after planting, so the location of the row can be easily seen in time for the early cultivation and killing of the first weeds. When the young plants are large enough to crowd each other, they should be thinned out. This is an operation that requires hand work, and the job can be lightened by not having the seed planted thicker than necessary.

Lack of time for weeding and hand hoeing is the excuse given by many for not attempting to have a good

NATIONAL FARM FEDERATION HOLDS INTERESTING MEETING

PUBLISHERS OF MODERN FARMER CONFER WITH OFFICIALS OF OTHER ORGANIZATIONS IN CHICAGO

Chicago, Ill.—(Special)—Members of the National Farm Federation representing the official group and the officials of The Modern Farmer are here in connection with the National Republican Convention, and took this occasion to call an executive session to make preparations for future work. James P. Davis, the president of the Association, called the meeting and declared that its objective was to prepare members of our race, especially farmers, to take advantage of the new legislation enacted by Congress to help farmers, home-makers, and especially the home loan bank proposition, the farm loan, seed loan, and other advantages that the government is offering through its several enacted bills.

It is understood that he wishes the editor of The Modern Farmer, which is the official organ of the National Federation, to make plans to increase its circulation, so that it can reach at least sixty per cent of the nine hundred thousand colored farmers in America.

MELON SHIPPERS NEWS

Information Broadcast By National Federation Of Colored Farmers Organization

A new rule issued by the Interstate Commerce Comm., Feb. 27, restores the old rates and suspends the new rates until the present season is over. It also gives new loading rules which should be known to all melon shippers that losses may be avoided. The rules follow:

"Rule 1—Shippers shall, at their expense, line the side walls of the car to the height of the load with kraft paper, weighing not less than 500 pounds per 500 sheets 24 inches by 36 inches; shall properly bed the floor of car with not less than three bales of dry excelsior weighing not less than 80 pounds per bale, or with clean dry grain straw or hay spread to a thickness of not less than six inches; and shall cushion the ends of car to height of the load with pads of dry excelsior or clean dry grass hay not less than two inches in thickness, securely attached to the ends of the car.

"Rule 2—Melons must be loaded compactly with the least possible slack so as to prevent shifting of the load while in transit.

"Rule 3—Shippers shall, at their expense, board car doors from floor of car to top of load, using boards not less than four inches in width and one inch in thickness, spaced not more than two inches apart; such boards shall be sound and substantially free from knots and shall be flush with inside walls of the car.'

Units of the N. F. C. F. that ship melons this season and market through the main offices of the organization are urged to follow these rules to the letter and avoid loss and trouble. We are extremely anxious for our Units to ship better cars than the average for we know Negro farmers are the world's best melon growers and when buyers find it out we will be able to get the better prices. What we do, let's do it right.

THE RURAL PROBLEM

More Home Owners Needed, Says Dr. Dillard

Most of us know by this time that there has not been a period in centuries when the whole world has seemed so unsettled as it seems at this present time. It is so in religion, in politics, and in social and business matters. And it is so from China to South America—it is so in the United States and in nearly all of Europe. France seems an exception in the field of economic conditions. In England, in Germany, and in the United States there never were so many people out of work as there are now.

The present state of affairs in our own country is making people think

YES, IT'S THE TRUTH SAYS EDITOR

Reason Why Negro Farmers Stay Poor Explained

The following item published in last month's MODERN FARMER under the heading "Interesting News and Notes" was discovered by many sharp-eyed readers and has been the cause of much correspondence and comment. Some, especially northern and border-state colored farmers, have asked us if the statement was correct. Here is the item:

"A member of the National Federation of Colored Farmers, Inc., Mississippi Unit, reports that his merchant charged him $1.50 for fifteen pounds of rice, $1.25 for a 24 pound sack of flour and $1.50 for eight pounds of lard. The present prices for these provisions are 45 cents for the same grade of rice, 44 cents for 24 pounds of the same grade of flour and 40 cents for the lard. This member paid his merchant $4.25 for provisions he could have bought for $1.29 had he purchased them co-operatively through his Unit. He threw away $2.96. The N. F. C. F. is advising members not to patronize merchants who persist in charging them from three to four hundred per cent above market prices."

We assure all interested that the statement is the truth, the whole truth and nothing but the truth. Many like cases come to our attention so often that they are common. Colored farmers are being skinned by ruthless merchants and plantation store owners and managers in all parts of the southern states and that is one of the main reasons why they are as poor and as helpless as they are. They are debt-slaves. The so-called "creditors" own them body and soul. They even own the women and children.

Officials of the N. F. C. F. are trying to break up this system and don't care who knows it. We quote the following item from a Bulletin recently released to members of this organization:

Groceries and Supplies

"Never before in history have we been able to buy salt pork at less than four cents per pound. Our members were able to buy at these prices for the past several weeks. Sugar is also low in price—being around four cents per pound for granulated.

There has been no change in the price of flour, and with the prospect of another big wheat crop, we see nothing to indicate any higher prices. Good Patent flour is being bought by our members at about forty cents for a 24 pound sack.

Other prices are as follows:

Fancy head rice $1.88 per hundred

50 pound cans pure lard, $2.72.

Pound talls salmon, 92 cents per dozen

Fancy Daisy cheese 11½ cents per pound

Granulated Sugar $4.00 per hundred

P and G Soap, 100 bars to the case, $2.45

Back bands with buckles $1.93 per doz.

Plow lines $1.73 per doz.

Wheat shorts, 75c per 100 lb. sack

3 ply certainteed roofing, $1.60 per roll

5 string brooms $1.79 per doz."

All Colored Farmers Organized Is the Slogan

COLORED TEXAS FARMER'S SUCCESS

From Nothing to Prosperity—Gives Wife Due Credit

We are indebted to Mr. C. H. Waller, state leader of the Texas Negro Extension Workers, through the columns of that great paper, the Houston Informer, for the remarkable story of Mr. Leo D. Fontenot, a Negro farmer of the Cheek Community, Jefferson County. Mr. Fontenot has come from nothing to prosperity by following the advice of faithful county agents and by using his own good common sense. As is not often the case with prosperous colored farmers, he gives his good wife credit for being a real "helpmeet" who takes care of what he produces. The story follows:

Leo D. Fontenot, a colored farmer of Jefferson County at Cheek, Texas, for fourteen years has proven that farming in this county is a paying business. The following is Fontenot's own story:

"I came to Beaumont from St. Landry Parish at Tyron, La., where I had been logging for the Newell Lumber Co. I had four mules and two horses, one of the mules would not pull. I rented a place from J. E. Broussard to raise rice. I asked him for a garden plot and some seed. I had no tools to farm with and very little money but I went around and bought some old discarded tools and fixed them so I could use them for the first year's crop. Right from the start I decided to buy things that I could afford and to live at home as far as possible. I put in my crop the first year and in the summer four of my mules died with the charbon; then I lost two more head. After that I studied a treatment for the disease. I bought a vaccine needle, got an early start in treating them and after that had no more trouble. I have mules that have made twelve crops and they are still in fine shape.

My first crop was a failure. I found that planting poor seed in poorly prepared land will not get you anywhere, so I decided to plant the best. You will find that to do this you will get better results, become better satisfied and learn to love

MRS. R. G. CARTER PASSES AWAY

We are grieved to hear of the death of Mrs. R. G. Carter, wife of the Chairman of the Helm Unit, N. F. C. F., of Helm, Miss. Mrs. Carter was a model wife and mother and was of essential assistance to her husband, who is one of the most fearless and progressive leaders of the Miss. N. F. C. F.

The Modern Farmer and the officials of the N. F. C. F. extend to the bereaved family and friends of the Helm community heartfelt sympathy.

GREAT MESSAGE FROM PRESIDENT JAS. P. DAVIS

JUL - 5 1932

There is no hunger or unemployment on the farm. Probably never before has there been more uncertainty, more confusion and misunderstanding resulting in general, dissatisfaction among farmers (both white and colored) throughout the nation than now exists. Solving the farmers' problems is the farmers' job. It is up to us to help ourselves. Individually we can do little. Organized strength means influence necessary to win equal opportunity and equal privileges.

White farmers have been organized for years. In the state of Illinois it is estimated that there are fifty thousand farmers in organization, and they have been able to pave the way for an equalized taxing system in Illinois based on ability to pay. They have also been able and instrumental in bringing about substantial reductions in land valuations for taxing purposes, which in 1932 averaged more than $30.00 saving for every farm in the state.

For the past two years members of the National Federation of Colored Farmers Inc., in Miss., Ala., and Tenn., have been buying their groceries and supplies co-operatively at wholesale and saving from 40 to 50 cents on the dollar. For the

NEW FARM BILL INTRODUCED IN CONGRESS

Congressman Black of New York has introduced two bills in Congress to encourage the utilization for farming opportunities by certain destitute or unemployed persons. The bill calls for ten million dollars and says the Secretary of Labor would be authorized to advance opportunities to destitute or unemployed persons to engage in agricultural pursuits in which such persons have sufficient experience to so afford reasonable assurance of earning a livelihood and paying for necessary land.

For such purpose the Secretary of Labor, thru the employment service of the Department of Labor, and the Federal Farm Board are authorized to co-operate in bringing to attention of such persons information as to lands available for cultivation and purchase and information as to obtaining loans thru federal loan banks for purchase of such lands and for other purposes under the provision of the Act July 17, 1916. The bill also authorizes the Secretary of Labor to lease abandoned farm lands and to provide suitable living quarters thereon, supply seeds and farming equipment and to take such other steps as may be necessary for carrying out the purpose of this act."

(Continued on Page 8)

SOUTHERN STATES REMAIN AT BOTTOM OF ILLITERACY LIST

New Orleans, La.—(CNS)—"The Southern States," Edwin R. Embree, president of the Julius Rosenwald Fund, told the American Library Association meeting here last week, "are among those at the bottom of the literacy list and have only one-fourth as many books per capita as the very modest average of the country as a whole.

"In ancient days," he said, "the Southern mansions had at least some pretty fine collections of books, but after Appamatox, reading went under an eclipse, with the result that today the Southland stands far below the rest of the nations in its library facilities and its reading habits."

The South cannot blame its illiteracy record on the Negro, Embree went on, "figures for whites alone still leave the South for below all other sections.

GOV. ROOSEVELT PUTS JOBLESS ON FARMS

New York—Many of New York state's unemployed will be assisted by returning them to farms, according to a plan announced by Governor Franklin D. Roosevelt.

The Governor, who is a prominent candidate for the Democratic nomination for President, told citizens of Westchester county that the jobless of the state numbered at least ten per cent of the total population and he explained that dependent families from cities and towns, especially those who had some agricultural experience, would be helped back to the farms that they might get there the permanent jobs they have lost.

The plan will be financed by state and local relief funds and the governor has authorized every public welfare commissioner to place as many families as possible on farms and to pay for rent, tools, seeds and household necessities. 244 families already have been taken care of. The plan reduces the cost of relief and also places dependent families in healthy surroundings where they can support themselves. It is reported that many southern Negro families, now residing in Harlem and other crowded sections, will be given opportunities to return to the farms of New York state. It is certain that many will go to these New York farms who could not possibly be persuaded to return to farms in the South.

SPECIAL PRODUCTS RETURN PROFIT ON EXTRA BUTTERFAT

Many farmers are making money marketing their surplus butterfat in the form of whipping cream, sweet cream butter, honey butter and other special products which are easily prepared on the farm, according to R. J. Ramsey of the dairy manufactures division of the University of Illinois.

"Sweet cream butter was originated to meet the demands of the housewife for a very high grade product. It requires no equipment that is not used in churning sour cream. However, the flavor of this butter is so mild and delicate that only the very highest quality of sweet fresh cream can be used. Even the feed of the cows must be watched carefully to avoid undesirable feed flavors. All milking utensils and even the separator should be sterilized with boiling water each day before being used. If boiling water is not available, chemical sterilizers, such as bleaching powder, may be used.

"The milk should be separated immediately after milking and the cream cooled to below 60 degrees. The cream must be kept cold until churned in order to prevent souring and to make churning easier. It is best to churn every other day, provided enough cream is available. Sweet cream is somewhat harder to churn than sour cream, so it must be aged at a low temperature for several hours before churning. For this season of the year the churning temperature should be about 50 degrees.

"The churning should be stopped when the granules of butter are the size of a wheat kernel. The buttermilk then should be removed and the butter covered with fresh cold water. The churn should be revolved a few times, the rinse water removed and the washing repeated. The butter is removed and placed on a chilled butter worker and worked until no moisture is visible in large droplets. Care should be taken not to overwork it. Only a fine grade of butter salt should be used in salting it, as table salt is likely to cause grittiness.

"If sweet cream butter is not salted, it may be made into honey butter. This makes a delicious spread for those who like honey. It is made by adding one pound of light-colored honey to one pound of soft cream butter. The two should be well mixed and then placed in containers and put in a refrigerator to harden."

ORCHID 45 FEET HIGH FOUND IN QUEENSLAND

(Christian Science Monitor)

Discovery of what is claimed to be the tallest orchid in the world has been made in southern Queensland. It grows to a height of 45 feet, and bears hundreds of beautiful flowers. One spike of flowers is almost six feet in length.

The giant orchid—Galeola foliata—grows in an almost inaccessible gorge in the Macpherson Ranges. A Melbourne botanical expedition hopes to reach the spot in September.

Before the discovery of the giant, 30 feet was believed to be the limit of the growth of the species.

The flowers of the orchid are golden yellow, contrasting with a white, pink-marked labellum.

LET US LOOK BACKWARD

W. P. Dabney in Chicago Defender

Many times in the past have we called attention to the Negro emigrants flocking into our city who had not had social training to fit them for this environment! We begged our churches, lodges, preachers and professional men to organize improvement associations as the Germans, Jews and other races have to teach the ignorant among them! But Pharaoh would not heed! Nothing has been done for these poor people! Rude, crude, poor, uncultured, why should we expect other citizens to mingle with them if, though of our own flesh and blood, we would not do so.

Throughout the Black Belt, at the railroad stations, on every downtown street and corner, hundreds and thousands of workless Negroes, absolutely devoid of training, since few people have paid any attention to them. They know little of cleanliness, less of politeness, nothing of life in a cultured city. That is the only class of Negro the mass of our white citizens see.

Yet we have our Y drives, recreation drives, our big balls, receptions, dinners, church drives for church debts, "store-front" preachers hounding politicians, "big church" preachers driving magnificent cars, drawing princely salaries, while all around are thousands of idle, ignorant Negroes who could become something with a little help.

"Nero fiddles while Rome burns." "The worst is yet to come."

PROMOTING TRUCK CROPS

Searcy, Ark.—A strong effort is being made by Searcy business men under the leadership of Tom Watkins, cashier of the Bank of Searcy, to start farmers in this trade territory away from 5c cotton. More than 200 acres were set with strawberry plants this spring. A considerable acreage was planted to Irish potatoes and tomatoes and other minor truck crops are receiving attention. If the farmers show proper interest the business interests of Searcy will get behind a move for a cannery to handle truck crops in time of a glutted market.

J. W. KIME WOULD HALT FARM GOODS SALE BELOW COSTS

(Des Moines Register)

Fort Dodge, Ia.—Dr. J. W. Kime, candidate for the Republican nomination for governor, outlined his program to enforce a holiday on the sale of farm products until they reach cost of production and reasonable profit to a meeting of farmers Saturday afternoon.

Dr. Kime read the text of a bill he has drawn to carry out his program. It would bar the movement of all farm products to market over highways unless they were consigned at the price agreed upon as fair.

The state highway commission would be made the enforcing agency.

His bill, if passed, would not become law until the same act had been passed by legislature of border states.

Dr. Kime announced eight speaking engagements for this week.

He will talk in Boone Tuesday, Webster City Wednesday, Carroll and Jefferson Thursday, Ames and Rockwell City Friday and Clarion and Humboldt Saturday.

CENTENNIAL OF FIRST PLOW

The centennial of David Bradley, said to be the maker of the first successful plow of the type now in general use, is being celebrated this year.

Sears, Roebuck and Co., under whose ownership the Bradley implements have been developed the last couple of decades, is assuming the leadership in the observance of the centennial. In connection with the celebration, prizes are being offered to owners of the oldest Bradley implements still in use.

The first Bradley plow was made in a little shop in Syracuse, N. Y., in 1832. David Bradley came to Chicago (then Fort Dearborn) in 1835 and manufactured plows there until his retirement from the manufacturing end of the business in 1842. The factory was moved to Bradley, near Kankakee, Ill., in 1895.

The David Bradley plows have won medals at the Philadelphia centennial in 1876, and the world's fair in Chicago, 1893.

SOUTHERN ILLINOIS GROWERS PLANTING MORE TOMATOES

Anna, Ill.—With only a small peach crop in sight, southern Illinois growers are turning to other lines and, according to shippers and growers throughout this section, there will be a sizable increase in acreage set to tomatoes.

Other green vegetables also show an increased acreage and it is anticipated that more carlots than ever will leave the district.

TRIES FOR THIRD CROP FROM SAME VINES

Dublin, Ga.—After having produced two crops of sweet potatoes from the same vines, Dennis Holliday now has set out to see if a third crop can be grown on them.

After harvesting his crop of sweet potatoes last fall, Mr. Holliday plowed the vines under. This spring when he went out to plow the land for replanting, he found that another crop of sweet potatoes had grown during the mid winter.

Now he is resetting the same vines for the third crop.

CALCIUM ARSENATE FOR POTATO FLEA BEETLE

Wooster, O., May 10—Calcium arsenate has proved to be the most efficient and economical insecticide to use for controlling the potato flea beetle on potatoes, according to results obtained in tests conducted by H. L. Gui, assistant in entomology at the Ohio agricultural experiment station during 1930 and 1931.

When this insecticide was used in the 4-6-50 bordeaux sprays throughout the season, increases of from 28 to 41 bushels per acre were obtained. The calcium arsenate used in these tests cost $2.16 @ 2.88 per acre, depending on the number of applications made. Tests also have shown that unless the arsenical is used throughout the season the returns on the investment are likely to be very low.

The results of the two years' work are discussed in the May-June Bimonthly Bulletin of the Ohio Agricultural Experiment Station. A copy of this bulletin may be obtained upon request.

IRON CONTENT OF VEGETABLES AND FRUITS

Washington, D. C.—Vegetables and fruits have for years been recommended by nutritionists as sources of food iron, but there have been few systematic studies of the iron content of the common varieties. A publication just issued by the United States Department of Agriculture (Circular No. 205, "The Iron Content of Vegetables and Fruits," by Dr. Hazel K. Stiebeling, senior food economist in the Bureau of Home Economics) presents the findings of a series of analyses which show the value for iron of 110 different forms, parts, or varieties of vegetables and fruits which commonly enter into the American diet. In her summary the author classifies the fresh or succulent vegetables and fruits as sources of iron, using four ratings—"excellent," "good," "fair," and "poor."

Graded as "excellent" are the vegetables with thin green leaves, such as spinach, turnip tops, beet tops, dandelion greens, mustard greens, kale, collards, watercress, chives, and chard. In this same grade are listed also the immature seeds of leguminous plants—lima beans, cowpeas, and English garden peas—and the vegetable oyster or salsify.

Graded as "good" sources of iron are potatoes, and the vegetables with thick pigmented stalks and leaves—red or green cabbage, cauliflower, Brussels sprouts, broccoli, asparagus, green string beans, and globe artichokes. In the "good" list appear also five fruits—blackberries, blueberries, raspberries, Concord grape skins, and quinces.

Approximately half the group called "fair" sources of iron consists of ruits, the rest are seed pods blanched leaf stalks, roots and bulbs—in all, 44 different forms, parts or varieties of fruits and vegetables. The group considered relatively "poor" sources of iron consists almost entirely of fruits and fruit juices.

This new circular is the third in a series of publications by the Bureau of Home Economics giving data on the chemical composition of fresh vegetables, fruits, and fruit juices. The two earlier bulletins, still available for distribution, give information in terms of protein, carbohydrates, and calorie value

---

"Industry must pay a cultural wage, and by cultural wage I mean a wage that will enable a man to develop his intellect, thereby giving him a fair chance to take advantage of the many opportunities that are offered in this free country of ours. That must ever remain the object of a high order of industrial society that gives to those participating in it adequate opportunities to aspire and achieve the very highest and noblest in our common life. Unemployment is the greatest economic blot on our capitalistic system."

—Owen D. Young.

FARM PRICES PAID IN 1846 ARE NEAR LEVELS OF TODAY

Farm prices today are comparable to those in effect eighty-six years ago, an old copy of the St. Louis Wholesale Price-Current for June 27, 1846, reveals. The copy was discovered in an old trunk by George F. Tullock of Rockford, director of the Illinois Agricultural association.

At that time grain was not graded as it is now, the classifications of wheat being prime red, prime white, fair to good, mixed, interior and spring. Corn was classed merely as white or yellow, and oats was not graded at all.

Prime white wheat was quoted at 50 to 51 cents at St. Louis, which is within 1 or 2 cents of the present price. Spring wheat was 30 to 38 cents. Corn was 19 to 20 cents, oats 18 to 19 cents a bushel, and hay (loose) $10 to $12 a ton.

Beef cattle were quoted at $2.50 to $3 a hundredweight, sheep at $2 each, and hogs $2.75 to $3 a hundredweight. Wool was 8 to 12½ cents a pound for unwashed, 14 to 20 cents for washed. Eggs were 5 to 6 cents a dozen and prime table butter 11 to 13 cents a pound wholesale.

Other prices quoted were as follows: Illinois coal $8 to $12 a ton, Java coffee 11½ to 13 cents a pound, flour $2.90 to $3 a barrel, prime plantation molasses 28½ to 29 cents a gallon, prime Louisiana sugar 6 1-8 to 6 1-4 cents a pound, lard 4 to 5 1-4 cents, bacon and hams 3 3-4 to 5 cents a pound. The farmer got well over 6 percent of the consumer's meat dollar in 1846.

Whisky was one of the commodities commented on in the market review for the week as follows: "The supply of raw whisky has been below actual demand this week, and rates have advanced—sales in the early part of the week at 15 cents, later 15½, and at the close 16 cents was probably the market price, with none on sale. This has caused more firmness for rectified, and sales have been within a narrower range—say 16 to 17 cents a gallon. Received during the week 502 barrels."

WHAT SHE MEANT

A young sea captain who lived on a small farm married a village maiden, Susan Margaret. Before sailing the young captain advised his bride, Susan Margaret, "While I am away have Frank, the hired man, feed two quarts of middlings to the cow twice a day."

Later the bride said to the hired man, "Frank, when you go to town get a sack of half-ways."

"What, ma'am?" asked Frank.

"Get a sack of half-ways, while in town," the lady repeated, more clearly.

"I do not know what you mean," replied the bewildered man.

"My husband said, 'Fed the cow four quarts of half-ways every day.' As there are none in the bin, I wish you to get a sack while in town,' said the lady with much dignity.

When the man could control his voice sufficiently he queried "Ma'am, do you mean a sack of middlings?"

—Lewistown Journal

HEAVY MAY DROP OF PEACHES IN GEORGIA

Macon, Ga.—The May drop of Georgia peaches continued heavy this week, especially in the orchards south of Macon, which includes the big Fort Valley-Marshallville section, and predictions last week that Georgia will have the shortest crop of fruit this year in the last 15 years appear to be borne out. How short it will be remains to be seen. There are no official estimates yet, nor will there be until June 1, but unofficial estimates now range as low as 3,000 cars of peaches for the state.

Georgia has had another long drought. The foliage has not come out on the trees as it should. The orchards are really suffering for the need of rain and the fruit is not hanging onto the limbs.

A month ago a crop of peaches of nearly 4,000 cars was in sight in the orchards south of Macon. Today growers and shippers and distributors agree that it will be difficult to get 500 cars of fruit out of that big district.

Conditions in the orchards north of Macon are spotted. It is said the Elberta crop in the orchards north of Macon range from 65 per cent to nothing.

SEES 65 PER CENT PEACH CROP FOR NORTH CAROLINA

New York, May 6—Moses Richter of the firm of Richter & Cochran, shippers, with headquarters at Mt. Gilead, N. C., arrived in New York late last week. The firm opened its New York office at 102 Warren St. about two weeks ago.

The firm which a few years ago opened a New York office to handle sandhill peaches shipped by its own connections, now handles strawberries, blueberries, peaches, peas and in fact a number of varieties of produce which are being shipped on commission. Richter & Cochran are handling five to eight cars of North Carolina strawberries a day at this time.

"It looks as though," said Mr. Richter to The Packer man, "North Carolina will have an average of about 65 per cent of peaches this year. The fruit is growing nicely and some of it is liable to come in before Georgia. Our Elberta outlook is splendid although we have made no f. o. b. contracts as yet. Mayflowers, which are the earliest peaches shipped, are very light in central and south Georgia. Of course, we all know now that Elbertas in north Georgia are pretty well shot. I think the estimate of approximately 6,000 cars of all kinds of peaches in Georgia still stands. Weather conditions cause rather uncertain crop movements. Georgia appears to be a little late with its peaches and North Carolina a little earlier, and it may be that we will be in the market before Georgia is. Weather and growing conditions have been good. We expect to have also a very good crop of dewberries, in fact, 9 per cent of the dewberries grown in North Carolina."

LOWER PRICES.

Peoria Transcript: Last month, the United States department of labor announced that the prices of farm products had declined until they stood at 49.4 percent of the 1926 figure. In other words, the farmer is now getting about half price for his products.

There is some elation over new low price levels in the last few months. Housewives are glad that butter, eggs, meat and other produce have slumped. Cheap wheat and other farm products have spelled disaster to the farmer. It is interesting to note that the chief decline in commodity prices was in the farm produce group. Leather products have declined to but 14.4 percent of the 1926 prices; fuel and lighting have declined to 71.7 percent; household furnishings have gone to 78.2 percent.

In other words, although the farmer's income from staples has been cut approximately 50 percent, other commodities have not declined correspondingly. The effect of this is obvious. Not only will the farmer suffer, but the city man who depends on farm patronage will also lose.

A mortgage which the farmer put on his land when wheat was $1.50 a bushel now takes three times as much wheat to pay interest. Debts have not decreased ratably with prices. The breakdown in price levels, which is a breakdown in the exchange of manufactured goods for produce, had much to do with unemployment. Consequently, while breadwinners, still earning within 20 to 30 percent of what they earned in 1926, are getting along, the general tone of the economic situation is bad. It might be better if prices were higher.

When the farmer bears the brunt of the economic burden, the nation suffers. This is inevitable in a civilization in which, fundamentally, prosperity must come from the buying power of those who produce food.

SLAMMING THE PRESIDENT

Schenectady Union-Star: Realizing that an election is pending, democrats fear lest President Hoover receive too great credit for the constructive legislation he initiated and whose enactment he secured by getting together the leaders in both parties. There should be credit enough to go around. No constructive legislation, however beneficial, could have been made effective without the cooperation of congress. The president can not enact; he can only approve legislation and execute laws. The public must not be misled if forthcoming events at Washington assume the form that is forecast in the dispatches. When you begin to see the headlines screaming that whatever good has come out of the present session of congress is due to the democrats, and whatever bad that comes out is due to the republicans, recall that there is an election coming, and the "boys" have to manufacture differences to make the campaign interesting. The administration need not fear that the country will not understand, and give credit where credit is due. The mere fact that they are training their guns on the president is enough to indicate that he has done something.

WITHOUT THE HORSE

Duluth Herald: Unless drastic measures are taken to prevent, old-fashioned horsehair furniture is coming back.

The only relief the farmer can expect is a plaster for his back!

STRAWBERRY TRUCKER FINED IN SALINA, KAN.

Salina, Kan.—J. J. Harper of Arkansas, who was arrested by the sheriff's force last week on a charge of operating a public carrier without permits from the public service commission, appeared in city court and pleaded guilty. He paid a $15 fine. Officers said Harper trucked strawberries to Salina from Arkansas without a state permit, and that from now on the court and officials will "tighten down," on such cases. A maximum $500 fine is provided. According to County Attorney Morris Johnson, Harper was reported to be bringing in the strawberries from Arkansas, they were sold in Salina in competition with local merchants who had already laid in stocks of Arkansas berries.

SELECT ADAPTED SOILS FOR GROWING PEANUTS

The outlook for profit from peanuts is so poor this season that there must be a drastic reduction in acreage, a lowering of the cost of production and an effort made to to be expected this year.

"Peanut prices have been below the cost of production for the past two or three years," says P. H. Kime, agronomist of the College. "With the large carry-over from the crop of this year, there appears to be little hope of any profit this fall unless the farmers themselves take a hand in the situation. They can do so by reducing the acreage first; by cutting down on the expenses of the crop, second, and by improving the quality as a third step."

Especially important this year is selecting the land best adapted to peanuts. Thousands of acres are planted to the crop each season which would not be profitable even if good prices were paid for the nuts. Such soils should be planted in legumes or some food and feed crop. Good stands are also needed for best yields. Each year there are great areas in the peanut belt with stands running from 40 to 75 per cent. This decreases possible yields from 10 to 40 per cent. Then in many instances where the stand is regular the plants are not thick enough on the row to give best yields.

Mr. Kime says that tests made for three years on the experiment station farm at Rocky Mount, N. C., show the highest yields and the best percentage of large nuts to be secured when the hills are from 8 to 9 inches apart on the row and two plants to each hill. Twelve-inch hills with two plants ranked next. This was with the Virginia Bunch variety. The Jumbo Runner gave the highest yields and the most handpicks when planted in hills 12 inches apart with two plants to the hill.

Application for Membership

NATIONAL FEDERATION OF COLORED FARMERS (Inc.)

Vincennes Hotel, Chicago

As a farmer, I believe the time has arrived when the Colored Farmers should form a National Organization devoted to diversified production, grading, packing, shipping and marketing of farm products and to the purchase of needed farm supplies through co-operative methods, to the end that a more prosperous financial condition may result from their efforts as producers.
I hereby subscribe $5.00 for membership in the National Federation of Colored Farmers for a period of 12 months from date. Also $1.00 for an Annual Subscription to the Modern Farmer.

Name .... Address ....

THE MODERN FARMER

Official organ of the National Federation of Colored Farmers

Leon R. Harris - - Editor

Published Monthly by the Modern Farmer at Nashville, Tennessee, and Chicago, Ill.

Nashville, Tenn., Office. 447 4th Avenue, North.

Chicago, Ill., Office: Vincennes Hotel, 36th and Vincennes Avenue.

Devoted to the interests of the Farmer, Truck Gardener Livestock and Poultry Breeder, the Home and the People.

Entered as Second Class Matter, April 10, 1929, at the Post Office at Nashville, Tenn., under act of March 3, 1879.

All contributions for publication in the Modern Farmer should be addressed to The Modern Farmer, 447 4th Avenue, North, Nashville, Tenn.

No libelous matter will be published. Unsigned articles or letters, and those written on both sides of the paper will not be used.

Subscription price $1.00 per year, payable in advance. Personal checks must be certified. Make all checks or money orders payable to The Modern Farmer.

Advertising rates and sworn circulation figures presented upon application.

"OUR SLOGAN"

STAY ON THE FARM IF YOU'RE ON IT! GO BACK TO THE FARM IF YOU'RE OFF IT!

THE LAW

"It is hereby declared to be the policy of Congress to promote the effective merchandising of agricultural commodities by encouraging the organization of producers into effective associations under their own control.

The Board is authorized and directed—to promote education in the principles and practices of cooperative marketing—to encourage the organization, improvement in methods, and development of effective cooperative associations." (Public—No. 10—71st Congress. Sec. 1-5.)

THE GOSPEL

"This law is predicated upon the ability of the farmer to manage his own business, once he is organized to do so. Cooperation is the key to it and only in exceptional cases can the Federal Farm Board have any dealings with a farmer who is not a member of a producer-owned and producer-controlled marketing unit." Hon. Sam'l R. McKelvie, Member, Federal Farm Board.

The National Federation of Colored Farmers believes that the Colored Farmers of America should own and control their own co-operative associations.

"Co-operation With All—Affiliation With None."

If you walk as a friend you will find
a friend
Wherever you choose to fare;
If you go with mirth to a far, strange
land
You will find that mirth is there;
For the strangest part of this queer
old world
Is that like will join with like.
And who walks with love for his
fellow man
An answering love will strike.

—ANON.

TURN ABOUT—FAIR PLAY

President Hoover and his advisers deserve the thanks of all farmers for the efforts they are making to reduce governmental expenditures by abolishing some of the department bureaus in Washington The agricultural department appears to have the most bureaus and probably needs them, but we are pretty certain there are many on that department's payroll who should be off it. A thousand and one things are done in the farmer's name that he never asked for and from which he has never received any benefit In fact, he has seldom ever gotten what he has asked for. He has gotten what city folks and politicians wanted him to have.

As an example of a useless job, it is reported that recently a representative of the agricultural department spent a whole day in an Illinois county showing farm and home bureau agents how to arrange their desks and hang the pictures on the wall. We would like to know how many farmers requested such service as this. And what good did it do them?

We suggest that if the government has funds to spare after it has abolished a few of the useless jobs, it might give the colored farmer a little consideration and spend some for his benefit. We need a few hundred more colored farm agents. We also need more home demonstration agents. The Farm Board needs a few special colored representatives to teach organization and co-operation to colored farmers. As a worthwhile experiment, a colored farm community might be established under government supervision. And while the seed and fertilizer loans are being made from time to time, a few colored inspectors might be employed to make sure that all the money borrowed is going to the ones who borrow it—not to their landlords or local merchants.

Turn about is fair play. 970,000 American colored farmers would like to know just when and where they come in.

POVERTY MAKES BAD CITIZENS

We have said, and we say again, that honest, intelligent Negro leaders are striving with all their might to keep the masses of their people from becoming radical and red, but how can they prevent this if those in power and authority,—the capable organizers and leaders in our country,—take no interest in the Negroes' economic ills and make no efforts to work out or support any plan to free the Negro masses from debt-slavery and persecution? Few of these leaders realize that poverty is the greatest enemy of civilization. Poverty-stricken people feel that life has not given them a square deal. They are class-conscious, ignorant and suspicious. Thy have pride but little self-respect. They do not love their government and the only reason they obey the law is because they fear it.

The masses of the Negro people of this country are a rural people and if given a fair show they make "solid citizens." They respect themselves and envy nobody. They cling to certan old standards of honor and morality as did their fathers. They love their country and would take a large interest in public affairs if the demagogue politicians and "no per cent Americans" who surround them would let them. But these latter are walking on their necks—keeping them in debt-slavery and ignorance for their own selfish interests,—and those who could help them forget them except in the time of war or calamity.

Negro rural people do not have enough of anything they want and should have. Their poverty makes them ignorant, unhealthy, irresponsible citizens,—burdens to society. It is little wonder that so many flock to northern industrial centers,—to any place that offers them a chance to live as all Americans want to live. Like all Americans they want luxury, leisure and learning and they are trying to get these They are going to keep on trying Nothing can stop them. If they cannot get these in the South, where they want to live, then they will continue to leave the South.

It is a real fact that many southern agricultural counties are ruled by selfish oligarchies that want to keep Negro farmers and farm laborers in ignorance and poverty. These control the land and the law. They force their peons to work for bread and meat and, no matter what the price of farm products, always manage in some way to keep them in debt. If they flee or refuse to work under such tyrannical conditions, they take their livestock and household goods and leave them nothing to subsist upon. They trump up false charges against the most outspoken individuals and put these to work on their chain-gangs. There are a few honest and progressive leaders in such counties but they are too few. They can do nothing. The colored citizens can do nothing for themselves because they have little money and no votes. They are in a worse state of slavery than they were freed from by Lincoln and Grant.

Their only hope at the present time is to get out of such counties and stay out. Some are being helped to get out and there are thousands who need this help. They are being placed on other plantations in communities where they are given a square deal and an opportunity to purchase farms of their own. As they are freed from poverty and ignorance and persecution they become good citizens.

Millions of dollars have been spent for Negro education. The rural Negro must now be given a chance to buy a home and farm and live as an educated, intelligent American desires to live. Those who want to keep him in debt-slavery and ignorance are traitors to their country and it is the duty of all Americans, white and colored, to drive these traitors from power.

THE CHILDREN ARE SUFFERING

Much interest has been manifested recently in the unhappy lot of children in various parts of the world. But economic conditions which prevail so generally at this time are causing children to suffer and this fact has touched the hearts of all who wish to alleviate human misery. Naturally, the first thought of such always has been for the young among the miserable. They are helpless and their present conditions will seriously effect their future and the future of the country of which they are citizens.

The chief interest of Americans should be in American children, colored and white. Thousands of white and colored children in the "Black Belt" are suffering at the present time,—and nearly all for educational and cultural advantages their rich country can and should give them It is a disgrace and a shame,—almost a crime,—that schools in many sections had to close their doors on account of lack of money to pay teachers and purchase supplies. It is a larger crime that scores of farmers' children must sleep in churches, tents, on the bare ground and some along the public highways because their parents have been dispossessed of their homes and personal property by unscrupulous landlords, bankers, merchants and managers of plantations owned by absent landlords.

The United States is supposed to be a civilized nation. Civilized people protect their young first. It might be well for those responsible—and who are responsible except our brilliant leaders, statesmen and politicians?—it might be well for them to take a few lessons in humaneness and practical Christianity from the black savage tribes of Africa and the South Seas.

Since an ex-slave pension bill has been introduced in Congress we are informed that some slick rascals are traveling over the Southern and border states charging ex-slaves money to make out their applications. This bill has not been passed and when it is passed, if ever, those entitled to the pension can file for it without having to pay out a penny to anyone. Beware of these fakes and rascals. They are thicker now during the depression than ever before. Don't give anyone something for nothing.

We would like to hear from those Units that are cultivating an acre this year for the benefit of the community church or Unit. This is a worthy effort. We hope all so engaged will be successful.

Let's keep our heads up and think about the better times that are coming. No one loves a whiner. "The darkest hour is just before the dawn."

Black Hawk, Miss.,
June, 1932.

The Modern Farmer,
Nashville, Tenn.
Dear Editor:

Will you please allow me a short space in your happy circle.

As I have been an interested reader of the Modren Farmer for two years. I thought to make my first attempt to help in making up the paper, providing if the waste basket doesn't gobble this up.

I think that the Moder Farmer is such a wonderful paper and every colored family, especially farmers, should be subscribers.

I live away out in the piny hills of Mississippi on a farm of about 300 acres and think that there is much pleasure in farm life.

We raise corn, peas, peanuts, sweet potatoes and lots of other truck farming. We also raise lots of chickens and geese. We have more than 200 head of chickens; we have different kinds, the Red Rhode Island, Brown Leghorns, White Wynedots and Black Jersey Giant. We sell lots of chickens and eggs each year.

I think that more of the youngsters who are interested in farm life should publish letters throughout the different states in this wonderful paper on what they are doing on the farm. I think that we are blessed to have the opportunity to publish what we are doing.

I am also a public school teacher of about three years of teaching experience, and naturally I keep quite busy, but I am a lover of work. My hobbies are reading, music and I do most any kind of needle work.

I guess I will have to make my letter short as this is my first letter.

Now, Dear Editor, please print this and I won't come again in a long, long time.

Hoping every one a lovely summer vacation.

Clementine (Tiny) Fluker.

Interesting News & Notes

On April 1, 1930, there were 1,207 colored farmers in the three Middle Atlantic States, 460 in New York, 384 in New Jersey and 363 Pennsylvania. These farmers owned 79,501 acres and the value of their land and buildings was $6,915,647. There are many prosperous colored farmers in these three states.

The government will distribute lists showing the names of all seed loan borrowers by July or August. These lists will be available to buyers of farm produce. The government has a lien on all borrowers' crops, and, as was the case last year, "The Government comes first," and must be paid first.

The total number of horses and colts on Georgia farms is 37,988 and there are 353,633 mules and mule colts. Both horses and mules have decreased considerably during the past ten years.

Farm women in increasing numbers are going into city markets and selling surplus farm products to housewives. Illinois, Tennessee and Alabama farm women are reported as being very active. Wives of colored farmers of North Carolina and Ohio seem to be the most active group along this line.

The acreage in early crop watermelons this season is estimated to be three thousand acres less than last season. The acreage of the second early crop is about the same as last year and the late crop acreage shows a silght increase.

A solid carload of raspberry plants has been unloaded and set out near Amory, Miss. This is the first car ever unloaded in the state. The plants will bear fruit next year. Raspberries sell high on northern markets, the earilest bringing around 70 cents per pint.

The colored farmer who is fortunate enough to have a good peach crop this year will be in luck. This year's crop is estimated at about thirty per cent of what it was last year. Prices are apt to rule very high.

Billions of locusts, moving at the rate of 100 miles a day, are laying waste great sections of South and West Africa.

More than 5000 acres of land in the city limits of Chicago have been made available for gardens for the unemployed.

The Farm Board has asked Congress for $100,000,000 more to be used to finance the Board's surplus wheat and cotton to European buyers. Many business organizations are attacking this proposal of the Board, calling it another raid on the U. S. treasury.

Five cows, 38 hogs and 40 goats were barbecued recently for the unemployed of Plant City, Florida. It is said to be the largest barbecue ever held in the South.

"Rural Life Sunday" which is similar to "Farmers' Sunday," originated by the National Federation of Colored Farmers, was observed by the Episcopal churches of America, May 19. On that day special prayers and services were conducted for blessings on the fruits of the soil.

Hereafter no General Conference of the M. E. Church white, will ever convene in a Jim Crow city. A resolution passed by the General Conference recently in Atlantic City states that there will be no meeting in cities where there is racial discrimination in hotels, restaurants, and dining rooms and that hotel bellboys and other employes must show the same courtesy to colored as to white delegates.

Old Doc Dobbin, a New Jersey horse that has supplied diptheria anti-toxin for inocculation of more than 41,000 children, is dead. He was owned by a chemical laboratory.

An Arkansas mule which was bitten by a mad dog five years ago, recently developed symptoms of rabies and bit two farmers. The county health unit has ordered serums administered to the victims.

Earl S. Smith, president of the Illinois Agricultural Association, is authority for the statement that forty per cent of the normal buying power of the country is dependent on the farmer and that the wheels of the factories will not move nor will the unemployed be put to work again until the buying power of the farmer is restored.

C. C. Richardson, state president of the Mississippi Units of the N. F. C. F., was a delegate to the Republican state convention. Mr. Richardson lives on his 200 acre farm near Lexington, Miss.

Most all of the 40,000 farms sold in Mississippi last month for taxes were owned by white farmers.

In 33 South Carolina counties colored farmers outnumber white farmers. In eight of these counties colored famers outnumber white farmers three to one. There are about 78,000 colored farm owners in the state.

German scientists have discovered a process which enables them to manufacture sugar from sawdust. It is expected that this discovery will have strong bearing on the future power of German industries. It is estimated that 30 million tons of wood and sawdust are wasted in the nation annually.

GREAT MESSAGE FROM PRES.

(Continued from Page 1)

first time in their career as farmers our members in South Carolina bought last month, groceries and farm supplies co-operatively, received better quality and saved 33 cents on the dollar. This saving will enable them to cut the cost of producing their crops this season.

Our members in other states have found they have been able to accomplish many things thru the federation.

The voice of organized agriculture among Negroes will grow stronger and not weaker, and the results we have already obtained will cement interest instead of breaking it down; for the reason that our race group farmers are not only suffering from depression, but oppression as well.

Patience is the power necessary for us to survive and win. Let us use it.

Our idea is to have every Colored farmer a member of the National Federation of Colored Farmers. But at the same time we are not over-urging non-members who hesitate to come with us for a farmer convinced against his will to join, will not make a good member.

THE DEGRADATION OF THE FARM BOARD

A powerful faction in the Farmers' Union Central Cooperative, Inc., of Kankakee favors saying a none too fond farewell to the farm board. That is encouraging. It shows that the farmers are alive to the injury that has been done them. It indicates that the farmers are no longer under the illusion that the board is helping them meet their problems.

The stabilization activities which the farm board was authorized to undertake by congress had small chances of success from the start. Experience the world over in attempts to raise agricultural prices by holding products off the market showed that the odds are a hundred to one against. The experiment failed disastrously when it was tried in Greece with the currant crop, in Yucatan with sisal, in Brazil with coffee, in the Malay states with rubber, in Japan with silk. Hundreds of millions of dollars were lost in these and other similar ventures. Some of them succeeded for a time, but in the measure that they succeeded in raising prices temporarily they increased production in the country which attempted the experiment. That was bad enough, but the final and crushing blow which all these experiments encountered was the creation of new competition attracted by high prices in countries completely outside the control of the government which undertook to finance the crop surpluses taken off the market.

What hope there was in the farm board lay in its ability to organize the farmers for reduced production. That effort failed and accordingly the same economic laws which operated in the coffee, the rubber and similar ventures were certain to operate in wheat and cotton as well. Even so, there was at least a color of decency, if not of economic soundness, about the operations of the farm board in its first days. Mr. Legge was and is an able man and he did the best he could in the face of an impossible task.

Today the farm board and its subsidiaries have degenerated to the point where they are principally useful in providing jobs and fancy salaries.

There is, for example, the Rev. Mr. Huff, late of Oronoque, Kans. Five years ago he was a village preacher, though even then he had already tasted the sweets of the federal pay roll as village postmaster. Today he is at the head of a 20 million dollar grain corporation financed by the tax-payers and his salary is $1,250 a month.

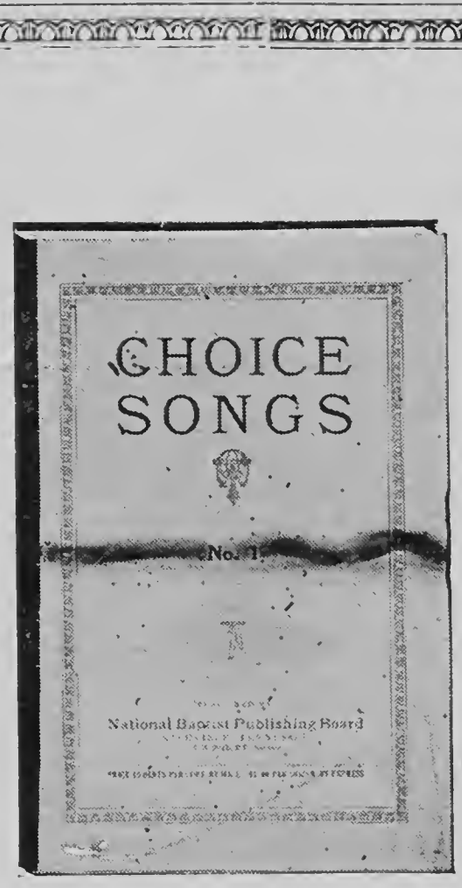
It is not difficult to sympathize with Mr. Huff. Even if he had an adequate training in grain marketing and finance, the job he holds would have been too big for him. It is too big for any man. Even a good juggler cannot balance the Washington monument on his nose. The sooner congress realizes the fact and orders a liquidation of the whole costly experiment, the better for all. Farmers, taxpayers, and consumers are all the victims of the present effort to achieve the impossible. Meanwhile the existence of such institutions as the farm board is a drain on the treasury and a constantly disturbing factor in the commodity markets.

(From Chicago Tribune)

Dr. John Hope Honored By Bates College With LL. D. Degree

Lewiston, Me.—(CNS)—Dr. John Hope, president of Atlanta University, Atlanta, Georgia, was awarded the honorary degree of Doctor of Laws from Bates College, Lewiston, Maine, at the commencement exercises of that institution held June 13.

This is the third honorary degree to be conferred upon Dr. Hope. He has been similarly-honored by Howard University, Washington, D. C., in 1920; Bucknell University, Lewisburg, Pennsylvania, 1923; and in 1919 he was elected an honorary member of Phi Beta Kappa Honorary Society at Brown University, from which institution he received the degree of Bachelor Arts in 1894 and Master of Arts in 1907.



Choice Songs 15c each; $1.80 per dozen.

YES, IT'S THE TRUTH

(Continued from Page 1)

Note the prices sent out to our members and compare them with the prices of the merchant who sold to the member in Miss. Can you wonder why so many of our members are refusing to patronize "home merchants?" When these latter become wreckers and robbers of Negro families and starvers of Negro babies do you blame officials of the N. F. C. F. for advising members to trade away from their communities. Yet only recently, some of these noble, prominent "home merchants" in one community enlisted the aid of the "white" county agent, held a meeting with the Negro farmers and informed them that they were doing wrong in sending their money out of the county. In reporting this meeting to us a member writes: "I asked one of the merchants how much peas were worth and he told me $2 90 per bushel. I told him I had bought mine for $1.68."

And we imagine the good sensible brother will keep on buying co-operatively through his Unit until the home merchants discover that the day of robbing and cheating Negro farmers is about over.

The N. F. C. F. wants its members to spend their money at home and aid in building up their communities. But, in plain English, we'll be doggoned if we will advise them to buy flour from a home merchant for $1.25 when we know they can buy a better grade of flour away from home, the same amount for 40 cents. It's the home merchants who need to be converted—not the Negro farmers.

L. A. HAWKINS OF INTERNATIONAL HARVESTER

(Continued from page 1)

garden, or not having one even after they have planted it. Cultivation is necessary to keep down weeds, help maintain the soil moisture and give the plants good soil conditions for growing. When your garden soil gets beaten down and begins to crack, cultivate it at once.

Cultivation must be timely and thorough for best results. Between the rows this can be done with a machine, but some hand work around the hills and plants is necessary.

Before setting out the plants that have grown in the hot-bed, the soil should be made into the best possible condition for plant growth. This best can be accomplished by keeping the ground cultivated from early spring until time for use. If this is done the weeds should be well under control in time to set out plants of tomatoes, cabbage, pepper, etc.

The work of setting out plants that have been grown in the hot-bed should be carefully done. If convenient, it is better to put out plants on a cloudy day or in the later afternoon. Before they are touched in the hot-bed, the soil should be thoroughly wet down so it will stick to the roots better while being moved. As much soil as can be kept around the roots is advisable, as it lessens the shock of transplanting and helps to keep the plant growing. In taking up the plants be careful not to break the roots or stems. Use a piece of shingle or a trowel to loosen the plants in the soil, then slide the tool in under the roots and lift them out.

Strong shorter plants are preferable to tall slender ones for transplanting, as there is so much less danger of their wilting and kinking over before the roots become established in their new location.

Stirring the soil as soon as the surface is dry enough after a rain is very helpful in maintaining the moisture in the soil. With some of the vegetables a straw mulch can be used very effectively to take the place of cultivation in conserving moisture and holding down weeds. Growing potatoes under a straw mulch is a rather common practice in many places. Tomatoes can be mulched with straw after they have gotten a good start and are growing well. Straw keeps the fruit off the ground, prevents it from getting dirty, and in many cases may check rot to some extent. Also, in many places, beans, early cabbage, peas, melons, sweet potatoes, and other crops will all thrive well in mulch put on after the growth has got a good start.

Frequent cultivation to kill weeds and conserve moisture will do much good to make the garden produce good crops of quality vegetables.

The teacher was examining the class in physiology.

"Mary, you tell us," she asked.

"What is the function of the stomach?"

"The function of the stomach," the little girl answered, "is to hold up the petticoat."—The Haight Accelerator.

"How are you getting on keeping bees?"

"Very well. We have not had much honey, but the bees have stung my mother-in-law several times."—Passing Show.

THE RURAL PROBLEM

(Continued from page 1).

once more about rural problems. Would it not be better if more people could be content to remain in the open country tending their own vine and fig tree? May it not be that France shows less distress because more of the land is divided into small holdings than in most countries? People have always had a hunger for land. Is it not natural that any country, or any part of a country, should be in a healthier condition when as many as possible of the tillers of the soil hold in their own right the soil they till? Is not the security of owning homes the central rural problem?

Security in holding land is the basis of home making, and of good, stable citizenship. Tenancy is not promotive of home making. It is a poor make-shift. The best advice that can be given for the betterment of rural conditions is to urge people to get land without a landlord. There are many who would do this without urging, if they could. Some have no money to start with. Others who might buy find difficulty in buying because owners of even unused land are not willing to sell.

It would seem evident that the State or county should not favor the holding of land out of use, but they do. They do so by laying an absurdly low assessments on such land. It may be true that the land is yielding no present revenue, but this is not the fault of the State or county, and the owner should not be helping in holding the land out of use. If such land were assessed at even a quarter of its value there would be more chance of buying it. Even at this rate owners of unused land would be more willing to sell. Any way to make it easier to get land would be a good move in behalf of the salvation, and against the desertion, of the open country. The method suggested would not increase the taxing of farmers, but of people who are holding land that is farmed.

We beat the air with vain words when we grow eloquent over other ways and means of keeping people in the country and having them love the country. Good schools, good roads and other improvements are all right, and we do well to push forward in such ways. But, whatever we may do, the basic means for rural advancement and for assuring rural progress is more division of the land and more homes held by people in their own right.

(Reprinted with some changes from the Louisiana Teachers' May, 1931).

COLORED TEXAS FARMERS

(Continued From Page 1)

your work. I own 2 farms, one with 157 acres that has two houses on it and another of 615 acres, a rice farm, with one house on it; two rent houses in Beaumont; 4 tractors, one thrasher, two 8-foot binders; tools of all kinds for high land and rice planting. I have a fine herd of cattle and this spring I am expecting 30 calves. I raise enough hogs for my own consumption and sell ten to twelve each year. Made twenty-seven bales of cotton on some high land last year, 1500 bushels of corn, sweet potatoes and vegetables of all kinds. I raised 10,695 sacks of rice on 575 acres of land. I appreciate very much the assistance of my wife, Anna, who grows a fine garden, raises chickens, ducks, geese and turkeys and last year put up more than 200 jars and cans of fruit and vegetables. When I first came to Beaumont we drove fourteen miles to town in a wagon and sometimes in a buggy. I bought a car when I got able to pay cash for it and have some money aside.

I wish to express my thanks to the white people for their cooperation and to Mr. Roligan, county agent, who made me see the necessity of buying some land, pure seed and the best breed of animals, poultry and turkeys. Every one wants the Negro man to pull his part of the load and if he fails to do this he is just in the way.

WELCOME HOME

When my work on earth is finished
And my toiling here has ceased,
When I pass beyond the river
To a home of love and peace,
May I hear the voice of Jesus
Saying, "Weary child come home;
Welcome in, thou faithful servant
Welcome in, oh, blessed one."

When my life on earth is ended
And my friends no more I see,
When I cross through death's dark valley
To a home prepared for me;
Oh, to hear the voice of Jesus
Saying as I nearer come,
"Welcome home beloved of Father
Welcome home, oh blessed one."

Many loved ones gone before me
Now are happy over there;
Where they know no sin nor sorrow
And their joy is beyond compare;
Some day I will go and meet them
Over on the other shore,
And will hear the voice of Jesus
"Welcome home forever more."

ATTENTION COLORED FARMERS

The National Federation of Colored Farmers is receiving hundreds of letters from Colored farmers requesting all kinds of aid and information. We are willing to do everything we can for all the Colored farmers of America. It costs money, however, to maintain offices and our expenses are becoming so heavy that we are compelled to discontinue supplying information to those who request it who are not members of the Federation. If you have faith enough in the organization to believe that it can aid you then you should be willing to join it and help support it Isn't that so?

Several County Units have organized and elected officers but have not sent in their membership dues. These units are eligible to membership in the Federation until dues are paid. Be helpful. Co-operate. Pay up. "All for each and each for all"

FINANCE AND INDUSTRY LOOK TO THE FARM

(Moline Dispatch)

In its monthly review of economic conditions, the National City bank of New York says

"According to a department of agriculture calculation, the average price of all farm products in the United States on Jan. 15, 1932, was only 63 per cent of the average over the last five pre-war years, while a similar calculation of the prices of goods which farmers are accustomed to buy was 121 per cent. On this basis the farmers as a group are able to make only 51 per cent of the purchases which they were accustomed to make in the pre-war years.

"That single statement accounts for a large part of the unemployment in other industries. What has happened to the farmers has happened also to the people who live in small towns immediately dependent upon the farms, and to these have gradually been added the numbers of unemployed in all the industries, as the decrease in buying power has spread.

"The farmer is digging into survive, and he has some advantage over other people in digging in, but through no fault of his own he can not give much support to other industries. He is delivering about the same quantities of his products as formerly, but receiving only about one-half as much in exchange.

"Nominally the other industries have an advantage, their products are rated relatively higher than before the war, but they are not more prosperous.

"Never has there heen a clearer demonstraton that the basis of prosperity is equitable exchange relations. It is hardly necessary to say that the existing situation is not what it is by design, but the unforseen result of the violent readjustment forced upon industry by the war."

Economic reviews issued by the bank have been consistent in assertions that prosperity as it normally is known exists when goods flow profitable through all channels of trade, and that such maladjustments as followed the war, leaving raw products deflated, is not prosperity and can not last.

On the other hand such a disclosure of facts concerning the farmer, brief though it is, rarely has come from any source on the Atlantic seaboard. Throughout all the years of depressed agriculture, about the only acknowledgment of it on the seaboard was in published reports that "conditions were improving," although they were not.

There are evidences now that finance and industry are beginning to look with hope to agriculture. They hope that somehow the producer of raw materials will be able to start the wheels. Yet, this report says that farm prices stand at 63 per cent, what the farmer buys at 121 per cent, and that he can purchase only 51 per cent of what he could have purchased under pre-war conditions with the proceeds of his sales.

Bloomington Pantagraph: A California man sold a strip of land an inch wide for $55. From what we know of California real estate men, it's a wonder he didn't try to subdivide it.

Alumni Loses House at Howard University

Washington — (CNS) — Alumni House, granted to the General Alumni Association by the Board of Trustees in 1929 when the late Dean George William Cook was elected Alumni secretary, is being remodeled and made ready for occupancy by a new member of the faculty, Rev. Howard Thurman, who will join the faculty of the Theological School in the fall.

Alumni House, the mecca of returning Alumni of the university was formerly the residence of the retired professor of history, William V. Tunnell. Linwood Koger, alumni secretary succeeding Dean Cook, will be given quarters in Miner Hall.

TALKS TO COLORED FARMERS

By Leon R. Harris, Secretary, National Federation of Colored Farmers

Someone is always preaching diversified farming and I am certain our farmers are tired of the text and sermon, but that practice is about the only cure-all we can depend upon for farming ills so it is necessary to keep it in mind.

By-products represent a large per cent of the profits of many corporations. Take the packing houses for instance. Originally devoted to the selling of meat, they now manufacture fertilizer of many grades, all kinds of chemical and medicinal products, glue and a dozen and one other things. It has been said that nothing about a hog is wasted except his squeal and that, even, can be recorded on a phonograph record. Our farmers should keep in step with modern business. You, also, should produce more than one cash crop.

A few years ago the farmers of Minnesota abandoned the all-wheat type of farming and went in for diversified farming. Since 1921 they have increased the revenue of the farms of that state nearly two thousand dollars per farm. If such a showing as this can be made in a state that has only a short growing season, surely southern farmers can do much better.

Successful colored farmers in many sections of the country say that they got nowhere until they abandoned the old one-crop system. Read the story of Leo D. Fontenot in this issue of this paper. Had he depended solely on rice or cotton do you think he would be in the prosperous condition he is in? Other colored farmers have made small fortunes out of livestock, chickens, turkeys, bees, flowers and vegetables. One I know of sells thousands of dollars worth of pansy plants every year. Another, a woman' sells maple sugar and syrup to wealthy families in New York City. She ships it from her Vermont farm. The best mule raiser in Missouri is a colored farmer. He takes prizes at stock shows and recently sold a car-load of young mules in Chicago, all raised on his own farm.

Opportunities are at your door, Brother Farmer, if you will think and work a little harder and grieve and grumble less. Raising about all the food your family needs on your own farm is just a start. You must get to the place where you have something to sell every month in the year. If you belong to the N. F. C. F. you know that you have a special market that is growing rapidly and you must take advantage of the opportunity and produce what that market calls for. I hope you will keep this in mind this year and with your fellow-members practice co-operative production and get all the profit a modern farmer should get. If you are not in the organization you are doing yourself an injustice for the unorganized farmer is a "has-been" and cannot hope for much success in the future.

WHAT'S WRONG!

Too much movie and not enough mother.

Too many open cutouts and too few woodsheds,

Too much juvenile showoff and not enough parents to showdown,

Too much stacomb and not enough stay-home,

Too many swagger sticks and too few apron strings,

Too many shingle-bobs and too few shingles,

Too many careening cars and too fed serious cares,

Too many powder rags and too few dishrags,

Too many beauty shows and too little show for duty,

Too many pool-shooters, and too few fool-killers.

The above piece, taken from the Lafayette Courier, was read at the special meeting of parents of the class of the high school last week by Mrs. J. S. Drake to conclude her talk, and those who heard it felt that there is a message for all parents in it.

SAVE Something!

NAT'L FARM FEDERATION

(Continued from page 1)

The Sec. of The Modern Farmer Miss S. B. Wilson, is at the same time treasurer of the National Federation. There were several members of the fairer sex expected here for the special meeting and the executive session. The president of The Modern Farmer publication, Henry Allen Boyd, came up to represent that publication and to work with the proposed plan of printing at least a half million papers each month. It was not known just how many of the local units scattered throughout the Union would support the plan, but President Davis feels that if the farmers could be reached through this publication it would not be long before they would all be in a position to know how to secure federal aid in building homes, purchasing live stock, buying seeds, getting advance in cash for their market produce, and using many of the other features of government aid through the secretary of agriculture and his department. He has been out of the city for several weeks, but came back from southern Illinois to be here in the conference and doubleheader between this publication and his organization.

ALFALFA BILL MURRAY INSULTS AUDIENCE AT LANGSTON UNIVERSITY

Coylo, Okla —(CNS) —Alfalfa Bill Murray, Governor of Oklahoma and avowed candidate for the Democratic presidential nomination in a recent speech at Langston University made constant reference to "you niggers."

He said "Robert Burns, Lieutenant Governor had just as much right to call out the militia while I was out of the State, as any of of you niggers out there in front of me." Murray was introduced to his Negro audience by M. E. Fruin, banker and Murray appointee to the Langston board of regents.

Negroes present felt that they had never heard a more rabid or insulting speech in which use of the word "nigger" was so frequent. The Governor took a verbal slap at Zack Hubert, former president of the university, when he said that "nigger Hubert" went away leaving a whole lot of debts at Langston. Dr. I. W. Young, with practically all his faculty and students was present to hear the Governor's tirade.

Another insult typical of Murray was passed when he said that he liked J. H. Lilley, superintendant of the State training school, because "Lilley's boys had lips for singing and mouths fit for cracking hickory nuts."

Murray was accorded recently by the Afro-American, Baltimore weekly, of making derogatory remarks about Negroes to the effect that they were fit only for menial tasks in a campaign speech some years ago. He defended himself by sending a book of his published addresses to the Afro-American's editor, in which the alleged insulting speech was not included.

New Farm Bill

(Continued from Page 1)

The N. F. C. F. has been advocating a bill of this character for the past three years, knowing that such an act would be of particular benefit to colored farmers. We have assured Congressman Black that we are ready to support him to the fullest extent. We hope the bill will get through.

"JOIN THE N. F. C. F.," SAYS BRO. PAGE

Secretary, Isola (Miss.) Unit Gives Good Advice

We give some excerpts from an address recently delivered to the farmers of his community by Secretary Ebbie Page, of the Isola Unit, N. F. C. F., of Scott, Miss. Members of this Unit have discovered that organization pays well in dollars and cents as well as in friendship and a fine community spirit.

"We belong to a large and steadily growing race which will eventually know the truth and make it prevail. We, who have enlisted under the banner of the National Federation of Colored Farmers, should rejoice in the privileges that are ours. We should always show our gratitude and prove ourselves worthy followers of those who have founded this great organization. There is no way I know of, that we can serve our country better than by getting into the N. F. C. F. The N. F. C. F. is rendering patriotic service for the colored farmers. It is conserving happiness for them. The good it is doing cannot be bettered by any other organization.

To those who are indifferent and know not which way to go, I would say that men are needed on the farms today,—they can render their country good service as farmers, so why not enlist in the N. F. C. F. and render the best service possible? We get advice and assistance through bulletins issued by our organization that keep us in the right road and help us toward prosperity and happiness. Hon. J. P. Davis, president of our organization, has looked on us with an eye of pity and extended a welcome to all. It is a privilege for us to take advantage of this chance to prepare ourselves for a better conception of what brotherhood among men really is.

I hope all of us will be filled with hope and inspiration, that, as our country rises out of this great catastrophe, our organization may prosper,—that our membership may be loyal and as worthy of reward as any other group of Americans."

HUMILITY AND PATIENCE

Humility and patience in adversity
more please me, my son,
Than much comfort and devotion
in prosperity.
And why should a little thing spoken against thee make thee sad?
Had it been greater, thou shouldest not have been disturbed.
But now let it pass; 'tis nothing
strange; it hath happened
before;
And if thou live longer, it will
happen again.
Thou art manly enough while there
is nought to oppose thee:
Thou canst give good counsel, and
hast encouraged others with
words:
But when suddenly the trouble cometh to thine own door,
Thou lackest to thyself both in
courage and counsel .. ..
Put the matter as well as thou canst
out of thy mind;
And if the tribulation hath touched thee, let it not cast thee
down nor entangle thee.
Bear it patiently, if gladly canst
not:
Or even if thou resent this saying
and feel indignation, yet govern thyself;
Nor suffer an unchastened word to
escape thee, whereby the little ones may stumble....
Be more tranquil in mind, and brace
thyself to better fortitude;
All is not lost, even though again
and again thou feel thyself
broken or well-nigh bent.

—Thomas A. Kempis.

THE MODERN FARMER

Vol. V. Nashville, Tenn., and Chicago, Illinois, July 15, 1932. No. 3.

A. And I COLLEGE-SCHOOL FOR FARMERS CELEBRATES ANNUAL EVENT

Mammoth Plant Organized By An Ex-Farmer Compliments Employees

OUTING HELD AT FAMOUS GREENWOOD PARK, NASHVILLE

Memory of the Late R. H. Boyd, Who was Born a Slave and was a Farmer

Picnic day was announced in the chapel of the National Baptist Publishing Board's Plant this week. It will be observed from nine o'clock Tuesday morning until seven-thirty Tuesday night. Every one of the large list of employees of the institution, established by the late Dr. R. H. Boyd, is making extensive preparations for the day, for the outing, for the occasion, for the picnic. Plans have already been completed for fun and entertainment. Music has been secured, street cars ordered, ice cream and lemonade provided for and the secretary has announced that the Plant will be closed the entire day.

It will be the thirtieth annual outing of this, one of the best known business and religious institutions in the United States. The National Baptist Giants, the base ball team under the management of "Legs Martin", will play ball during the afternoon. The leading club the nearest to them will be engaged in the combat. Legs Martin declares that he is going to keep his record clean, that every member of the team will sharpen their battling axe and that the batters will strike out the heaviest hitters that can be produced on that day.

The National Baptist Publishing Board's employees will be joined by members of the Publishing Board on this occasion. The families of all are going out. The park was secured through the courtesy of Mrs. Ida Mallory Taylor, who is the manager not only of the park, but Taylor & Company Undertakers. She has promised to throw open all the concessions at the park during the day, so that the roller coaster, the jiggler, the merry-go-round, grandma's kitchen, in fact, everything in Greenwood will be open, just because it is picnic day for the employees of the National Baptist Publishing Board's Plant.

National Association Of Teachers in Colored Schools

Montgomery, Ala., July—Registered Representatives from 22 States met here at the Alabama State Teachers College for the three-day session of the 29.th annual convention of the National Association of Teachers in colored Schools, heard an imposing array of outstanding speakers, on various aspects of the convention topic "The Teacher of the Negro Child," considered initial proposals for a closer relationship between the several National professional organizations and for a more organic relationship between the N. A. T.

ROSCOE SIMMONS' ADDRESS

National Orator Discusses Platforms of Parties

"Register, qualify as a voter, pay your poll tax, read the platforms, understand the position of the Democratic and Republican Parties on questions of the movement'.' These were the principal themes of an address delivered at the Bijou Theatre Sunday afternoon by Col. Roscoe Conkling Simmons of Chicago, who was a delegate-at-large at the Republican National Convention, and who made one of the two nomination speeches for the Hon. Herbert Hoover, the standardbearer of the Republican Party, who is to come up for re-election in November.

Col. Simmons arrived Sunday morning on the Dixie Flyer from Chicago. He was met at the Union Station by a reception committee, and throughout the day and evening he was the guest of the citizens of Nashville. Unusual preparations had been made for the mass meeting scheduled for three o'clock, July 10th. Long before three o'clock every available space on the main floor, the balcony, the boxes and on the stage of this, one of Nashville's largest auditoriums, was taken. Men, women and children from every walk of life were in evidence.

Supporting Col. Simmons were Nashville's leaders in religious, business, civic, educational and professional lines. Not only did the Nashville people turn out, but they came from Franklin, Columbia, Springfield, Gallatin, Murfreesboro, and surrounding towns to hear him in his own and very distinct way, deal with the matters of the moment effecting the citizenship of the nation, and to get his interpretation of the platform of the Republican Party as well as his exposition of the wording of the Democratic Party, in which he showed by the silence so far as to the Democrats are concerned, not only in the present platform but in every one for the past one hundred years, as he put it.

His address was punctured throughout with great applause. He was interrupted from time to time by an outward burst from his audience putting their approval upon some logical, witty or far-reaching statement taken from current literature, from ancient or modern history as it effects the Negro. He paid splendid compliments to outstanding men in the Democratic Party as individuals; he declared emphatically that no member of the Negro Race could, with propriety join into the Democratic Party when they themselves, according to his statement, had gone to the supreme court of the United States to prevent the Negro from voting the Democratic ticket. The speaker de-

(Continued on Page 8)

INTER- RACIAL LEAGUE SESSIONS

Members of Both Races Discussed Law and Order

Since last annual meeting of the League the activities of the Interstate Secretary in Tennessee have included the following:

Law and Order

Presentation of sheriff's medal, October 27th, 1931, to Mrs. J. C. Butler, of Huntingdon, wife of the sheriff of Carroll County, who foiled a mob in its efforts to take a colored prisoner from the county jail. "If you come in here it will be over my dead body" were her words to members of the mob. The following inscription appears on the medal: "In defense of law and civilization." Addresses on this occasion have been printed and mailed to interracial committees. Prof' J. L. Seets, of McKinzie, spoke for the colored people.

A bill was presented to the last Legislature, the purpose of which was to protect faithful officers of the law and their prisoners when threatened with violence. It was an amendment to the Police Bill of Tennessee. It passed first reading in the House and Senate, but failed of further consideration due to the prolonged debate over the finances of the State.

The Scottsboro case which had

CONFERS WITH NEW YORK MINISTERS

HENRY ALLEN BOYD GREETED BY PASTORS, NATIONAL AND STATE OFFICERS IN THE METROPOLIS

New York City (Special)—Representatives from the New York Baptist City Union, the New York Baptist Minister's Conference, the New York Baptist State Association and three officials of the National Baptist Convention of America, greeted Henry Allen Boyd of Nashville, Tenn., upon his arrival in this city last week. These various divisions and groups were represented by their executive officers and a number of their members. A six hour session in a closed door conference was held at the 135th Street Branch of the Colored Young Men's Christian Association. This courtesy was extended to the group and to the distinguished Nashville man by Henry C. Parker, Jr., the religious work secretary connected with the New York Y Organization.

The Rev. Mr. Boyd's coming to the metropolis had to do with com-

REDUCED FARES TO HOUSTON

Inducement Offered To Farmers by Low Rates

Reduced rates for the National Baptist Convention, Houston Session, which convenes September 7 12, have already been authorized by the Southwestern Passenger Association. Henry Allen Boyd, Secretary of the Railroad Commission, made the announcement this week after receiving a letter from Mr. J. E. Hannegan, the chairman of the Southwestern Passenger Association Territory, located at St. Louis, Mo. He has ordered the certificates, and will be ready to mail them out, says, he by August first.

Mr. Hannegan's letter authorizing these rates, and notifying the Railroad Commission Secretary of them, says:

St. Louis, Missouri, June 30, 1932 Rev. Henry Allen Boyd, Secretary National, Baptist R. R. Commission, 523 2nd Ave., N., Nashville, Tenn., Dear Sir:—Referring to your application for reduced fares account occasion referred to above—Round-trip tickets will be sold at FARE AND ONE HALF of the current fares with minimum of $1.00 from territory shown in attached extract from our Convention Circular dated June 29th, 1932 upon presentation to Ticket Agents of identification certificates certifying that holder is a member of your organization or a dependent member of the family of a member.

Tickets may be routed via same lines going and returning or may read via diverse routes, that is, via any authorized route on going trip and any other authorized route on the return trip.

Tickets will be sold only on authorized selling dates shown in extract attached and will bear final return limit of thirty (30) days in addition to date of sale.

Tickets will be validated at Destination by Ticket Agents at Ticket office of the lines over which the tickets read into place of meeting on any date to and including final return limit and when validated will be good for return leaving place of meeting on any date within final return limit, but passengers must reach original starting point prior to midnight of such final limit.

It is desirable to suggest to your members that they call at the railroad station and purchase their tickets at least thirty minutes before departure of train.

Particular attentio is diirected to the fact that the return portions of the tickets sold for this occasion must be presented to the railroad ticket agent to be stamped before boarding the train. It is suggested that announcement of this fact be made DAILY from the platform and also by bulletin notices posted in a conspicuous place at the convention headquarters.

FOUNDER'S DAY OBSERVED THURSDAY, JULY SEVENTH

Commissioner Harned Senator Broadbent and President W. J. Hale

Annual celebration of Founders Day was observed at the A. and I. State College, Nashville, on July 7, at 10 a. m.

In giving the history of the institution from an Act passed for its establishment in 1909, along with three other colleges in the State, Commissioner P. L. Harned declared it had fulfilled the requirements and expectations of the Board thereby demanding the respect and attention that it now receives. With educational acts, the one of 1873 which provides for the equalization of the term in the county and the one of 1925 which provided for a eight months school term in every county of the state, the time has now come when salaries should be monthly paid with no discount from banks and a fair state salary schedule based on the training and equipment of the teacher. In this way there would be no weak counties unloading burdens on the State, believes Commissioner Harned.

On behalf of the State of Tennessee, Senator A. B. Broadbent paid a tribute to the institution and its leader, President W. J. Hale, who for twenty years has exemplified the type of leadership necessary in the building of citizenship. "We need in this State," said Senator Broadbent, "people of courage and leadership who will serve as leaders to restore the confidence of the people during this period of financial depression."

Superintendent W. C. Dodson, on behalf of Davidson County, expressed pride in the institution because of the progress made in the 20 years of its establishment. Such an institution opens the way to preparedness and does not shut its doors on any one earnestly seeking it. Supt. Dodson expressed the desire to see every man who wanted to work to be able to find something to do, then sincerely work on the job when it is secured.

Dr. Bruce R. Payne, president of

Tenn. A. and I. State College, Nashville

William J. Hale, Jr., addressed the division of Rural Education of the National Association of Teachers in Colored Schools at its 29th Annual meeting convening in Montgomery, Alabama, July 5-7, on the subject "Present Trends in Rural Education," by the invitation of President H. C. Trenholm of the Alabama State Teachers' College.

Mr. Hale has just recently returned from Columbia University where he just received his M. A. Degree at the age of 17. Mr. Hale received his elementary, secondary and College training at the A. and I. State College of which his father, W. J. Hale, Sr, is president.

NEGRO FAMILY STATISTICS FOR TENNESSEE

Washington (CNS) — The Bureau of the Census has just announced that there are 120,402 Negro families in the State of Tennessee of which 33,655 are owner families and 82,515 tenant families. The number of Negro families represents 20 per cent of the total number of families of the State, while the Negro population, 477,646 represents but 18.3 per cent of the total population. Approximately 28 per cent of the Negro families of the State live in owned homes.

The Negro families occupied 25,335 owned non-farm homes of which the medium value was$1,289 as against a medium value of $3,491 for native white owned non-farm homes. A total of 55,283 non-farm homes were rented by Negro families. The medium rental per month for these was given as $10.28 and that for native whites as $16.36. Of the 25,335 owned non-farm homes, 11,774 were valued from $1,000 to $2,999; 2,518 valued at $3,000 to $4,999; and 1,376 ranged in value from $5,000 to $20,000 and over.

The medium size of the Negro family was 2.98 while the medium size of the native white family was 3.83. Of the Negro families in Tennessee, 111,906 were described as having a home-maker (the woman member of the family having the care of the home and family) of which 43,116 were gainfully employed. Of the gainfully employed 13,338 were employed at home; 4,834 in agricultural pursuits and 8,504 in other occupations. With 29,707 stated as employed away from home, 1,527 were shown as professional workers; 181 office workers; 3,346 industrial workers; 167 sales women; and 23,226 servants, waitresses, etc.

Negro families with man head number 95,349. These male heads included 8,444 under 25 years of age; 22,024, 25 to 34 years; 23,158, 35 to 44 years; 21,771, 45 to 54 years; 12,710, 55 to 64 years; 5,217, 65 to 74 years; and 1,819, 75 years and over.

In Chattanooga, the Negro families, 8,848, represented 30.3 per cent of the total number of families in the city and lived in 1,403 owned non-farm homes and 7,259 rented non-farm homes, with 377 ranging in value from $1,000 to $1,999; 731 valued at $2,000 to $4,999; and 160 valued at $5,000 to $20,000 and over.

In Knoxville, the Negro families, 4,161 represented 17.1 per cent of the total number of families in 1,285 owned non-farm homes and 2,726 rented non-farm homes, with 412 ranging in value from $1,000 to $1,999; 582 valued at $2,000 to $4,999; and 67 valued at $5,000 to $20,000.

In Memphis, the Negro families, 29,597, represented 43.2 per cent of the total number of families in the city and lived in 7,556 owned non-farm homes and 20,527 rented non-farm homes, with 3,210 ranging in value from $1,000 to $1,999; 2,688 valued at $2,000 to $4,999; and 300 valued at $5,000 to $20,000 and over.

In Nashville, the Negro families, 12,177 represented 30.9 per cent of the total number of families in the city and lived in 3,469 owned non-farm homes and 8,453 rented non-farm homes, with 1,442 ranging in value from $1,000 to $1,999; 1,247 valued at $2,000 to $4,999, and 181 valued at $5,000 to $20,000 and over.

YOUNG NEGRO REPUBLICANS CONTRIBUTE $85 TO CAMPAIGN FUND

Washington,—(CNS)—A group of young colored Republicans representing ten States made the first campaign contribution since the selection of Hoover and Curtis as party nominees last Monday when the group made formal presentation of a check for $85 to Everrett Sanders, newly chosen chairman of the Republican National Committee. John P. Davis of Cambridge, Massachusetts, a speaker at the Young Republican conference held here a year ago, was spokesman for the delegation.

The group which made the contribution to the Republican coffers was composed entirely of young men and women from various States, who have shown an interest in Republican politics. Present at the presentation were Mrs. Ellis A. Yost, chairman of the Women's Division of the Republican National Committee, Mr. Robert H Lucas, executive director, and Mr. Harry Hayden, Secretary of the Young Republican Conference.

The spokesman of the group pledged to Mr. Sanders the support of young Negro Republicans in working for the party candidates He stated in part: "As young Republican voters, we are committed to the proposition that we ought to support our party with our contributions as well as our time and energy; it is only in this way that we believe the Negro as a particular group many achieve permanent self-respect in the field of politics."

Mr. Sanders, in accepting the contribution, expressed his gratification at the timeliness with which young Negro voters had offered their aid to the Republicans and assured them of his kindly interest in their behalf. A group picture with Mr. Sanders and other Republican leaders was taken following the presentation.

In the group were: Mrs. Sara Pelham Speaks of New York, vice-chairman of the First Voters group of the Colored Division in the 1928 campaign, Lucas Howard, son of the National Committeeman from Mississippi, Henry Lincoln Johnson, Jr., son of the former National Committeeman from Georgia, Hyman Y. Chase, president of the National Negro College League Republican Club, Alice Bell of the District of Columbia, G. E. Mills, W. C. Curtis, Wallace Wormley, Dutton Ferguson and others. The States represented by contributors to the donation were: Illinois,, New York, West Virginia, Massachusetts, Virginia, District of Calumbia, Mississippi, New Jersey Indiana and South Carolina.

Following the presentation, it was announced by the delegation that immediate organization of young Negro Republican units would be had in every large city where there was a sizeable Negro population.

IN THE MIDST

Myra Lou Field, Lebanon.

There are those who would live by
the side of the road
And be friendly to passing men,
With never a thought of the burdensome load
They are carrying along with them.
Not a thought of a lift, just friendly smile
And a nod as they trudge along.

Let's get away from the side of the road,
And walk along with the throng;
With the crowds who are tired and need a lift.
Let's share their load with a song.
For the hearts that are brave, and the hands that are hard
From the laborious tasks every day
Need a friend who will walk along by their side,
And not just nod a good day.

The side of the road is a very fine place
For a shelter and a place to rest,
When the load is heavy and help is scarce
And your strength is not at its best;
But out in the middle and along by their side
Is the place to help carry the load,
Of the burdened soul and the weak weary heart,
And not at the side of the road.

If you walk as a friend you will find a friend
Wherever you choose to fare;
If you go with mirth to a far, strange land
You will find that mirth is there;
For the strangest part of this queer old world
Is that like will join with like,
And who walks with love for his fellow man
An answering love will strike.

PYTHIANS AND CALANTHES WITH UNIFORM RANK DIVISION READY EOR GRAND LODGE

LARGE DELEGATION EXPECTED—GRAND LODGE OFFICERS PREDICTING SPLENDID SESSION

Mme. Burke of Calanthes, Sir Reynolds of Pythians, and the Head of the Uniform Rank Optimistic

Members of the Uniform Rank Division, K. of P., have been informed and ordered by the Brigadier General of the state to attend the annual encampment of this military department of the Pythian Grand Lodge to be held in Franklin, Tenn. Sir N. N. Reynolds, the Grand Chancellor, and the logical head of all Pythians in the jurisdiction of Tennessee, has concurred in the order and O. K'd the command. Mme. Cora E. Burke the Grand Worthy Counsellor of Calanthe, who has been a strong supporter of this department of Pythianism, acquiesced in the movement, while the Juvenile Department is receiving the same sympathetic encouragement for the coming conclave in the county seat of Williamson County.

While Sir. F. J. Ewing, the Grand Keeper of Records and Seals has not made a definite statement as to the number of certificates he has received from the local subordinate lodges throughout the jurisdiction, as to the size of the delegations, it is known here that the organic members are of sufficient size to constitute a large attendance and to insure a successful gatering of Pythians for 1932 Grand Lodge.

Some weeks ago the Grand Chancellor released his proclamation, ordered it published and sent out to every local lodge in the state. Since that time he has made official visits to the three Grand Divisions and held conferences with the leaders not only in the sevral cities, but with his own cabinet and grand lodge officers.

News comes from Franklin to this city that the populace of that splendid agricultural section, that town made famous by the battle of Franklin during the Civil War, is merely waiting the time in the month when the vanguard of messengers would arrive, when the leaders of Pythians will assemble, when the representative of the Grand Court will enter within her gates and when the military division in platoon formation or in regiment style will march through her streets.

The homes of the city have been made ready, the reception committee is intact, and the arrangement committee practically has completed its work; the only thing left now, says the Grand Chancellor and other leaders, is the arrival of the day when the Grand Lodge proper will open, or putting it in another style, when one of the leaders of Pythians said: "We are merely waiting for Sunday, to have religious services and a spiritual opening for what we consider the greatest Order of fraternal workers in the United States."

CONGRESS ASKED TO ERECT SHRINE TO FREDERICK DOULLASS AT WASHINGTON

Washington — (CNS) — Representative Emanuel Celler of the tenth New York congressional district has recently introduced in the House of Representatives a resolution calling for the erection of a monument to the memory of Frederick Douglass.

In introducing his resolution Celler took a crack at prejudice when he said: "Such a monument would serve to remind the Nation of its responsibility to the colored race, upon whom they foisted the bontage of slavery, and to whom it should lend a helping hand.

Attorney Andrews Succumbs After Winning Legal Battle For Voters

Durham, N. C. — (CNS)—Attorney R. McCants Andrews long a practicing attorney and leader in North Carolina died in Lincoln Hospital July 5 after a short illness.

Mr. Andrews led the recent legal fight of the Voters Leagne against Raleigh registrars who disqualified Negro voters of that city illegally in the recent primary election.

"COST OF LIQUIDATION" EATS UP BALANCE OWED MEMPHIS BANK DEPOSITORS

Memphis, Tenn. —(CNS) —The 28,000 depositors who lost their savings when the Solvent and Fraternal Savings Bank went to the wall with loss of a million dollars several years ago held a meeting last week to discuss the nonpayment of a promised five per cent dividend.

The receiver for the bank has made one five per cent disbursement to depositors but it is claimed now that he will be unable to make another owing to the heavy cost of liquidation.

Those having funds in the bank at the time of its close have formed a Depositors Association with Dr. George R. Jackson a Beal S., druggist as president to push their claims.

Big Struggle Among Sepia Democrats For Party Leadership

Chicago, Ill.—(CNS)—The question as to what group will handle the Negro end of the campaign for the Democratic Party remained undecided this week, as Jim Farley new chairman of the Democratic National Committee busied himself with the general step-up of campaign leaders following the Roosevelt-Garner nomination a few days ago. That there will be a Negro division similar to the one headed by Julian Rainey of Boston, Massachusetts in 1928 seemed a certainty, however.

Several factions among Negro Democrats throughout the country were in evidence during the Democratic convention here and were strenuously bidding for control of the campaign work. The factions seeking controll are, first the National Colored Democratic Association, headed by Dr. William J. Thompkins of Kansas City, Missouri; second, the National Democratic Negro Voters League, headed by Dr. F. O. Williston of Washington, D. C.; third, the powerful organization of Tammay Hall Negroes headed by Ferdinand Q. Morton and the strong one-man leadership of Julian Rainey of Boston.

The activities of the various groups at the convention was limited to these activities; James Ross of New York undertook to organize tho Negro visitors and alternates. After repeated parleys on the part of this group, Ross was desposed and Dr. Tompkins, elected to fill his place. The National Democratic Negro Voters League met on Judiciary Committee of the Senate the Saturday following the convention with Chairman Williston, presiding. This conference unanimously endorsed the platform of theDemocratic Party and the candidates as named at the Chicago convention Ferdinand Morton and Julian Rainey remained aloof from both of these groups.

The roster of officers, elected for the National Colored Democratic Association reads, Dr. W. J. Thompkins, Kansas City, Missouri, president; O. L. Lawson, Denver, Colorado, 1st vice-president; E. V. Mosee, St. Louis, Missouri, 2nd vice-president; B. A. Hammond, Chicago, Illinois, 3rd vice-president; L. A. Newby, Chicago, Illinois secretary; Theodora V. Jones, Los-Angeles, California, assistant secretary; E. L. James, Institute, West Virginia, treasurer; James A. Ross, New York City, chairman of organization, Edgar G. Brown, Chicago, Illinois, chairman of pjublicity; E. Leftridge, New York City, speakers bureau; C. E. Kimbrough, Charleston, West Virginia, chairman of Omaha, Nebraska, sergeant-at-advisory committee; Harry Leland, arms; and Mack D. Rowe, Washington, D. C., press representative.

The National Democratic Negro Voters League adheres to its policy of letting the people in the States select their own leader. These leaders as reported so far are: Armond W. Scott, Washington, D. C.; Fred Gardner, Phoenix, Arizona; E. V. Crain, Los Angeles, California; E. L. Branwell, Norwalk, Connecticut; N. B. Brnce, Kansas City, Missouri; Dr. Taylor Lewis, Wilmington, Delaware, Arthur R. Barber, Boise, Idaho; Major Adam E. Patterson, Chicago, Illinois; Thomas R. Smith, Baltimore, Maryland; Joseph C. Cole, Detroit Michigan; John Lewis, St. Paul, Minnesota; W. Justin Carter Reading, Pennsylvania; A. Payton Cannal, Newport, Rhode Island; William Greenwall, Salt Lake City Utah; N. N. Thomas, Alexandria, Virginia; R. L. Ryan, Seattle, Washington; and E. L. Powell Virginia.

WHERE BAD SPORTSMANSHIP IS NECESSARY

Two weeks ago the Democratic Party nominated a partia invalid, Frank D. Roosevelt for President and John Nance Garner of Texas for vice president. Directly after the nomination, a distinguished political editor stated that he hoped the coming campaign would take a higher ground than previous campaigns and that a unfair advantage would be taken of the fact Mr. Roosevelt was lacking in the physical qualifications necessary for the strenuous duties of the office which he seeks. To harp on this physical incapacity of Mr. Roosevelt, occasioned by infantile paralysis which has made him a permanent cripple, would be bad sportsmanship, said the editor.

There are times when bad sportsmanship is necessary, and this is one of them. However unfair it is to take advantage of physical weakness for reasons of personal greed or animosity, when weakness threatens the welfare of an entire nation, personal injustice cannot be considered. And such happens to be the case in the present campaign so far as Negro voters are concerned.

Already Negro leaders in the Democratic ranks have been exhorting Negro voters to open their eyes to Roosevelt and close them to Garner. That is not new. They did that in 1928, when they said regardless of how much yon hate Joe Robinson of Arkansas, remember he will never be president and can't do you any harm.

This time their argument sounds weak. Of course, it is not admitted at all that Mr. Roosevelt himself, if he were in the best of health would be the right man. There are too many anti-Negro evidences in his none too brilliant record to say that.

But for the guiltless ones this writer is willing to grant for sake of argument all the qualities of fair-play his colored campaigners think he has. And still the argument is sound that his precarous physical condition, in the face of a gruelling campaign and four years of grinding word in the presidential chair, make his election unsafe and unwise.

The reason is Jack Garner of Uvalde, Texas, Jack Garner is "Kingfisher" in Texas as "Hooey" Long is in Louisiana. Jack Garner's record as one of the worst Negro-haters in all Democratic history is eclipsed by probably not more than three men. Cole Blease, Vardaman and Tom Heflin. In control of his State party, Garner and his ohorts are responsible for disregarding the Constitution of his Nation and the United States Supreme Court, by refusing Negroes the right to vote in Democratic primaries. In the House he has been opposed to any legislation favoring colored people. He is a mean man, an intolerant man, and every Negro voter who doesn't know, can be convinced by reading his record.

And if Franklin D. Roosevelt should break under the strain of presidential duties, Jack Garner of Texas would be President. And if there is anybody that doesn't know what Negroes could expect if he were in that high office, then it is too late for them to think about voting.

"Green Pastures"

Los Angeles, California —(CNS) —"The first thousand performances are the hardest" thus "Green Pastures" having past that point will make a triumphant return East after a gala celebration here. Richard B. Harrison who plays the leading role of "the Lawd" is among several of the company who number more than 100, who have not missed a performance.

Opening in New York February 26, 1930 it ran 640 performances. After 160 shows in Chicago the Coast tour began with no one-night stands. Before reaching California it had made 939 performance

William Allen, Finder of Lindbergh Baby, Shut Out of Vaudeville

Trenton, N. J:—(CNS)—William J. Allen, the colored man who gained some fame when he found the body of Charles Augustus Lindberg, Jr., has been mentioned for a State job no what Col. Lindbergh has requested the circus and vaudeville people to keep him off their programs.

Allen appeared three weeks with a circus and was scheduled to enter vaudeville. He received $300 for his first week under the big tent but was discharged without further pay when the flying Colonel objected to his stunt. In talking to newspaper men he said:

"I left the circus somewhere in Massachusetts. I cannot remember the town. The boss told me Col. Lindberg didn't want me appearing in circuses, and I didn't care to make trouble for the boss, so I came home."

Allen said he appeared three weeks with the circus and was paid his salary $300 for one week. "But I guess I'll get the rest of it—some day," he said. 'I was going on the vaudeville stage, too," he said sadly. "But that fell through. I don't remember the theater I was going to play at, or how much I was to get. But I did get a week in a sideshow at Coney Island, but I didn't get money for it. I can't remember the name of the show.

The matter of the missing wages bothered him only a little, it appeared, even if he has a wife, two children, and now no job.

Application for Membership

NATIONAL FEDERATION OF COLORED FARMERS (Inc.)

Vincennes Hotel, Chicago

As a farmer, I believe the time has arrived when the Colored Farmers should form a National Organization devoted to diversified production, grading, packing, shipping and marketing of farm products and to the purchase of needed farm supplies through co-operative methods, to the end that a more prosperous financial condition may result from their efforts as producers.
I hereby subscribe $5.00 for membership in the National Federation of Colored Farmers for a period of 12 months from date. Also $1.00 for an Annual Subscription to the Modern Farmer.

"OUR SLOGAN"

STAY ON THE FARM IF YOU'RE ON IT! GO BACK TO THE FARM IF YOU'RE OFF IT!

THE LAW

"It is hereby declared to be the policy of Congress to promote the effective merchandising of agricultural commodities by encouraging the organization of producers into effective associations under their own control.

The Board is authorized and directed—to promote education in the principles and practices of cooperative marketing—to encourage the organization, improvement in methods, and development of effective cooperative associations." (Public—No. 10—71st Congress. Sec. 1-5.)

THE GOSPEL

"This law is predicated upon the ability of the farmer to manage his own business, once he is organized to do so. Cooperation is the key to it and only in exceptional cases can the Federal Farm Board have any dealings with a farmer who is not a member of a producer-owned and producer-controlled marketing unit." Hon. Sam'l R. McKelvie, Member, Federal Farm Board.

The National Federation of Colored Farmers believes that the Colored Farmers of America should own and control their own co-operative associations.

"Co-operation With All—Affiliation With None."

THE MARKET BASKET

By the Bureau of Home Economics, U. S. Department of Agriculture

Use or Save All Food the Garden Yields

The preserving season is on. And the Bureau of Home Economics, United States Department of Agriculture, advises families that have gardens to let nothing go to waste. Use the fresh vegetables and fruits as they come along, of course, and don't can them just for canning's sake. There is little virtue in hoarding. But put up any perishable things not required for present needs, the bureau urges. Then if there is more on hand than one family needs when winter comes, they may well be shared with homes that are less fortunate.

A preserving program should, of course, be planned with reference to its cost. Nowadays more foods are canned than are preserved in any other way, but housewives who do not have the cans or jars and a steam pressure cooker can fall back upon the oldest, simplest and cheapest method of food preservation, which, the bureau points out, is drying. Corn, mature beans, peas, celery, and okra, among the vegetables, are easily and satisfactorily dried, as are also apples, pears, apricots, cherries, prunes, and some other fruits. The easiest way to dry vegetables and fruits is to spread them out in the sun, on a shelf, table or roof, cover them lightly to keep out insects and dust, and let the sun do the rest. This method works in sunny climates, but when it rains the products must be brought indoors or sheltered. An outdoor dryer, very much like a hotbed, which is sheltered from the rain, can be made. Or ventilated shelves over a cookstove or small laundry stove will make an indoor dryer.

"Putting down in brine" used to be more common than it is nowadays, but it is a cheap and useful way of holding for winter use some of the vegetables which are not so successfully canned with the ordinary home equipment. String beans, onions, cauliflower, green peppers, cucumbers, green tomatoes, cabbages—all these can be brined and use for pickle. The beans and onions can also be cooked (after soaking out the salt) and served in place of fresh vegetables; the green peppers are useful for stuffing; the cabbage makes sauerkraut; the green tomatoes can be used for pie.

In brining vegetables a salt solution may be used, but some vegetables contain enough water to make their own brine when salt is added; and some contain enough sugar to cause fermentation, making an acide brine—cucumber pickle and sauerkraut, for example. "Pickled corn," however, may result from dry salting without fermentation. The fresh corn is cooked in boiling water for ten minutes, to set the milk. Then it is cut off the cob and packed in layers with one-fourth its weight of fine salt.

There is almost nothing nowadays that can not be canned successfully with the best commercial equipment. But for home canning it is important to consider vegetables in two classes—tomatoes (which are really a fruit) and all others. Tomatoes and all fruits, because of their acid, can be put up by the open kettle method, or they can be sterilized in a boiling water-bath, in a steamer, or in an oven equipped with a heat-regulating device or a good thermometer. For nonacid vegetables, however, the Bureau of Home Economics recommends processing (i. e., sterilizing in a steam pressure cooker only. The housewife, without a pressure canner, will do well, the bureau says, to limit her canning to tomatoes and fruits—apples, apricots, berries cherries, currants, gooseberries, peaches, pears or plums. To prevent spoiling, if canned, and possible food poisoning, if eaten, the nonacid vegetables, such as corn, beans peas, or greens, must be processed at temperatures around 240 degrees and 250 degrees fahrenheit, which are higher than can be obtained in the open kettle or waterbath.

Drying Beans and Peas

Garden peas intended for drying should be gathered when in ideal condition for immedaite table use; that is, when the seeds have attained full size and before the pods have begun to turn yellow and dry up. Shell them by placing the pods in boiling water for three minutes, then spread on a wire screen having a mesh large enough to permit the shelled peas to pass through, with a box or basket beneath it. Rub the pods vigorously over the screen with the hands. This will burst and empty practically all the pods much more quickly than they could be shelled by hand. Then dip the shelled peas for only one to two minutes in boiling water (to which table salt has been added, 2 tablespoonfuls to the gallon), drain, spread to a depth of 3-4 to 1 inch on the trays, and dry at 115 degrees to 120 degress fahrenheit, as initial temperature, rising to 140 degrees toward the completion of the drying. Stir occasionally while drying. Properly dried peas will be uniformly dry throughout, showing no moisture near the center when split open.

Wax beans, Lima beans, or mature string beans for drying should be gathered when full grown but before the pods have begun to dry. Shell, blanch five minutes in boiling water with thorough agitation, dry, and spread on trays to a depth of not more than one inch. Stir rather frequently in the first hours of drying. Considerable variation in temperatures employed in drying is permissible, but do not heat the material above 150 degres F. at the outset.

Brining String Beans

Select white or green stringless beans and remove the tip from each end. Wash the beans well and place them in a 10 per cent or 40 degree brine. Add salt each day until the reading does not change. When the brine is costant, store the beans in glass jars or earthenware containers, sealing closely with paraffin. After the jars are sealed do not move them, or the liquid will loosen the seal.

The beans can be refreshed when needed for pickles or can be used for the table. The cold water method for freshening consists in placing the beans in cold water three times their volume, bringing to simmering point and keeping there for twenty minutes and then allowing to cool in the water. Place in fresh water for a few minutes; the salt is sufficiently extracted and he beans are ready for use.

Canning Tomatoes

Select firm, ripe tomatoes of medium size and uniform shape. Do not use tomatoes which are overripe or which have spotted or decayed places. Put into trays or shallow layers in wire baskets and dip in boiling water for about a minute, according to ripeness. Remove and plunge quickly into cold water for an instant. Drain at once and core and peel promptly. Pack into jars or cans as close as possible. For home use, fill with a thick tomato sauce or with the juice of other tomatoes. If the tomatoes are to be sold under federal regulations add only the juice which drains from them during peeling and trimming. Season with one teaspoon of salt per quart. Process quart and pint glass jars for forty-five minutes in boiling water and No. 2 and No. 3 sanitary or R enameled tin cans for thirty-five minutes.

Canning Tomato Juice

Select firm, ripe tomatoes. Wash well and drain. Cut into sections. Add a small quantity of water to start cooking and simmer until softened. Stir occasionally to prevent burning. Put through a sieve fine enough to remove seeds. Bring to boiling, put immediately in containers. Add one teaspoon salt to each quart of juice. Process quart and pint glass jars five minutes in boiling water.

U. S. Agriculture Department Improves Southern Farm Conditions

Washington — (CNS)—Through the aid of 297 trained Negro men and women, employed as extension agents cooperatively by the Department of Agriculture and the Land Grant Colleges, Negro tenants of Southern farms are improving their practices and living conditions. Mr. J. B. Pierce, field agent of the Extension Service of the Department in speaking of the work says:

"Among other things, these agents have helped many Negro families to improve their health conditions, to raise their standards of living, and grow and save enough food and feed for home use until the next corn crops are harvested.

"A study was made of the Sweet Bros. plantation, St. Francis country, Arkansas, which showed that the tenant families were largely dependent upon the Red Cross for food, and that they were practically without livestock and poultry. A live-at-home program of work was put into effect with the cooperation of the landlord, which resulted in the 24 tenant families producing a money crop and their home supply of food

"They raised 397 bales of cotton, 5,635 bushels of corn, 41,150 pounds of peas, 1,663 bushels of sweet potatoes, 64 hogs, and 1,060 gallons of molasses. Every family except one had vegetables in the garden and canned food in the pantry.

"Similar studies were made on three other plantations, and the results were more or less the same as on the Sweet Bros. place. These demonstrations reveal the possibility of reaching and serving tenant families so that both tenant and landlord are mutually benefited."

After extension work lasting several years in Surry County, Va., Mr. Pierce said, a survey showed that the Millfarm community, an organized community in the county, had 43 families, of which 30 owed their own farms, all kept poultry, 37 kept hogs, 23 kept cows, and 29 raised all their food and feed or its equivalent. Most of the 131 children attended school regularly, 6 were in high school or college, and 72 were enrolled in 4-H agricultural clubs, he said.

Letter Carrier Walks Same Route For 42 Years, Retires

Memphis, Ten.—(CNS) — Williams H. Owen, letter carrier of this city, has been retired after walking the same postal route for 42 years. It is hard to estimate the number of miles he has plodded on his two daily trips and Owen himself hesitates to give out any figures. He says, however, he would be a "long ways from here" if he had travelled in a straight line.

He has seen the streets in this ward developed from mud to asphalt, and he has watched the children of two generations and many waves of those who moved in and out, playing in the yards.

Born 65 years ago at 674 Washington, Will Owen has lived there all his life married there, raising a family of two boys and a girl.

DR. AMBROSE CALIVER SHOWS POOR HIGH SCHOOL FACILITIES FOR COLORED CHILDREN OF THE SOUTH

Montgomery, Ala.,—(CNS)— Some idea of the lack of high school facilities for colored children is vividly set out in a report by Dr. Ambrose Caliver, specialist in education, of the Office of Education, to the National Advisory Committee on the Education of Negroes in session here this week.

Dr. Caliver shows that of the 1,413 counties in 15 Southern States, States, 230, having a Negro population constituting 12.5 per cent or moro of the total population, had no high school facilities at all for Negroes. In these counties there is a Negro population of 1,379,304, with 158,939 of them of high school age.

The report further shows that high school education for colored children is of recent development —two-thirds of the schools studied offered secondary work for the first time since the World War, and that the Negro has shown remarkable actividity in accepting the secondary educational facilities available to him.

Of the 1,067,821 Negro high school educables in 16 Southern at States, only 101,598, or 9.5 per cent, are enrolled in public high schools, as contrasted with 33.5 per cent of the white high school educables in the same States.

The per cent of white pupils enrolled in high school in 15 Southern States is more than three times as much as the corresponding per cent for colored pupils, being 14.2 and 4.5, respectively.

The cost per pupil for white and colored high school teachers' salaries is respectiveiy $34.18 and $22.65. In order to bring the cost per Negro pupil up to the whites would require an additional expenditure of $1,175,182, or 51 per cent more than is at present being spent.

The cost per high school educable for white and colored high school teachers' salaries is, respectively $34.18 and $22.65. In pupil up to the whites would reorder to bring the cost per Negro quire an additional expenditure of $1,175,182, or 51 per cent more than is at present being spent.

The cost per high school educable for white and colored high school teachers' salaries is, respectively, $11.77 and $2.16. To make the two races equal in this regard in the 15 States would require an additional $9,937,944, or 43 per cent more than is at present being spent.

Of 1,140 high schools reported by 15 States, only 506 offer four years of work. Only 39 per cent of the four year high schools are available to Negroes living in rural areas who constitute 68.7 per cent of the total Negro population.

It was reported that the typical Negro high school teacher had three and one-half of college training, nearly three-fourths of whom received their academic training in private colleges. The median number of years of college training for Negro teachers in the open country is 1.8 as compared with 3.49 for those in large cities.

Negro high school teachers receive much less salary than white high school teachers, the average salary for Negroes being $963, for white, $1,479. The average salary for Negro high school principals is $1,325 a year compared with $2,454 for white principals. Negro principals receiving $1,500 or less constitute 61.2 per cent of the total, while the corresponding per cent for white is 7.6

NAVY TO HELP LYNCHTOWN CELEBRATE BICENTENNIAL

Washington — (CNS) — Salisbury (Lynchtown), Maryland will on August 10 celebrate its two-hundredth birthday in grand style. On the recommendation of Representative Goldborough and Senator Tydings the acting Secretary of the Navy, Rear-Admiral Sexton has consented to send three naval planes to "Lynchtown" on the day of celebration. Salisbury earned its name of "Lynchtown" when about six months ago a man was taken out of his hospital cot and lynched with almost the entire population of the town in the role of spectators.

These members of the Congressional delegation some time ago requested the department to participate in the celebration to be held at Salisbury and to send naval vessels and aircraft to that city to cooperate with the citizens of the Eastern Shore in the ceremonies. The department, however, advised that it would he unable to comply but later agreed to send three naval planes from Anacostia, D. C., on that date.

Representative Goldsborough is still hopeful of obtaining permission for a naval vessel being sent to Salisbury for the celebration.

National and Local N. A. A. C. P. Bodies Pass Buck On $3,000 Expense

New York City —(CNS) The National Office of the N. A. A. C. P. and the District of Columbia Branch in Washington have locked horns over an indebtedness of some $3,000 incurred in meeting the expenses of the 1932 Annual Conference held in Washington in May. The two bodies are engaged in a spirited controversy as to who shall foot the bills or out of what fund the necessary money shall be taken to met a deficit of several hundred dollars.

It is stated that the District of Columbia Branch guaranteed to the National Office $1,500, minus such sums as the other branches would contribute to the conference fund. Despite the fact, however, that the Washington Branch has raised and sent to New York more than $2,300 and other branches have sent in for conference expenses more than $400 the National Office claims that the branch in Washington is obligated to pay a deficit of several hundred dollars.

The expenses of the Annual Conference amounted to some $3,000 and the Washington Branch has suggested and made a positive request that any balance due on the guarantee be met by taking the money from the membership fund raised in the District of Columbia this year.

This request is denied and strongly opposed by the National Office on the ground that it is contrary to the rules and regulations of the Association.

In discussing the matter from the National Office standpoint, Mr. White is quoted as saying:

"No other branch in the history of the Association has refused to pay its guarantee after having invited the Annual Conference on the plain understanding of the obligations connected with such a meeting. Membership which have been sent to the National Office by the District of Columbia Branch during the current year have been listed as such and the money cannot under our constitution be diverted to any other purpose.

"If the District of Columbia Branch chooses to take the position that such diversion shall be made, then we have no other course than to list the branch as defaulting in its willingness to pay the guarantee or such part of it as it is able to pay.

"The National Office feels confident that the District of Columbia Branch does not wish upon its magnificent record the fact that it of all branches in the history of the Association, has deliberately applied funds which legally belong to the Association, regardless as to whether or not a conference was held in Washington to payment of an entirely separate item, doing so in the face of the constitution and custom."

Revision of Charter of Rural School Fund Planned

Washington — (CNS) — Dr. James H. Dillard, former president of the Jeanes Fund Board Negro Rural School Fund; Dr. Arthur B. Wright, president who succeeded Dr. Dillard, and Dr. Emmett J. Scott, members of the Board of Directors, met in Washington at the headquarters of the Jeanes Fund Board, 926 Jackson Place, Northwest, Washington, this week, for the purpose of preparing recommendations looking to a revision of the charter and by-laws of the Rural School Fund.

The Jeanes Fund Board administers a gift of $1,000,000 given by the late Anna T. Jeanes, of Philadelphia, to povide supplemental help for rural schools for the colored people of the South, the original grant having been made to the late Booker T. Washington of Tuskegee Institute, Ala., and the late Hollis B. Frizzell of Hampton Institute Virginia.

In addition to the fund provided by the gift of Miss Jeanes, the General Education Board also makes large and important contributions to the extension of the work of the Board. This work is carried on in conjunction with the John F. Slater Fund which also contributes to the work of Southern institutions of learning for colored youth.

ENJOYS FIRST BIRTHDAY PARTY

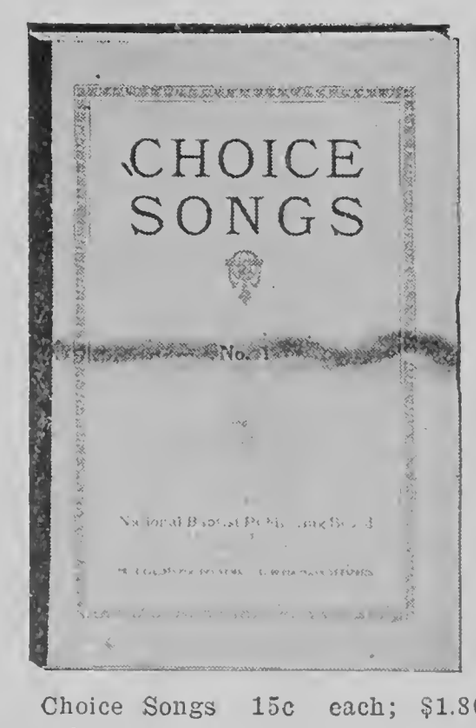
Little Bettie Delorese Foster, baby daughter of Mr. ad Mrs. A. J. Foster, enjoyed her first birthday party, Tuesday, July 12th when her mother gave a party in her honor at the home of the baby's grandmother, Mrs. Bettie Primm at 1401 Wade St., this city. Some five little guests were present and presented the little honoree with lovely gifts. Kodak pictures were taken and games were played and the main featre of the afternoon was the cutting of the little birthday cake with one tiny candle. At a late hour in the afternoon delicious ice cream and cake were served. Guests enjoying the party were Dorothy Seymour, earl Lee, Juanita Meadows and Irene and Margaret Rawlston.

Five Pass Penmanship Tests At State College

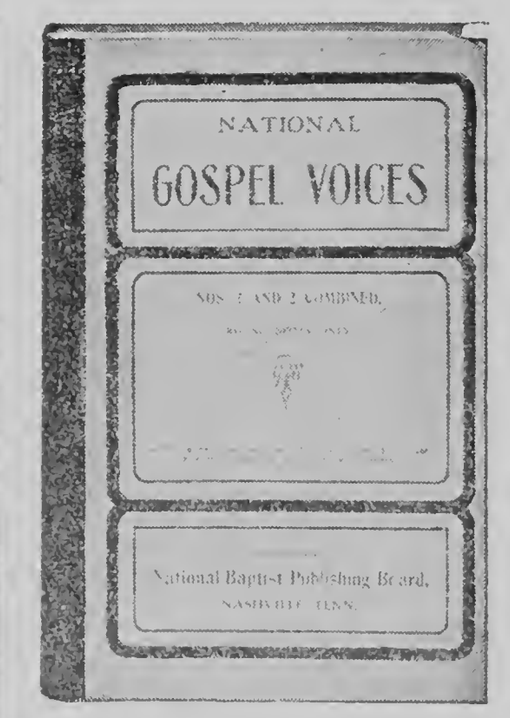
The following teachers of A. and I. State College have passed the American Penman examination, and are qualified to teach business writing in the State of Tennessee:

Miss Flora M. Locke, Chattanooga,
Miss Laura E. Jones, Knoxville,
Miss S. M. Jumpper, Nashville.
Miss Anice I. Kennedy, Knoxville,
Miss Margarite Pennington, Knoxville.

The penmanship course is conducted by Prof. F. J. Myles, the supervisor of penmanship of the Nashville Public Schools, and an expert in the technique of writing.

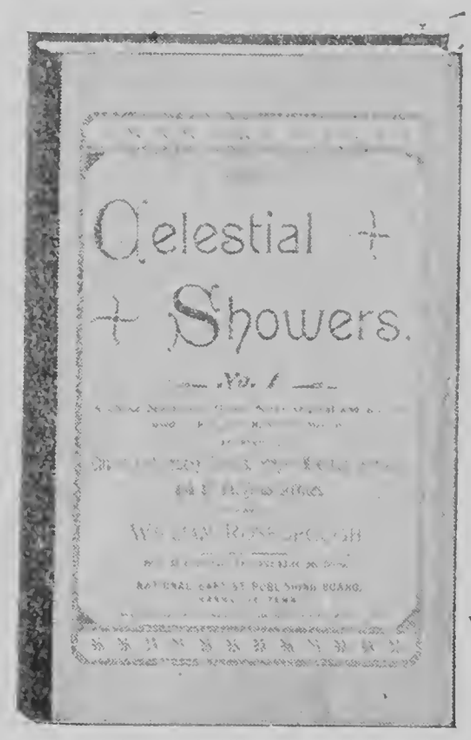


Choice Songs 15c each; $1.80 per dozen.



National Gospel Voices Nos. 1 and 2 combined 45c each; $5.40 per doz.

National Harp of Zion 35c each; $4.20 per dozen.



Celestial Showers 40c each; $4.80 per dozen.

STATE FEDERATION OF WOMEN'S CLUBS OF CHARLESTON, WEST VIRGINIA, START NATIONAL MOVEMENT

To Make Boyhood Home of Famous Educator and Founder of Tuskegee Institute a National Shrine

Charleston, W. Va.—(CNS)—Through the efforts and work of the State Federation of Women's Clubs, the boyhood home of Booker T. Washington has been reclaimed and dedicated as a National shrine.

For years the cabin which housed the famous Negro as a boy stood virtually neglected a few yards from the State highway. Then, at the annual convention of the State Federation of Women's Clubs, it was decided to make it a shrine for his race.

Last week prominent men and women of both races met at the tiny cabin in the little town of Malden near here, to dedicate what was the West Virginia home of Booker T. Washington, noted Negro educator and emancipator as a National shrine to his memory.

Dr. Carter G. Woodson, founder and president of the Negro History Association, delivered the main address. Other speakers were Howard B. Lee, State Attorney General; Mrs. A. D. Spalding, president of the State Federation of Colored Women's Clubs, and T. G. Nutter and others.

Dr. Woodson declared that West Virginia was fortunate in having Washington settle here and Washington likewise was fortunate in growing up here in this atmosphere of more liberty than that of the State from which he came.

"We do well to assemble here between these hills to dedicate this home site as a national shrine," said Dr. Woodson. "Visiting this hallowed spot and standing on this sacred ground, we may be inspired to noble deeds for our race and nation.

"We revere the memory of this man because he loved his race. He loved his race because he loved humanity. In spite of all the white man had done to oppress the Negro, Booker T. Washington would not let this sour his spirit. He said, 'I will suffer no man to drag me down so low as to make me hat him.' While advocating the uplift of the Negro, therefore, he did not fail to speak out for the handicapped white man. He realized that our relationships and interrelationships are such that the one cannot stay down without holding the other down and that the one cannot rise without bringing the other up with him."

The dedicatory exercises covered three days of activities about the little home. Mayor R. P. Devan of Charleston and a group of social workers and educators joined in the memorial exercises.

TENNESSEE MAYORS COMMENT ON UNEMPLOYMENT AND RELIEF AMONG NEGROES ACCORDING TO THE STATE WELFARE SUPERVISOR

An interesting collection of letters was revealed this week by Professor James H. Robinson, Supervisor State Negro Welfare, dealing with problems of unemployment and relief among the colored people of the State of Tennessee.

Mr. Robinson recently wrote 153 mayors in the State of Tennessee asking them for facts about working conditions and what assistance and relief were being given. Some of the comments made by the mayors follow:

"We have a small town relief committee; there is no public work, the only jobs to be offered to Negroes are odd jobs of work that white folks might need to have done. Most of the Negro men are farmers and have plenty to eat, clothing will be the chief object, if the winter is cold, but with the unusual good weather there has been no suffering among our colored people Any way that I can be of service I will be glad to do so."

Mayor W. O. Thomas.
Savannah, Tennessee.

"We are furnishing all the work we can and so far are taking care of all our unemployed trying to furnish at least two or three days per week. We appreciate your interest in making the inquiry and when we can be of service command us."

Mayor A. G. Lowe,
Bruceton, Tennessee.

BETTER HOMES MOVEMENT

The annual meeting of the Better Homes Movement was held at the A. and I. State College on July 8, at 2 P. M.

In giving the annual address, the state vice chairman, Mrs. R. T. Burt, told of the purposes and progress of the movement since its beginning ten years ago in Washington, D. C. The movement which is now a national one operates in every state of the Union with the exception of one. During the three years attempt as a state movement added interest and participation have been noticeable with greater emphasis this year due to economic conditions, on home cleaning, garden planting, painting, home beautifying and remodeling rather than building. showed new homes under construction.

Reports from district and However, many of the reports county chairmen, supervisors and home demonstration agents were made.

Mrs. Genette White Flanery, Secretary of the Better Homes Movement in Tennessee among white people and Miss Julia Green, supervisor of schools in Davidson County, spoke of their interest in the work as it is being carried on not only among the Negroes but among all throughout the State in order to improve the living conditions and cultural side of the people of Tennessee.

Pres. W. J. Hale, State Chairman of the eBtter Homes Movement, congratulated the members on their past achievements and for what thep planned to do in the future.

Ohio Grand Jury Indicts Six Members of Mob That Beat Atlanta Man To Death

Ironton, O.—(CNS)—The Lawrence County grand jury has indicted six white men for the death of Luke Murray the Atlanta colored man whose body was found June 13 in the Ohio river.

Those indicted, all of South Point, Ohio, are Taylor Napier, 24; Milford Massie, 20; Clyde Elkins, 20; Lawrence L. Massie, 19; Garland Massie, 24, and Theodore Johnson, 29.

Against a state charge that they abducted Murray from the South Point jail, beat him to death and threw the body into the river, the accused countered that they intended only to deport the Negro, but that he jumped from their boat into the river and was drowned.

The Negro had been jailed for threatening two white men with a knife.

Miss Shirley Graham's "Tom Tom" Goes Over Big in Cleveland

Cleveland — (CNS) —A Negro opera staged and performed by Negroes held its world premiere at the Cleveland Stadium before an audience of 10,000 people. This audience far surpassed the number in attendance at the presentation of "Carmen" which was staged the night before.

A deluge of congratulatory messages have literally swamped the composer of the first Negro opera, Miss Shirley Graham. Among those congratulating Miss Graham were, Mary Garden who played the leading role in Carmen, and Mme. Braum the author of Grand Hotel.

The opera is scheduled to appear at the Madison Square Garden in New York City, some time during the summer.

Founders Day Observed

(Continued from Page 1)

Peabody College brought a message of work. The question of what kind of citizen you would want to take your place, should be in every man's mind. "I want to buy stock of every man who works sixteen hours a day," declared Dr. Payne. "My father worked hitherto and I work too.'

Dr. J. H. Hale spoke on behalf of the professional people. Dr. R. C. Burt, on bchalf of the Interracial League and Prof. H. L. Allison, ex-president of the Tennessee Teachers Association on bchalf of the Association.

President W. J. Hale, president of the institution gratifyingly spoke of the ability to carry on the present building program now under way which will offer larger and more Tennessee. Music was furnished by efficient training to the people of the Concert Singers under the direction of Miss Marie J. Brooks.

Confers With New York Ministers

(Continued from Page 1)

pleting plans for the National Baptist Convention of America to be held in Houston, Texas, and with the New York quota of representation that is lining up to attend this annual gathering in the magnolia city of the "Lone Star State."

The personnel of the conference represented by their leaders, consisted of Revs. E. D. Bowles, D. D., president of the New York Baptist State Association, D. C. Allayne, D. D., representing the New York Baptist Assembly, B. Baker, D. D., the chairman of the New York Baptist Minister's Alliance, and Jacob Starks, moderator of the New York Baptist Ministers' Conference. Augmenting these were their group of ministers and members from these organizations, and Rev. O. J. Allen, D. D., chairman of the National B. Y. P. U. Board of the Convention, Norfolk, Va., Rev. C. M. Long, of East Orange, New Jersey, the statistician of the National Baptist Convention of America, the Rev. A. A. Graham, D. D., corresponding secretary of the Foreign Mission Board of the National Baptist Convention of America, Corona, N. Y., and Mme. C. Etta Phillips, who has charge of the publicity for the various groups in New York City connected with the unincorporated Convention.

While the preliminaries leading up to the meeting had been under way for several days arranged by telegraph and long distance. The hour for the meeting was high noon, but it was six o clock daylight savings time before this group of international and national representatives concluded their one day session. While no definite plan as agreed upon and worked out during this six hour conference was released, it was understood here from inside source, considered reliable, that a consumption of the entire proposition gone into by the secretory of the National Baptist Publishing Board and secretary of the Sunday School Congress, will be completed on a subsequent visit, that a great state-wide rally will be held culminating in a mass meeting in some big auditorium up here in Harlem. These plans are to be worked out, so it was announced by the Rev. Mr. Baker, of the Ministers' Conference, Rev. Mr. Starks of the Ministers' Union, Rev. E. D. Bowles of the Baptist State Association, and the Rev. D. C. Allyane of the Baptist Assembly.

Notable among those who were in attendance were the Rev. Arthur N. Lloyd, New York City, Rev. E. H. Hamblin, Port Chester, New York, Rev. Jacob Starks, New York City, Rev. Q. J. Allen, Norfolk, Va., Rev. S. Ferguson, New York City, Mme. C. Etta Phillips, New York City, Rev. C. M. Long, East Orange, New Jersey, Rev. David B. Mdodana, Brooklyn, Rev. E. D. Bowles, New York City, Rev. B. Baker, New York City, Rev. W. H. Brown, New York City, Rev. K. M. Johnson,. New York City, Rev. W. White, New York City, Rev. L. S. Taylor, New York City, Rev. J. S. Givens, New York City, Rev. A. A. Graham, Corona, New York, and a number of others whose names were not handed in to the secretary.

After the adjournment of the six hour confab the distinguished visitor was the recipient of many congratulatory statements, and was piloted around in Harlem, visited a number of points of interest before they placed him on the Pennsylvania Golden Arrow for Chicago.

NATIONAL ASSOCIATION OF TEACHERS IN COLORED SCHOOLS

(Continued from page 1).

C. S. and the eighteen state associations, chose Supervisor Francis M. Woods, of Baltimore, Maryland as the 23rd president, and enthusiastically complimented the excellent programs and the unique and cordial hospitality of the session here under the direction of President H. Council Trenholm.

The program opened on Tuesday night, with welcome greetings by Miss Elizabeth Tucker of Birmingham for the summer School Students, Miss M. Wilber Weeks of Mobile for the Alabama State Teachers Association, President Brooks Dickens of Miles Memorial College for the Colleges, and Secretary Frank Grove for the Alabama Education Association with the response being made by Dr. J. S. Clark of Southern University at Scotlandsville, Louisiana and with a closing address by Dr. A. F. Harmon, State Superintendent of Education for Alabama. On Wednesday morning, current studies in Negro Education was discussed by Mr. Horace Mann Bond for the July yearbook of the Journal of Negro Education, by Mr. Harry W. Greene for individuals and foundations, by Dr. Ambrose Caliver for the United States Office of Education and by Dr. John W. Davis of the West Virginia State College for the National Advisory Committee on Education, with President John Hope presiding at the Wednesday night session, Mrs. H. R. Butler of Atlanta spoke for the P. T. A. movement, Dr. Thomas Elsa Jones of Fisk University for the University centers, Dr. Will W. Alexander for the program of interracial activities and President H. Council Trenholm for the N. A. T. C. S., with an appeal for a three plank platform of professionally-minded leadership, soundly evalant ed activity programs, and more constructive organizational cooperation between the professional organizations.

Interesting contribntions on Thursday morning were made Mr. F. C. McCuistion on "Status and Trends in Teacher Preparation," by Miss Eva Mae Howe of the Branch CarnegiTe Library of Atlanta on the program of Adult Education, and by Mr. Reginald E. Johnson of the Atlanta Urban League on Influence of Economic Needs on Trends in Vicational Education. Thursday night, Mr. F. Rivers Bernwell of the Texas Tuberculosis Association talked on School Health program while Dr. Carter G. Woodson of the Association of Negro Life and History made a most appealing plea for the development of sound attitudes toward group enterprises. The final morning session on Friday gave opportunity for contributions from Dr. N. C. Newbold of North Carolina, Mr. L. N. Taylor of Ken- president-elect, and Mr. C. E. tucky, Mr. Francis M. Wood, the Carolina Mutnal Insurance Company.

Of particnlar importance was the luncheon conference on Thursday of officers and representatives of the State and National professional organizations. Proposals were considered for meetings at the Spalding, president of the North same time and place for the Association of Deans and Registrars, the association of Colleges of Negro Youth, and the General Council of the N. A. T. C. S. Extended consideration was given to the plans for a closer and more organic relationship between the State and National organizations in the matter of program and of membership. A special commission headed by retiring President H. Councill Trenholm, who now becomes chairman of the General Council, was authorized to organize the details of the proposal and to conduct an informal referendnm through the several state associations next year.

Officers chosen for the next year along with Mr. Wood were F. R. Lampkin of Georgia, R. C. Reynand of Louisiana, W. H. Fouse of Kentucky, W. E. Day of Oklahoma, B. F. Bullock of New Jersey and L. F. Palmer of Virginia as regional Vice presidents. W. D. Miller and W. W. Saunder of West Virginia were continued as treasurer and executive secretary while Dr. H. L. McCrorey of North Carolina was elected to the Board of Trustee succeeding President W. J. Hale of Tennessee.

Summer School At Prairie View State College Enrolls Earnest Student

By Napoleon B. Edward

July 11, 1932 The Summer session of Prairie View State Normal and Industrial College will come to a close August 13. Despite the prevailing depression apparent in all sections and affecting ail professions and industries, the enrollment has exceeded the expectations of Principal W. R. Banks and the faculty. Recent reports from the Registrar disclosed that the total enrollment in all branches of the college was 847.

The academic work of students and teachers alike has been earnest and of a high order. It is quite evident that the session will be one of the most successful and progressive in the history of the college.

In reply to an interview with respect to prospective graduates this summer, the following statement was submitted by the Registrar's Office:

From the Division of Agriculture: U. S Blanks, Edwards John Campbell, J. C. Coger, M. W. Evans, Joseph J. Yates; From the Division of Arts and Sciences: Thelma Lee Atkinson, Katheryn L. Bacoats Mrs. Ellen R. Baldwin, Mrs. Millie A. Bates, Charlie Mae Batts, Mrs. Bessie L. Benjamin, Mrs. Eloise L. Wells, Mrs. Rebecca R. Brown, R. C. Chatman, Laurie E. Claybon, Sallie A. Hogan Cotton, Willie C. Countee, Bessie V. W. Davis, Mrs. Ellen M. R. Fortson, Ruby Lee Foster, Sallie Frazier, Willie E. Goodwin, Zella Harris, Mattie L. Hawkins, Mrs. Florence B. Dean Hudspeth, Frances A. Jackson, Frankie B. Jackson, Mrs. Velma M. D. Joter, Mrs. Hortenst H. Johns, Jessie A. Jones, Mrs. Alice E. Reed Jordan, Mrs. Esther S. Kennard, Elizabeth Keyes, Mrs. Rosie E. Lewis, Ida B. Liston, Mrs. M. B. Lockett, L. R. Lockhart, Mrs. Cora B. Marion, Percy H. McDavid, Mrs. Jannie R. Palms, Mrs. Johnnie H. Pierson, Cohnita H. Price, Mrs. Stella M. Reed, Norma R. Prince, Alberta C. Roberson, Mrs. J. B. Roligan, Mrs. Bertha P. Shelbon, Arnell Elizabeth Spriggs, Sara B. Stewart, Willie A. Tarrow, Robert Fulton Taylor, Mrs. Bogie M. Watkins, Annie L. Williams, Elberta N. Williams;

From the Home Economic Division: Mrs. Luida B. Austin, M. L. Wells, Mrs. Nancy V. Berry, Ardella Clark, Eugenia P. Fair, Mrs. J. D. Shelton, Mrs. Ardelia Sydney, Theresa Truitt, Mrs. Alma Yates; From the Mechanic Arts' Division: Shelton Mason.

Col. Roscoe C. Simmons Electrifies

(Continued from Page 1)

clared that he was against state right division and Democratic platform, and that he favors the stand taken in the Republican platform that dealt with the Eighteenth Amendement, and the Volstead Act. He declared that it is peculiar in the eyes of most of the voters that a Democratic nominee for President could be elected to the government of New York on a dry ticket and then run as President of the United States on a wet ticket.

The program Sunday afternoon was in charge of the Roosevelt Republican Club. Roscoe C. Grant, the president, while Dr. J. H. Hale had charge of the financial end. Dr. H. H. Walker, was master of ceremonies and Rev. Henry Allen Boyd presented the speaker. Rev. J. A. Jones led in prayer and the congregation was led in two songs, first by E. W. D. Isaac, Jr., and the second by Authur G. Price.

Col. Simmons made his usual impression upon Nashville's audience and maintained his reputation not only as a forceful and logical, but as a lengthy speaker, as his address consumed every bit of two hours, but no one left the theatre, no one surrendered the seats; they remained some from 2:30 in the afternoon until the end of the program, which was concluded at 6::00 p. m.

1932 Report of Interracial Activities

(Continued from Page 1)

its beginning in Chattanooga has been given consideration by our leadership in Chattanooga, and by the State Interracial Committee of Alabama. This Committee gave out a statement to the public in September, 1931. It expressed the hope that all uncertainty should be cleared away before the extreme penalty is inflicted. A symposium of Alabama editorial opinion has been released in pamphlet form to members of interracial committees.

Religious Groups.

The Secretary has presented the interracial program to the following religious groups: City and County Interdenominational Pastors Associations, and to three Sunday School Conventions. Material has been furnished to a number of religious publications.

District Conferences.

Two district conferences have been held in Memphis and Bristol. West Tennessee conference includes the territory west of the Tennessee River. Dr. Clyde D. Frost, of the Medical Research Department of the Rosenwald Fund, Chicago, was a guest. The next meeting will be held in McKenzie. Prof. James H. Robbins, of McKenzie, is Chairman.

The Appalachain District reaches from Knoxville to Roanoke. The Bristol meeting was attended by representatives of white and colored colleges, public schools, health departments, agricultural extension, city officials and business men. The next meeting goes to Johnson City. Mr. J. E. Brading, of Johnson City, is Chairman for Upper East Tennessee.

Institutional.

On invitation of the Chairman of of the Penal Institutions Committee of the Legislature the Secretary prepared a statement with regard to the transfer of colored boys from the Herbert Domain property in the Cumberland Mountains to a more suitable location in West or Middle Tennessee. This was included in the recommendations of the Legislative Committee, but like many other bills, it failed of passage due to the balancing of the budget.

The State Interracial Committee has strongly endorsed efforts to provide an institution for colored feeble-minded and defectives, day homes and orphanages for colored children, and a vocational school for colored prisoners.

Educational.

Close contact is maintained with the State Department of Education, the State Rosenwald Agent, and many county superintendents of education. Last fall we visited with the Rosenwald Agent in West Tennessee. Sentiment for better schools is very good, and much progress is being made. The appropriation by the last Legislature to the A. and I. State College, Nashville, indicates public opinion in the State ior Negro education. The Secretary spent two days at this college this summer in the seminary for supervisors, principals, and teachers. Plans of cooperation are being worked out in all parts of Tennessee through this conference.

Health.

The State Public Health Department had representatives in the district conferences in Memphis and Bristol, and in the annual meeting of the State Interracial Committee in Nashville. Vanderbilt University School of Medicine and Meharry Medical College were represented in the State meeting, and are coöprating in the interracial program. Health departments, schools, doctors, nurses and agencies are to be commended and encouraged and supported for their increasingly successful fight against tuberculosis. The interracial Movement is pleased to build public sentiment in favor of these programs.

City and County Committees.

Forward-looking leaders are at work as chairmen of city and county committees. Ex-Mayor T. C. Thompson, Chattanooga, Dr. Alva Taylor, Nashville, Dr. Louis Levy, Memphis, Prof. J. L. Harris, Jackson, Mr. John Richardson, Paris, and Mr. Dancy Fort, Clarksville, are among this number. Many Tennessee counties are carrying on interracial activities. These committees are dealing intelligently and helpfully with specific situations.

Conclusion.

There is reason for rejoicing over the record of progress made along these and other lines throughout the State of Tennessee in developing proper race feeling. Progress toward right relations is very definite. There is a growing realization that the two races are of a common family, that what helps or hinders one helps or hinders the other, and that intellectual, humanitarian and religious endeavor honors no color line and should rise above prejudice. In the light of these facts our interests and purposes become one.

Reduced Rates

NEW EGG-DRYING PLANT AT FORT WORTH, TEX., WILL HELP FARMERS

Land Bank Bond Buyers Find United States Pledges Hollow

PAUL POTTER IN THE CHICAGO TRIBUNE

Says Forced Sales Beat Down All of the Farm Values

(In Chicago Tribune)

What is an "instrumentality of the United States government?"

Several hundred thousand farmers and investors in government farm land bank bonds are raising the question. As farmers, they were told by government officials the period from 1916 to 1926 that the federal treasury was authorized by congress to provide them long term credit to buy farms through the printing of tax exempt bonds for joint stock land banks and federal land banks.

As investors, thousands of persons were urged to aid the nation's basic agricultural industry by purchasing the bonds on which the treasury department engraved: "Farm loan bonds issued under the provisions of this act shall be deemed and held to be instrumentalities of the government of the United States."

"Under U. S. Supervision"

The banks issuing these bonds, as government official from President Wilson on down through the federal bureau created to supervise them pointed out repeatedly, were "organized under section 16 of the federal farm loan act, operate under the provisions thereof and are under federal supervision."

Now, with 49 joint stock land banks still subject to bureaucratic red tape even to the approval of the banks' clerical help, three banks have been placed in receivership by the farm loan board. Others are defaulting on bonds or operating under recognized man-

BACK TO HARVARD AFTER TWENTY-FIVE YEARS

Twenty-five years ago a class went out from Harvard University into the world to make its way and to represent that institution which is located at Cambridge, Mass. After a quarter of a century had passed these former graduates, who, at that time, mostly young men, had gone into every walk of life practically, in pursuit of their business, professional, educational, civic and political career. They went back to Campaigne, they reassembled at Harvard.

Prof. Buchanan, after his graduation, took charge of the school at Normal, Ala., which institution was founded by the late Wm. H. Council, and afterwards married the daughter of the former president.

FARM BOARD'S REDUCTION

Senate Cuts Appropriations for Expenses

Washington, D. C. —Restriction of Federal Farm Board operation in so far as that may be accomplished by limitation of funds available for pay roll and contingent expenses was voted in the Senate after criticism which has frequently recurred was renewed, in connection with the Board's appropriation in the annual independent offices supply bill.

The Senate accepted an amendment by Senator Brynes (Dem.) of South Carolina, which will make only $600,000 available for pay roll and office expenses of the Board in the next fiscal year. In former years, the Board has had $1,000,000 for the purpose the Committee on Appropriations amended the house bill, this time to allow the Board to use up unexpended balances from former years, amounting, according to Senator

CANADIAN PATRON LIKES JUBILEE MELODY SONG BOOK

There has just come to the secretary of the National Baptist Publishing Board a splendid endorsement of the National Jubile Melody Song Book from a lady living away up in Victoria, British Columbia, Canada Early in June she wrote to Henry Allen Boyd and asked for a copy of this book. She said she had learned that his father, the late R H. Boyd, had made such a compilation, and dedicated it to his mother. The price of the book was forwarded and the publication sent. She writes Rev. Mr. Boyd nnder date of July 5th from Victoria ,British Columbia, saying:

"Dear Sir:— Your Jubilee Melody Song Book has arrived, and I am having a very happy time learning new songs from this unusual publication. I already knew a great many tunes, but I find a large number in this book that I had never heard of, nor did I know were in existence. It is a rare collection of Jubilee music, inspirational songs and plantation melodies.

"By the way, I am wondering if you have a ministerial directory in your office? I met Dr. Jos. Hill, a colored gentleman a few years ago, at which time he was stationed at a Baptist Church in Hot Springs, Ark., later. I believe he was formerly of Richmond. If you know of his present abode would you be so kind as to let me have his address?

Sincerely yours,

Mrs. Maud Hammond."

INTERESTING NEWS NOTES

Items From Here and There Assimilated

Thirty-five hundred hogsheads of dark fine tobaco are being shipped from Kentucky warehouses to Spain and other foreign countries. The prices ranged around two and one-fourth cents per pound.

Gov Franklin D. Roosevelt of New York says that the unemployed should return to "good earth." He has arranged a plan, to be financed by the state, to place as many families as possible on farms. To date, 250 families have been taken eare of in this manner.

Recent statistics show that during the past two years southern states have lost heavily in the export of their products to foreign countries. In 1929 the state of Mississippi sold 52 million dollars worth and in 1931 only 17 million. Arkansas exported 29 million dollars worth in 1929 and last year only eight million: Tennessee, 52 million in 1929 and last year, 20 million. These states mainly export farm products.

The main offices of the National Federation of Colored Farmers have received reports that the territory west of Dallas, Texas is threatened with the greatest invasion of grasshoppers in history. The boll weevil has also appeared in the southern part of Texas.

Angu Dondero controls the peanut business of New York's three baseball parks and Madison Square Garden. He is an Italian. He says the patrons of the three ball parks alone consume an average of thirty tons of peanuts a month during the season. The per capita consumption is higher at Madison Square Garden where the circus is there every year on account of people buying for the elephants. Mr. Dondero says the peanut business is better since the depression. People are eating more peanuts and less glazed almonds.

Directors of the New Orleans Cotton Exchange demanded abolition of the Farm Board and protested against waste and extravagant spending by the federal government.

Illinois poultry farmers are making good. Sales last year from 1680 farms totaled $378,000.

One consumers' cooperative society in Stockholm, Sweeden, was so successful last year that it gave refund of 3 per cent on all purchases in addition paid a dividend of 5 percent to all members.

EMPLOYMENT NOT INCREASING

National Urban League Reports on Negro Workers

The National Urban League of New York City, which through its Department of Industrial Relations keeps check on employment conditions of Negroes throughout the country, has refrained from comment lately in order to avoid monotonous statements on conditions which showed no improvement. This monotony has been broken recently by occasional and part-time employment of a few workers for brief periods; as for instance, in Detroit where at the present Negro men are among those now being re-employed by the Ford Motor Company; and in Pittsburgh where a few more waiters have been added to the regular crew of a department store restaurant. In St. Paul a few men have gone to work on the din-

REGISTRATION OF BIRTHS

(Prof. James H. Robinson, Supervisor State Negro Welfare)

Has it ever occurred to you how important it is to have the birth of a child registered as soon as possible? Many parents do not think of this and as a result, many a child goes through life without the proper legal record to establish the date of its birth, its identity or even its existence.

One of the great fads of the day is the registering of fancy animals—cats, dogs, horses and cattle. This greatly enhances their value and is often done with meticulous care by the owners. The pedigrees of some snch creatures can be traced back for many generations furnishing some of the most valuable data that we have on the laws of heredity. Surely children are more important than animals; and if any parents have been careless with reference to the matter of registration, they should take example from the breeders of blooded stock at least to the extent of properly registering their children.

it one of the points of the five-point, minimum, uniform, state-wide Health Week program. In the course of the campaign in 63 counties over the State where 98.56 per cent of the colored people live, this topic was mentioned hundreds of times by newspapers, physicians, nurses, health officers, social workers, midwives, ministers, teachers and others and in some counties they set about actually to register the children. with interesting results. One county in West Tennessee had a scarcity of doctors but a whole army of mid-

(Continued on Page 7)

POULTRY RAISERS WILL FIND PROFITABLE MARKET

Power Used in Making Cake, Doughnut and Waffle Flour

With the formal opening of a new egg-drying plant at Fort Worth, Texas, an industry has been brought back to this country. Althought egg drying was carried on in the United States as far back as 1900, this activity ceased almost completely within a few years, due to the severe competition of Chinese imports. It was impossible for domestic manufacturers to produce powered egg yolk or white that could complete either in quality or price with the tariff-free Chinese product.

With the opening of a modern egg-drying plant at Fort Worth by the Doughnut Machine Corporation of New York City, the first exclusive egg drying plant in America has been established. The market for egg powder requires annually upward of 10,000,000 pounds. This quanity is the equivalent of 36,000,000 dozen shell eggs. The present capacity of the Fort Worth plant is in the neighborhood of 2,000,000 pounds of powder a year. According to a statement by A. Leavitt, president of the Doughnut Machine Corporation, whose company has been one of the largest users of imported egg power in this country, the complete production of the Fort Worth plant will be used in the manufacture of fully prepared cake, doughnut and waffle flour.

At present about two hundred workers find employment in this industry. It is expected that practically the entire surplus egg production of the state of Texas will be used in egg-drying. The farmers and egg producers in that territory are jubilant over the solution of an important marketing problem.

BAPTIST WORLD ALLIANCE OFFICIAL STATEMENT

London, Eng. — The General Secretary of the Baptist World Alliance (Dr. Rushbrooke) has received letters from America indicating concern lest economic depression in the United States might militate against a representative and full attendance if a World Congress is held next year. This correspondence he submitted to the Administrative Sub-Committee at a meeting in London on Monday, June 20th, 1932, under the chairmanship of the Rev. Gilbert Laws.

(This Sub-Committee consists of the British members of the Executive, and it is permitted to take any necesary action subject to report and confirmation at the next

(Continued on Page 7)

CORNCOB PIPES NOW DISPLACE COSTLIER SMOKING EQUIPMENT

Corncob pipe makers are benefiting from the depression. Business men who formerly scorned anything less than a briar now have several of the Missouri Meershaums stuck in pigeonholes of their desks. They thus pay tribute to Henry Tibbe, a woodworker, who first perceived the commercial possibilities of the corncob pipe when a neighbor asked him to bore out an extra cob with his lathe and fashion a pipe. He gathered a few cobs and carried on a small business. But the first cob pipes had short lives because the pipe burned along with the tobacco. Henry Tibbe's son, Anton A. Tibbe, fireproofed the cob with a plaster of paris filling. This made the pipes enduring and they sold like hot cakes. Later Tibbe established a bone factory which manufactured bone bits for the pipes. When he moved to California he turned this over to his sons along with the original factory. He died a few years ago 70 in Oakland.

The center of the corncob pipe industry is Washington, Mo. In Franklin county of that state nearly 20,000 acres are given over to raising the extra large cobs required. Before starting through the factory the cobs are seasoned for a year. The latest statistics show New York to be the third largest customer for the pipes, Massachusetts leading and Pennsylvania coming second. In one year more than 2 million cob pipes were shipped to Europe. Some of them found Belgian owners.

Pipe smoking is taken so seriously in Belgium that pipe clubs have been organized and contests are held between rival districts. The prize goes to the smoker who keeps his pipe going longest. In one competition the winner kept puffing an hour and thirty-seven minutes.

BUY BONDS; DENY FARMERS' AID

If they should realize $6,000 on a mortgage of $10,000 which the government had approved, the land bank directors by bonds they previously issued, on a market which at present quotes these securities at from $6 to $63 per hundred. By purchasing bonds with par value of 10,000 at about $3,200, as has happened in recent weeks, the bank is keeping liquid while forcing down land and bond values.

In a period when good farmers with lands clear of indebtedness seek much needed credit that the farm loan system was created to provide, none is available from the joint stock land banks. Insurance companies are in no position to provide farm loans, no matter how good the farm.

The farmers who were aided in the boom days of the government's land loan business face loss of their entire properties and past payments, while the bondholders who were told by the government that they were getting gilt edge investments, "instrumentalities of the United States," find their only security has been the red tape of "federal supervision."

EXTERMINATORS AND INSECTICIDES

It is ridiculous for customers to spend large sums of money for exterminators and insecticides when these can be prepared very cheaply at home by following the directions to be found in the various government bulletins. Which can be obtained from the Superintendent of Documents. Washington, D. C. at the small charge stated:

ANTS: Farmers' Bulletin, No. 740, "House Ants," 5c

BEDBUGS: Farmers Bulletin, No. 754, "The Bedbugs," 5c

COCKROACHES: Farmers Bulletin, No. 658, "Cockroaches," 5c

FLEAS: Farmer's Bulletin No. 897, "Fleas and Their Control," 5c

FLIES: Farmers' Bulletin No. 1408, "The House Fly." 5c

MOSQUITOES: Farmers' Bulletin No. 1570, "Mosquito Remedies," 5c

MOTHS: Farmers' Bulletin, No. 1353, "Clothes Moths." 5c

RATS: Farmers' Bulletin No 1533, "Rat Control," 5c

Materials for Insect Control

"Common Insects of the Household" Cornell Extension Bulletin No. 202 FREE, Office of Publication, College of Agriculture, Cornell University, Ithica, N. Y.

"The Control of Household Insects," Agricultural Extension Service University of Illinois, Agricultural and Experiment Station, Urbana, Ill. FREE.

"Insect Powder," U. S. Department of Agriculture, Bulletin No. 824 from Supt. of Documents. Price 20c.

Cedar lined closets do not kill moths. Neither do the so-called "Moth Killing garment bags. The latter keep moths out, but do not kill those already in. Avoid solutions which contain a salt of arsenic. Most other exterminators on the market are ineffective and largely a waste of money to consumers. When you buy insecticides under their real names, instead of their trade names, you save from 80 to 90 per cent.

NO WHEAT OVERPRODUCTION

Illinois State Journal: The popular notion that the wheat surplus is due to excessive production has been exploded. A check-up shows that the amount now grown is less than what was produced thirty years ago. Apparently, it is a clear case of decreased consumption.

While bread still hold its place as the "staff of life" and the most important of human foods, it is now supplemented with a great variety of other foods. Improved transportation facilities make it possible to transport large quantities of all sorts of food from one section of the country to every other section at all seasons of the year. No community is isolated from this general distribution.

The chief reason for the surplus however, is that so many humans are unable to have bread. If the straving millions of the orient who have never known the taste of wheat product could be fed, there would be no unconsumed wheat anywhere in the world. Instead of chiding the farmer for producing an excess, we would be demanding that he speed up grain production.

RETIRED FARMER'S DEATH REVEALS LIST OF DEBTORS

(From Chicago Defender.)

Sheveport, La.— The late Irving S. Stokes, retired farmer residing in this city, who died here last summer, left his widow, Mrs. Sarah W. Stokes, 1450 Jordan St., an estate valued at $45,000 according to records on file in the Caddo parish district court.

The estate consisted of real estate, personal property and notes receivable. The succession suit revealed that quite a number of prominent Shreveport people were heavily indebted to the late farmer, and publication of the civil proceedings setting forth these facts created a sensation in Shreveport last week.

BUT WE HAVE THE HILL

A young American girl, traveling through Canada, saw in one of the public parks there an old cannon, carefully guarded by an old soldier, She questioned the soldier about it. That cannon," the soldier replied, "was captured by the British troops from the Americans in the battle of Bunker Hill in 1775. We keep it here as a memory of the victory." For a moment the fair American was staggered, and then she answered with spirit. "That's all very well; but, at any rate, we have the hill!" —Kansas City Star.

GOING DOWN?

Washington Post: Donkeys are cheaper than at any other time since 1832, and may be cheaper still after November.

A Statement on Negro Business

By The Executive Committee of the National Negro Business League

In a period of adversity such as the world has witnessed since 1929, people of all nations and all groups are drawn together in the common purpose of correcting the causes and improving the unsettled conditions. In seeking to attain such mutual objectives, the spiritual essence of human values reaches its fullest expression and the bond of world brotherhood is stronger than at any other period of human experience.

Like all other groups, the Negro, in the present depression has sustained severe losses, both in the reversal of individual business enterprises as well as the withdrawal of much of the support which has hitherto come from philanthropy for the advancement and development of our people.

Over against the losses, the Negro has gained a new solidarity, a new sense of responsibility, and a new vision of his latent powers.

The Executive Committee of the National Negro Business League in its annual meeting held in New York City Tuesday, June 21st expressed high praise to those business pioneers of our race who have established a splendid record by "weathering the storm" of the present depression and would remind the members of our race that the gains in racial solidarity which have been forced upon us by the depression, will, if properly used and directed add greater economic strength and fortify the group against similar periods of adversity.

It is of utmost importance to record here the fact that Negro business enterprises which have been most successful are those which have made ideals in service the bed-rock upon which they are constructed. Racial sentiment alone will not build business. Neither will sharp practices nor selfish leadership.

Local Financial Groups Recommended

More and more as the Negro advances there will be need for local financial groups to provide capital for the small Negro business enterprise. An example of the type of organization needed is the People's Credit Union of New York founded by C. Benjamin Curley. Without palatial offices or salaries, this little organization through the unselfish leadership of its founder has loaned, in the two years of its existence, more than $45,000 in amounts averaging $150.00 per loan at an interest cost not exceeding 6 per cent per annum. Many individuals and struggling businesses in Harlem have been aided through this agency which operates very much like the Morris Plan. We commend this type of community effort to our people.

Practical Education Needed

For the Negro to properly equip himself for the tests ahead in business, we recommend that the heads of our schools and the various associations representing the education of our youth give serious thought to the practical needs of our race and wherever necessary, revise their curricula, especially in the commercial departments, to meet the changing demands of the present time.

Interracial Cooperation in Business

We heartily commend the idea of interracial cooperation in business. The tried business experience of sympathetic white friends is valuable in helping to formulate policies for certain types of Negro business and to give necessary stability. We would warn however against the selfish whites who too frequently exploit our people. The Dunbar National Bank of New York City, which is founded by the Rockefeller interests, represents the highest type of interracial cooperation in business. Here we find a mixed board of directors, a mixed staff of officers and a splendid staff of Negro clerical workers.

Trade Associations

The idea of the local Trade Associations has been given greatest impetus by the National Negro Business League through its local Business Leagues. No agency for local understanding and strengthening of Negro business is more important than local groups of business men and women who are banded together to study the economic needs of the race and to develop a program to meet these needs.

Negro Trade Weeks

In 1926 the Executive Committee formally endorsed the idea of the Negro Trade Week Campaign. This year there have been held a number of successful trade week campaigns and Trade Exhibits among Negroes. Particularly do we commend the efforts of the Harlem Business Mens Club in successfully conducting a Trade Week; the first Trade Exhibit among the Negroes of Harlem and the One Year Plan for local Negro business in Harlem. We have authorized the Secretary of the National Negro Business League to compile the Trade Week and Trade Exhibit experiences of this year and to spread this information among local Business Leagues and other trade groups among our people throughout the country with a view to having larger participation for next year. These cooperative advertising efforts are most effective in stimulating an interest in Negro business.

Negro Press

We express our deep appreciation to the Negro press for its unwavering interest in and support of Negro business. Negro newspapers and magazines are the direct reflectors of Negro opinion and Negro progress. As such they are increasingly valuable as advertising appropriations based upon gross volume to be used for advertising in Negro papers which can meet the standards of circulation and service.

The Housewives League

The Housewives League movement represents the buying power of Negroes and in its potential strength is one of the most important undertakings among Negroes. In its "Declaration of Purpose" the Housewives League states that it is organized "to conduct an economic crusade in behalf of the employment of our children and to promote the progress of our race." The League's "declaration" further states that its object may be rapidly attained by "affiliating with the National Negro Business League's efforts to organize Negro business in its various classes and groups." We hereby express our sincere appreciation to the faithful women of our race who are pioneering in this movement and have appointed a committee of three of our national officers to cooperate with the leaders of the Housewives League movement. We further urge the business men of our race to take full advantage of the intense interest of our women in the development of Negro business and recommend that units of Housewives' Leagues be organized in every city where there are local organized groups affiliated with the National Negro Business League.

The C. M. A. Stores

The C. M. A. Stores represent a practical demonstration of the fundamental teachings of the National Negro Business League and we give our unqualified endorsement to this movement and pledge ourselves to disseminate and properly interpret the program and policies of this effort to successfully place our people in the field of retail merchandising.

The Executive Committee Offers Specific Aids to Negro Business

In order to encourage all of the various racial activities set forth above the Executive Committee offers its service to the race and to the nation to assist in any and every way the advancement of the economic efforts of our race.

To that end, it is our purpose to bring to the policy-making group of the National Negro Business League men and women who are active in business and who are willing, as leaders of our race, to give of their time and their experiences the essential stimulus and methods of procedure to enable the League to serve all types and classes and groups among us who are in business or who plan to enter business.

We further offer, through our president, Dr. R. R. Moton, to appoint a special committee of capable, experienced men to meet committees representing special business interests of our race, whenever such joint meetings may serve to consider some specific problem affecting the special group. We believe through such joint conferences serious difficulties for Negro business groups may be averted or minimized.

Support Needed

To do this work successfully we are compelled to appeal to the Negro public to join with us in giving support to the National Negro Business League. This will mean more memberships and contributions. The amount needed is $5000 for competent field workers. Our President, Dr. Moton, is behind this appeal and will be generous through such financial cooperation.

Appreciation

The Convention for 1932 made history in that it was featured by a marvelous Trade Exhibit staged by the business men of Harlem. To the Harlem Business Men's Club which acted as host to the Convention we express our sincere thanks.

During the past year Dr. Julius Klein, Assistant Secretary of the United States Department of Commerce has contributed an article on Negro business to one of our magazines and in one or two instances has referred to the National Negro Business League and to Negro business in his nationally popular radio talks on business topics. For his letter of greetings read to our Convention and for his interest and efforts in behalf of Negro business we extend to Dr. Klein a special vote of thanks and appreciation.

To the Honorable Robert P. Lamont, Secretary of Commerce, and his associates we express our thanks for the constant assistance rendered to Negro business through our own Mr. James A. Jackson who is officially represented in the department. We hope our business men will call upon Mr. Jackson for the very valuable advice and printed matter which the Commerce Department make available for all types of business men and women.

Conclusion

Finally, as we face the future, there is increasing need for a strong national organization among us to coordinate the commercial activities of the race and to work for a sound economic program to insure the progress of the Negro through enlarged opportunities for employment and service. For thirty-two years, the National Negro Business League has endeavored to meet these needs and we therefore invite, solicit, and urge the Negro public to support this movement in order that its power for service may be strengthened and its influence extended.

Respectfully submitted,

Members of the Executive Committee of the National Negro Business League Present at the Thirty-Third Annual Convenvention.

LOUISIANA BAPTISTS MEET AT BATON ROUGE

President J. W. Hurse and Secretary Henry A. Boyd, Invited Guests for the State.

Baton Rouge. La. —(Special)— Baptists from throughout the state of Louisiana are to gather in this city this week to hold the annual State Convention. The Rev. Wm. Grimble, president, located at Alexandria has made several public anouncements concerning the distinguished guests who will grace the occasion with their presence. He said the Rev. J. W. Hurse, D. D., president of the National Baptist Convention of America is expected on July 28th, Thursday, and that every arrangement is being made to give the president a rousing reception and a great audience.

Dr Hurse has already accepted his invitation to be present, and stated that he would go from this city from this convention on to Houston where he is to hold a conference with the leaders of the Lone Star state and with the city of Houston, to effect final arrangements for the Convention which convenes there on Sept. 7th.

He said with regard to Rev. Henry Allen Boyd, that the distinguished secretary was halted between two opinions, as to whether he should come down in Louisiana or go on to New York, as he has both engagements on his calendar, and that by fast riding he might make both Conventions, although he is undecided as to whether it would be advisable, since the president of the Convention is coming and since their visit would be just two days apart.

President Grimble is to send a letter direct to Nashville, and the two will make a final decision, but if the Rev. Mr. Boyd appears, then he will be the principal speaker at the mass meeting Sunday afternoon, July 31.

PRIVATE OVERPASS BUILT FOR CATTLE OVER NEW HIGHWAY

The state of New Hampshire has built a private grade crossing at Salem, N. H., cross the new trunk line on the Lawrence-Manchester highway. The grade crossing is built on what was formerly land of Daniel G. Tenney, a breeder of prize cattle at Selem, reports the Boston Globe.

When plans for the new Manchester-Lawrence highway were drawn, it was found that the road ran directly through Mr. Tenney's farm.

Seeing the predicament he would be in trying to get prize herd to pasture across the new highway twice daily, Mr. Tenney approached state authorities and offered to relinquished the land needed for the highway at $25 an acre, if the state would construct a bridge so that his cattle might be taken from the barn to pasture land without having to cross the highway.

The State agreed and paid Mr. Tenney $275 for eleven acres of his land and started construction of the cement bridge. The bridge, erected at a cost of about $3,000, is nearly complete and when done will be the first private cattle overpass in New Hampshire.

Based on a recent decision in a dispute case, Mr. Tenney could have collected between $1,000 and $20,000 in land damages.

To protect his stock in the years gone by Mr. Tenney's father made an agreement with the railroad for the construction of an underpass so that his cattle would not have to cross the railroad tracks. This underpass is still used.

Mr. Tenney's herd is valued at about $100.000 and with the new bridge completed he will be able to drive his cattle from the barns under the railroad and over the new roadway, which carries very heavy traffic at all times.

Mr. Tenney estimated that without the bridge it would take him all day to get the herd safely from the barn to pasture.

Application for Membership

NATIONAL FEDERATION OF COLORED FARMERS (Inc.)

Vincennes Hotel, Chicago

As a farmer, I believe the time has arrived when the Colored Farmers should form a National Organization devoted to diversified production, grading, packing, shipping and marketing of farm products and to the purchase of needed farm supplies through co-operative methods, to the end that a more prosperous financial condition may result from their efforts as producers.
I hereby subscribe $5.00 for membership in the National Federation of Colored Farmers for a period of 12 months from date. Also $1.00 for an Annual Subscription to the Modern Farmer.

Name ..... Address .....

City ..... County .....

State ..... Date .....

THE MODERN FARMER

Official organ of the National Federation of Colored Farmers

Leon R. Harris - - Editor

Published Monthly by the Modern Farmer at Nashville, Tennessee, and Chicago, Ill.

Nashville, Tenn., Office 447 4th Avenue, North.

Chicago, Ill., Office: Vincennes Hotel, 36th and Vincennes Avenue.

Devoted to the interests of the Farmer, Truck Gardener Livestock and Poultry Breeder, the Home and the People.

Entered as Second Class Matter, April 10, 1929, at the Post Office at Nashville, Tenn., under act of March 3, 1879

All contributions for publication in the Modern Farmer should be addressed to The Modern Farmer, 447 4th Avenue, North, Nashville, Tenn.

No libelous matter will be published Unsigned articles or letters, and those written on both sides of the paper will not be used.

Subscription price $1.00 per year, payable in advance. Personal checks must be certified. Make all checks or money orders payable to The Modern Farmer.

Advertising rates and sworn circulation figures presented upon application.

"OUR SLOGAN"

STAY ON THE FARM IF YOU'RE ON IT! GO BACK TO THE FARM IF YOU'RE OFF IT!

THE LAW

"It is hereby declared to be the policy of Congress to promote the effective merchandising of agricultural commodities by encouraging the organization of producers into effective associations under their own control.

The Board is authorized and directed—to promote education in the principles and practices of cooperative marketing—to encourage the organization, improvement in methods, and development of effective cooperative associations." (Public—No. 10—71st Congress. Sec. 1-5.)

THE GOSPEL

"This law is predicated upon the ability of the farmer to manage his own business, once he is organized to do so. Cooperation is the key to it and only in exceptional cases can the Federal Farm Board have any dealings with a farmer who is not a member of a producer-owned and producer-controlled marketing unit." Hon. Sam'l R. McKelvie, Member, Federal Farm Board.

The National Federation of Colored Farmers believes that the Colored Farmers of America should own and control their own co-operative associations.

"Co-operation With All—Affiliation With None."

NATIONAL FEDERATION OF COLORED FARMERS INC.

Vincennes Hotel, Chicago, July 6, —News Bulletin —To be read to members in meeting only.

Look Ahead

Our race group exercises too much hind-sight. As a rule we wait until a thing happens before we try to avert it. We must look and plan ahead. To do this we must keep well informed as to conditions in general. The Negro farmer needs more information than he does money, and this is why we send out at regular intervals our news bulletins.

We should try to keep out of hell on earth as well prepare to avoid the hell after leaving this world. Join in firm solidarity to be freed from debt slavery and then victory will be ours.

Preparing for Next Winter

We again urge our members the importance of putting in cans or jars, all the fruits and vegetables they will be able to grow or purchase this summer and fall.

It is true there is a tremendous surplus of food everywhere, and yet people are going hungry for the want of food. In the larger cities there is already much suffering and it is predicted that conditions will get worse as the winter months approach.

We are also reminding you of our instructions issued a few weeks ago to have larger patches of both sweet and Irish potatoes, peas and peanuts. By all means have twice as many hogs and chickens than you have ever had before. Keep your gardens well cultivated and plant something every week in order that you may have an ample supply of fresh vegetables throughout the entire season.

Conditions this winter will be nothing short of disastrous. Those of our members who will begin now and produce and save enough food and feed to supply themselves this winter and spring, will be able to take advantage of an opportunity to better their condition another year.

Owing to the very low prices now being paid for chickens, eggs and butter, it is unwise for you to attempt to sell or trade them, but use these commodities on your home table and reduce the cost of your grocery bills.

Statistics show there are less eggs in storage than at any time since 1903, and we are expecting the price to advance very sharply in the next few weeks.

Hogs are advanced almost daily, and in our opinion will be much higher this fall and winter. It will be to your advantage to produce meat enough to carry you for at least 12 months. It is predicted that the western states will not have a large hay crop this season. Most of our members who live in the southern states fight grass six months and buy it six months. Begin now and save your hay and fodder.

Our reports from the cotton states reflect there will be another heavy crop this fall. There will be around 12 million bales left on hand from last season. We can see nothing to indicate good prices.

Present quotations range from 4 to 8 cents per pound for spot cotton — according to trade.

Government Loans

On June 18th Congress passed without a dissenting vote a bill broadening the powers of the Reconstruction Finance Corporation to authorize loans to livestock and poultry farmers as well as, dairy farmers, and also to those who may have crop failure during 1932.

We will give further information along this line in our next bulletin.

Opportunities for Another Year

All members who wish to make changes another year, we will in all probability be able to aid them in renting, leasing or buying some of the finest farm lands in most all of the southern and middle western states.

Just now we have a 160 acre farm of very fine land in Mississippi that can be bought for $5.50 per acre. Five dollars and fifty cents per acre. Any four of our members could go in together and buy this farm and each take 40 acres.

We also have a 600 acre tract in the delta of Miss. that can be brought on any kind of terms for another year. For full particulars write this office.

Annual Convention

Our annual convention will be held the latter part of either October or November. It will be the biggest and best that we have ever held, and the program will include some of the most outstanding men and women of both races, who will bring messages of weight and worth.

Officers of all units are again reminded to have their members pay the 25 cents convention tax. Prizes will be offered again this year for the following:

Best made baby dress size 1 year old, child's dress size 5, woman's dress— any size, man's shirt —any size, quilt, piece of fancy work, display of canned fruits and vegetables, peck of sweet potatoes, irish potatoes, turnips, beans, field peas, dry onions, ears of corn, stalk ribbon cane and largest pumpkin.

A prize will also be given to the unit that makes the largest purchase of groceries and supplies co-operatively during the year.

We will also award prizes for best cake, loaf bread, and to the unit who renders the best statement of their accomplishments during the year.

We are also working with a view to try and be able to offer a farm of about 25 or 30 acres to the member who will bring in the largest number of new members. We will advise about this further in our next bulletin. Committees will be selected and announced later.

Credit Corporation

All units are urged to continue their efforts and raise their capital stock fund. Keep all such monies that are paid you and place it in your home treasury and bring it with you to the convention. This applies to the captial stock money only, and you will continue to send in to this office money collected on membership dues and convention tax.

We are hoping to be able to complete the credit corporation by the end of the year.

General Market Conditions

Members who buy together through their units are able to purchase granulated sugar at 3 7-8c per pound or 3.75 per hundred. Boiling bacon less than 4 cents per pound. Patent flour from 2:90 to 4:60 per barrell, pure lard around 5 cents, good rice from 1.25 to 2.00 per hundred. Best corn meal at 25 cents for a 24 pound sack. 5 string brooms 1.59 per dozen or about 14 cents each. Wheat shorts 74 cents per 100 pound sack, pint size fruit jars 59 cents, quarts 69c and gallon 93 cents per dozen. The tin cans will cost about 1.48 per dozen for the 2s and 2.01 per dozen for the threes. This figures about 38 cents per dozen for the 2s and 5c per dozen for the threes. Members who pack their fruits and vegetables in tin cans should buy co-operatively a canning outfit and save considerably in the cost.

Movement to Reduce Taxes.

There is a very strong movement to make a fight for reduced taxes on farm lands throughout the country. We are lending every effort to this cause.

Red Cross Flour

The Federal Farm Board has turned over to the Red Cross forty five million bushels of wheat to be ground into flour and shipped into sections where it is needed. We understand it is to be given away to those who are in need. If you sign up for any of this flour and fail to receive any, please let us know.

Revamped bill providing for the distribution of a half million bales of cotton to relieve distress was also approved by the United States Senate June 30th.

The Common House Fly

It is not the big and powerful creatures which are a danger to mankind. It is the small pest, and the common housefly is about the worst. Scientists have traced more than 30 diseases to flies.

Keep your premesis clean, and be sure to screen your doors and windows. Spray freely.

The Pension Bill

The pension bill has not been acted on as yet. We will keep our members informed.

Instructions to Sewing Circles

Miss Mary Chalmers a Designer and Cutter for one of the largest dress manufacturers, and a graduate of the Master College of Chicago will direct the instructions and furnish a series of lessons to you.

She says, "Our clothes are important, for they aid in promoting our health. Shall we learn to choose the material and learn how to make useful articles of clothing for ourselves and family? Sewing is an art which all girls should learn. If we know how to sew we can keep our clothes in order and always appear neat and attractive.

First. Make a study of your material and decide what goods are best suited for making garments.

Second. Make a study of your guide and how your pattern should be laid out for the garment before cutting the material.

Shall we learn to take measurements, and if so, then we can better judge if our patterns are too large or too small. It will also aid you in sending for patterns or drafting them.

Measurements for dresses; Bust measure is easy to take. Pass the tape measure under the arm over the full part of the bust—not too tight. Bring it to the center of the back, stopping the tape slightly upward between the shoulder blade. Waist measure: A snug measure around the small part of the waist. For girls, the measure should not be too snug. Skirt measures are taken from the waist line to the floor, at the front, at the side over the hip and at the back.

For the short skirt one must deduct from the full length the number of inches desired from the floor. The second lesson will be given in our next bulletin.

Back Membership Dues

Every unit in the federation is considerably behind with the membership and convention tax. Officers are urged to ask the members to help us just at this time.

Increase in Postal Rates

On July there will be an increase in the postal rates. The ordinary letter will cost 3 cents instead of two cents.

LOCUSTS TRAVEL BY PLANE

Living African locusts were carried by airplane from the Sudan to London recently. They are now in the London zoo, where an attempt to rear them will be made. The locusts were carried with locust eggs in a case in which green stuff had been placed for food.

If you would reap Praise, you must sow the Seeds, gentle words and useful deeds. — Benjamin Franklin.

SOME IMPEDIMENTS AMONG NEGRO OWNERS AND TENANTS ON FARMS

William Caesar Cheers, Glenn Ellen Farm Murfreesboro, Tenn.

I have found through observation that there are about two very damaging features about the average Negro farmer who has to deal with tenants on his farm and even with himself.

One of the most grilling however is the matter of having to deal with the tenant. It appears that the Negro farm tenant just will not look upon his Negro landlord with the same respect that he shows to a white man in the same capacity. If a Negro (not all however) goes on a farm owned by one of his race, he seems to feel that because they both are Negroes, he should not be expected to come up to the ready fixed agreements or contract set forth. He does not feel that he should get up and out and make the work what it should be. He believes in sleeping too late in the morning, he believes that he should not be told when he has failed to do the things for which his contract calls and gets offended if he is reminded of his misgivings. The same fellow will in most cases go on the farm of a white and go early and late or he is told that his rights as a tenant are forfeited. Hands put in his field and the crop is worked out.

The cost of such is then deducted from his share of the crop at harvest time, or if he does not like what the landlord does in such cases, he is asked to move and all of his rights are discarded.

But if he is on the farm of a member of his own race and its thus treated, that landlord is charged with an uppardonable sin. So far that part of the story.

Now there is found a grievious fault among a few Negro farm owners and their wives. It is a known fact that a man cannot attain success on a farm and stay in bed until seven o'clock in the morning. He should get to bed in time to get plenty of rest, and rise no later than five A. M. while the air is cool and fresh. His stock should be well fed at night with plenty of hay and grain taped off with a light early morn feeding that they may drink plenty of water before being put to work, carried to the field and worked until the heat of the day, brought in, watered and fed well. The farmer should at the same time go to his place of abode where he should find a well prepared vegetable dinner for himself. After the stock and he have eaten and had ample rest, he should hook up and return to the field and stick to it until the sun has hidden himself behind the western hills. I have found too many farmers, wives who possess the wrong idea about farming. I have found that in many cases where the man gets up early and goes to the field before eating, his wife will remain in bed until seven and eight o'clock before even thinking of getting breakfast for the old man. He will often work until he is so hungry that when he does eat breakfast, he will then find himself eating too much or he is so weak that he cannot eat enough. Then he is unfit for any further work that day.

The best way as I have noticed as a farmer, to attain good results upon the farm, is that there should be cooperation among the husbands and the wives, that the husband should posess a strong desire to do and then do. The housewives or those responsible for the cooking should have the meals ready at a reasonable hour and let the man get to work. Of course some men do not like early breakfast, they had rather go out and toil for two or three and five hours before eating. Some men find that they can better relish their morning meals after a few hours' work. In those cases it is all right for the wife to take that extra beauty nap and then get up in time to have the meal ready at the time expected.

But as afore stated, Negroes in many cases sleep too late for business. The reason for a bit of this habit however is that too many of them try to keep late hours at night going to every place of pleasure, and then sleep to catch it up. I know a little town where lives about fifty white families and about five Negro families. These Negro families all own their own homes and some of them own little farms. The whites are some farmers others factory hands and such. You may pass through this little country place early in the morning and note even at five A. M. lights are burning in the homes of whites, they may be seen eating breakfast or on their way to work. You may look toward the Negro homes and it is still dark.

They have never waked up. The whites will get out at least two and three hours earlier than the Negroes. May I make it clear that this does not apply to all Negro farmers. But there are as I said in the outset, too many of these kind of farmers among our people.

This is also true with many of the Negro restaurant keepers. You can pass a Greek stand at five A. M. and get hot coffee, chili and many other such things as he may carry, but to the Negro restaurant at seven and many of them are just making fire in the stove.

These same folks, sad to say, when working for the other fellow will be on the job at any hour demanded, even if at four A. M.

EDDIE TOLAN'S WORLD RECORD

Two Race Men Uphold U. S. Reputation

Olympic Stadium, Los Angeles, Aug. 1—(AP)—Two American Negroes restored world sprint supremacy to the United States today, sharing the spotlight of the Olympic track and field championships with two sturdy Irishmen in another big splurge of record-breaking.

Inches apart in a whirlwind finish, Eddie Tolan and Ralph Metcalfe finished one-two for the United States in the final of the classic 100-meter dash.

It was so close that several of the judges, as well as many of the 60,000 spectators, disputed the result, but the judges finally declared Tolan the victor by a hand's breadth and credited him with 10.3 seconds, equalling the world record.

Altogether, the day's spectacular athletic battle involved the equalling of two world records in men's events, a new world mark for women sprinters by the Polish-American girl, Stella Walsh, and the creation of new Olympic standards in four events.

It brought the total of new Olympic track and field records up to nine for only two days of competition.

Ireland Wins Twice

Although the United States gained its first major objective in winning the 100-meter crown for the first time since Charley Paddock captured it in 1920, and more than doubled its team total of points the Irish Free State's flag twice flew to the Olympic victory staffning the 100-meter crown for the head to give Old Erin more than an ordinary share of honors.

Dr. Patrick O'Callaghan, the 245-pound Irish giant, gave the big crowd a thrill by winning the hammer throw for the second straight Olympaid, with a throw of 176 feet 11 1-8 inches, on his final trial.

His youthful countryman, Robert Tisdall, an Oxford student, romped to a sensational victory over the 400-meter hurdles.

Tisdall experienced the unique sensation of being crowned world champion, but at the same time being deprived of a new world record of 51.8 seconds because he knocked over the last hurdle in his victorious journey. A stride behind him came the young American Southerner, Glenn Hardin, who was timed in 52 seconds flat, and forthwith credited with a new Olympic mark besides equalling the world record. Right behind him was the man who set the world record, Morgan Taylor of the United States, and Lord David Burghley of England, the 1928 Olympic champion.

Percy Williams, the slim Canadian, who startled the world by scampering off with the double Olympic sprint honors in 1928, also was dethroned as America's best dash men had their biggest day since pre-war Olympic times.

The United States took three of the first four places in the 100-meter final as George Simpson, the former Ohio state star, failed by a narrow margin to overhaul Arthur Jonath, German favorite, who took third place.

The South Atrican, Dan Joubert, and Japan's game little sprinter, Yoshioka, finished fifth and sixth to complete the sprinting cast but over the last 50 meters of the route it was merely a question of whether Tolan or Metcalfe would win.

Tolan, who had lowered the Olympic record the day before to 10.4 seconds, got off to a better start than Metcalfe, but the rangy Marquette Negro was coming like a black thunderbolt at the close.

As botl, new past the judges, it seemed to many Metcalfe had shoved his chest in front, though there were plenty, too, who thought Tolan was ahead.

It looked like Metcalfe to the American head coach, Lawson Robertson, and Tolan himself apparently thought he had lost as he ran over to congratulate Metcalfe. Meanwhile the official announcer cast his voice in Metcalfe's favor and the big crowd was stunned momentarily to silence when Tolan was finally proclaimed the winner by the officials. It was believed only the pictures would show exactly what happened. The judges view them at a private showing tonight.

All three Americans qualified in the 3,000-meter steeplechase trial heats, in which the Olympic record twice was broken. Tom Wenson of Great Britain trotted in just ahead of Walter Pitchard, American collegian, to cut the mark to 9:18.8, then the sturdy Finnish ace, Volmari Iso-Hollo galloped over the jumps to lead the other two Americans, Joe McCluskey and Glen Dawson, and post a new record of 9:14.6.

Walsh Breaks Record

For the second straight day, in the women's track and field competition, the feminine contingent demonstrated how to dispose of world records completely. On the heels of "Babe" Didrickson's performance for the United States in the javelin yesterday, Stella Walsh, the Cleveland girl, competing for Poland, lowered the women's 100-meter record to 11.9 seconds. In fact, she touched this time twice, in her first trial and then the semi-finals, to remove the former world mark of 12 seconds, credited to Myrtle Cook of Canada and Tolina Schurman of Holland.

Dr. O'Callaghan's victory was one of the day's most dramatic episodes as he swung his implement out beyond the marks of all rivals on his final appearance in the seven-foot ring with the hammer.

Prairie View State Normal and Industrial College

Prairie View, Texas

SUMMER SESSION CLOSES AT PRAIRIE VIEW; THE YEAR'S WORK QUITE SATISFACTORY—By Napoleon B. Edward

Prairie View State Normal and Industrial College will close its annual session, regular and summer, August 13th.

The Commencement sermon will be preached Sunday morning, Aug. 7, by Dr. Willis J. King, president of Samuel Huston College, Austin, Texas. The Commencement address will be delivered by Father John B. Boyce, rector of the Episcopal Church, New Orleans, La.

The annual report of Registrar John B. Cade shows that the enrollment for the year beginning September 16 and closing August 13, was 1509, there being 662 in the regular and 847 in the summer session. Reports from the registrar's office show, also, that the number of graduates from the college, including those from the trades and industries, for the year ending August 8 is as follows: Regular session, 89, summer session, 63, total, 152.

Owing to the depression affecting our group in all walks of life, the annual enrollment shows a decrease of about twenty per cent compared with the enrollment in normal times However, the enrollment has exceeded the expectations of the Principal and college authorities.

Speaking from an academic standpoint, it is said by teachers and students alike that the work at the college has been of a high grade and quite satisfactory as a whole. Another feature regarded at the college as of much significance is the increasing attendance of students with the bachelor's degree. "There are twenty-seven students enrolled in the summer session holding bachelor's degrees," said Registrar Cade. "These graduates have enrolled,' 'he said, "to work either for a second bachelor's degree, to extend or secure certificates, or to pursue special courses to better prepare themselves in their various professions and avocations."

Dr. J. C. Anderson, chief health officer of Texas, spoke to the summer school of Prairie View State College recently. He was introduced to 900 teachers and students in the auditorium by Principal W. R. Banks.

Among other things Dr. Anderson commended the work fostered at Prairie View by the state and said he favored appropriations by the Legislature of Texas adequate for the training and promotion of good citizenship, so that those who receive the benefits thereof would render the largest possible service to their families and communities.

Dr. Anderson discussed at length the organization and work of the state health department and asked the co-operation of teachers in the promotion of health in the state. He said there were two colored health nurses now employed by the health department whose services would be available as far as possible on applications made to the state health department at Austin, Texas.

Dr. Anderson warned the teachers against spoiled and impure food and said it was the duty of the department to protect the people against impure food and drugs by inspecting the stores and markets. He said the sanitary bureau inspects the milk and water supply of the school and home and renders all of its services without charge to the people. Dr. Anderson showed the contagious possibilities of unsanitary closets and urged persistently that the people everywhere be vaccinated as a protection against various contagious diseases. He said that the state health department through its various bureaus would given information and suggestions on diseases and health, free, when proper applications are submitted for consideration and advice.

INTER-RACIAL COMMISSION ADOPTS RESOLUTIONS

Resolutions deploring "the agitation incident to the present political campaign as tending to intensify race prejudice," were passed by the white section of the Tennessee Interracial Commission in meeting Monday.

The resolutions were signed by Dr. James E. Clarke, president of the commission, and Dr. Julius Mark, chairman of the executive committee.

The paper referred to the recent question of the Negro in the Democratic primary in Tennessee, and stated that no citizen, white or black, should be denied the right to vote in the primary of either party.

"We call upon all good citizens to protest against every attempt to stir up interracial prejudice and to demand that every citizen be accorded his full right under the law," the paper stated.

The resolution in full follows:

"The white section of the Tennessee Interracial Commission, concerned for the conservation and development of the highest type of citizenship in Tennessee and especially interested in the preservation and promotion of such interracial relations as shall work for the highest good of our colored citizens, deplores the agitation incident to the present political campaign as tending to intensify race prejudice.

"In the name of that liberty guaranteed by the State Constitution, we assert that no citizen, white or black, who expects to support the nominees of any political party, should be denied the right to vote in the primary elections of that party. To deny such a right is to violate the Constitution, and any individual or group willing to violate the Constitution in one particular for selfish ends cannot be trusted to obey the Constitution in other particulars or to administer government in accord with its provisions.

"In the name of clean and honest government we maintain that we cannot hope for such government at the hands of any who, by bribery or undue pressure upon the weak and ignorant, secure illegal votes for themselves or their partisans, and any who resort to such practices should be repudiated as unworthy of trust.

"In the name of law and order and of that human brotherhood we seek to establish we call upon all good citizens to protest against every attempt to stir up interracial prejudice, and to demand that every citizen be accorded his full right under the law."

—Nashville Banner.

Congressman DePriest Invited To Speak in Nashville

Full Program and Complete Plans Now Being Worked Out

Hon. Oscar DePriest, Member of Congress from the First Illinois Congressional district, has been invited to speak in Nashville. While the exact date of his coming and the place where he is to appear, have not been announced, it is definitely agreed that he is to come as a committee of two of the well known citizens in Nashville not only got this permission from the Congressman, but they are busily at work on plans trying to select a date that will suit the citizens of Nashville and middle Tennessee.

Congressman DePriest spoke Saturday of last week in Bowling Green, Ky., to an over-flow audience. The populace of Warren county gave him an audience and a hearing that was flattering. He left Bowling Green immediately and is now touring in Kansas.

A member of the committee from this city will have a conference with the Congressman at his Chicago office between the 10th and 12th of the month, then the exact date and place will be relaid to Nashville so that plans may be completed. Mr. DePriest has been to this city several times. He appeared here merely as a guest of Henry Allen Body's Sunday School Class of Mt. Olive Baptist Church, where he was greeted by a packed house, but it was not a scheduled address. He was also presented at a reception at the residence of Rev. Mr. Boyd when about two thousand people shook hands with him, but he has not come to Nashville for a set speech. This time the Illinois Congressman, hailing from one of the wealthiest districts in the United States, will make a special address.

Mr. DePriest has just been renominated by the Republicans of Illinois to succeed himself. He is to come before the voters in the November election for their final approval. He received a larger majority in the recent Republican Primary than he did on either of the two former occasions when they voted upon him. He led all of his opponents, it is said that he is perhaps one of the most popular men not only in Illinois, but in the nation and in the halls of Congress.

The preliminary announcement of his appearance, while not confirmed, is believed to carry with it a Middle Tennessee arrange; that is, representatives are to come here from as far west as Jackson and as far east as Chattanooga. At present the only problem before the committee of two is to secure a building large enough to accommodate the thousands who will want to see, hear and shake hands with him. "His speech will not be broadcast," said a member of the committee this year.

Howard Medics Pass State Boards

Washington—(C N S)—Despite a large percentage of failures among the white candidates for license to practise medicine in Maryland, Virginia and the District of Columbia, all of the colored medical school graduates taking the recent medical examinations of these three boards were granted licenses to practise in the respective communities.

Those licensed for the District of Columbia were Dr. Peter Douglas Johnson, Dr. Howard Marshall Payne, both graduates of the Howard Medical School, and Dr. Henry Arthur Callis, associate professor of medicine at Howard University, who although an authority in the field of pathology and a practitioner of several years standing, was required to take the District Board because of a ruling of this Board which requires that such practice shall be two years prior to the application for reciprocity. Dr. Callis had been a member of the staff of the Tuskegee Veterans' Hospital for several years and had not been engaged in private practice recently.

In Maryland eleven Howard men were licensed, four of the class of 1932; Julian O. Blache, L. Z. Johnson, Jr., William H. Sinkler, Jr., and James K. Smith; six of the class of 1931; Claude L. Cowan, Ferdinand N. Forbes, Lawrence W. Green, James A. Henry, Henry A. Washington, Alphonso N. Seabrook; and one of the class of 1930; John O. Cummings.

Five colored physicians were licensed in Virginia. One from Meharry, Robert Johnson; and four from Howard—Samuel A. Brown, '31; Lester M. Archambeau, '31; Perfecto Andino Espojo, 31; and Edward Silvera, 32.

FARM BOARD'S REDUCTION

(Continued from Page 1.)

Byrnes, to more than the usual $1,000,000.

Further Waste Opposed

In connection with debate on the Farm Board appropriation, Senator Ashurst (Dem.) of Arizona, told the Senate he would "never again vote to give it funds to waste or otherwise." He said the senate was unaware of the feeling throughout the country concerning Farm Board operations, and he advised that Senators "pay some attention to that feeling before it is too late."

The Arizona Senator's remarks were followed by a declaration by Senator Smoot that he found it necessary "to admit that I was wrong when I advocated the Farm Board."

"I thought it would do some good," he said. 'I favored it and I worked for it; but I am now compelled to admit that I was wrong, and I am willing to admit my mistake."

INTERESTING NEWS NOTES

(Continued from Page 1)

So many lambs have been killed by dogs in South Monmouthshire, England, that farmers armed with shotguns are patrolling fields at night.

The Agriculture Department estimates that a corn pack of ten million cases will be required to satisfy this year's consumption demands and leave a carryover somewhat above the five year average.

Ohio has 1237 colored farm owners. They own 92,804 acres of land and the value of their land and buildings is over five and a half million dollars.

Illinois Farmers

There are Race famers in 72 counties in the state of Illinois and our farmers own farms in 54 counties. Eight Illinois counties produced crops of cotton last year. Illinois offers many advantages to Race farmers to locate. The agricultural wealth is unsurpassed by any state in the Union.

The officials of the Santa Fe railroad ordered an agent to leave a box car on a siding until a pair of robins nesting in it had hatched their young.

American chemists submitted grapefruit seed to X-rays for a few minutes and then planted it. The plants blossomed in five weeks. Regular grapefruit requires five years for its first blossoms.

EMPLOYMENT

(Continued from Page 1.)

ing cars due to summer travel of tourists, although this is lighter than usual.

Practically all of such changes are temporary, seasonal, or experimental. Business has not improved, and Negro workers are fewer today than before. Instances of improvement are rare, while losses are many. This condition reports of reduced numbers and has occasioned transients moving about from city to city, and in some communities this problem has greatly taxed relief funds. The number of Negroes joining demonstrations over failure to receive work is decidedly on the increase. Public agitations, whether over bonus payments, eviction notices, inadequate relief allotments, or general economic questions, are always sure to be participated in by Negroes. Pickets have been stationed in front of stores on 125th Street in New York City. College students find customary places of employment on boats and in hotels closed to them; and relief funds are reported consumed in almost all large cities.

PAUL POTTER

(Continued from Page 1)

agement.

As bondholders watch the market for their holdings dwindling to as low as 6 cents on each dollar they invested they find the only official interpretation of the meaning of those "instrumentalities" is given by the treasury department, which states that the bonds are exempt from all taxes.

U. S. Destroying Land Values

Thousands of farmers unable to keep up payments on their amortized loans have been losing their farms to the federal directed banks. Much in need of cash, the banks are selling farms once valued by federal appraisers for purposes of a 33 year loan at $175 to 250 an acre for as low as $50 an acre, each such forced sale further depressing land values in the community.

Criminal irregularies in the handling of some 2 billions invested in the farm land bank system prior to 1929 resulted in new policies and management under Eugene Meyers, directed by President Coolidge. Since then the banks which hold foreclosed farms have been selling them as rapidly as possible.

BAPTIST WORLD ALLIANCE

(Continued from Page 1)

full meeting of the Executive Committee itself)

The members gave careful attention to the correspondence, and to the views of the German Baptist Committee preparing for the Congress. They were also assisted by a cable mesage expressing the Judgment of the President, Dr. John MacNeill. They found the position as follows:

(a) The decision of the Executive Committee taken in February consistutes a definite instruction to proceed with preparations for the World Congress in eBrlin in August 1933;

(b) Such a decision cannot be cancelled except by the action of the Execuitve Committee itself, or by withdrawal on the part of the inviting body;

(c) While certain developments on both sides of the Atlantic have during the past two months raised new difficulties, these cannot at present be regarded as insuperable or as justifying the officers or the Program Comimttee in holding up arrangements;

(d) A meeting of the Executive Committee is to be held in the United States at the end of November; and if it should then appear that decisive changes for the worse have taken place on either side of the Atlantic, the Executive can exercise its powers with full knowledge of the actual position.

The Administrative Sub-Committee has requested the General Secretary to give publicity to this statement in order that it may be clear to our people that the position has been carefully considered.

The World Alliance will be true to its character as a fraternal body, and therefore will take care that, in a matter which concerns all, adequate opportunity of representing chinery of the session of the Exeevery point of view shall be afforded through the constitutional macutive in November eight months before the date fixed for the Congress. It may be added that the draft program for the sessions of the Congress is now all but complete, only a few names of speakers having yet to be inserted.

REGISTRATION OF BIRTHS

(Continued from Page 1)

wives who in most instances were the sole attendants of mothers at the time of birth. These were called together and through them the children whom they had brought into the world were registered. Some of the results of this registration campaign are presented here not so much because of the great number registered but as pointing the way toward getting the parents of the community in the habit of performing this sacred rite. Note below the children registered in this way in particular counties during Health Week.

County	No. Registered
Crockett	6
Davidson	50
Decatur	27
Hardin-Chester & McNairy	12
Haywood	8
Henry	24
Lauderdale	35
Loudon	6
McMinn	12
Rhea	3
Warren	14
White	6
Williamson	2
Total for Health Week	205

The doctor, the nurse and the health officer can advise any parents as to the steps to take in registering the child, enabling it at any time in the future to refer to a record that will give authentic account of the time and place of its birth and its parentage and thus settle any legal claim that may arise with reference to its identity. This means of protection to the child ought to be a source of satisfaction and pride to the parents that they have at least performed this one duty faithfully and well.

BACK TO HARVARD

(Continued from Page 1)

In writing about the anniversary, this class day exercise, he said:

'You might guess that we had one grand time. There were 356 classmates who returned to participate in this twenty-fifth re-union. They brought with them 330 wives whom they had married; they brought in addition to these wives 207 sons, 204 daughters. Such men as Harrold Vanderbilt of New York Central Railroad, W. W. Aldridge, president of the Chase National Bank, New York, George Whitney, partner and associate of the late J. P. Morgan, Edgar Stearne, sin-in-law of the late Julius Rosenwald, and many others of this stripe were members of the class. They were just as nice and friendly as they could be. My wife and son accompanied me and were made to feel perfectly at home.

After spending four days at Harvard, as many more in Boston, and a few days down in Maine, we took our way back home, returning through New York and Philadelphia, feeling that we had the best vacation of our lives.

LINCOLN'S IMPATIENCE

One of the most sarcastic rebukes ever given to a commander was contained in a note which President Lincoln wrote to General McClellan, who, in 1862, was acting against Lee, near the Potomac.

McClellan was conducting a waiting game, being so careful not to make mistakes that he made but little headway. "My dear Mr. McClellan," wrote Lincoln, "if you don't want the use of the army I should like to borrow it for a while." — Kansas City Times.

In a Carmarthen village in Wales a magpie has been taught to pronounce twenty words clearly.

GO TAKE A LOOK

DR. WILLIAM SMITH SAYS YES

Lake Wales. Fla. — (Special)—Dr. Wm. Smith, pastor of the First Baptist Church, this city, voted "Yes' on the advisibility of bringing Mrs. Bessie Martin Thorbone from the Canal Zone, where she is working with her husband, back to the states to attend the National Baptist Convention of America at Houston, Texas. He made this public anouncement Sunday night in the church when they had listened to his statement, had heard his pronouncement, because he had been asked by Henry Allen Boyd, the Congress Secretary, whether he favored bringing Mrs. Thorbourne back this year.

The First Baptist Church voted with him and agreed to send a donation at once to Nashville, which is to be relaid to Panama. In addition to that, he sent the following letter to Nashville endorsing the Sunday School Congress movement.

"Dear Dr. Boyd:—

This letter will attest my great admiration of your great work and worth to the race, and to our denomination in particular. I am herewith giving you my impression of the great Congress meeting just closed at Jacksonvile, Fla.

The Congress is of great benefit to the messengers that attend it. than the National Baptist Convention. Because of what is given out or dispensed. There is no time to wrangle over office nor lose time magnifying some individual man but it is listening to men of learning and experience who are specialists in their line of work. I shall do my best to have our people and especially those I come in contact with to purchase our B. Y. P. U. literature which is the best. Of course you know our S. S. literature is as good as the best. I thank you for selecting me as one of the B. Y. P. U. Workers. I have already received a few letters attesting the help they received in our department, and that they have already gone to work preparing to be at the next Congress meetthing we have as Baptist. God bless you and may you live long to help our people. I trust I have been of some help in making the B. Y. P. U. Department what you really wanted it to be.

Respectfully yours,
Wm. Smith."

FARM FAMILIES FINDING NEW HOMES IN CANADA

Special to The Christian Science Monitor

Edmonton, Alta.

During the past 10 months, 521 families, living on farms in the drought area in southern Alberta, have removed to portions of the Province where a good yield from the land is assured.

The railways and the governments have shared the transportation cost of this wholesale removal of settlers. While this movement of settlers has been going on for some years, the "exodus" reached its peak in the past year.

OXEN DRAW PLOW FOR FAIR BUILDING

One hundred years of agricultural history was pictured yesterday on the grounds of the Century of Progress Exposition, when ancient and modern methods of plowing were demonstrated at ceremonies marking the breaking of ground for buildings of the World's Fair gricultural group.

A team of oxen, pulling an eighteenth century plow, started the ceremonies at a signal from Earl Smith, president of the Illinios Agricultural Association. The plow, built in 1750, and once used by James Armour, ancestor of the Chicago Clan, is now the property of A. Watson Armour.

A BOOMERANG

A railroad man was ready to make his usual run. His wife instructed him to get her some turkey eggs to set. In passing through a small town a dirty country lad approached the enginees and asked him, "Don't you want to buy some buzzard eggs?"

Seeing an opportunity to play a joke upon his wife, he gave the lad a nickel for them. About a month later he asked his wife:

"How are your turkeys getting along?"

"Oh, I decided it was getting too late for turkeys, I put them in your lunch."

—Forbes Magazine.

TO SWEETEN RANCID BUTTER

Add 25 to 30 drops of lime chloride to every 2 pounds of the rancid butter. Work the mass up thoroughly; then wash in plenty of fresh, cold water and work out the lime chloride.

New York Physician Denied Passage on Steamship, Sues

New York—(CNS)—Claiming that the steamship company refused to permit them to embark on the Mauretania for the three weeks cruise for which they had obtained passage and accommodations. Dr. George Hutson Batson and his wife, Mrs. Costella Batson have filed suit for $21,000 against the Cunard Steamship Company and the National Pleasure Tours, Inc., through which they arranged and paid for their tour.

Dr. Batson claims that he paid the full amount of the passage and accommodations for three weeks, several weeks before the date of sailing. He received in exchange a certificate guaranteeing them passage and accommodations on the boat. All arrangements had been made and thir baggage, duly labelled, was on the boat which was scheduled to sail from Pier 4, Hoboken, New Jersey at midnight July 8. The names of the couple had been published among the guests. When the couple presented their tickets Dr. Batson claimed that they were told that there was something wrong "somewhere," and they were refused permission to embark, and a part of their luggage was removed from the ship to the pier.

Several parties of their friends were on the ship awaiting their arrival to bid theme bon voyage.

Dr. Batson and Mrs. Batson each are suing both companies. They each ask $10,000 damages for the humiliation they suffered, and $500 under the New York Civil Rights act for discriminatory practices.

Robeson Is Guest Artist

New York City—(CNS)—Paul Robeson was the guest artist at the concert of the Phil-harmonic Symphony Orchestra at Lewisohn Stadium Sunday evening. The orchestra formerly directed by VanHoogstraten, was conducted by Albert Coates. Mr. Robeson was accompanied by Lawrence Brown. More than 5,000 attended the open air concert.

THE MODERN FARMER

Vol. V. Nashville, Tenn., and Chicago, Illinois, September 15, 1932 No. 5.

Memphis, Tennessee To Entertain National Convention of Farm Federation

Co-operatives of Forty Nations Observe "Day"

Alliance of 70,000,000 Members Ahead of Profit

Special from Monitor Bureau

London—The tenth annual International Cooperative "Day" is being celebrated today in 40 countries.

To mark the occasion, the International Cooperative Alliance has drawn up a resolution for adoption by its 70,000,000 members representing with their families more than 200,000,000 persons.

"The only efficient means," the resolution declares, "of overcoming the present crisis and of preventing the recurrence of similar disasters lies in the universal application of the principles of cooperation—democratic control; production for service instead of profit; and the adjustment of production to consumption for which the cooperative movement supplies the only sound economic basis."

The motto of the I. C. A., adopted on the occasion of the first International "Day" in July, 1923, is "Each for all and all for each." Societies are urged, on the tenth "Day," to remind the world of this motto, to rejoice in their economic triumphs, to declare the magnitude of their operations, their network of material achevements in stores, warehouses, and factories, in educational and social institutions.

Imports Reach lb53,144,692

Above all, they are urged to work for the development of international cooperative trading. Mr. H. J. May, general secretary of the alliance, writing on this subject recently, declared: "How extensive are the possibilities of international cooperative trade can be seen from the imports and exports in 1930 of the organizations affiliated to the International Cooperative Wholesale Society, which were: Imports, lb53,144,692; exports, lb1,910,160."

Mr. May added: "For us, it must be 'cooperative trade' in every sense of that much strained term. Only so can it effectively show the capacity of the cooperative system to replace the economic anarchy whch has produced the present problems, among the most pressing of which has produced the present prob-

UNABLE TO SELL PRODUCE FARMER GIVES IT TO POOR

P. H. Kiehne, who has a truck farm at 17th and North avenues, Melrose Park, arose before dawn yesterday and loaded a truck with spinach, kohlrabi , beans, carrots, and other vegetables. He took them to the Randolph street farmers' market in Chicago, but stood all morning without finding a buyer. On his way home he decided that rather than waste the vegetables he would give them away. He stopped at the Melrose Park police station and asked police for the names of deserving persons Members of the police and fire departments notified familes on the unemployment relief rolls.

THE MARKET BASKET MADE

SAVING TIME AND FUEL ON HOT WEATHER MEALS

By the Bureau of Home Economics, U. S. Department of Agriculture

How much cooking time, and therefore how much fuel, can a housewife save on hot-weather meals? Without attempting to count the hours or minutes or the dollars and cents, it is safe to say that the saving is worth while, especially to the household that is short of money, and certainly the less the cooking time the cooler for the housewife. It all depends on a wise choice of foods and the right choice of methods of preparing, cooking and serving.

Use as many as possible of low-priced vegetables that are good to eat raw, such as carrots, cabbage, turnips, cucumbers, tomatoes, onions, and lettuce. Then, for the vegetables that must be cooked, the top-of-the stove, quick-cooking methods save time and fuel. Anyhow, short cooking is better for most of the fresh vegetables, the specialists advice. Canned foods, too, are time and fuel savers.

But you want something hot, you say, at least for dinner, even in hot weather. Try some of the soups and chowders. In this way you cook everything at once, almost a whole meal in one dish, in half an hour or less. A half hour is time enough for fish chowder, corn chowder, or cream of vegetable soup , any one of which, plus a raw salad or a fruit desert, makes a very agreeable meal for a summer day, and a most inexpensive one. Then there is a good quick turnip soul, and cream of spinach soup which also is quick and easy.

The cheapest cuts of meat, if used for stews, do not consume much fuel because cooked on top of the stove. But with meats at their present low prices, and if there is a refrigerator in which to keep the left-over meat, it may prove both practical and economical to make the outlay for a five-pound leg of lamb, or shoulder of pork, or a ten-pound ham, on the first cool day of the week, and cook it, some for immediate use and the rest for cold cuts or salads for two or three days to come.

Then too, there is ground meat, especially broiled ground beef, either as hamburg patties or on toast, and neither of these takes much time to cook. The meat should be freshly ground when bought, and should be cooked as soon as possible, unless there is a refrigerator in which to keep it.

The fresh summer vegetables and all of the canned vegetables should be cooked quickly, say the specialists of the Bureau of Home Economics, to preserve their food values to the utmost. String beans, with tips and strings removed, then cut into small pieces and dropped

(Continued on Page 7)

TEN THOUSAND EXPECTED FROM 19 STATES IN UNION

Prizes and Premiums Will Be Awarded by Federation Officers

Chicago, Ill.—Responding to requests and invitations from officials prominent business men and residents of Memphis, Tenn., which have poured into the office of the National Federation of Colored Farmers, Inc., by the hundreds, Leon R. Harris, Secretary of the organization has announced that the 1932 annual convention of the N. F. C. F. will be held in that city the latter part of October.

This is the first time the annual session will be held outside the state of Mississippi, the two previous conventions having been held in Howard and Mound Bayou, respectively.

In announcing the coming meeting, Mr. Harris gave out the information that some criticism has developed this year against holding a convention at all. Reply to this Mr. Harris states:

"Few national organizations of any prominence have abandoned their convention plans this year and the officers and directors of the N. F. C. F. have decided that it would be both unwise and unfair to our membership not to hold our regular convention. If any one is entitled to a bit of recreation and enjoyment it certainly is the Negro farmer. The N. F. C. F. is proud of that fact that it is rendering an unique service—a kind of service no other colored organization is able to give. Negro farmers should assemble at least once a year to become better acquainted with their organization—to learn more about its efforts and policies—to hear addresses by men and women of note—to discuss their business affairs and to learn more about existing conditions. The tenant farmer, the cash cropper and the day hand will attend so they may know how to proceed to lay plans for the ownership of a farm and home."

"And, too, the officers of the N. F. C. F. are convinced," adds Mr. Harris, "that some are objecting to

THESE MOLINE PRIMROSES BLOOMING ONLY AT NIGHT

(From Moline, Ill., Daily Dispatch)

Night blooming primroses, of a rare variety, are now in full bloom in the yard of the residence of Leon R. Harris, 1440 Eleventh St., A, and are attracting the attention of scores of flower lovers. The blossoms are very pale yellow and open suddenly before the eyes of the watchers.

The plants bloom the second year from seed. Mr. Harris has developed his variety from one plant which he discovered accidently in a nasturtium bed four years ago.

Mr. Harris, who is editor of the MODERN FARMER, is a lover of flowers and specializes in varieties rare to Illinois soil and climate.

Garden Topics By Floyd Bralliar

Suggestions and Guides To Farmers

There are many of our readers who would like to increase their stock of some shrub or other that they grow if they only knew how this could be done easily. Either they would like to have a few shrubs to give to friends or they may wish to use them in their own planting. Whatever the reason for the desire, this is the best time to do such propagating.

Most shrubs that root from cuttings at all root most easily from what we know as half-ripened wood In much of the country this wood is at its best about the middle to the last of August. In the extreme North, this wood is at its best the first week in August.

The first thing to do is to prepare a bed to receive the cuttings. This should be a bed about five or six feet wide and as long as we wish to use. It is best to put a stout board frame about this protected bed so we can protect the cuttings at any time if we wish.

Remove the soil to a depth of eight inches from this bed, putting the top three inches in one pile and the remaining soil in another. Now mix two parts of good sharp sand with one part of this top three inches of soil and fill the bed with the mixture. Tamp it well to settle it and you are ready for your cuttings.

Cuttings should be made from wood that has grown this season, preferably from the first shoots that started. All of these shoots is good to use, but the soft sappy tip. Make these shoots into cuttings about six inches long, being careful to make the lower cut on each cutting just below a bud and the upper one at least an ince above a bud. Do not allow these cuttings to dry out. When the cuttings are made, remove all leaves from them but the top one. This should be left on the cutting and care should be used to not injure it. Should the lower part of the shoot have no leaves so that a few on the cuttings must

(Continued On Page ")

FARMER'S SIDE OF STORM

The following letter, written by a dairy farmer to the editor of a western paper, should be of large interest to colored farmers of the South who can remember so well the Liberty Bond drives of the late war. No one knows the farmer's side of the story as well as the farmer himself.—THE EDITOR.

To The Editor: I read in the papers that W. A. Moody, president of the St. Louis Livestock exchange, told the house agriculture committee that the farm board refused to aid dairymen during the drouth of 1929 unless they became members of the farm board's cooperative. He quotes the case of C. B. Denman, who was told no man could borrow one cent unless he belonged to a farm board organization. Mr. Moody calls that coercion. This was done with the knowledge of government officials of the highest rank.

Now let us take a look back only as far as when this country became involved in the World War. The government called for money with which to carry on the war. The farmers then came to the assistance with money. They bought 3 1-2 per-cent government bonds with money that many of them had to borrow from the banks at 7 per cent, thereby actually donating to the government 3 1-2 per cent.

Coercion, nay compulsion, was then extensively used. Every farmer was compelled to buy according to what the appointed committee assessed them whether they had the money or not. (I for one was assessed $300 on a nine-acre farm, and I had to borrow the money at the bank.)

I never whimpered and I don't regret it. I rather wish that I could have done more.

Now the farmers have had a very tough time of it for eight years or more, and the outlook for the future is still very dark. Taxes are higher than during the war, and more offices are created every year with subsequently more officers and more salaries. And what the farmer has to sell must be sold at a great sacrifice.

Just the other day I read some advice given by a city farmer telling us to sell our cream even if we get only 25 cents per pound for butterfat. That was very good advice and we get lots of that kind, but the fact is we get 17 to 19 cents per pound for our butterfat, so there is some difference between advice and facts. As I said before, we have to sell at a big loss whatever we have to sell but we must pay big for what we need. Now it seems reasonable to many of us, not to say all, that the government should come to our aid as we did during the war. Give us a chance to borrow money at say 3 1-2 or 4 per cent, reduce our taxes. Please give us an even break.

CHARLES J. OSTERMAN.

MISSOURI K. OF P.'S PURCHASE POTATO KING'S FARM

The farm at Edwardsville, Kansas, owned at one time by Junius J. Groves, colored, known throughout the country as the "potato king", is now the property of the Missouri Grand Lodge of Knights of Pythias. The last payments were made this year and the Lodge now has a clear title

This is a 310 acre farm in the rich Kaw valley of Kansas. At one time it was rated as the most valuable farm of its size in the state. A 22 room mansion is locaed on it which was once the show place of Wyandotte County. Mr. Groves died several years ago. He was a close friend of Booker T. Washington.

GARDEN TOPICS

(Continued from Page 1)

be bare, use them, but remember they are not likely to start growth so soon as those with a leaf.

Stick these cuttings in the bed you have prepared, setting them an inch apart in the row and the rows six inches apart. Push the cutting into the ground deeply enough that the top bud with the leaf remains above the ground no more than a half inch or so. Be careful that you do not break or bruise the cuttings in sticking them into the ground.

Of course one should use all of one kind of cuttings before starting with another for no two kinds will root and grow just alike. When any batch of cuttings has been stuck in the ground water them thoroughly to settle the soil about them their entire length. As soon as the soil in the bed is dry enough on the surface thoroughly loosen it to a depth of perhaps an inch. Water as often as needed to keep the soil thoroughly moist without its being wet and soggy.

In choosing a location for a cutting bed be sure that it does not receive the direct sunshine all day, though it should have sunshine for three or four hours every day. Most cuttings will start new growth in four, six or seven weeks at longest. Keep them growing steadily till fall, give them some sort of protection against freezing and thawing in winter, and leave them in their bed till spring. At that time they may be set where they are to grow, or better still in a nursery row in the garden where they can be cared for till fall.

It may be well to give a list of shrubs easiest propagagted in this way. Here are a few. Forsythia in all varieties, weigalias of all kinds. the better privits such as lucidum and nepols, crepe myrtles, abelia, all of the honeysuckles, either vining or bush, buddylea, beauty bush, cydonia or Japanese quince, most of the altheas, Japanese barberry, and even French lilacs, and hydrangias. Every cutting will not grow, but if carefully watered and cared for most of them will do so. We have not tried to give a complete list of shrubs propagated in this way and at this itme. Almost any tree, vine, or shrub that will root from cuttings at all may be rooted in this way. But do not wait a month to do it.

Mrs. J. E. J. Dresden, Tenn., asks what kind of grass to sow under maple trees. She has four large maple trees in her yard and cannot get grass to grow under them.

Most likely these trees have limbs coming very near the ground. If you really wish grass to grow under these trees they must be trimmed up high enough so no limbs will be nearer than seven or eight feet of the ground even at their tips as any grass must have some light. Then send to one of the large mail order seed houses such as Burpee, Dreer, or Vaughn and buy their "Shady Lawn Mixture." You will be unable to get this seed in most small towns as the demand is small.

Fertilize the lawn and work it up thoroughly fine for two inches deep before sowing the seed. If you have water so you can keep the soil moist till the grass is well up. Sow now. If not wait till next March 1.

GARDEN TOPICS BY FLOYD BRALLIAR No. 2

The fall catalogs are coming in now and it is time to think about planting bulbs of various kinds. Of these, tulips are perhaps the most showy and for that reason if for no other, the most popular. Tulips are found wild in the Holy Land and in other countries bordering on the Eastern Mediterranean Sea. One of those wild varities, tulip gregli, is without doubt the most brilliant and beautiful of all red tulips, and is a giant in its family.

Most of the tulips cultivated today are the result of crosses made long ago, so long ago in fact that we do not always know which of the wild species were used in making these crosses. Perhaps the oldest of the various races of tulips in cultivation today is the cottage garden or old English tulip. There are dozens of named varieties of this class in commerce today and on the whole they have adapted themselves most readily to our American conditions. Of these the gesneriana group are doubtless the very best of the brilliant red tulips for general out-of-door planting for they remain in bloom longer than most other varieties and will flourish better in our gardens from year to year, being more nearly immune to disease.

My brother still has a few of this variety in the yellow color that have been in the family for fully seventy-five years, blooming every year and increasing rapidly.

Next in importance come the bybloomsand the bizarres. These tulips are of the largest size, multiply readily, stay in bloom for as long as three or even four weeks, and if one loves the duller colors with bronzes, browns, striped, and feathered flowers, all in bewildering array, these are the tulips to plant.

From these as one of the parents developed the race of Darwin tulips that has been the most popular of all for a quarter of a century. They are today more widely planted than any other tulips. They are strong growers, have long stems, large flowers, and clear colors. If properly cared for they will multiply rapidly in this country, but like most tulips, are subject to disease if left undug from year to year, and are liable to be eaten by mice, squirrels, and other animals.

It is seldom advisable to plant single earlies, double earlies, or parrots in the South. They do not make sufficient stem and stay in bloom too short a time.

It is well to order tulip bulbs as soon as possible so as to get the bulbs early. American grown bulbs are more abundant every year, and although they may usually be purchased for less money than imported stock, they are fully as satisfactory.

For the best results bulbs should be planted about four inches deep in soil that is fairly loose and that is rich in humus. In their wild state they grow under trees in almost pure leafmould. While clay is their native soil, they are mostly grown commercially in sand that has been made very rich with cow manure. Of course this manure is well rotted before it is mixed with the sand. However we get better color and fully as good results in every other way if we plant in clay soil that has been thoroughly mixed with decayed plant material of some kind to loosen it and enrich it.

Though we have had fair results from planting tulip bulbs as late as the first of February, the best time to plant them is October, or the first half of November. Planted at this time they make a strong root growth before top growth starts and so give larger flowers on longer stems.

Hyacinths are not grown as widely as they deserve not even as much as they were even twenty years ago. This is due in part at least to the fact that the bulbs have been very high priced in recent years. But even they are falling again and many will take up their culture again this fall.

If planted in the open ground, do not plant hyacinths before the first of December and the middle of that month is better. If planted early they come up in the fall or in the winter and the buds are injured before they are large enough to bloom.

The miniature size, 1-2 centimeters in circumference, is decidedly the best for out-of-door planting, and they cost much less than the larger bulbs. Give them the same kind of soil as tulips and plant an inch deeper.

OLD BIBLE BOUGHT BY MARYLAND MAN

(Special to The Christian Science Monitor)

Hagerstown, Md.—One of the original copies of the Bible printed in German by Christopher Saur, at Germantown, Penna., in 1743, the first Bible published in a European tongue in America, has been obtained by Mr. Fred M. Peterman of this city.

The copy, well preserved, measures 7 1-2 by 10 inches and contains 1243 pages. The covers are bound in oak wood covered with pigskin. Saur is said to have made his own type, ink and paper.

INTERESTING NEWS AND NOTES

Cotton reached ten cents a pound on August 29th, the advance being spurred by bullish crop reports. It was the first time cotton reached ten cents since last summer. Gains ranged from $1.30 to $1.75 a bale.

Secretary of the Treasury Ogden Mills has announced that 10 agricultural credit corporations have received loans of $767,000 and 14 livestock credit corporations loans of $8,000,000 from the Reconstruction Finance Corporation. J. P. Davis, president of the National Federation of Colored Farmers, Inc., states that Negro Agricultural Credit Corporations in Southern states would have been eligible for loans had any been in existence and that this is further proof that it is absolutely necessary that Negro farmers organize if they expect to receive any share of the relief the government can give through its agencies. It is expected that colored farmers of Mississippi will have their agricultural credit corporation functioning by early next year.

The cabin which housed Booker T. Washington, the famous educator, as a boy has been reclaimed by the West Virginia State Federation of Colored Women's Clubs and dedicated as a national shrine to his memory. It is located at Malden, near Charleston, W. Va.

Bishop Isaac Lane of the C. M. E. Church, who founded Lane College at Jackson, Tenn., in 1882, recently attended the fiftieth anniversary and golden jubilee of the college. Bishop Lane is now 98 years old.

There are 475 colored farm owners in the state of Indiana. They own 29,072 acres and the value of land and buildings is $2,014,855. At one time there were several settlements of colored farmers who owned some of the best land in this state, but the children of these pioneers abandoned the farms for the cities.

Ed Gies of near Fort Worth, Texas, has crossed plums and cherries and the result is a fruit that tastes like plums but grows in clusters like grapes.

A Louisville, Ky., hen has laid an egg that has a perfect letter "p" on its upper end. Its owner wonders if this stands for "prosperity."

Della Garland, 13, of Toccoa, Ga., was killed by lightning as she sat beside the fireplace.

The intense July heat this summer killed many farm animals in Alabama.

Anthrax has broken out in the vicinity of Sioux Falls, S. D., and a rigid quarantine is being enforced. Animals on 38 farms are affected.

The son of a farmer near Peoria, Ill., died of tetanus, or lockjaw, caused by stepping on a sharp-edged weed which cut his foot.

Hijackers stole a truck-load of cherries valued at $500 which was on its way from St. Joseph, Michigan to Chicago. Evidently the thieves were too lazy to pick them from the trees.

South Georgia farms have been devasted by grasshoppers this year and deadly poisons have failed to stop the insects.

200,000 less cattle are on Georgia farms now than were on them in 1925.

Armed guards are watching the gardens of unemployed citizens of Chicago territory to keep thieves from stripping them at night.

Filipinos in one Florida trucking district have been ordered out by the white farmers. The Filipinos are successful gardeners, but were ordered out because the natives heard that 2000 more were planning to move in from California.

400 POUND HOG ATTACKS FARMER; WIFE SAVES HIM

Petersburg, Ind.—(Special)—A 400 pound sow, maddened by the heat, attacked Jesse Wilson, aged 70, a farmer living near Union this morning. The hog knocked Wilson down, but his wife who heard his screams rushed to his assistance and beat the animal off. Wilson was bit ten times.

City Bred (pointing to a haystack): "What kind of a house is that?"

Country Bred: "That ain't a house, that's hay."

City Bred: "Say! You can't fool me; hay doesn't grow in a lump like that!"

A farmer once asked the editor of a country paper for advice, as follows: "I have a horse that at times appears normal, but at other times is lame to an alarming degree. What shall I do?"

The reply came: "The next time your horse appears normal, sell him!"

BOTH PLATFORMS NEGLECT FARMER BUREAU HEAD SAYS

Special to The Christian Science Monitor

Ottumwa, Iowa—Neither the Republican nor the Democratic national conventions gave the agricultural problem anything like adequate consideration, Mr. Edward A. O'Neal, president of the American Farm Bureau Federation, said at a big farmers' gathering here Monday.

In his first comment on the work of the conventions and the platforms adopted, Mr. O'Neal said: "Speech after speech was made from the platforms on other questions, and not a single voice was heard telling the parties of the actual condition and needs of 50,000,000 people of the nation directly dependent on agriculture.

"It disgusts me greatly," he added, "to see how little time was given the discussion of the great economic questions that so deeply threaten our nation today. Among hundreds of duly elected delegates and official leaders, how few openly championed the cause of agriculture. Delegations elected by great agricultural states, whose very existence is threatened, had no delegates who would fight on the floor of the great conventions for our cause.

As to the platforms themselves Mr. O'Neal said the Democratic one was "a bit more definite" but reserved further comment until they are interpreted by the nominees whose duty is to interpret and carry out those promises."

Mr. O'Neal declared that while four years ago "both political parties gave solemn pledges to the farmers that they would seek legislation for restoring equality to agriculture to the end that agriculture might prosper, today those promises stand unredeemed and the inequality of agriculture is far worse than it was in 1928."

THE MODERN FARMER

Official organ of the National Federation of Colored Farmers

Leon R. Harris - - Editor

Published Monthly by the Modern Farmer at Nashville, Tennessee, and Chicago, Ill.

Nashville, Tenn., Office 447 4th Avenue, North.

Chicago, Ill., Office: Vincennes Hotel, 36th and Vincennes Avenue.

Devoted to the interests of the Farmer, Truck Gardener Livestock and Poultry Breeder, the Home and the People.

Entered as Second Class Matter, April 10, 1929, at the Post Office at Nashville, Tenn., under act of March 3, 1879.

All contributions for publication in the Modern Farmer should be addressed to The Modern Farmer, 447 4th Avenue, North, Nashville, Tenn.

No libelous matter will be published. Unsigned articles or letters, and those written on both sides of the paper will not be used.

Subscription price $1.00 per year, payable in advance. Personal checks must be certified. Make all checks or money orders payable to The Modern Farmer.

Advertising rates and sworn circulation figures presented upon application.

"OUR SLOGAN"

STAY ON THE FARM IF YOU'RE ON IT! GO BACK TO THE FARM IF YOU'RE OFF IT!

THE LAW

"It is hereby declared to be the policy of Congress to promote the effective merchandising of agricultural commodities by encouraging the organization of producers into effective associations under their own control.

The Board is authorized and directed—to promote education in the principles and practices of cooperative marketing—to encourage the organization, improvement in methods, and development of effective cooperative associations." (Public—No. 10—71st Congress. Sec. 1-5.)

THE GOSPEL

"This law is predicated upon the ability of the farmer to manage his own business, once he is organized to do so. Cooperation is the key to it and only in exceptional cases can the Federal Farm Board have any dealings with a farmer who is not a member of a producer-owned and producer-controlled marketing unit." Hon. Sam'l R. McKelvie, Member, Federal Farm Board.

The National Federation of Colored Farmers believes that the Colored Farmers of America should own and control their own co-operative associations.

"Co-operation With All—Affiliation With None."

BETTER BUSINESS

"The man who deals in sunshine,
Is the one who gets the crowds;
He does a lot more business,
Than the one who peddles clouds."

RED CROSS—WEST AND SOUTH

The American Red Cross has furnished over two million pounds of feed for starving farm animals and hungry farm people of western Iowa since last February. Some of this relief came from the federal government and some from the American Legion. Disbursements were made every two weeks and the needy farmers had their orders filled at the standing cars the moment they arrived. Everything worked like "clock work". There was no confusion—no criticism—no discrimination or prejudice shown. The man who was in need got what he needed whether landowner or tenant.

The Red Cross tried hard to render the same sort of service to the needy South, but could not do it. Some received and some did not. Some who received were charged for it and will have to pay for it yet. But it was not the Red Cross that did the charging. That organization tried to be fair. Unfortunately, some of the relief supplies were handled and distributed by dishonest, selfish individuals. These took advantage of the ignorance and helplessness of Negro tenant farmers. Some of these individuals controlled county and local Red Cross chapters.

We are certain the National Red Cross knows now that it is folly to expect local southern Red Cross chapters to distribute relief to the needy without prejudice or discrimination. If called upon again they will be prepared. They will proceed to organize local Negro chapters and allow the representatives of these chapters to handle the supplies destined for needy members of their group. If they will do this it will be better for all concerned.

The SOUTH is not the WEST. We trust the National Red Cross has discovered the truth of this fact and will act accordingly.

THE COMING CONVENTION

We believe the membership of the National Federation of Colored Farmers, Inc., will agree unanimously that their officers and directors acted wisely in deciding to hold a convention this year in spite of depressive economic conditions. If the Negro farmer ever needed instruction, encouragement and recreation he needs them now. He has more to learn, more to unlearn and more to forget now than he has ever had before. A revival—a "big meeting" at this time is imperative.

No Negro organization in history has ever been blest with a membership so loyal, so faithful and so unselfish as is the membership of the N. F. C. F. No class of Americans are learning so quickly what cooperation really means as is this class of organized Negro farmers. At the same time, we know of no Negro organization in the Nation blest with such an unselfish, race-loving leadership. In spite of the worst opposition imaginable these leaders have stuck to their policies and have kept right on organizing, building and planning for the welfare of colored farmers. They have done some things the wisest of Negro leaders called "impossible" and they have just started to do. The good Lord simply intends that some things shall happen and he has surely blest the efforts of the founders and leaders of the N. F. C. F.

From three thousand at Howard to five thousand at Mound Bayou on to ten thousand at Memphis and then what? Is it saying too much that we expect the first world-wide convention of organized Negro farmers will be held in Chicago next year during the World's Fair. We think not. An organization that can grow from one little local Unit at Mileston, Miss., to hundreds of local Units in nineteen states in three years' time can expect to keep on surprising the Race and the Nation.

No member of the N. F. C. F. should become impatient or feel at all discouraged. These have been trying times for all organizations and their members. An organization that can grow so rapidly and so solidly during such times as these must have a great mission to fulfill. So it must know its duty and neither falter nor fail. The N. F. C. F. is destined to become the biggest economic organization of Negroes on this continent. This, it shall become.

BUY THAT FARM NOW

Every colored farmer who can possibly do so should arrange to purchase a farm this year. Good farms can be purchased on most any kind of terms. Recently, 40,000 farms in the stata of Mississippi alone, were sold for taxes. Most of these farms were owned by white farmers and most of them can now be rented or leased with the privilege of purchasing. A late bulletin of the N. F. C. F. issued to members listed a farm of 160 acres priced at $5.50 per acre. It also listed a 40 acre Michigan farm with five room house that could be purchased for less than nine hundred dollars. Numerous farms can now be purchased on easy terms in Michigan, Wisconsin, Illinois, and the other middle western states as well as in the South. So the colored farmer who desires a home and farm of his own can get one most anywhere if he will arrange to get it now. But that word "NOW" means much.

Officials of the N. F. C. F. have successfully placed many of their members on good farms, located in good communities, and they expect to continue this work. We believe the southern Negro farmer should stay in the South, but if he does not want to stay there we know he can succeed in the North or West if he is a good thinker and a good worker. We know too that he should not stay in some Southern communities, even in some whole counties. Communities controlled by oligarchies where he cannot be treated as a civilized human being should be abandoned by colored farmers, farm tenants and farm hands immediately. The N. F. C. F. knows well where these communities are and is glad to help its members get away from them.

We particularly urge colored farm tenants and laborers to strike out for themselves this fall by purchasing a farm or leasing one with the privilege of buying after the first year. We should have at least 350,000 colored farm owners in the U. S. by 1940.

MARSHALL COUNTY, MISS.—ASLEEP?

A prominent colored farmer of this county writes: "We farmers in this county will be glad to be of service to the National Federation of Colored Farmers when we can be convinced that yours is a worthy organization. We must see the necessity of a separate organization from the ones already existing here, though you are not "Race" organizations."

We don't know what luck we may have in convincing this good brother that the N. F. C. F. is a "worthy organization." Some folks expect an organization and its officers to do a lot for them before they do anything at all to help that organization's cause. They are willing to take all they can get that is offered by the organization but when they are asked for some assistance or support they are unwilling to give. Such people will never find a "worthy organization."

We wonder what the N. F. C. F. could do for the Negro farmers of Marshall county that would make them believe it to be worthy of their support. The white farm population of this county is 4,176—the colored farm population is 15,113. There are 1020 white farmers in the county and 3,143 colored farmers. 414 white farmers are full owners and 416 colored farmers are full owners. Total average value of all crops produced in the county is around two and a half million dollars annually. Farmers expended around $120,000 for feed and fertilizer last year. Of this amount of money about half of it was expended through co-operative methods. This is a fair record compared with many other Mississippi counties.

First of all, we believe the N. F. C. F. could influence more colored farmers of this county to purchase farms. They outnumber the white farmers three to one yet there is only a difference of TWO in the number of white and colored farmers.

It is evident that at least two-thirds of the crops of the county are produced by colored farmers. It is also evident that these same farmers do not receive two-thirds of the value of the crops when sold. The N. F. C. F. might be of some assistance here. Every member of the N. F. C. F. knows the value of the organization's market bulletins and information.

We have evidence that the colored farmers of this county know nothing about the benefits of co-operative buying and little about co-operative selling. Some of them are tied on to the co-operatives owned, controlled and managed by their white farmer neighbors but none of them are members.

The colored farmers of this county, more than a hundred of whom own and manage farms of from 160 to 4000 acres, will never be the right kind of farmers until they become organized farmers. There is no hope for farmers who are afraid to organize and Negro farmers of Mississippi who cannot see the necessity of a separate "Race" organization are blind indeed. Little wonder the sons and daughters of such farmers are going to the cities just as soon as they are grown.

URGES CARE IN USE OF SOME LAXATIVES

(Know Your Drugs Series, No. 7)

A healthy 10-year-old boy living in California, recently ate the contents of a box of a well-known laxative tablet, mistaking them for candy. As reported by a California physician, the boy's temperature rose rapidly, he became delirious, and died nine days later.

"Deceived by their sugar coating, children sometimes unwittingly mistake cathartic tablets for candy," says Dr. F. J. Cullen, of the Federal Food and Drug Administration. "Adults are less likely to make such a mistake, since the food and drugs act requires that laxatives, prepared in chewing gum or confection form, be labeled to indicate that they are a medicine and not a confection. Manufactures generally are labeling laxatives and cathartics in full compliance with the law."

Laxatives have valuable uses, according to Cullen, but an individual not infrequently forms the "laxative habit," and this may prove injurious. The intensity of the effect of cathartics varies from mild to extreme, small quantities of one producing results as intensified as large quantities of another. Generally, the effects vary markedly with different individuals. For these reasons, says Cullen, it is extremely important that the buyer read the labels on these products and keep the articles out of reach of children. While the food and drugs act does not require that manufacturer declare the presence of any but a few specified drugs, such as alcohol and narcotics, it does insist that, if the constituents are named, the statement be truthful.

LAST OF HEATH HEN TRIBE SEEN AGAIN; WAS THOUGHT DEAD

The last heath hen on earth, believed to have been dead, as it had not been seen for nine months, has again been sighted near the traditional booming field of the last heath hen tribe on Martha's Vineyard Island, Massachusetts, according to word reaching the American Game association.

Apparently in perfect health, this cock bird, sole survivor since 1928 of a species which formerly ranged New England states in greater numbers than any other bird, returned to the farm of James Green near West Tisbury on February 9. It was observed by Mr. Green and others.

Warm weather of early spring, usually in March, has always sent the bird from its seclusion in the scrub oaks of the island, back to a meadow on the Green farm where for many years the only remaining flock of heath hens were wont to gather for their courtship antics. Although tourists still line the highway bordernig the meadow to watch the last bird during his spring visits, he has not strutted, boomed and inflated the orange sacs on either side of his head since his disappointment in 1929.

At that time he boomed almost daily until May 11, and finally retired to the scrub oaks sadly crestfallen. No females had come to the trysting ground to admire him.

A second attempt was under way by Oklahoma game officials to provide the last bird with the companionship of five prairie chickens, near relatives of the heath hen, when Dr. Gross announced the probability that the species was finally extinct. His reappearance may cause this plan to be carried through.

GIVE THE YOUNG FELLOW TIME!

"Your methods of cultivation are hopelessly out of date," said the youthful agricultural college graduate to the old farmer. "Why, I'd be astonished if you got even ten pounds of apples from that tree."

"So would I," replied the farmer. "It's a pear tree."

Sixty tons of flowers are being shipped daily from Spalding, England, and soon 200 tons will be sent each day to all parts of the country.

SAYS RED CEDAR TREES NEAR ORCHARD SHOULD BE REMOVED

Columbia, Mo.—Apple growers and investigators are of one accord in the opinion that the only satisfactory way to prevent serious damage from cedar rust is to cut the red cedar in the vicinity of apple orchards, says T. J. Talbert, chairman of the department of horticulture of the Missouri College of Agriculture. Since the red cedar does not sprout from the stump or stub, one cutting is sufficient, but it is important that every cedar tree be cut to a distance of one and one-half to two miles from orchards if satisfactory protection against the disease is to be afforded, he believes.

The red cedar trees which generally do the greatest harm in commercial apple growing districts are those which are allowed to grow along the roadsides, on pasture lands, and on rough and uncultivated waste lands. In such situations, from 30 to 40 or 50 years may be required to develop cedar trees capable of making satisfactory fence posts. No one, therefore, can question the advisability of destroying runty, unprofitable cedar trees in the neighborhood of commercial orchards, if the matter is considered from an economic point of view, says Mr. Talbert.

In the spring, during rainy or damp weather about the time for apples to bloom, the mature cedar apples or cedar balls on the red cedar produce jelly-like horns or appendages. These appendages contain numerous teliospores which germinate, producing small spores called sporidia. Upon the drying out of the appendages following rains, the sporidia are blown on the young leaves and fruits of the apple. These spores germinate readily on the leaves and fruit of the apple under favorable conditions. The low temperatures often occurring in April and May in Missouri are very favorable to the germination of the sporidia, he concludes.

MOST R. F. C. AID IS GIVEN BANKS IN SMALL TOWNS

Mills Lists Groups Getting U. S. Cash

Providence, R. I.—(Special)—Most of the banks which have received loans from the Reconstruction Finance Corporation are located in small towns notwithstanding reports that it was the large city institutions which got most of the corporation's assistance was the statement made in a speech here today by Ogden L. Mills, secretary of the treasury. Mr. Mills was addressing graduates of the Bryant Stratton College of Business.

Mr. Mills stated that the corporation has lent $1,219,000,000 to 4,947 institutions, including 4,190 banks and trust companies in the period between Feb. 2 and July 31.

Classification of Aid

Of this sum banks and trust companies got $736,000,000, Mr. Mills said, adding that $30,000,000 was given for reorganization or liquidation of 364 closed banks.

He then classified the financial aid given other lines of activity as follows:

43 railroads and railroad receivers—$230,000,000.

541 buildings and loan associations—$68,000,000.

73 insurance companies—$67,000,000.

60 mortgage loan companies—$81,000,000.

10 agricultural credit corporations—$767,000.

14 live stock credit companies—$8,000,000.

8 federal land banks—$26,000,000.

5 joint stock land banks—$1,500,000 (approximately).

3 credit unions—$405,000,000.

"Of the $1,219,000,00 authorized," the secretary continued, "$976,000,000 had actually been disbursed on July 30, of which $110,000,000 had been repaid. In addition to the above 500,000 individual loans to farmers, aggregating $65,000,000, have been made by the secretary of agriculture out of the $97,000,000 thus far allocated to him.

"It has been said that the Reconstruction Finance corporation benefits only the great city bank and other large institutions. The contrary is true. The great majority of banks which have borrowed from the corporation are lacted in small towns. Specifically, on July 30, [illegible] per cent of the banks to which loans had been authorized were in towns of less than 5,000 population; 86 per cent were in towns of less than 25,000 population, and 90 per cent were in towns of less than 50,000.

Many Banks Helped

"Looking at it from another angle, we find that loans have been authorized to more than 20 per cent of all the banks in the country, these banks having about 15,000,000 of the forty million bank depositors in the United States. These have been directly affected by the corporation's loans to banks while the other 25,000,000 have benefited indirectly in preventing the fire from spreading."

"Men may not look to the immediate economic future with complete assurance," Mr. Mills remarked, "but today they are at least facing it unafraid. Our ship has come through a financial hurricane with much suffering, some broken spars, torn sails and wreckage on deck but the hull is sound and neither crew nor passengers doubt that we shall come safely to port."

TO REMOVE SUMMER STAINS

Peach stains contain tannin. To loosen the tannin, first soak the spot in warm glycerin, says the Bureau of Home Economics, United States Department of Agriculture. If the fabric is white cotton or linen, follow with oxalic acid solution, rinse and neutralize with ammonia. The warm glycerin can be used equally well on colored fabrics, but should be followed with denatured alcohol, not oxalic acid.

Treat any stain promptly as possible. The longer it stays the more it sets. Many fruit and berry stains on white cotton and linen can be taken out easily by stretching the fabric over a large bowl, and pouring bioling water on the spot from a teakettle held high above it. If the stain has been put into soapsuds, it may be necessary to use a chemical bleach, but as most chemicals take out colors or destroy silk, wool, or rayon fibers, they are chiefly recommended for white cotton and linens.

Oxalic acid will sometimes take out mildew stains that resist soap and water. Mildew is a kind of mold that grows right in the fabric. Mildewed cotton shower curtains may be bleached by soaking in Javelle water. (Never use Javelle water on silk or wool or colored goods.) Rinse thoroughly after using any bleach, and store these poisonous chemicals where children can not get them.

RADIO REPORTS ON AIR AT HEIGHT OF TEN MILES

Radio meteorographs are the newest devices for bringing down to earth information on atmospheric conditions high above the clouds. Several of these instruments have just been calibrated by the United States Weather Bureau and sent to Alaska for use in obtaining facts for the Second International Polar Year, which started August 1.

A radio meteorograph consists of an automatic temperature and pressure recording device and a compact radio sending apparatus. It is attached to a balloon for release at any desired point. As the balloon rises the changes in barometric pressure and in temperature cause a metal finger to move across various contact points, thus transmitting radio signals. The observer on the ground below picks up these signals with a receiving set and, from calibrations of the instrument previously made, determines the corresponding temperatures and heights.

In thickly settled areas instruments that automatically record atmospheric changes on tracing paper are often sent up in balloons. Attached to a parachute and bearing a tag asking that they be returned to the nearest Weather Bureau station, they stand a good chance of being recovered. In the uninhabited polar regions, however, they are not likely to be seen again. The radio meteorograph was, therefore, designed for use there.

Atmospheric records at all levels up to about 4 miles can be obtained by pilots in airplanes. To get records at higher levels, however, balloons are necessary. They go 10 miles or more up into the stratosphere before they burst.

Radio meteorographs are designed to promote that part of the polar year program which calls for a determination of the relationship between weather conditions in the polar regions and those in the lower latitudes. They will also help toward a better understanding of the general circulation of the atmosphere over the earth.

EXPECT SHORT PECAN CROP

Thomasville, Ga.—The larger Parker pecan groves near this city will yield only about 5 to 10 per cent of a normal crop this year, it is claimed by experts. Other pecan orchards in throughout south Georgia will be extremely short this year.

NEW BASKET LINER

Rockingham, N. C.—Robert L. Steele, III, head of the Martha Orchards, growers and shippers of Sand Hill peaches and dewberries, has established a basket liner plant here. Mr. Steele has invented a new kind of liner, which also covers the bottom of the basket and gives plenty of ventilation.

DRYING BEANS AND PEAS

Garden peas intended for drying should be gathered when in ideal condition for immediate table use—that is, when the seeds have attained full size and before the pods have begun to turn yellow and dry up. Shell them by placing the pods in boiling water for three minutes, then spread on a wire screen having a mesh large enough to permit the shelled peas to pass through, with a box or basket beneath it. Rub the pods vigorously over the screen with the hands. This will burst and empty practically all the pods much more quickly than they could be shelled by hand. Then dip the shelled peas for only one to two minutes in boiling water (to which table salt has been added, two tablespoonsful to the gallon), drain, spread to a depth of three-fourths to one inch on the trays, and dry at 115 degrees to 120 degrees Fahrenheit as initial temperature, rising to 140 degrees toward the completion of the drying. Stir occasionally while drying. Properly dried peas will be uniformly dry throughout, showing no moisture near the center when split open.

175TH HOLSTEIN TOPS 1,000 POUNDS IN "FAT" RECORD

Ormsby Hengerveld Tehee, a purebred seven-year-old Holstein cow, owned by R. V. Rasmussen Deerfield, Illinois, has completed a yearly record of 32,751.5 pounds of milk and 1,052.4 pounds of fat, according to The Holstein-Friesian Association of America. She is the 175th cow of the breed to exceed 1,000 pounds of fat in a year and the 130th to top the 30,000 pound milk mark. The greater part of her record was made while she was owned by Bell Farm Rieck and Nettrour, Coraopolis, Pennsylvania and completed at Elmwood Farm after being purchased by Mr. Rasmussen. J. C. Indoe, Sharon Center, Ohio, has the honor of being the breeder of Ormsby Hengerveld Tehee. She is sired by Ormsby Sensation 23rd one of the sires owned by a bull association in Medina county, Ohio. Ormsby Sensation 23rd is a son of Ormsby Sensation and out of a daughter of Ormsby Korndyke Lad.

As a senior four-year-old, Ormsby Hengerveld Tehee was credited with 28,188.4 pounds of milk and 895.3 pounds of fat in 365 days.

NEW COTTON FOUNDATION FABRIC FOR HOOKED RUGS

Revival of interest in things colonial has suggested an advantageous extension of the use of cotton for making hooked rugs. These rugs are inexpensive and attractive homemade floor coverings whose popularity has created a widespread farm home industry, especially in the South and New England.

Hooked rugs require a strong, loosely woven foundation fabric, a filler material, and a protective lining. For all three of these parts, cotton can be used. The United States department of agriculture recently undertook to develop a good cotton foundation fabric to overcome some of the drawbacks of the commonly used jute burlap and other foundation materials, and provide an outlet for more short-staple cotton.

Two promising cotton foundation fabrics were selected from a number designed experimentally. They were tested for tensile strength, thread count, weight per square yard, and thickness. These fabrics are similar in structure to burlap, but stronger in the warp yarns and less likely to deteriorate from moisture and sunlight.

Complete rugs were also made in the laboratory on these foundation fabrics, using different kinds of fillers. In colonial days, the housewife made her hooked rugs from old clothes or hose or the piece box. But many rugs are now made of new material purchased in desired colors or dyed to suit the pattern. Both the ready-prepared cotton fillers and cloth cut in narrow strips are used, and provide an additional outlet for cotton. Cotton fillers usually result in more beautiful and more durable rugs.

A lining or backing gives added life to a hooked rug. It prevents the rug from curling readily, gives it body, and keeps dust and grit from cutting the stitches on the back of the rug. Any durable, closely woven cotton, such as crash, denim, osnaburg, or canvas, is satisfactory.

NOTICE—CHICAGO READERS

OCTOBER 1 AND OCTOBER 11 are the only days on which you may register for the general election November 8.

Everyone in the Chicago election district must register at precinct polling places in order to vote. Previous registrations will not be recognized.

PORTABLE RADIO OUTFITS AID FOREST-FIRE FIGHTERS

Portable radio sets aided the United States Forest Service in quick reporting and communication during fire emergencies in several national forest fires this summer.

The Forest Service has been experimenting with the possibilities of radio communication since 1927, and last year its investigators developed specialized sets suitable for the rigorous requirements of national forest use. This year it has 150 new sets in use in national forests in the West, supplementing the existing forest telephone system.

One type of set developed by the Forest Service is strictly portable, and weighs only about 80 pounds each complete. Its effective radius of communication is 10 miles or more, messages being received by voice, and sent by code. Sets of this type will be carried by fire crews and by "smoke chasers" traveling the roads and trails, constantly on the lookout for fires, "firebugs," and persons careless with matches or tobacco.

A larger type of semiportable sets weighing about 35 pounds will be used at central stations, in lookout towers, and at points having telephone connections. These have an average radius of 50 miles, and send and receive messages both by voice and telegraph code.

SWINE SANITATION

Application of the sanitation system developed by the United States Department of Agriculture and which is in common use in the Middle West, is resulting in the production of more and better pigs in the Southern States, according to reports reaching the department.

One grower in Tennessee raised six litters of pigs on clean pasture where no other pigs had been allowed to run since the pasture crop was planted. At the age of 3 months the pig were uniform and thrifty, averaging about 80 pounds. Three other litters raised on ground previously used by hogs averaged less than 30 pounds per pig at the same age, the pigs being unthrifty and rough-coated. Heavy losses at farrowing time and on pasture also commonly occur when pigs are raised with no attention to sanitation.

SPECIALISTS SEEK NEW VARIETIES OF PEACHES

Washington, D. C.—Earlier, later, and better strains of the better peach varieties are being sought by Department of Agriculture scientists through propagation of valuable bud variations. This is the method that brought such good results in developing the California orange industry.

Peach trees sometimes show one branch which varies from the rest of the tree. This variation may be desirable or undesirable from the standpoint of the grower. Desirable variations may produce larger fruit, fruit that ripens earlier or later, or fruit of extra quality. The government specialists transfer buds or grafts from the differing branches to young peach seedlings and the resulting tree is generally similar to the branch from which the bud was cut.

Experiments in progress at Merced and Shafter, Calif., show promise of such improved strains of the present commercial varieties.

LANDSCAPE EFFECT
Starke County (Ind.) Republican

If Gov. Roosevelt can work out that plan for planting 3,000,000 trees they will look fine set out around the million postoffice buildings that Mr. Garner wants to put up.

JACK THE GIANT KILLER

Dallas, Texas, July 20—"I agree with my friends in Texas and California," said Speaker John N. Garner here today, stopping on his way home to Uvalde, "that I am big enough to deal with Herbert Hoover."

San Antonio, Texas, July 21.—"I agree with those who insist," said Speaker Garner as his train paused here today, "that I am as big as anybody in the Republican party."

Hondo, Texas, July 22.—"I agree with those who have found out," said Speaker Garner from the back platform of his train here today, "that I am bigger than any Republican and as big as any other Democrat."

Knippa, Texas, July 22.—When Speaker Garner's train stopped here for water on its way to Uvalde, near by, the Speaker told a throng in the terminal drug store: "I am bigger than any Republican or Democrat now extant, and my son Jack is stronger than Herbert Hoover, Jr."

Uvalde, Texas, July 22.—Addressing an ecstatic home-coming crowd here today, Speaker John N. Garner, after uttering the words "I am bigger"—, suddenly exploded and was reassembled with great difficulty. Physicians assured anxious friends of his recovery when, the reassembling process just concluded, the patient said feebly: "I am bigger than Primo Carnera."

MR. GARNER'S BID
Iroquois Chief

What a hit Mr. Garner will make this fall when he mounts the stump and bids for votes for the Democratic ticket on the grounds that he tried to spend a billion dollars of the taxpayers' money for 1,400 postoffice buildings that were not needed.

DO WE WANT GOLD BRICKS?
Washington Post

All that is needed to make the present effects of depression look like good times would be to have the Goldsborough gold brick and other inflationary and inflammatory measures passed by the late Democratic House also get by the Senate and a President.

TEXANS STILL TRYING TO BREAK INTO DEMOCRATIC PRIMARIES

Houston, Tex.—(CNS)—Kept out of the State Democratic Primaries here by technicalities, Negro Democrats of Harris County are planning a concerted effort to secure the right of Negroes to vote in the city Democratic Primaries to be held here in January. J. Alston Atkins, editor of the Houston Informer and J. M. Nabrit, president of the Harris County Negro Democratic organization, are leaders of the movement to test the right of local Democrats to disfranchise them. Every legal remedy available will be pursued to the highest courts, they declared last week.

THEt MARKET BASKET MADE

(Continued from Page 1)

into boiling salted water, will be tender in fifteen to thirty minutes. Five-minute cabbage, cooked in milk and thickened, retains its crispness, its fresh color, and is delicate in flavor with just this short cooking.

Salads, of course, made either of raw vegetables or fruits, or of cold cooked vegetables left over from the day before, are something for the cook to depend upon in hot weather especially Cottage cheese, as salad, or "just plain so," is another standby. With a refrigerator, the salads can be varied by using gelatin now and then, making tomato jelly, jellied vegetable or jellied salmon or tuna fish salad.

The simplest desserts at any time are fresh fruits in season, or canned fruits. But there is a quick blueberry pudding that is easy to make. And a butter-scotch pudding that can be made with less than half hour's cooking. And junket, which needs a cool place but not necessarily a refrigerator. Peach short cake, now the peach season is here, is one of the choice desserts that does not take long to cook.

TEN THOUSAND EXPECTED

(Continued from Page 1.)

holding the Convention through sinister motives. There are some who claim there is no reason why Negro farmers should have a national organization. These especially, fear the economic and political power of the organized Negro farmer.

They are aware of the fact that members of the N. F. C. F. have purchased more than a quarter million dollars worth of home and farm supplies during the past three years. They know that the organization now has a large and powerful membership in nineteen states. Formerly the requests of unorganized Negro farmers have never worried them, but they have good cause to fear the demands of organized Negro farmers for these demands must be met by deeds and not by promises."

Delegates will attend the Memphis Convention from Tennessee, Mississippi, Missouri, Arkansas, Kentucky, Illinois, South Dakota, Ohio, Indiana, Wisconsin, Alabama, Louisiana, South Carolina, North Carolina, Oklahoma, Kansas, Iowa, Virginia, Georgia and Florida. Texas will also send delegates from at least ten counties .

As at former conventions, numerous prizes and premiums will be awarded to individuals and Units of the N. F. C. F. that have made extraordinary progress. It is reported that plans are underway to include a small farm as one of of the capital prizes.

The first Convention of the N. F. C. F. was held at Howard, Miss., and drew an attendance of three thousand organized Negro farmers. The second Convention at Mound Bayou was attended by five thousand. It is expected that fully ten thousand will attend the Memphis meeting.

The following pioneers and leaders of the organization have assured the national office they will be on hand. All are faithful and loyal supporters and the organization owes much of tis success and progress to their efforts: C. C. Richardson, Wm. Moore, Tom Stewart, Louis Irving, Rev. B. W. Byram, Rev. C. H. Kelley, Chas. Ashley, Gus Moore, T. M. Blackmon, Miss Martha Chalmers, Mrs. Rachel Baskin, J. N. Haskin, Rev. H. J. Franklin and many others just as worthy who might be mentioned.

COOPERATIVES OF 40 NATIONS

(Continued from Page 1)

which has produced the present problems, among the most pressing of which are the necessity of international agreement upon a new monetary standard; settlement of war debts; disarmament; and an international tariff policy. The last is the most important because without agreement between the nations on tariffs there is little hope of realizing the other aims."

FARM PRICES DECLARED KEY OF SITUATION

Better Business Said to Rest on Higher Levels for Food Products

Special to The Christian Science Monitor

Abilene, Kan.—On higher price levels for farm products depends greater demands for industrial products, according to Mr. Charles Moreau Harger, author, editor, lecturer and bank director of this city.

In response to many inquiries from the East regarding conditions in the great agricultural belt of the middle West, Mr. Harger points out that the farmer's problems present a multiplicity of economic adjusments the neglect of which may tell greatly at the polls this autumn.

"For the first time since deflation in the price level of his products struck the farmer," Mr. Hargers calls attention, "the farmer will have an opportunity to express himself at the polls. Since the election of 1930 he has seen greater depths of deficient income than he thought possible. The effect of this strain of his mental and financial resources is likely to make him an unknown quantity in the forthcoming contest."

Problems Outlined

Outlining some of the problems faced by the farmer, Mr. Harger says: "Gradually he has parted with much of his working surplus represented in bank deposits; he has used his available overhead and still has as much difficulty in balancing his budget as does the Federal Government, and without its resources for producing revenue. It is revealed in his attitude toward government, toward tax-making bodies, toward banks and everything that reaches him directly in his activities.

"Primarily, of course, it checks back to the lack of proper relationship between the price of commodities and of his own products. To be sure, the essentials of life are cheaper, but there is no such deflation as has come in wheat at 33 cents a bushel, corn at 30 cents, eggs at 7 cents and dairy products one-third that of the figure two years ago. Where the producer started with some balance in the bank he has gradually used it for such expense as could not be avoided.

"Bank deposits in the rural communities have shrunken month by month—not from runs and only occasionally from fear but from the needs of the depositors. The shrinkage of the average county seat bank that had $1,000,000 deposit account two years ago has been 20 to 25 per cent. If it has been blessed with a large surplus, it has met the situation, but if not, it has been forced to seek credit; if this failed, suspension has come. This has been the reason behind the many closings, mergers and voluntary liquidations in the farm country, frequently in sections where for 60 years the banks have prospered and served the communities.

"The financial condition of the producer is bringing a serious condition to his mortgage indebtedness. Take a typical situation which can be duplicated a thousand times. A 160-acre farm normally worth $12,000 increased in the market to $20,000 or more in war times. It changed hands at the high price and seldom without a mortgage of at least $7,500. Now that farm, if it can be sold at all, is worth perhaps $9600. The past two years have seen fixed charges pile up—interest at 5 1-2 per cent, $825, taxes $300, insurance $60, a total of $1185, bringing the charge against it to $8685, or within only an equity of less than $1000 for the owner.

Have But $1050

"Little wonder he is discouraged. If it were all in wheat and he produced 20 bushels to the acre—a good yield—he would have but $1050 on which to support his family for a year and meet his fixed charges. If he owns his farm clear of debt he can get along. The other day a visit to 17 farms found no hired man on any, though ordinarily there was one or two on each—the farmer and his family are doing all the work. The town bakeries have no more farmer customers—the farm wife is baking again.

"These are some of the things that are happening and their effect usually brings a great volume of public auctions, "vendues" they were once called, when farmers sold off their equipment and stock. Auctioneers were busy, the rural papers blossomed with advertising. This year there are scarcely any.

"The farmer formerly could move to town and easily obtain a job in a filling station, running a truck or working in a factory. Now there are no town jobs and he finds he is better off sticking to the farm, regardless of his difficulties. Besides, the money received at such sales is so meager that he could not refurnish a home from the proceeds of an average auction.

"So the producer's state of mind is one of watchful waiting, in the meanwhile keeping expenses to the minimum and hoping for an upturn in markets. Hopefully he has waited on rising wheat prices in particular. The holdover of grain in the farmers' hands throughout the interior is the largest in a decade. Much of this in storage and the owner is paying a cent a bushel a month rental; some is in his own granary, but he is poorly equipped for such management.

"Against this wheat he has usually borrowed at his bank, the notes of any country bank show a great number memorandumed with '1300 bushels wheat' or some such legend, indicating that there has been a gamble on the farmer's part. Perhaps it will win, but that is uncertain.

Have Not Declined

"Debts and fixed charges, such as taxes, interest and contracted payments have not declined, though the income from products has done so drastically. These debts result from abundant credit in the past, the desire to have all modern improvements in schools, courthouses and paved roads, not to mention motorcars, radios, and extravagant farmstead equipment. These charges, with their burdensome effect, have in the opinion of students of the interior's finances, three possible ways toward remedy:

"1. A rise in prices to approximately the level at which the debts and fixed charges were incurred. This is not immediately likely.

"2. Reduction of debt and fixed charges by repayment, repudiation, foreclosure, bankruptcy, voluntary writing down and in the case of fixed charges mutual adjustment of terms. This process in some of its forms, though painful, and full of hardship, is under way.

"3 Refunding debts and fixed overhead charges so that their payment may be extended over a longer period of time. This is also being used sparingly, but not as frequently as is desirable, but as may come later.

"By these latter methods, eventually, if conditions remain, the burden will slowly be lightened The farm country will adjust itself to the income it can possibly attain and write off the losses involved in such readjustment. If no other outcome be possible, just what effect it will have on financial affairs while it is under way remains to be seen."

WHITE COUNTY AGENT GIVEN FOUR YEARS

Henry Witherington, County Agent of Houston Co., Ala., was sentenced to federal prison for four years following his guilty plea of fraud in connection with federal seed loans.

Witherington was one of a group of prominent merchants and planters of this section who were indicted recently for defrauding the government. The N. F. C. F. has been particularly interested in these cases because the victims of those indicted were tenant farmers and Negro farm laborers.

NON-STICK SHORTENING

No one enjoys having shortening stick to the measuring cup. To avoid this, always break eggs into the measuring cup first, then transfer them to the beating dish. This method leaves a coating of egg white around the inner surface of the cup. Now measure your shortening and you will find that it leaves the cup with scarcely a trace remaining.

Approximately 68682 horses and mules attached to the American Expeditionary forces were killed in the World War.

WOMEN GOT FLOUR BUT DID NOT KNOW HOW TO BAKE BREAD

Baking appears to have become very much a lost art in many homes as relief agencies in Minneapolis learned recently, according to the Ohio State Journal. Through the Red Cross they had received 47,000 sacks of flour made from wheat contributed by the federal government, but after weeks of intensive effort to distribute, they put out only 13,000 sacks. People wanted food, were willing to take most things they could obtain, but demned to take flour and explained the women folks knew nothing of bread making. The plan now is to have the flour used in a school where bakers are instructed and the distribution then will be in bread.

We're sorry for the folks in any home where the art of baking and bread making is unknown. There was a time in this country when every woman baked her own bread, the custom being general even if all women were not first class bread makers. Think of an American home without hot biscuits, syrup and gravy, where light rolls are not regular and welcome visitors, and where good home-made bread is a stranger. Bakers have won popular favor by saving the women from the hot and difficult work of bread making, and in Minneapolis, great flour center of the country, they appear to have done their work with such far-reaching results thousands of homes are minus the joys of home-baked bread.

EDITOR'S NOTE: And hundreds of poor colored farmers in Mississippi and South Carolina who needed this flour badly and whose wives are the best bread makers in the world could not get any flour at all. Something was wrong somewhere and the N. F. C. F. is going to discover just what and where.

BOB-TAILED CALF LOOKS LIKE FAWN

Claire, Mich.—Everett Allen. a farmer, claims one of the strongest animals ever seen by mankind—a bob-tailed calf with "spike" legs The animal, Allen reports, looks like a fawn and lopes instead of walks.

IOWA WIFE SUCCEEDS IN RAISING SILK WORMS

Centerville, Iowa—Mrs. Belt Delpontia has started a silkworm industry here. She imported some worms from Italy and they have been carefully watched for two years in an effort to establish whether silk cultivation is adaptable to this climate. The experiment is a success, it was reported.

Application for Membership

NATIONAL FEDERATION OF COLORED FARMERS (Inc.)

Vincennes Hotel, Chicago

As a farmer, I believe the time has arrived when the Colored Farmers should form a National Organization devoted to diversified production, grading, packing, shipping and marketing of farm products and to the purchase of needed farm supplies through co-operative methods, to the end that a more prosperous financial condition may result from their efforts as producers.
I hereby subscribe $5.00 for membership in the National Federation of Colored Farmers for a period of 12 months from date. Also $1.00 for an Annual Subscription to the Modern Farmer.

ARKANSAS EXPERIMENTS WITH FERTILIZING SWEET POTATOES

Fayetteville, Ark.—Sweet potato fertilizer and cultural work conducted at both the main and branch experiment stations of the University of Arkansas College of Agriculture show interesting results that can be applied throughout the state, states W. G. Amstein, extension horticulturist.

In work conducted at the main experiment station at Fayetteville, phosphorus has proved to be the most important element needed. With phosphorus left out only 11.23 bushels gain per acre was secured over plots where no fertilizer was used. The value of nitrogen and potassium was about equal, but the need for either was only about one-third as great as for phosphorus, he says.

The most economical returns were obtained from the use of 500 pounds of a 5-10-5 fertilizer per acre. There was practically no differences in returns from row and broadcast applications. Thus can be accounted for by the fact that even with broadcast applications, most of the fertilizer was collected near the row in ridging, Mr. Amstein continues.

Work at the fruit and truck branch station in Hempstead county has been carried over a period of four years with sweet potatoes. The average gain from the use of a complete fertilizer was nearly 100 bushels per acre. Here nitrogen proved to be the limiting element.

Recommendations based on the work done are given by the college as follows: With heavy soils, such as the Clarksville silt load, 500 to 600 pounds of a 4-12-4 fertilizer would prove most economical; on soils similar to those on the fruit and truck branch experiment station 600 to 1,000 pounds per acre of a 5-10-5 fertilizer would be more satisfactory. Early plantings will require somewhat less fertilizer than plantings made later. If large applications of fertilizer are made, they should be applied several days before setting to avoid injury to slips.

No table variety in active demand has shown to better advantage than the Porto Rico and Nancy Hall. The Triumph has proved a high yielder but has little value as a table type, says Mr. Amstein.

Most striking results were secured with the use of large, well matured slips earlier in the season than is ordinarily practiced. Slips set April 15 to May 1 nearly doubled the yield of slips set June 1. Planting closer in the row than is customary has increased yields and cut down on the number of jumboes produced in early plantings.

Editorials of the Week

ONE REASON FOR UNEMPLOYMENT

Spokesman-Review, Spokane, Wash.

We want to build up manufacturing in Spokane, Seattle, Tacoma and other cities of the Pacific Northwest. How can that hope be realized if we demolish our tariff gates and invite Japan to supply our markets, take our money and pay it to Japanese labor working long days for a few cents a day?

Japanese manufacturers and wage earners would be delighted to have the United States lower its tariff bars and adopt a "competitive tariff for revenue," as the Democratic party and Mr. Roosevelt are advocating.

Even with our present protective tariff, which Mr. Roosevelt and Democratic congressional candidates are proposing to lower, so that products and manufactures of foreign cheap labor could compete on equal terms in American markets with our own producers and wage earners, Japan is breaking into the markets of this country.

Last year Japan sold 71,000,000 light bulbs in American markets.

In six months this year, Japan marketed 1,323,000 pairs of rubber shoes in the United States, compared with 200,000 pairs in the same months in 1931. American manufacturers have appealed to Commissioner of Customs Edle, protesting that many American rubber shoe factories will be closed this winter and 15,000 employees discharged, unless the industry is protected from Japanese competition.

Japanese tennis shoes are selling in variety stores of the United States for as little as 20 cents. These shoes were copied after types and from models made in the United States.

Japanese manufacturers have two big advantages over American manufacturers—pitifully low wages, and cheap ocean freight rates.

NOT ORATORY

Detroit News

President Hoover is no orator. He has no gift of mellifluous words, of resounding periods. His speech of acceptance will never be recorded in a Golden Treasury of the world's masterpieces of eloquence. But it will live in the memory of those who heard it, either in his immediate audience or by radio, as a great public utterance; great through no artifice known to the practiced public speaker, but because of the tremendous sincerity of the man who spoke.

It was in no sense the speech of a politician clinging to public office by bidding for easy popular favor. It came from the heart of a man who realizes to the depth of his being the tremendous task of President of the United States, the awful responsibility thereof; a man who has devoted to the people and their government his best abilities, and is confident that whatever the voters may say in November, he will be treated well by the considered judgment of history.

OLD STUFF

Malcolm Bingay in Detroit Free Press

Franklin Roosevelt comes right out and blames Hoover for the depression.

Blaming Hoover for the depression was such old stuff six months ago that wiser Democrats than Roosevelt had already decided to lay off that nonsense as they found it was reacting in Hoover's favor.

Roosevelt might have gone a step further and blamed Hoover for America's getting into the World War, which a Democratic President did get us into after being elected on a promise that he was going to keep us out of it.

Roosevelt goes back through Hoover's statements on business conditions and charges Hoover with not having warned the country that the crash was coming.

Great!

And if any President of the United States had ever issued such a warning, what would have happened? Business would have crashed without any cushion at all to land on. Any President who would have made such a statement would have been worse than a fool at a theater yelling "Fire."

Al Smith would never have made such a tricky speech as Roosevelt made at Columbus; he would have too high a regard for the facts. He would have had political sense enough to remember that the Democratic Party was in control of the House when needed legislation was being fought through and that the biggest obstacle to coherent action was Speaker Jack Garner, now Roosevelt's running mate.

Assailing the President and offering nothing for a program in opposition to his plan but glittering generalities is not statesmanship. It is cheap politics. As Governor of New York, Roosevelt has not raised a finger to have passed laws in his state he now pretends to favor. Reform, like charity, begins at home.

"What kind of a worm is that?" Bobbie pointed a pudgy finger at a fuzzy something-or-other, crawling across the path.

"That," Larry instructed, with the superiority of six years over four, "is a 'cat's pillow'."

GARNER OFFENDS TEXAS DRY

Dallas, Tex., Aug. 16 (AP)—M. H. Wolfe of Dallas, who led the prohibition forces in Texas when the saloons were closed, predicted today that speeches made last night in New York by John Nance Garner, Democratic vice presidential nominee, will drive Texas into the republican column again this fall.

"I do not believe the people of Texas are 'religious bigots because they favor prohibition," said Wolfe. "Nor because they oppose Tammany Hall sitting in the president's chair. Texans have not authorized John Garner to apologize to the wet Democrats of the East about Texas voting dry."

In the recent Democratic primary Wolfe polled more than 32,000 votes in the race for the gubernatorial nomination. He ran on a prohibition platform.

SCAPEGOAT

Des Moines Register

Does the wolf howl at your door?
Jump on Hoover!
Are your prospects rather poor?
Land on Hoover!
Does your husband sometimes snore?
Is your wife a tiresome bore?
Are your bunions awf'ly sore?
Kick at Hoover!

Did they clean you in the Street?
Growl at Hoover!
Has the rust destroyed your wheat?
Rave at Hoover!
Do your new shoes pinch your feet?
Did your favorite team get beat?
Was your lemon pie too sweet?
Snap at Hoover!

When King Cotton took a spill
That was Hoover.
When your bank stock slid down hill—
Grr! That Hoover!
When your home-brew made you ill,
And you got the doctor's bill,
Weren't you mad enough to kill
Herbert Hoover!

If they find a Bolshi plot
They blame Hoover!
If it rains or snows a lot
They chide Hoover!
When the demagogues wax hot
In a blaze of silly rot
How they love to take a pot-
Shot at Hoover!

Well, enjoy your little game
Baiting Hoover!
You MAY win eternal fame
Knocking Hoover!
Though it seems a bloomin' shame
Someone has to take the blame,
But—he wins out just the same—
'Ray for Hoover!

ON THE R. F. C.'S LIST

New York Herald-Tribune

The publication of loans made by the Reconstruction Finance Corporation in the last ten days of July should set at rest the notion advanced by the Democratic candidate that the corporation was using its credit to bolster the big borrower at the expense of the "forgotten man." Overwhelmingly predominant in the list of beneficiaries are small banks in little towns, just the type of institution on which the "forgotten man" must rely in the conduct of his business and on whose solvency depends his salvation. Not a single bank in New York City is included and few large banks elsewhere, the number receiving more than $500,000 each being seven out of a total in excess of 300. Against this background of fact Mr. Roosevelt's slur is thus seen in its true light.

The spreading of these loans on the public record is, we have contended and still believe, against sound policy and has no more justification than the publication of individual income tax returns. It involves an invasion of privacy that, in the spirit at least, infringes on constitutional rights. Conceivably it might, though the indications are that it won't, affect adversely the business of the borrower. But we are glad to note its value as a refutation of unfair attacks on the R. F. C. and the Administration. In this respect it metes out a certain poetic justice to its authors who had a very different purpose at heart when they incorporated it in legislation over the objections of the President.

THE MODERN FARMER

Vol. V. Nashville, Tenn., and Chicago, Illinois, October 15, 1932 No. 6.

PROMINENT SPEAKERS TO ADDRESS NATIONAL FEDERATION OF FARMERS, MEMPHIS

DELEGATES FROM TWENTY-ONE STATES MAY ATTEND

Governors Are Appointing Representatives and Giving Them Credentials

Chicago, Ill.—The annual convention of the National Federation of Colored Farmers, Inc., will open its session at New Prospect Baptist Church, 4th Street and Beale Avenue, Wednesday, October 26th. The Convention will last through Friday, the 28th. Delegates from nearly all Units located in twenty-one states have informed the national office of their intention to be on hand at the opening session.

Dr. J. R. A. Crossland, of the U. S. Seed Loan Office, St. Louis, Mo., will arrive the first day and will address delegates and visitors at two in the afternoon. Dr. Crossland will bring a message direct from the Department of Agriculture which will be of particular interest to Negro farmers. Other representatives from the Department of Agriculture, Federal Farm Board, Reconstruction Finance Corporation, National Negro Business League and C. M. A. Stores have been invited to attend and deliver addresses.

The governors of several states have appointed special representatives to attend. Of particular interest to members will be the President's annual address, Friday. Mr. Davis has an important message for our farmers this year which none should miss. Leon R. Harris, secretary of the N. F. C. F., will report to the delegates Thursday. He will also deliver an address sometime during the sessions.

Prizes will be distributed to winners for best display of farm products, needlework, canned goods and etc. Special cooking and sewing classes will be held in charge of experts.

Rev. Perkins, able pastor of New Prospect, is a loyal race man and is doing all he can to make delegates feel at home. He and his officers are leaving nothing undone that might add to the success of the meeting.

ANTS IN INVASION OF PARIS

Paris is fighting its third invasion of pests. First a swarm of mosquitoes visited the French capital. Then followed a plague of blue flies . This time it is ants. The health department has marshaled all its forces armed with sprays, disinfectants and other paraphernalia, and is directing an onslaught on the invaders. A number of bakeries near the Bourse and other buildings in other parts of the city have been overrun by the busy insects.

COTTON

Cotton was up and then down this week. 7-8th inch strict middling is around 7.05 and the 1 1-4 inch long staple about 12.25. We believe the real long staple cotton will sell higher later on.

American Negro Farmers Must Organize Says Editor

ILLINOIS FARMERS SESSION

Unit Formed at Last State Federation Meeting

Colored farmers of Illinois held a rousing meeting at Mound City, Pulaski county, October 8th, approximately 350 being in attendance. The meeting was called by Wm. M. Ashby, Executive Secretary of the Urban League, Springfield, to discuss federal farm loans, marketing of crops, State Fair exhibits, Four-H. Club and farm organization, C. P. Williams, of Cairo, presided.

Dr. J. R. A. Crossland, representative of the U. S. Crop Production Farm Loan Board, was present and spoke to the farmers on government loans and assured them that his office was established particularly to assist needy farmers of our group and that all applications for loans would receive due consideration. Mr. Houston S. Scheweidh, Field Agent, Farmers Seed Loan Office of the U. S. Department of Agriculture, also discussed farm loans. J. P. Davis, president of the National Federation of Colored Farmers, Inc., discussed farm marketing and told of the benefits of co-operative marketing. Leon R. Harris, editor of the Modern Farmer, discussed farm organization and stressed the necessity of colored farmers being organized. Wm. M. Ashby mentioned the fact that no colored farmers are exhibiting products at the annual State Fair and that no farm youth of our group are taking advantage of the benefits of Four-H Club activities.

A Unit of the National Federation of Colored Farmers was organized at the meeting,—sixty-one farmers applying for membership.

The Unit will be known as the Pulaski-Alexander Unit of the N. F. C. F. and will organize Four-H Clubs and auxiliaries of farmers' wives.

Addresses of welcome were delivered by Judge C. S. Miller, County Judge of Pulaski county and president of the Mound City school board and by Prof. G. H. McGhee, principal of Lovejoy Community High School.

FACE TO FACE IN MEMPHIS, TENNESSEE

Our convention will be held in Memphis, Tenn., at Rev. Perkins Prospect Baptist Church on Beal Avenue, near Fourth St., October 26th, 27th, and 28th.

A convention tax of 25 cents per member is now due. Officers of all units are urged to send in reports at once and have your membership also.

Membership buttons are now ready, and send in your requirements at once so we can get them in to you in time for the members to wear same to the convention. The price of these buttons is 5c and the units sell them to the members at 10 cents and the difference be placed in your local treasury.

NEGRO LABOR CASES HEARD

Brig. Gen. G. B. Pillsbury, Presented Facts And Figures

(Houston Informer)

Washington, D. C.—(ANP)—On Thursday morning, September 22, in munitions building, Washington, D. C., charges of virtual slavery and peonage in the labor camps of the Mississippi flood control project were presented to Brigadier General G. B. Pillsbury by representatives of the National Association for the Advancement of Colored People. Before the hearing began, General Pillsbury made it known that all reporters would be excluded from the hearing.

The only persons present were Gen. Pillsbury and Capt. Moore of the War Department, Walter White secretary of the National Association for the Advancement of Colored People, and Miss Helen Boardman, former Red Cross worker who investigated living and working conditions among Negroes in camps of the Mississippi flood control project. In an interview after the hearing, Mr. White and Miss Broadman gave a complete account of what took place behind closed doors in the office of General Pillsbury.

Miss Boardman, a graduate of Grinnell College, who has had wide experience as an investigator and as a Red Cross worker, gave to the representatives of the War Department a picture of the tragic conditions which she discovered in the course of her investigation She stated that she found them working from 12 to 16 hours a day for as little as $1 to $2.50 out of which they were forced to pay $4 to $5 as a weekly fee to the commissary, 50c a week for drinking water, $1 a week for cook's fee. Prices at commissary, she stated, were from 150 per cent to 550 per cent higher than prevailing prices in nearby stores. In answer to General Pillsbury's question, "How are Negroes forced to trade at the commissary?" Miss Boardman replied, "Either they trade there or they are fired." She cited a case at Camp Morrison in Arkansas, where violence is a common occurrance, in which a Negro was severely whipped when he asked about his pay, and was finally compelled to have the sheriff go with him to collect his wages.

The usual diet in the camps which Miss Boardman visited consisted of beans, black-eyed peas, rice, hominy, sorghum and coffee, prepared under such conditions as to make it unfit for human consumption. The kitchen, she stated, were filthy beyond belief, and pigs and chickens roamed through them at will. Gen. Pillsbury asked Miss Boardman how this diet compared with the diet of colored people of that area, and how the sanitation of the camps compared with housing conditions of the lower class of Negroes in that region. Miss Boardman replied that she had previously investigated Negro housing in that region in

(Continued on Page 7).

NEWS BULLETIN FOR OCTOBER

President James P. Davis Sends Out More Information

The annual convention will convene in Memphis, Tenn., Oct. 26th 27th and 28. The sessions will be held at Rev. Perkins New Prospect Baptist Church on Beale avenue.

We have asked the railroads to give reduced rates.

On the opening day Oct. 26th, Dr. J. R. A. Crossland will speak to our members and friends and fully explain conditions concerning loans to be made by the government. This is very important, and as many as are able to come, should be there and hear this important message.

We have also asked the Federal Farm Board to have one of their representatives address us. On the second day Dr. J. C. Austin pastor of the Pilgrim Baptist Church Chicago will deliver a very important address. Hear him.

Our Grand Secretary Hon L. R. Harris will also bring a most important message, and Mrs. Bertha Montgomery one of the foremost women of our race will address the wives and daughters of our members on the third day.

Never before have Negro farmers had such recognition as will be given them during this session of our convention.

A representative from every unit will be expected to give a three minute talk regarding the accomplishments of their members during the past season.

Officers of all units are expected to bring in full reports on convention tax, and also reports covering as much of the back membership dues as is possible. Officers of all units are also expected to bring their reports on the Credit Corporation fund. This is very important.

Prizes will be awarded to members for best peck of sweet potatoes, Irish Potatoes, turnips, field peas, peanuts, sample of cotton, ear of corn, stalk sugar cane, dry onions and largest pumpkin.

Prizes will also be awarded for best loaf of bread, best cake, best made baby dress size 1 year old, child's dress 5 year old (size) woman's dress and man's shirt. Best quilt, and piece of fancy work.

Also for best display of canned fruits and vegetables. Valuable prizes will also be awarded for the member that brings in the largest number of subscriptions to the Modern Farmer, to the unit which has purchased the largest amount of groceries and supplies during the year, and the member who brings in the largest number of applications for membership.

Among the many prizes to be given will be a cooking stove, a clothes washing machine, a suit of clothes, 1 set of Rogers silver table ware, 1 set of dishes, 1 set alumnium cooking ware, 1 pair

LEON HARRIS' ADDRESS TO ILLINOIS STATE UNIT

Stirring Appeal Made on October Eighth by Modern Farmer Writer

"FARMERS OF ILLINOIS AND FRIENDS:

Ever since the days when I was a student of agriculture at Tuskegee Institute, Alabama, I have been interested in the life and welfare of the American Negro farmer. He is an American of whom I have never been ashamed,—a Negro whom his racial group should delight to honor,—a man who possesses every virtue and trait of character it takes to make a man—a real man. I greet you here today, not posing as a great farm leader or specialist but simply as a friend who is anxious to show himself friendly and as a servant ready and willing and proud of an opportunity to be of service.

At the present time everybody is trying to solve his own problem and get out of his own troubles. There is an old rural saying that "all signs fail in dry weather." We have been having a very funny kind of dry weather all over this country during the past three years. All signs have failed. I know I haven't sense enough to be a farm problem prophet or advisor. In spite of all the intelligence, education and training possessed by those who claim to know all about the farm situation, one fact stands out very prominently and that is the fact that the farmer who has had to struggle with his own problems has learned more from experience than he can ever be taught by any one. That is all I wish to give you now, my friends,—a brief recital of my experience as a leader in organization work among American Negro farmers. I trust that what I say may be interesting and profitable.

No American farmer, colored or white, is foolish enough to believe nowadays that farmers' organizations are not necessary. The farming industry is a business, just as manufacturing, mining and all other industries are businesses. We citizens of America thrive and prosper just in proportion as our business thrives and prospers. And in order for any business to thrive and prosper, those engaged in it must work together toward certain ends, —they must work together in certain established ways,—they must be organized.

Three large farm organizations are in existence in our Nation. We have the National Grange—the National Farmers' Union and the American Farm Bureau. The aims, primarily, of these three great organizations are alike. Briefly, they are "to promote co-operation in every effort to improve facilities and conditions for the economic and efficient production, conservation, marketing, transportation and distribution of farm products; to further the study and enactment of

(Continued on Page 7).

GARDEN TOPICS

By Floyd Bralliar

By the time this reaches our readers it will be time to sow the winter-crop of seven top turnips, and even though one has but a small garden to use he should sow this crop. Of all the green leafy vegetables men eat, there is little doubt that turnip tops stand at the top in vitamine content and general wholesomeness.

But turnip greens do not ship well and even though they are purchased from nearby gardeners, they are never quite so tender and good as when we can get them out of our own garden. If grown for home use one may cut only the leaves and leave the roots and central bud intact and get another crop in a few days.

Turnip greens should be sown in very rich soil if we desire them to produce abundantly and be tender and good. However it is not wise to use fresh manure on the soil at least not to any great extent as this is sure to effect the quality and wholesomeness of the greens. If the soil lacks in richness sow it with either nitrate of soda or muriate of ammonia as soon as the turnips are sown but before they have come up, using a pound to the square rod of space.

If enough rain has fallen to thoroughly wet the soil we may now sow radishes and reap a crop of better roots than we get in the spring. Use the same varieties we sow in early spring. If you are fond of radishes and have never grown a fall crop sow a few and be surprised.

Blackseeded Simpson lettuce may be sown at this time with every expectation of producing for this variety is very hardy, withstanding a heavy frost without injury. It does not produce hard heads but makes a large loose leaf head of good quality.

Rain has been badly scattered this tall, but where it has fallen plentifully it is time to sow the rose bed with some thick growing crop like rye that will use up the surplus moisture and aid the roses in ripening up their wood. If we desire to do so, we may use seven top turnips instead of rye for this purpose.

There are a good many flower seeds that are better sown in the fall than in the spring, and while it is a little early to sow any of these it is time to purchase the seeds as most of our readers are so located that they must order these from some mail order seedsman and this takes time.

Annual poppies of all kinds except the "California poppies" should be sown in the fall, usually about the first week in November. One will get a much better stand of plants and they will bloom much better if sown at this time. Annual larkspur of all kinds are also much better sown in the latter part of October or the first part of November. The seeds may come up this fall, but if so they are hardy. Usually they do not come up till early spring.

South of the Kentucky line one will usually get better results by sowing both alyssum and phlox drummondi seeds in the fall. We seldom have such weather as makes it possible to sow these in early February, and so both are cool weather plants at least in the early stages of growth, fall planting is a decided advantage. The same is true of calendulas. It is better to plant these rather late in the fall however for the plants are not always hardy if they come up in November. However by fall planting it is possible to get about as good bloom in the open as florists get in their greenhouses, but if we wait till spring to plant, the weather is usually so hot before the plants begin to bloom that it is impossible to get really fine bloom.

Heading petunias of the smaller type such as rosy morn and rose of heaven may be sown in November with every expectation of their coming up very early in the spring and doing much better than if sown in the open ground at any other season.

If pansies have not already been sown they should be sown at once. Plant the seeds in a box as has been recommended for other seeds in past articles.

GARDEN TOPICS

By Floyd Bralliar

There are few flowers that are so satisfactory for the care given them as daffodils in their various varieties. As this is the season for resetting those that have been planted for several years and for making new plantings there are a few things we wish to say about this flower.

First there are few plants that can stand as much fertilizer as can daffodils and if we wish truly fine flowers, we must give them food in abundance. While it may not be and is not advisable to let these bulbs be planted where they can touch fresh barnyard manure of any kind it may be used as a covering over the surface of the beds after the bulbs have been planted. A few years ago we had an experience in trying to determine how much manure emperor daffodils would stand without injury. The bulbs were planted in naturally rich soil in which manure had been mixed freely, but care taken to not allow manure to actually come in contact with the bulbs when planted. About two weeks after the bulbs were planted they were mulched with pure horse manure that had never been rained on. This manure was dry and so was not in chunks. It was put all over the bed to a depth of two inches. In the spring these daffodils not only bloomed freely, but had the largest bloom we have ever seen for the variety, and many of the stems bore two or three flowers, something we never saw before. One stem actually bore five flowers all open at the same time and all as large as the ordinary emperor bloom.

We are not recommending giving these bulbs this treatment but we are recommending giving them much more fertilizer than is commonly done. If stable manure is not available make up for it by mixing equal parts of cotton seed meal, and some good potato grower, and mix a quart of this mixture in every wheelbarrow full of soil used in the bed. Then see to it that these bulbs have plenty of water till the fall rains set in for narcissus of all kinds just miss being swamp plants. In fact they will thrive on tussocks of loamy soil that stick up here and there in swamps. In fact there are several plantings of this kind in the vicinity of Charleston, S. C., that bloom abundantly.

Narcissus bulbs contain a small percentage of poison so they are seldom eaten by mice, squirrels, moles or other pests that destroy tulip bulbs. Even the tops in the spring are seldom eaten by animals of any kind. We once knew a hungry goat to eat a few bites of daffodil tops but even he did not repeat the venture though he did not seem to suffer any from his experiment.

This is the very best time to plant bluebells (mertensia virginicus) and certainly there is no more beautiful spring garden flower. These plants are now being grown by the tens of thousands by nurserymen and may be bought for less money this fall than at any other time in our memory. The roots are perfectly dorman at this time and will be for six weeks yet. Plant this fall in soil that contains an abundance of decayed leaves or similar material and they will bloom about as well next spring as if they were old established plantings.

Those who have a winter window garden may plant four or five roots in a six inch pot and set the pot out of doors till the new year. This pot should be either covered well with wet leaves or with earth and kept moist. About the first of the new year bring the pot into the house and set in a sunny cool window. In a few days the plant will be up and if kept watered and cool, will soon be several inches tall and well budded. Now give living room temperature and you will have more good bloom than you can get from almost any bulbs you can plant. And best of all, blue flowers are scarce at any time and there are no better blue flowers than bluebells.

Mrs. S. G., Lebanon, has a number of snapdragon plants that did not grow tall and made short spikes this season

SIGN OF THE TIMES

"The day is coming when we are going to be as much ashamed of being sick as we are now of being dirty." — Kathleen Norris.

AN EDUCATIONAL INSTITUTION

"I cannot give you anything for Nannie Burroughs's school, because she is merely duplicating what we are doing in the public schools," said a lady to me when I appeared to her for a contribution to this very deserving institution.

"You are very much in error," I said to this misinformed woman. "At the National Training School Nannie Burroughs is doing a work which neither the public schools nor the university can do. The other schools have their spheres, and the National Training School has its special sphere." In the large school systems teachers are merely parts of a machine, and they teach books; but in Miss Burroughs' school the instructors teach the students— actually educate them by bringing out into action the powers of the mind.

Both the public schools and the universities are so organized and conducted as to draw upon so many different kinds of students and to depend upon so many sorts of teachers that neither may have a higher moral atmosphere than the community in which they serve. While the majority of both teachers and pupils in the large systems are disposed to do right they are always handicapped by a vicious minority that makes moral progress a difficult problem.

The gambler insists that in the public schools and state universities his child must have the same consideration as that of clergymen, for in the present prosperity of the criminal element the former may be a larger taxpayer than the latter. The net draws in everything from homes of varying standards of conduct. Moral education in such an atmosphere then, becomes a joke. What effect does it have on the child to teach him not to drink or gamble when his father supports him in school by providing opportunities for such indulgences, And what interest will an increasing minority of our teachers have in such character education when some of them patronize the number kings, frequent the races, and support the bootleggers?

As a rule nobody questions today the character of a scholarly public school teacher or a learned professor of a university unless he lowers his standard to the extent that his morals are reviewed in court; and even then he may not be dismissed, if he has money enough to buy "justice."

I happen to know of a recent case of a distinguished professor in a white university who was reported to the president of the institution for living with a woman to whom he is not married. Tho president refused to consider the case, saying that as long as this instructor continued to make such discoveries in science as he had made and as long as he taught the students as he had been teaching them, he would pay no attention to his conduct after school hours.

Students in the public schools and larger institutions of learning consequently cannot be expected to develop the high moral sense which we so much desire. In the dormitory in which I lived in a Northern university the students had a "beer night" twice a week, and there was a national prostitute on the stage that boasted that she had spent nights in every man's dormitory on that campus.

Students in Negro schools, of course have been apt scholars in learning from such whites. The other day a girl in a Negro school complained that after going to the trouble of smuggling into one of its first-class dormitories two and a half gallons of bootleg stuff, it turned out to be such a poor product that the girls could not drink it. They had been having so much better luck with other importations.

In a boarding school like the one conducted by Miss Burroughs I doubt that such a thing could happen. The students are better selected. The "aristocracy" would not send their children to such a struggling institution. These students come from the homes of hardworking people— from that of the widow or the widower with a daughter requiring protection while the breadwinners is away at work, from that of the parent who is seriously concerned about the development of character in the child, from that of the religious person who wants to see his child taught the principles of Christianity by the examples of teachers who do not spend their leisure smoking, drinking, petting, or playing poker.

I once had the idea that Miss Burroughs' work was a duplication of that of neighboring systems, but I was disillusioned one day when I went into a cafe to be served. The dining room had every aspect of comfort, and attractive decorations caught the eye here and there. A neat and polite girl approached me as soon as I entered, directed me to a comfortable seat, and promptly took my order, while making several welcomed suggestions as to the menu. The linen was immaculately clean, the silver was well polished, and the dishes conformed to the standard set in the other cases. The food was cooked according to scientific methods, but it nevertheless had been given a domestic touch that we seldom find in public places. It is needless to say that I enjoyed that meal immensely.

This girl had made such a favorable impression upon me, however, that I inquired as to her name, the part of the country from which she came, and the school which she had been trained to do so efficiently. Much to my surprise I learned that she came from a small town in Arkansas a few years ago and had had no training but what Miss Burroughs had given in the fundamentals and in catering.

Not long thereafter I had occasion to dictate a letter in the office of a colored man who heads one of the largest business enterprises controlled by Negroes. I had some doubts about his secretary, a physically deformed girl from North Carolina, who has such difficulty in locomotion that she has to support herself by taking hold of the objects as she passes through the building— just the very sort of girl that the public schools would not have taken up time with, one who could never get to a university without special help. This girl, however, took that dictation with such ease, worked it out so thoroughly, and handed the affair in such a secretarial fashion that I immediately enquired as to where she received such thoroughly training. At Miss Burroughs' school was the reply.

Later, too, I was attracted by the printing being done for a friend of mine. It was more than mere printing. Some attention had been given to the style, to proper make-ready on the press, and especially to the ornamental finish worked out in keeping with the thought of the matter printed. Surprised to learn that a woman was doing this printing, I went to her shop to find out something about her and the establishment. There I met an intelligent woman applying her education in a practical way, running a large up-to-

THE MODERN FARMER

Official organ of the National Federation of Colored Farmers

Leon R. Harris - - Editor

Published Monthly by the Modern Farmer at Nashville, Tennessee, and Chicago, Ill.

Nashville, Tenn., Office. 447 4th Avenue, North.

Chicago, Ill., Office: Vincennes Hotel, 36th and Vincennes Avenue.

Devoted to the interests of the Farmer, Truck Gardener Livestock and Poultry Breeder, the Home and the People.

Entered as Second Class Matter, April 10, 1929, at the Post Office at Nashville, Tenn., under act of March 3, 1879.

All contributions for publication in the Modern Farmer should be addressed to The Modern Farmer 447 4th Avenue, North, Nashville, Tenn.

No libelous matter will be published. Unsigned articles or letters, and those written on both sides of the paper will not be used.

Subscription price $1.00 per year, payable in advance. Personal checks must be certified. Make all checks or mooey orders payable to The Modern Farmer.

Advertising rates and sworn circulation figures presented upon application.

"OUR SLOGAN"

STAY ON THE FARM IF YOU'RE ON IT! GO BACK TO THE FARM IF YOU'RE OFF IT!

THE LAW

"It is hereby declared to be the policy of Congress to promote the effective merchandising of agricultural commodities by encouraging the organization of producers into effective associations under their own control.

The Board is authorized and directed—to promote education in the principles and practices of cooperative marketing—to encourage the organization, improvement in methods, and development of effective cooperative associations." (Public—No. 10—71st Congress. Sec. 1-5.)

THE GOSPEL

"This law is predicated upon the ability of the farmer to manage his own business, once he is organized to do so. Cooperation is the key to it and only in exceptional cases can the Federal Farm Board have any dealings with a farmer who is not a member of a producer-owned and producer-controlled marketing unit." Hon. Sam'l R. McKelvie, Member, Federal Farm Board.

The National Federation of Colored Farmers believes that the Colored Farmers of America should own and control their own co-operative associations.

"Co-operation With All—Affiliation With None."

LIFE

A crust of bread and a corner to sleep in,
A minute to smile and an hour to weep in,
A pint of joy and a peck of trouble,
And never a laugh but the moans come double;
And that is life!
A crust and a corner that love makes precious
With the smile to warm and the tears to refresh us,
For joys seem sweeter when cares come after,
And a moan is the finest of foils for laughter;
And that is life!
—Paul Lawrence Dunbar.

WHEN IT'S "MOVING DAY"

The National Federation of Colored Farmers and this paper have advised colored farmers to move en mass from those communities where they are treated as peons and slaves and where there is no chance that any reformation may be brought about in the immediate future. This suggestion has brought sharp criticism from some quarters and its sponsors have been told that such advice will create ill feeling and unnecessary suffering. These critics simply cannot realize the amount of ill-feeling and suffering that exists now. If they understood this we believe they would favor and support the suggestion.

We have received several letters recently that reveal the kind of conditions we are talking about. Here are a few extracts:

"They are making us live here on about fifty cents a week and it is out of a commissary."

"We can't get no money in part of this county at all. Those who get work get 37 cents a day in money and 37 cents in trade."

"They are barely letting us live here. We can't get no money on our crops. Some of us planted sugar cane, peanuts and small garden crops and they made us plow them up. We want to raise something to live on but they won't let us."

"We receive no cash at all for our labor but have to keep our families on what goods they let us have from the Commissary and they charge us two or three prices for that."

"I ginned ten bales of cotton and paid for the ginning with the seed then my landlord took all my cotton and only gave me one pair of shoes for one of my children."

"I raised my cotton on another man's land but the man on whose farm I live took all my cotton and told me to pay the other man off in corn."

"They charge us $4 at the Commissary for a sack of feed we can buy for $1.50 cash. We have to pay 20 cents a pound for meat we can get for 5 cents a pound cash."

"I work on a farm and get $12 a month,—one dollar in cash and the rest of it in trade."

Farmers and farm laborers in some communities have been existing under such conditions the past fifty years and the only chance they have to better themselves and the situation is to move away as quickly as possible. They do not have to move North or West. Some of them need to move only a short distance. But they should leave their persecutors in the hands of God and the devil and go somewhere where people who own land know how to treat their tenants and farm hands as human beings.

BEWARE OF FALSE DOCTRINE

Merchants of some towns near where Units of the N. F. C. F. exist have adopted the plan of having the county agent, white or colored call a meeting of colored farmers and when they assemble, take advantage of the opportunity to berate and abuse them because they have joined the N. F. C. F. They are told that the N. F. C. F. is no good—that they save nothing by buying farm and home supplies cooperatively,—that the N. F. C. F. market quotations and service is untruthful and hypocritical and that they should spend their money at home and come out of such an organization.

Officials and leaders of the N. F. C. F. have never advised members to boycott honest and honorable home merchants. They have informed the members of current prices of farm and home supplies and it is up to members to use their own judgment as to where they trade and with whom they trade. No member who possesses common sense will pay 20 cents a pound for meat he can purchase elsewhere at 6 cents a pound. He will pay $1.25 for 24 pounds of flour when he can get a better grade of flour for 35 cents.

The trouble is that scores of merchants and plantation owners who run commissaries have made it a business to skin colored farmers, farm tenants and laborers for so long that the "business' has become a habit and the habit is hard to break. They are now trying to run down the N. F. C. F. because, under its leadership, their victims are getting away from them.

We advise colored farmers to patronize honest and honorable home merchants, white and colored, for we know there are many such who deserve their patronage. But those who persist in charging them three and four prices for the necessities of life,—who charge them ten per cent interest on what they must purchase on credit,—who never let them get out of debt to them and are yet trying, in this enlightened age, to play the old "skin game," are not honest or honorable merchants and they should be boycotted and forced to close up their dirty joints as soon as possible. Tho N. F. C. F. cares nothing about what this class may say about the organization, even though they be backed up by county agents who receive part of their pay from federal and state governments.

At one of these meetings a member of the N. F. C. F. asked the county agent and merchants how much would he have to pay for a bushel of cow-peas. They informed him the price was $1.50. "Well," said the member," I have done bought mine for 65 cents, so you can go your way and I'll go mine, right along with the N. F. C. F."

Members who have that kind of intelligence can't be fooled. The N. F. C. F. has several thousands of such. The day of false weights, false measures, false price and false doctrines is over and the sooner dishonest and dishonorable merchants and dumb county agents get this truth into their heads the better.

ROOSEVELT'S "PEASANTS"

Dean John T. Madden of the Alexander Hamilton Institute, N. Y., sharply criticises Gov. Franklin D. Roosevelt's plan of establishing unemployed city families on farms where they can grow their own food and become self-sustaining. says Dean Madden:

"Many American farmers have ceased to be farmers and have become peasants. Prices of raw materials have declined 45 per cent or more. Prices of finished products, however, have declined only 20 per cent or less. The farmer is crippled in buying what he needs even for the purpose of production."

"Gov. Roosevelt's measure," he adds, "not only tends to make peasants of farmers, but tends to postpone recovery indefinitely and make peasants of all of us."

Dean Madden thinks, of course, that more farmers will bring about more production and therefore we will have more of the so-called "over-production." He belongs to the class of American leaders who can see but one cause for the present depression. That cause, as they see it is "over production." Hence, in order to get things in the right shape again we must destroy much that we have produced and never, never again produce that much again. A lot of farmers and farm leaders thought the same last fall. The Federal Farm Board wanted the farmers to plow up every third row of cotton. Some wanted half of the wheat and potatoes and tobacco in the country dumped in tho ocean. Waste, waste and throw away this God-given food and other products while at the same time thousands in the U. S. and millions in other parts of the world were hungry and ragged.

These brilliant leaders are always straining at gnats and swallowing camels. They did not object to the reclamation of millions of acres of arid western soil by building dams and irrigation projects that cost taxpayers millions of dollars. They did not object to the erection of thousands of factory buildings now standing idle. They did not object to the incorporation of hundreds of "water stock" concerns that fleeced the people of their hard-earned cash. No, they claimed such would increase competition and "competition was the life of trade." But when a few unemployed ex-farmers who are starving in the big cities are given an opportunity to return to farms so they can work and eat and live they cry "over-production."

These "peasants," black and white, are much better off than thousands of city laborers, wage-slaves,—who don't know their souls are their own when they are working and who have to starve when not working. We hope many of them will return to the farms and become good, decent, full-bellied "peasants." They may never get

STATEMENT OF OWNERSHIP

The Modern Farmer as required by the Act of Congress, August 24, 1912.

State of Tennessee,
County of Davidson.

Personally appeared before me, a Notary Public in and for the State of Tennessee, County of Davidson, S. B. Wilson, who having been duly sworn according to law deposes and says that she is the Business Manager of the Modern Farmer, and the following is to her knowledge and belief, a true statement of the Ownership, Management, etc., of the said publication for the date sworn above caption requested by the Act of Congress, August 24, 1912, embodied in section 443 Post Office laws and regulations.

1. That the name and address of the publisher and business manager of the Modern Farmer, Nashville, Tenn., and Chicago, Ill., S. B. Wilson, Business Manager.

2. That the owners are Henry Allen Boyd and S. B. Wilson, both of Nashville, Tennessee.

3. That there are no known bonds, mortgages or other security holders or owners holding one percent or more and that there are no bonds, mortgages or other securities on the corporation.

(Signed) M. G. FERGUSON, N. P.

Sworn before me the 15th day of October, 1932.

My commission expires January 10, 1939.

rich or enjoy much high priced night-life but they will live longer and happier lives. Let Gov. Roosevelt's peasants alone. They know better than any big leaders and economists when they are well off.

MODEL COMMUNITY OF NEGRO FARMERS

The National Federation of Colored Farmers was deeply interested in the Simmons-Whittington bill when before Congress and made an effort to have the bill amended so as to provide for the establishing of model farm communities of colored farmers in southern states as well as for white farmers. The original bill called for the establishing of one model farm community in each of the southern state. The N. F. C. F. wanted two such communities established, one for white and one for colored farmers.

Some have objected to this measure on the grounds of government paternalism but we believe in this instance the govenment can well afford to be paternal. The establishing of such communities and their successful existence would be a great object lesson to southern farmers, colored and white. We hope the bill will be revived, amended and passed.

NATIONAL FEDERATION OF COLORED FARMERS

Incorporated
Vincennes Hotel
Chicago

Dear Officer:—

The Tomorrow of the Negro Farmers is the vital question now. Not what yesterday was, but what today is.

As an officer of your unit, representing the National office in looking after many details regarding conditions among your members, you are expected to do your part.

Life is a thing of rapid chances, and our members need more information than money.

Please see that the bulletins are read and fully explained. Have each and every member to fully understand that this is their organization, and we are fighting for their interests.

The National Federation of Colored Farmers, Inc., is the monthpiece for the Negro farmer from Maine to California.

The Modern Farmer is the only periodical to espouse your cause.

Money is badly needed to assist us to carry this fight.

Will you make a personal appeal to your members to help us all they can just at this time with back membership, and also the convention tax if they have not already done so? Have your members pay their subscription to the Modern Farmer.

The depression was not invited, and we must fight it out. Are you fighting or marking time? Are you acting or hoping? Are you planning or dreaming?

With all your getting, remember to get **Understanding.**

Will you let us have your report by return mail?

Faithfully,
National Federation of Colored Farmers Inc.
By
Jas. P. Davis,

THE MODERN FARMER

The Modern Farmers is badly in need of your subscription. They have kept you posted all the year, and its your only periodical devoted exclusively to the Negro farmer.

Subscribers who owe, should send in their subscription now, and those who have not subscribed should be redblooded to the extent of sending in their subscription of One Dollar at once, to their office

The Modern Farmer 447 Fourth Avenue, North, Nashville, Tenn.

Information is what the Negro farmer is needing.

REPORT ON LABOR CONDITIONS IS SHOCKING

Forrest Jones Camp, Near Delta-La.

This contractor agrees to pay the men $1.25 a day for twelve hours—5:30 to 6:30, but usually they work fourteen hours. From this is deducted the $4 commissary checks, 50c a day for board, $1 a week tent rent plus any bill made out at the commissary. Recently they were "paid" for 26 days. Most of the men received nothing, but were told that they were in debt. A few received a dollar or two. The men here do not know the prices of anything in the commissary and do not know that they are being charged for. If they try to keep accounts for themselves, they are likely to be discharged. When men are discharged, they are usually paid nothing. A few men in this camp were hired at $2 a day but never received it. Many were hired at $1 a day from which the above charges are deducted. A man living in the neighborhood furnishing his own team is paid $1.25 a day and receives it— a case so exceptional as to be extra-ordinary.

Hunter's Camp, Near Delta, La.

The living quarters in this camp are about average. Men are hired at $2 a day, 12-hour shift. There is a $3 weekly check at the commissary, 50c a week for the cook and 50c a week for tents. The pay-day is irregular and they seldom receive any money as the bill at the commissary equals the amount due.

J. J. McCathy States Contracting Co. Camp at Wayside, Miss.

There are 75 men in this camp, of whom 15 are white. The colored men are hired at $1.50 a day with the exception of a few tractor drivers at $2.

Callahan-Walker Construction Co., Wayside, Miss.

This is a fairly large and clean looking camp with more white workers than is usual. There are many tractors, electric tower, Monaghan, drag-line and other machinery, requiring more skilled labor. Pay averages $2 a day although one spotter (a white man) receives $7. The colored workmen were afraid to talk and even refused to answer the questions of a colored investigator.

Rainey and Moore Construction Co., Glen Allen, Miss.

There are 50 colored and 20 white men in this camp. Ordinary labor is paid $1.50 a day but the tractor drivers get $2.50 for a 12-hour day. The men are fairly satisfied. They state that although they get very little pay when commissary charges have been deducted they consider this a good outfit as treatment is humane. The tents are usually good.

Charles Lowrance Camp Near Allen Mississippi

People at other camps in the vacinity spoke of this as the worst one around there. The contractor is a man of violent disposition, beats the men, does not pay, discharges without pay on slight excuse, etc. The men were afraid to talk even to a colored assistant who went among them.

R. T. Clark Co., Inc., Myersville, Miss.

This is another camp famous in the district for brutal and inhuman treatment. There are 100 men in camp of whom 14 are white. There is one colored foreman and a number of men who were interviewed separately said that if it were not for this man (Isaiah Johnson) no one would stay in the camp. Clark, himself, is the worst offender, as he is a man of violent temper. Whippings occur daily. "Clark will pick up a stick and beat a man just for looking at him," one man said. The men are paid $1.50 to $2 a 12-hour day. There is a $3 commissary check, 50c a week tent rent, 75c for cook, 5c a day for ice water. Pay-day is irregular. At the time of this visit they had not been paid for five weeks. One man stated that he had received $12.35 for two months work of 12 hours a day, seven days a week. He had not missed an hour.

HUGE CO-OP PLAN OF FLOYD OLSON

Minnesota Governor to Urge Its Formation

Creation of a giant cooperative organization which would include farmers of all northwest states and which would be sufficiently powerful to control the quantity of farm products shipped to market each day, will be urged by Gov. Floyd B. Olson of Minneapolis.

"Supply and demand regulate prices of farm products and once the farmers are able to regulate the supply, the prices will take care of themselves," Governor Olson says.

"The organization I propose would include every grower of foodstuffs in the northwest, if possible. From a central office, branch offices would be regulated, and from these branches, the farmers would be kept in touch with market conditions.

"With such an organization in the field, there would be no chance of any certain product flooding the market and driving prices down to a point where the farmer must sell at a loss if he sells at all. Members could hold back a product when market conditions became unfavorable and although they might take a loss in this manner, they would be saved the expenses of shipping goods which would not sell on arrival at the markets.

"I believe such a plan would do much to solve the low price problem confronting farmers. Prices paid by these men for goods they buy are set by others. Prices they receive for goods they sell also are set by others. Men in no other line of business are confronted with this strange problem.

NATIONAL FEDERATION OF COLORED FARMERS, Inc.

Vincennes Hotel, Chicago, Sept. 30th, 1932

NEWS BULLETIN

To Be Read to Members in Meeting

A very aunthentic report from our Washington, D. C., office has just been received, and it is to the effect that President Hoover has order an extention of all government seed loans to farmers this year who are unable to meet their obligation, and give these borrowers the opportunity of paying only one fourth of the debt when due in November, and a signed agreement to pay the balance on whatever terms congress may prescribe after it re-convenes this winter.

Our members who can pay their loans in full should do so, but if you have any difficulty in meeting the entire debt, then ask to pay only one fourth of the amount.

A meeting is being held in Chicago this week with a view to having extensions granted to farmers who are unable to meet their mortgage payments on farms.

A representative from the government, mortgage holders and representatives from all sections of the country are in attendance.

Our bulletin next week will give further information along this line.

SIZE AND FINISH CONTROL TURKEY SALES

An extra big turkey, undeveloped and poorly fattened, stands a poor chance in the general markets against a medium bird that is fat and well finished.

Bryan Nesbit, turkey export for the poultry department at State College, Raleigh, N. C., believes that some turkey fanciers have gone too far in trying to grow out the largest birds possible. Since the beginning of turkey raising he says, the birds have been bred for their size and the regular standard weights have been raised from year to year. Only recently, the standard weights for all birds, except the Bronze, were raised three pounds each.

ARKANSAS FARMS

These farms can be bought on terms of about 10 or 20 per cent down and the balance in 10 years. Never before in history have you ever had such an opportunity to own a farm as now. Buyers will be given as much as ten years to pay the balance if desired.

Let us know the farm you are interested in and wish to buy, and we will give you farther instractions.

Crittenden County

No. 15843—80 acres 6 miles south of Earle and 1 2 mile to hard road. Price Twelve Hundred Dollars.

No. 28142—120 acres in cross county 2 1-2 miles south of Hickory Ridge, on a public road. 15 acres cultivated. 10 acres pasture and 95 acres in timber. Price Five Hundred Dollars.

No. 4748 — 40 acres in Lee County 5 miles west of Aubrey on a public road and 4 miles to hard road. Two room house. 18 acres in cultivation and 22 acres in timber. Price Four Hundred Dollars.

No. 12939— 80 acres 1-2 miles North of Moro in Lee County on a public road. 5 room house and 3 room house and barn. 45 acres cultivated and 35 acres in timber. Price One Thousand Dollars.

15785—65 1-2 acres, 1 mile southeast of Moro, on a public road. 4 room house, barn and other buildings. 45 acres cultivated. 20 acres in timber. Price One Thousand Dollars.

1890—159 acres in Lee county six miles south of Palestine. Log house and old barn. 70 acres cultivated and 89 acres in timber. Price Seven Hundred Dollars.

This is less than $4 50 per acre.

21582—40 acres Lee County 4 miles North of Marianna. Four room house and also barn. 30 acres cultivated and 10 acres in timber. Price Nine Hundred Dollars. About 90 dollars down and balance in 10 years.

28365— Two hundred acres 4 miles east of Aubrey in Lee County 7 miles southwest of Marianna, on a public road. Seven room house and 2 room house. Also barn, 2 sheds and some other buildings. 170 acres in cultivation and 20 acres in timber. Price Five thousand dollars. 4 members could go intogether and buy this place and pay about 125 dollars down and balance in 10 years.

Mississippi County

15482— 80 acres, 10 miles southwest of Osceola, 2 1-2 miles Northwest of Grider. Four room house and a 2 room house. 55 acres cultivated and 25 acres in timber. Price Two Thousand dollars.

20787 — Forty acres one quarter mile south of Chilford. Seven room house and small building. 30 acres cultivated and 10 acres timber. Price Two Thousand dollars

---

PHILLIPS COUNTY

No. 1298— 135 acres— 5 miles Northeast of Marvel and 2 1-2 miles North of Poplar Grove, on a public road. Four room house. Four small houses and 2 barns. 100 acres cultivated and 13 acres in pasture and 12 acres in wood. Price Three Thousand Five Hundred Dollars.

Three members could go in together and buy this, paying about one hundred dollars each down.

No. 1516—Eighty acres, 14 miles to Elaine station, on a public road. 3 room, house, small barn, 60 acres cultivated and 20 acres in timber. Price Six Hundred Dollars. About sixty dollars down will start this.

No. 5039 —Forty acres 4 1-2 miles Southwest of Helena and 3-8 mile to public road. 460 dollars About 50 dollars down will likely get this.

No. 5634— Forty acres. 1 1-4 miles west of Oneida on a public road. Two room house. 28 acres tillable, and 12 in timber. Price only two hundred dollars. You can likely pay about 25 dollars down and balance as long as you want it.

No. 6144— Forty acres 1 mile Northwest of Oneida. Half mile to hard road. Four room house and 4 small barns. 35 acres cultivated and 5 acres in timber. Price Two hundred dollars.

No. 6592— Forty Acres 2 1-2 miles west of Oneida on a public road. Two three room houses and 2 barns. Price Eight Hundred Dollars.

No. 6719— Forty Acres —3 miles Northwest of Oneida on a public road. One house and barn also some sheds. 30 acres cultivated and 10 acres in timber. Price Six Hundred Dollars.

No. 7081— Eight acres, 1 mile Northwest of Oneida on a dirt road. One house and one barn. 70 acres cultivated and 10 acres in timber. Price One Thousand Dollars. About One hundred dollars down will likely swing this.

No. 7116 One hundred eighteen acres, 2 miles north of Heck on a paved road. Four room house, 3 room house and small barn. Forty acres cultivated 20 acres pasture and 58 acres in timber. Price twelve hundred Dollars.

No. 8453 Forty acres 1 mile east of Barton. Two room house and 4 room house and old barn. 25 acres cultivated and 15 acres in timber. Price Five Hundred Dollars.

No. 11737— Forty acres Phillips county. 2 miles southwest of Oneida on a public road. 1 house all cultivated. Price seven hundred dollars. This is a good chance to get a home. Down payment around 75 dollars.

14924. Forty acres Phillips county 2 1-2 miles southeast of Oneida. Three room house. 15 acres cultivated and 25 in timber. Price 600 dollars.

17110 — Forty-four and three quarter acres 2 1-2 miles east of La Grange 3 1-2 miles to hard road. 5 room frame house 35 acres cultivation and 8 is in timber. Price 1,000.

No. 17010—Forty acres 2 miles south of Palestine on private road. Four room house, small log barn and log crib. Price 400 dollars. About fifty dollars down may get this.

9644— Forty acres 7 miles north west of Palestine on private road 12 acres cultivated. Price one hundred dollars. A few dollars down will get this.

If you wait too long you may miss these bargains.

No. 5039 —Forty acres 4 1-2 miles southwest of Helena and 3-8 miles to public road old house and barn. All cultivated. Price 460 dollars. About 50 dollars down will likely get this.

No. 5631—Forty acres. 1 1-4 west of Oneida on a public road. Two room house. 28 acres tillable, and 12 in timber. Price only two hundred dollars. You can likely pay about 25 dollars down and balance as long as you want it.

No 6144— Forty acres, 1 mile Northwest of Oneida. Half mile to hard road. Four room house and 4 small barns. 35 acres cultivated and 5 acres in timber. Price two hundred dollars.

No. 6592— Forty Acres 2 1-2 miles West of Oneida on a public road. Two three room houses and 2 barns. Price eight hundred dollars.

No. 6719— Forty Acres— 3 miles northwest of Oneida on a public road. One house and barn and also some sheds. 30 acres cultivated and 10 acres in timber. Price six hundred dollars.

No. 7081— Eighty acres, 1 mile northwest of Oneida on a dirt road. One house and one barn. 70 acres cultivated and 10 acres in timber. Price one thousand dollars down will likely swing this farm.

No. 7115—One hundred eighteen acres, 2 miles north of Heck on a paved road. Four room house. 3 room house and small barn. Forty acres cultivated, 20 acres pasture and 58 acres in timber. Price one thousand dollars. About one hundred dollars down will likely swing this farm.

No. 7115 — One hundred eighteen acres 2 miles north of Heck on a paved road. Four room house, 3 room house and small barn. Forty acres cultivated, 20 acres cultivated, 20 acres pasture and 58 acres in timber. Price twelve hundred dollars.

No. 8453—Forty acres, 1 mile east of Barton. Two room house and 4 room house and old barn. 25 acres cultivated and 15 acres in timber. Price five hundred dollars.

No. 11737— Forty acres Phillips county, 2 miles southwest of Oneida on a public road, 1 house, all cultivated. Price seven hundred dollars. This is a good chance to get a home. Down payment around 75 dollars.

13186-7 —Forty-five acres 4 miles southwest of Postelle on a public road two boxed houses. 25 acres in Cultivation 20 acres in timber. Price three hundred dollars.

No. 14576—Forty acres 8 1-4 miles northwest of Morvel on a private road 1-2 mile to paved highway number 20. 20 acres cultivated and 20 acres in timber. Price, One hundred dollars. Very few dollars down will land this 40 acres.

14924 —Forty acres Phillips county 2 1-2 miles southeast of Oneida. Three room house. 15 acres cultivated and 25 in timber Price 600 dollars.

17110— Forty four and three quarter acres 2 1-2 miles east La Grange 3 1-2 miles to hard road. road 5 room frame house 35 acres cultivation and 10 in timber. Price 1,000.

Number 5,000 — Eighty acres, 9 miles north Helena on public road two houses and barn. 50 acres cultivated and 30 acres in timber. Price $1,600.

No 23888.—Forty acres 2 miles west of Oneida on a public road Two four room houses and barn. 28 acres in cultivation 4 acres in pasture and 8 in timber. Price three hundred dollars.

ST. FRANCIS COUNTY

57.97 acres, 10 miles northwest of Forrest City and 5 miles from Calawell on a public road. 1 house, 80 acres tillable and 7 acres in timber. Price three hundred dollars. A very few dollars down will land this.

No. 4835-11595—180 acres miles northwest of Chatfield, 1 milo to gravel road. Six room house and 3 room house. Two small barns 55 acres in cultivation and 125 in timber. Price 4 500.

No 17010— Forty acres 2 miles south of Palestine on private road. Four room house, small log barn and log crib. Price 400 dollars. About fifty dollars down may get this.

9644 —Forty acres 7 miles northwest of Palestine on private road 12 acres cultivated. Price one hundred dollars. A very few dollars down will get this.

If you wait too long you may miss these bargains.

EXCERPTS FROM "POOR RICHARD'S" EARLIER ALMANACS

He that cannot obey, cannot command.

Approve not of him who commends all you say.

Write injuries in dust, benefits in marble.

Content makes poor men rich; discontent makes rich men poor.

Liberality is not giving much, but giving wisely.

Better is a little with content than much with contention.

You may talk too much on the best of subjects.

He's a fool that cannot conceal his wisdom.

Let thy discontents be secrets.

Wealth is not his that has it, but his that enjoys it.

He that can compose himself is wiser than he that composes books.

Teach your child to hold his tongue —he'll learn fast enough to speak.

It is better to take many injuries than to give one.

The worst wheel of the cart makes the most noise.

He that waits upon fortune is never sure of his dinner.

Do good to thy friend to keep him, to thy enemy to gain him.

He that would catch fish must venture his bait.

He that speaks much is much mistaken.

Search others for their virtues, thyself for thy vices.

'Tis easier to prevent bad habits than to break them.

A quarrelsome man has no good neighbors.

What you would seem to be, be really.

Many a man thinks he is buying pleasure, when he is merely selling himself a slave to it.

Half the truth is often a great lie.

Laziness travels so slowly that poverty soon overtakes him.

Well done is better than well said.

If you'd lose a troublesome visitor, lend him money.

If a man could have half his wishes, he would double his troubles.

The doors of wisdom are never shut.

Doing an injury puts you below your enemy; revenging one makes you but even with him; forgiving it sets you above him.

—Benj. Franklin.

INTERESTING NEWS AND NOTES

Dr. Emmett J. Scott, Secretary-Treasurer of Howard University, Washington, D. C., has been appointed one of the members of the newly created Parole Board of the District of Columbia. The other two members are white.

One of the most dastardly murder plots in the history of the South was revealed recently at Jackson, Miss., when five white men were arrested and allegedly admitted their participation in a plot to murder Negro firemen of the Illinois Central railroad. Five firemen have been killed during the past, seven months. Those arrested are all discharged former employes of the road.

Chas. E. James, a Negro aviator 30 years old, was burned to death when his plane crashed at the Gary, Indiana airport.

Prof. W. B. Windsor, noted educator and fraternal society man of Greensboro, N. C., was killed recently by an automobile.

---

894 Illinois colored farmers own 57,811 acres and the value of their land and buildings is $3,720,618. Illinois farmers will hold a Farmers' Conference in Mound City October 8th.

The "farm strike" which started in Iowa is spreading all over the country. Strike leaders urge farmers to withhold produce from market until there is a rise in prices. Milo Reno of Iowa is the recognized leader of the strike organization.

Thugs robbed a 61 year old onion grower of all his life savings whey they searched his house and discovered the hiding place of his money. He lived on the outskirts of Chicago. He had been warned to place his money in the bank but had not heeded the warning.

John Specht, 16 years old, won the recent Illinois plowing contest. He was presented a large silver loving-cup. The contest opened at nine o'clock in the morning and lasted till noon and was witnessed by more than five thousand persons.

AN EDUCATIONAL INSTITUTION

(Continued from Page 3)

date print shop as well as others do and adding thereto a bit of art to which others do not generally give attention.

"Who are you and where did you learn this?" I enquired.

"Some years ago," she said, "I came as a poor girl from Alabama, and worked my way through Miss Burroughs' school. After completing the high school course I took up printing there and developed in the trade, and I have made a good living at it every since."

While college bred men and women are daily appealing to me for employment, this woman has so much to do that she has to run her print shop until midnight to take care of her customers.

Now if Miss Burroghs does not do any more than to turn out one student of this type every year, her institution thereby amply repays the public for all the money given to it and obligates the people throughout the country to give it still more support. I am giving this school one hundred dollars this year. How much will you give?

NEGRO LABOR CASES HEARD

(Continued from Page 1)

1927 and that she found the homes of the poorest cleaner and the food more wholesome. During the hearing Miss Boardman refused to give names of persons who assisted her in securing information because she had given her word that she would withhold names. Over the entire area, she stated, there is such an atmoshpere of terrorism that revealing names might lead to abuse or even the possibility of persons being killed.

Miss Boardman stated that it was her conviction that the worst abuses were to be attributed to the contract system of the War Department now in force.

Mr. White pointed out that it was not the duty of any private organization such as the N. A. A. C. P. to investigate such conditions as these. It is clearly the War Department's job. There should be no difficulty in getting facts, he said, if the War Department wishes to do so. He urged that the department send to the flood control area as investigators men who are free from prejudice and from economic bias, and that witnesses be assured that they will not be intimidated, fired or subjected to violence. He urged further that the department cancel all contracts held by persons who have been guilty of offenses set forth in the testimony.

While assuring Mr. White and Miss Boardman that everything possible will be done to correct conditions in the flood area, Gen. Pillsbury took the position that the government cannot enter casually into contracts and break them, and also that the War Department cannot dictate living conditions among workers on the project. The War Department has already appointed an army officer, Harley M. Ferguson, a native of North Carolina, to make the investigation.

LEON HARRIS' ADDRESS

(Continued from Page 1)

constructive farm legislation; to advise with representatives of public agricultural institutions in the determination of nation-wide farm policies; and to inform their members regarding all movements that affect their interests." These, briefly, are the primary objectives of all our national farm organizations.

These great farm organizations, my friends, are non-sectional, non-political and non-sectarian. They say so. Their leaders say so. They would be perfect organizations for all the farmers of this country were it not for one fact. One, great, big, important fact, however, is that they are not non-racial. And there is the rub.

The Grange, the oldest of these organizations, is strong in the East and East Central states, but there are few colored farmers in this section of our country. Out of a membership of near a quarter of a million there are less than a thousand Negro farmer members. The National Farmers' Union is strong in the South and West, but it has no full members of our group. The American Farm Bureau, the strongest of the three, has never sought colored farmers and has refused to recognize as full members the few misguided southern colored farmers who paid membership fees.

What could be done about this situation? Surely the nine hundred-seventy thousand colored farmers, farm tenants and share-croppers of America should receive the benefits of organization, but how? The answer was,—"through an organization of their own,—an organization of and for colored farmers

The National Federation of Colored Farms, Inc., is in existence I mention it as the fourth national farm organization and ten years from now someone will truthfully call it a great national farm organization. We, who are members, who have seen it grow from nothing to its present position, are proud of its progress and accomplishments. We know it has special work to do,—unique service to perform, and it is up and doing.

I have mentioned the chief aims of all our national farm organizations. Allow me to mention more clearly the chief aims of the National Federation of Colored Farmers.

First of all, The N. F. C. F., our organization desires that its members shall earn more, save more and therefore, have more as a result of their labor. It instructs and aids them in the practice of co-operative buying, co-operative production and co-operative marketing.

Members of our Units in some sections save from ten to fifty per cent on the purchase price of home and farm supplies by buying together—co-operatively. Colored farmers should organize for this purpose alone, if for none other. "A penny saved is a penny earned" and pennies count nowadays. My pennies are now looking like dimes and feeling like quarters.

Co-operative production, which is the planting of a sufficient acreage of like crops and like varieties by members of a Unit that will enable the product to be sold in car-lots and otherwise profitably marketed, is a worth-while practice and organized colored farmers discover that it adds to their annual income. For instance, one farmer may be unable to produce a car of Spanish peanuts, but ten farmers in the same Unit can do so easily and when the product is marketed, each of the ten is better off than any one of them would have been had he produced and sold as an individual.

Of course co-operative marketing follows co-operative production. I will say right here that our organization is extremely fortunate in having as its president one of the foremost marketing specialists in the U. S. Mr. Davis has been closely connected with some of the largest commission and marketing agencies of the country for many years. He knows the business from A to Z and his advice and service in this capacity is essential to our success.

When the colored farmers of Illinois are organized,—as they will be sooner or later,— they will discover that the national office of the N. F. C. F. can put them in touch with better markets than they have ever known. But they must do their part, and they must furnish products graded according to standard, carefully handled, and packed according to instructions. Secondly, our organization desires to substitute Negro farm ownership for Negro farm tenancy. It aids and instructs its members in the purchasing of farm homes.

At the present time there are around 250,000 colored farm owners in the U. S. We want at least 300,000 by 1940. There are 894 farm owners in this state and the Lord only knows how many tenants and farm hands. And I know this—there are at least ten thousand Negro ex-farmers in the city of Chicago who should right now be Illinois farm owners and I'm not saying anything about another ten thousand living in the other cities and towns of this state. We want to get them out of the smoke into the sunshine We want to get them out of man's dirt onto God's good dirt. Negro farm tenancy must be destroyed. The southern share-cropping system—that land-robbing, man-robbing, children robbing, God-robbing system must die as dead as the dodo. It has existed long enough in this civilized age, in this bountiful, beautiful country, destroying the happiness of three million black American citizens and smudging the souls of all who profit from it. It must die and it is dying. Give the N. F. C. F. twenty-five more years and we will kill it. It **should** die and every American, black and white, knows it, although some of our prominent Southern Negro leaders are afraid to say so. Our organization, in numerous ways, helps members become farm owners. Our efforts along this line are appreciated by all good citizens and I could show you a book of letters to prove it.

And thirdly,—let me say this. Our organization recognizes the situation and condition of thousands of American Negro farmers, tenant farmers and farm hands who are now existing in an enforced state of persecution, debt-slavery and poverty. It attempts to alleviate the sufferings of this class by reporting to the legal authorities of the federal and state governments specific cases of injustice and persecution, by openly publishing facts relative to such cases that public opinion may be focused upon them,—and by using the political and economic power of the organization to combat such conditions and situations.

A specifice case reported was that of a tenant farmer whose landlord used the tenant's name on an application for a government loan. The landloard received the money, gave the tenant a few dollars and kept the rest. When "settling time" came the poor tenant was forced to give up all his crop to this landlord and remain in debt to him for a loan of money he had never seen or handled.

That landlord, a white county extension agent, a lawyer, and several others are now in the Federal Penitentiary at Atlanta, Georgia, convicted of defrauding the government, and I want to say that the N. F. C. F. helped put them there.

This illustrates what I mean, my friends, when I say that we use the political and economic power of the organization to combat persecution. The Negro farmer has a vote,—at least he has in some sections, and he has friends who vote in some real important political divisions,—and also, he has some money to spend. Singlehanded as an individual he is a plain nobody. But organized, he is a giant.

The power of the organized colored farmer's dollar is worth something too. I can show you orders for farm and home supplies from Units of the N. F. C. F. that run into thousands of dollars. I can show you single orders for as much as $800.00. Of course the home-town merchants and bankers are going to respect a group of farmers who can spend four or five hundred dollars every two or three weeks. Who wouldn't respect them. Organization begets respect as well as many other happy children.

The American farm market is worth 7 billion dollars annually and one-eighth of this market is Negro. Manufacturers are short-sighted indeed who will neglect this market much longer. Negro farmers are good buyers and a co-operative organization of Negro farm-buyers could obtain bargains now undreamed of.

I could give you many other reasons why organization and co-operation pays good dividends. It teaches the colored farmer to think in terms of business. It makes him desire to have something and to be somebody. It makes him hold his head up. It gives him courage. It makes him love his farm and his vocation. It keeps his children on the farm—happy and independent. (My wife here is one of the eighteen children of a successful Negro farmer, of Iowa, too, and she loves the farm. She has done about everything on a farm, too, since we've been together, from hatching incubator chickens to hauling manure behind an ox team.) Organization makes successful farmers and children are not going to stray very far away from the old folks if the old folks are successful and happy and have something.

The co-operation of organized rural and city women in the marketing of farm products, for instance, will also be found to be very beneficial. There are over a hundred organized women's clubs right here in Illinois towns and cities. The members of these clubs are housewives and they eat and some of them keep boarders. Why can't the colored farm women of Illinois feed them? They can if they will get together.

Just a word about the farm community. The National Federation of Colored Farmers has faith in the permanency of those colored farm communities now in existence and desires to establish more of them. What are these communities going to be? They are either going to be communities of colored farmers working as hired hands on farms owned and controlled by large corporations and money-interests, or they are going to be communities of colored farmers who own their own soil and live and work together in harmony and co-operation. We don't want corporation farming in this country and we are fools if we let it come. Thousands of corporation employees are starving right now in the large cities. We do want the co-operative farm communities. They are and will be the logical result of the American farm co-operative idea. In these communities will exist the co-operative baking, packing, creamery, clothing, recreation and educational plants. These plants will produce many commodities the communities need and the surplus will find a market. The day of the immense plant is about over. This depression and oppression is about to prove that they have failed. The small plant in the small community run as a co-operative business is about to come into existence.

I don't want you to think that I am a dreamer or a visionary. The good book says that "young men shall see visions and old men dream dreams", but I am neither young or old so it doesn't mean me. I know all this will require money and brains, but Negro farmers of this country are blessed with more good, hard common sense than any other class of persons in this country and they can get the money.

The outlook for the intelligent Negro farmer is not dark or gloomy. He must be diligent, industrious and farsighted. He has got to learn the art of being agreeable that he may live in peace and harmony with his fellows. And he must organize and learn the secret of successful co-operation,—all for each and each for all,—or as our own organization puts it in plainer language—"You help me, and I help you."

NEWS BULLETIN

hogs (registered) fruit jars, barrel flour, one hundred pounds sugar, 1 case Mme Walker vegetable soap, 4 cartons Rinso, 4 cartons Lifebuoy soap, 1 set of silver salt and pepper shakers and lots of other things.

None but members can compete for these prizes. Membership buttons are ready.

Let us all meet again FACE to FACE in Memphis, Tenn., Oct. 26th 27th and 28th.

All friends and non-members are also invited to attend our sessions, except the business session on Friday afternoon which will be for members only.

Don't forget register on opening day.

Faithfully,

National Federation of Colored Farmers, Inc.

FARMS FOR RENT

We are working on quite a list of very fine farms that will be available for rent another year, and we hope to give this to our members in next bulletin.

Application for Membership

NATIONAL FEDERATION OF COLORED FARMERS (Inc.)

Vincennes Hotel, Chicago

As a farmer, I believe the time has arrived when the Colored Farmers should form a National Organization devoted to diversified production, grading, packing, shipping and marketing of farm products and to the purchase of needed farm supplies through co-operative methods, to the end that a more prosperous financial condition may result from their efforts as producers.
I hereby subscribe $5.00 for membership in the National Federation of Colored Farmers for a period of 12 months from date. Also $1.00 for an Annual Subscription to the Modern Farmer.

NATIONAL FEDERATION OF COLORED FARMERS, INC.

NEWS BULLETIN
Vincennes Hotel

Chicago, Oct. 12, 1932.— The department of agriculture has agreed to grant extension on crop production loans made to cotton farmers.

The department also announced it would accept cotton as collateral for loans on a basis of nine cents a pound. The basis for the nine cents figure will be middling seven eighths cotton. Differentials will be prepared to provide premiums for staples longer than seven eighths inches and grades better than middling, and like discounts for shorter staples and lower grades. As we understand it, if you have a seed and production loan with the department, you can pay this loan with your cotton, and they will allow you nine cents per pound for it based on 7-8ths middling grade, and where you have better grades the price will be better than nine cents.

All members who desire to take advantage of this liberalized provision, will be required to deliver their cotton to the Cotton Co-Operative Associations or to any federal bonded warehouse and send the receipt in to the seed loan office.

By this method you can get at least 2 1-2 to 3 cents per pound more for your cotton— based on the present market quotations.

Farmers who have seed and production loans and unable to pay on account of short crops and other conditions beyond their control, have the option of paying only one fourth of the amount now but they will have to make satisfactory arrangements for the balance.

Dr. J. R. A. Crossland has been appointed by the government to look after all loans to be made to our race farmers. Members who need money to redeem their farms as a result of having been sold for taxes, mortgages and etc., should write him at once. Members who wish to secure a loan on their livestock should also write him at once. Farmers who have farm products in large quantities are also elgible to fie for loans through this department.

His address is Dr. J. R. A. Crossland Farmers Seed Loan Office, St. Louis, Mo.

Through an act of Congress the American Red Cross Society has been given a quantity of flour and cloth to distribute to those who are in destitute circumstances. If you are refused by the local Red Cross chapter, we suggest that you write a letter to the American Red Cross Society, Washington, D. C.

FARM LANDS

Members who are interested in buying any of the farms given in our last news bulletin, should act as quickly as they possibly can.

We have a list of some very fine farms in southern Illinois ranging in price from six hundred dollars up. Further information given on request.

We do not believe our members will ever have a better opportunity to secure farms at lower prices than NOW.

We are working on a list of farms for rent, and it will be completed within a few days and will be given in our next bulletin.

It is better to pull up the weeds from your own garden than to grumble at those in your neighbor's ground.

Sage Sayings.

COOLIDGE REVIEWS WORK OF HOOVER; DECLARES IT GOOD

Says R. F. C. and Farm Board Prevented Economic Collapse.

"Parties are judged not only by their promises, but by their performances," says Calvin Coolidge, adding that while the republican party does not claim it can perform the impossible, it is willing to be judged on its record. Then he recited from the record. The article, entitled The Republican Case, is in the current issue of the Saturday Evening Post. Excerpts from the article follow:

Postpones Wage Reduction

"A large majority of our people are wage earners. They had come to enjoy the highest standards of compensation, and therefore of living, that ever existed in the world. Their welfare is the ultimate social obligation of our government. In time of distress they have always been the first to suffer and heretofore have had the least consideration. The first suspicion of declining business has usually been a signal for a drastic reduction of wages. While the panic was still on in November of 1929 the president called a conference of important industrial leaders and secured an understanding in wages, which was generally maintained for about eighteen months. The amount of bitterness and strife which was prevented was simply incalculable. Profits and dividends might dwindle, salaries might be reduced, but the wage earners knew that for the time being their rate of pay was secured and they would be the last to be called on to make sacrifices. As a consequence, we have had remarkably few of those strikes and industrial conflicts marked by riot and bloodshed which have characterized former depressions."

Farm Board Success

"When the world-wide decline came in agriculture which cut the price of wheat almost in half in Canada, the president directed the use of the funds of the farm board to support prices in the United States. Many crops are raised on credit which is provided by the bank and a radical decline in prices would have meant not only distress to the farmers but also a large number of bank failures, which would have spread distress almost everywhere. His action held the price of our farm products about 30 percent above that of other countries while the farmer was disposing of his crop. The same method was pursued to meet the menace which arose when Russia started dumping agricultural products on the world market. These actions have benefited the farmer to the extent of hundreds of millions of dollars and prevented what would have been a panic of widespread dimensions."

Common-Sense Relief

"There are always those in politics who seek to profit by an appeal to class prejudice. It has been represented that the efforts of the president disregarded the needs of the great body of our people because he has provided funds for such concerns as banks, railroads and insurance companies, and has not favored making loans to individuals.

"When a person is suffering from hunger, the common-sense method of relief is to put food into the stomach, whence it is sent into all parts of the body. Under the method of relief that is proposed for the body politic by the critics, instead of providing food in this way to nourish the hands and the feet, I suppose that the needle would be used to inject nourishment into the fingers and the toes. Under such a treatment the whole body would soon perish and the fingers and toes would become useless. The policy of the president has been to place nourishment in the digestive organs of society in order that through the natural distribution of the channels already in existence the whole body would be strengthened and able to function in the usual way."

Personal Attacks

"He (Hoover) has been subjected to most bitter personal attacks. Apparently his eminence was so great that his opponents discarded all hope of discrediting him by criticizing his policies and therefore resorted to other methods, which, as is usual in such cases reacted in his favor.

While others have been content to criticize and oppose, he has laid out a great policy of relief and reconstruction. The only leadership in this crisis worthy of the name has come from him. He deserve re-election for what he has done and for what he has prevented. We know he is safe and sound."

Dealing With Defeatists

"We always have the defeatists with us. Washington had them; they organized a cabal to retire him from command and turn over the leadership to others. Lincoln had them; for four years they were encamped in his rear and filling the country with prophecies of disaster. Wilson had them during the war to such an extent that he found it necessary to turn over the conduct of important legislation to republican leadership. We have them at the present time doing their best to capitalize distress and preaching the overthrow of our system of economics and government. It is these forces more than depression which render our condition critical.

"If we have the courage and vision to maintain our governmental and social structure we can meet all other problems. The forces of discord always work in an insidious way. They often attempt to conceal the period of their unsound proposals under the claim that they are liberal. When that is analyzed, it usually means that they intend to give away the money which someone else has earned. Such a process, once started is bound to increase until it lands the country in universal bankruptcy and general disintegration. It is a time when the great body of our people of common sense should not be stampeded, but should stand firm. In spite of all declarations to the contrary, of the professions of platforms and candidates, the record of two generations discloses that the safety of the country lies in the success of the principles of the republican party."

GIVEN FARMS AND HOUSES

Considerable progress has been made in New Zealand to place unemployed married men on land under the government's 10 acre project, and four-room cottage are being built for their homes. The cottages are standardized and built according to a pattern by the public works department which is being aided in this work by the railway department at its shops. The house has a living room, two bedrooms and a kitchen and bathroom. The kitchen is equipped with facilities for washing clothes.

"THE LORD GOD PLANTED A GARDEN"

The Lord God planted a garden
In the first white days of the world,
And he set there an angel warden
In a garment of light unfurled.

So near to the peace of heaven,
That the work might nest with the wren,
For there in the cool of the even
God walked with the first men.

And I dream that these garden-closes
With their shade and their sun-flecked sod
And their lilies and bowers of roses,
Were laid by the hand of God.

The kiss of the sun for pardon,
The song of the birds for mirth—
One is nearer God's heart in a garden
Than anywhere else on earth.

Dorothy Frances Gurney.

STRIKE OVER SMALL PEAS

Pea-shellers in Covent Garden, London, recently struck because the peas were too small. Nearly seventy women employed by William Bailey whose family has supplied peas to restaurants for more than 100 years, declared that it took too many peas to fill a quart, and they were paid 4 cents a quart for shelling small peas as well as large. Bailey explained the economics of the pea industry, and after being out for a few days the strikers returned to work.

THE RETORT COURTEOUS

The honeymooners were driving through the country when they met a farmer leading a mule. Just as they were about to pass, the animal turned toward the motor-car and brayed vociferously.

The bridegroom in a teasing way turned to his wife and remarked: "Relative of yours?"

"Yes," she said sweetly, "by marriage."

"Abstemious" Has Them Order

"Is there a word in the English language that contains all the vowels?"

"Unquestionably."

"What is it?"

"I have just told you."

ANNUAL CONVENTION OF THE NATIONAL FEDERATION OF COLORED FARMERS, INC.

WEDNESDAY-FRIDAY, OCTOBER 26-28

New Prospect Baptist Church, Memphis, Tenn.
Fourth Street and Beale Avenue.

Representatives of U. S. Department of Agriculture, Federal Farm Board, Reconstruction Finance Corporation, National Negro Business League, C. M. A. Stores and other organizations will deliver addresses.

Valuable Prizes Given Away for Exhibits of Farm Products, Needlework, Canned Goods, etc.

Delegates from Units located in twenty-one states will attend this meeting. It will be the biggest meeting of colored farmers ever held in the United States. You are cordially invited to attend.

Department of Agriculture Releases Statistics on Farmers

GOURD AND PUMPKIN

Both Are Cousins, Only One Is Useful

The pumpkins lie moon-yellow in the fields, generous heaps of summer richness caught for mankind within the golden rinds of the gourd's most friendly cousins, says the Philadelphia Public Ledger. And even more important, those pumpkins are finding their way into the pastry kitchens, through the mysterous alchemy of magic hands and out to the pie plates of a fortunate nation. Pumpkin pie season is at hand.

Pumpkin pie season can be either a time of sweetness comparable to the feasts of the gods or a time of blighting disappointment so bitter that he who experiences it may well renounce forever his great American dessert. In the hands of an unimagnative artificer, be she amateur or gray-haired veteran of the oven, pumpkin becomes just so much tasteless pottage. But when one comes along who recognizes the pumpkin not so much for what it is as what it may become—then you find waiting a wedge of such pie as would make a wooden Indian's mouth water.

How this magic is wrought no mere man could ever guess, and very likely no woman could tell even if she knew and were willing to share the secret. The pumpkin is peeled and cut and stewed, and spices are added, cinnamon and ginger and nutmeg, and eggs fresh from the nest and cream direct from the cooling shelves. All is cooked to the proper consistency, while a flaky crust is made ready. Then pumpkin and crust are combined, and, presto! there is your pie.

So much for procedure, which the cookbooks amplify or vary. But that does not make pumpkin pie worthy of the name unless something more is added. Just what it is or where it is added is the great mystery. Very likely it is imagination, that subtle distillation of the artist's skill which comes not in cans or packages which can be bought over the counter. With it imbedded deep in the creamy custard, there is in all the world no other viand quite like pumpkin pie. Without it—well, without it there is no pumpkin pie at all, but only a sad mistake which should never escape the oven.

WOMAN IMPORTS SILK WORMS

Opens Industry in Iowa

Centerville, Ia.— Mrs. Belt Delpontia has started a silkworm industry here. She imported some worms from Italy, and they have been carefully watched for two years, in an effort to establish whether silk cultivation is adaptable to this climate. The experiment is a success, it was reported.

CARROT GREW 7 TOPS

Floydada, Tex.—A carrot weighing two pounds and four ounces and having seven distinct "tops," giving the appearance of a bunch of carrots, was grown here in the garden of Mrs. Ella Johnson.

TURKEY CROP UP 13 PER CENT

Produce Dealers Reported Over 18 Million

Produce dealers throughout the United States reported this week that turkeys grown in this country in 1932 number more than 18,000,000, or about 13 per cent more than in 1931. With this estimate, markets were told to expect that about 47 per cent of the turkeys would be on the market for Thanksgiving, about 40 per cent for Christmas, and the remaining 13 percent for consumption later.

More farmers raised turkeys this year and the flocks are of greater average size, the commercial turkey report indicates. Last spring the weather was not favorable for hatching turkey eggs, but early summer months proved excellent for the growth of the young birds.

Because of the large American crop, combined with the cost of water freight and tariff, very little of the Argentine crop has been marketed in New York or Chicago this year, although in 1931 nearly 5,000,000 pounds of dressed turkeys were imported from Argentina.

AUSTRALIA OPENS CAMPS TO TEACH WOMEN FARMING

Canberra,—Girls of Australia are joining the "back to the plow" movement which has been started by the United Associations to help young women to go on the land.

The organization is known as "Sisterhood of the Plow" and the first camp, called "Gouliston Camp," boasts eighteen girls who already are expert plowwomen. They include former stenographers, school teachers, nurses and store clerks who had lost their positons.

The camp is on a twenty acre farm, which the girls have cleared and prepared for cultivation. Each expects eventually to manage her own farm. They live in tents and by 7 o'clock every morning are hard at work in the field.

Other camps are of the same nature and are expected to be fully as successful.

882,850 NEGROES IN AGRICULTURAL PURSUITS

Every Section of U. S. And Every State is Represented Therein

Eight hundred eighty-two thousand, eight hundred fifty Negroes throughout the United States are pursuing agriculture and farming in some phase. This is the report coming from the fifteen census of the United States through the Department of Agriculture. The statistics were released by Mr. Wm. Lane Austin, the chief statistician fo agriculture. It shows farm operators by race exclusive, by geographic division, such as New England, Middle Atlantic, East North Central, West North Central, South Atlantic, East South Central, West South Central, Mountain and Pacific States.

The largest number of farmers reported in 1930 for any division of the United States was given to the East South Central States, which embrace and take in Kentucky, with 9,104; Tennessee, 35,123; Alabama 93,796; Mississippi with 182,578. It can be seen at a glance from the report, that the largest number of farmers of all classes is to be found in the state of Mississippi, known generally as the delta state; Second in importance, according to the report, is Georgia, with 86,787. The Report further discloses the fact that there was a decline in the past ten years of more than 50,000 farm owners and operators, because in 1920 there was reported 925,708 farm owners in part or in whole. The tenants however, who were making their living on those farms in all of the states, as shown in 1930, had dropped down to 11,198,893.

It is claimed that the decrease in farm owners, farm tenants and farm operation was due to the exodus from the rural districts and the farms to the cities. Whether it can be attributed to low farm prices and a scarcity of the market for farm produce, was not clearly defined or actually set forth.

(Continued on page 8)

$1,935,901 LOANED FARMERS

Credit Extended by the Reconstruction F. C.

(Chicago Tribune Press Service)

Washington, D. C.,—(Special)—The Reconstruction Finance corporation announced today that loan totaling $1,935,901 had been made to 559 farmers and stockmen through the regional agricultural credit corporations during the four weeks they have been in operation. The total disbursements represented an average loan to each borrower of $3,463.

In application for a 35 million dollar loan from the Reconstruction Finance corporation was filed with the interstate commerce commission today by the St. Louis-Kansas City Short Line Railroad company. The money, according to the application, would be used to "complete" a railroad designed to shorten the distance between St. Louis and Kansas City by forty-two miles.

Tho company seeking the loan was incorporated in 1928 and entered negotiations with Dillon, Reed and Co., of New York for financial backing for the project. The negotiations collapsed in 1929, according to the application, with the collapse of the stock market.

Approval of the loan, it was said, would enable the company to begin construction immediately and would put 20,000 men to work for two years.

NOTICE! NOTICE!

Members of the National Federation of Colored Farmers who are interested in buying any of the farms listed on page six of the October issue of the MODERN FARMER should address their letters about same to our main office, in Chicago. Please do not write to Modern Farmer about these farms. Write to our Chicago office and all information will be promptly sent you. Address: National Federation of Colored Farmers, Inc., Vincennes Hotel, Chicago, Ill.

SUGAR BEET OFFERS HELP

Opportunity to Farmers Shown in its Growth

Beet sugar production offers an opportunity to the American farmer which he has been slow to realize, according to Charles S. Young of Washington, D. C., representative of the United States Beet Sugar association.

Mr. Young, a former newspaper publisher, is making a survey for the association in the interests of developing the beet sugar industry in this country. He was in Chicago yesterday.

Beet sugar factories already established in this country operate at about one-half of capacity because only half enough sugar beets are grown by American farmers to keep all plants operating on a full time basis for 100 days each year, according to Mr. Young.

"The sugar beet," Mr. Young declared, "is considered by leading agricultural economists the world over as the keystone of agriculture but the American farmer has been slow to realize fully the benefits to be derived from greater production of this plant."

This country, he added, buys almost five pounds of imported sugar for every pound of home grown manufactured sugar. In the last ten years about 120 billion pounds of sugar have been consumed in the United States. Of this total 100 billion pounds of which was from cane grown in continental United States.

ATTENTION READERS!!

The Editor regrets that notes and other matter pertaining to the annual convention of the National Federation of Colored Farmers, recently held at Memphis, Tenn., were lost, and, unfortunately, he has been unable to supply them in time for publication in this issue. We will give a detailed write-up of Convention news in our next issue.

NEGRO FARMERS IN ANNUAL CONVENTION

Officers and Members Attending the National Federation of Colored Farmers Convention. Session held in Memphis, Tennessee in October.

Plan To Harmonize Interest Of Railroads And Highway Users

New York, October 30, 1932.—Some degree of harmony instead of open warfare soon will mark the relations of the great transportation interests of the country, if the hopes of the members of a joint committee recently created are realized. Six railway presidents and an equal number of representatives of the users of the nation's highways will begin a series of round table conferences early in November, in the belief that they can reach agreements upon many issues that now threaten their respective interests.

The situation has been brought to a head by the fact that during the past several years State Legislatures have been importuned by both highway users and the railroads to pass legislation or to avoid the passage of legislation affecting in one way or another their respective interests. There has arisen a serious conflict of opinion in many cases and there has been much acrimonious argumentation.

To Weigh the Facts

The trouble has been that the arguments of neither side have been based upon an agreed statement of facts or an agreed body of conclusions arrived at after careful examination by both sides of all the pertinent facts. The result has been that State Legislators, desirous of being perfectly fair to both the railroads and the highway users, have had great difficulty in determining the wise and equitable policy to pursue.

Some forty-four State Legislatures will probably assemble on the first of January, and in every one of these States there will probably be agitation for legislation concerning traffic on the highways. It is, therefore, regarded as of paramount interest to everybody concerned that a careful examination of all the facts should be made by a group of competent representatives of both the users of the highways and of the railroads. If then, on the basis of such examination of the facts, conclusions can be agreed upon as to what will be helpful to all interests and to the public, such consensus of opinion can be laid before all of these State Legislatures to assist them in intelligently drafting whatever new laws may be regarded as necessary concerning the highways.

Officers of Committees

The Committee representing the railroads has been appointed by the Advisory Committee of the Association of Railway Executives, with General W. W. Atterbury, President of the Pennsylvania Railroad, as Chairman. The Committee representing the highway users has been constituted by the National Highway Users' Conference, and the Chairman of this Committee is Alfred H. Swayne, Vice President of General Motors Corporation. Dr. W. J. Cunningham, James J. Hill Professor of Transportation at Harvard University, has agreed to serve as Executive Secretary of the Joint Committee.

It has been agreed by the members of the Joint Committee that, pending their examination of the facts and their formulation of conclusions, both sides will refrain from urging or opposing specific legislation on this subject for presentation before the State Legislatures to assemble in January.

The members of the Joint Committee expect to make a careful examination of all the data which are placed before them, and in the end submit to the organizations they represent their findings. But, more than that, they expect to serve in a still broader field. Much of the factual material which will be placed before them and the results of their study will be made available to the National Transportation Committee, that non-partisan group whose head is former President Coolidge.

Will Correlate Data

Professor Cunningham, who was agreed upon by the representatives of both groups as a technical man, is familiar not only with the problems of the railways, with which he was at one time identified, but also with the problems of the operators of automotive equipment. It will be his task to correlate the data gathered by the members of both wings of the committee and to engage in independent research. He will have as assistants men with technical knowledge assigned by the railroads and the highway users.

In selecting Professor Cunningham, one of the country's well-known economists, the members of the two committees believe they have set up within their own body an office of checks and balances that will make more certain the reaching of unbiased conclusions. He has been a member of Harvard's faculty since 1916.

The group representing the users of the highways has its authority from the National Highway Users' Conference, a recently organized body, with headquarters at Washington, D. C., including in its membership some fifty units.

Many Groups Affected

The chairman of the advisory board of this organization is Alfred P. Sloan, president of General Motors Corporation. Associated with him on the board are representatives of many other groups of highway users. Among the groups which are members of this new body are the National Automobile Chamber of Commerce, the American Automobile Association, the National Association of Motor Bus Operators and the trucking interests. In addition to these automotive interests, the great agricultural groups, the petroleum interests, the National Retail Chain Store Association, the highway construction group, and numerous other commercial and industrial groups whose welfare is so dependent upon highway transportation.

Associated with General Atterbury as representatives of the railways are:

L. W. Baldwin, President, Missouri Pacific Lines St. Louis.

Ralph Budd, President, Chicago, Burlington & Quincy Railroad Company, Chicago.

George B. Elliott, President, Atlantic Coast Line Railroad Company, Wilmington, N. C.

J. J. Pelley, President, New York, New Haven & Hartford Railroad Company, New Haven.

Paul Shoup, Vice-Chairman, Southern Pacific Co., New York.

All Interests Represented

Care was taken in selecting the members of the committee representing the users of the highways to get a cross-section which would be representative of all interests. The chairman, Mr. Swayne, has long been a prominent figure in the production of automotive equipment and is credited by his associates with a comprehensive knowledge of the needs and problems of those who are operating on the public highways the output of the factories. He and the group he represents will be able to lay before the committee a mass of detail concerning costs of production, distribution and operation of automotive equipment, ranging from the private passenger car to the trucks and buses.

The problems of the farmers will be presented by Louis J. Taber of Columbus, Ohio, master of the National Grange. In including the farm group the National Highway Users Conference had in mind that 26 per cent of the country's trucks are used on farms and that of the total 26,000,000 vehicles registered in the country, 5,000,000 are owned by farmers. The committee realizes that the automobile, truck and tractor have almost superseded the horse and wagon.

The selection of Colonel C. O. Sherrill, of the National Retail Chain Store Association, Cincinnati, was due to a desire of the conference to have represented on the committee the operators of those hundreds of thousands of trucks used by the mercantile and industrial groups.

The oil interests, whose stake in the business of highway transportation is indicated by their annual distribution to the consumers of America of 16,945,000,000 gallons of gasoline, are represented on the committee by R. C. Holmes, president of the Texas Company.

The other two members of the committee are Arthur M. Hill, president of the National Association of Motor Bus Operators, and Robert P. Hooper, member of the Executive

SAVE Something!

Committee of the American Automobile Association, that organization representing the millions of owners of private cars.

Adjustment of Differences Sought

It is hoped that the findings of this joint committee may be such as will receive the endorsement and general support of both fields of transportation. Its members believe they will be able to effect an amicable adjustment of the prevailing differences, and that they may open the way for fair and reasonable regulation of both means of transportation.

The decision to set up a conference of highway users and railway executives grew out of informal conversations in which spokesmen of both groups became convinced that a solution of the existing transportation problems is a possibility.

"We realize fully," said Mr. Swayne, "the difficulties we are going to encounter, but if we can sit down and listen to each other's arguments and study our respective problems, I believe that we will find that we have more in common than is now generally believed. The users of the highways are not undertaking this task of adjustment with any idea of obtaining for themselves some special advantage over the railroads. As a matter of fact we are keenly interested in the success of the railroads. We need the railroads, and the railroads are dependent to a great extent on the maintenance of highway transportation. The interests of the two groups join at many points, and our task is largely one of ascertaining by what means the best interests of both can be conserved.

Regulation and Taxation

"Regulation of highway traffic to a certain degree is both unavoidable and necessary. We do object, however, to regulation that approaches the point of strangulation, because those who have come to depend upon highway transportation cannot now dispense with it, particularly in the field of short hauls, regardless of the efficiency of the railroads and the service they render. Nor do we object to taxation as such, but we cannot submit without protest to punitive taxes, especially when they approach the point of confiscation.

"As object of the Coolidge committee is to ascertain what the contributing factors are that have resulted in the decreased railway earnings. In the letter signed by representatives of insurance companies, banks and other organizations interested in railway securities, in which Mr. Coolidge was invited to serve as chairman of that fact-finding commission, it was stated that 'each form of transportation should be unhampered to provide effectively at a reasonable cost and at a fair profit the service for which it is best fitted.' With that we are in accord. In this same letter, it was admitted that 'no form of transportation should be favored either at the expense of another agency or at the ultimate expense of the people of the United States.' And that is a statement to which we can subscribe.

Approach Study With Open Minds

"The railway executives and the representatives of the highway users are, I am confident, approaching their study of the existing transportation problems with entirely open minds and will, if possible, reach some workable understanding. I have no doubt that Mr. Coolidge and his associates are equally sincere in their search for facts and remedies, and I believe that the Joint Railway-Highway Users Committee will be able to assist materially the Coolidge committee in its work. Such information as reaches the conference table from the highway users and the railways will be available to Mr. Coolidge and his associates.

"We are not looking for a fight. We are looking for some means to eliminate waste effort, and for some agreement that will safeguard the interests of the railroads and the highway users and at the same time protect the public interest."

Roy F. Britton, director of the National Highway Users' Conference, added this statement to that of Mr. Swayne:

"This organization will act as an agency for coordinating, as far as practicable, the activities of all classes of highway users, and will serve as a clearing house for the collection and distribution to them of information concerning the present and proposed national, state and municipal legislation affecting motor vehicle taxation and regulation, and the taxation of products used in motor transportation."

CRIME OF WHITES DOUBLE THAT OF RACE

(Chicago Defender)

Atlanta, Ga., Aug. 5.—During 1931 white criminals in Georgia have increased twico as fast as Race lawbreakers, and are incarcerated in the county jails for much more serions crimes, according to the state department of public welfare.

The commitments to county jails during 1931 recorded an increase of 7 per cent over 1930—the commitments representing a total of 19 out of every 1,000 population in the state.

While both white and black groups showed a gain, the increase in whites was 10 per cent against a 5 per cent growth in the Race population of our jails.

Only a few years ago there were about two Race men in jail in the state to one white person, but this ratio has steadily changed until now the two groups are practically equal, with the white population exceeding that of the Race almost two to one.

MARKET STUDY BRINGS FARM PROFITS

The St. Joseph Loan and Trust Co., a South Bend, Ind., bank, has proven that farming can be made profitable, even with prices at the present low levels. Common sense diversified farming is the secret of success.

The bank owns a 646 acre farm. This year it produced seven different "money" crops. These crops were 165 acres corn, 65 acres potatoes, 90 acres peppermint, 18 acres onions, 20 acres cabbage, 25 acres wheat and 45 acres oats. 200 hogs and 25 beef cattle are also on this farm.

Kenneth Ely, vice president of the bank, says that the farm succeeds because they study the market closely and know in advance just what crops to plant for a reasonable profit. He says that a good money-making crop one year may be no good the next year and the only way this fact can be found out is by farmers studying the market and accepting advice from those who know.

CINCINNATI CLUB WOMEN PROTEST

Cincinnati, Ohio, Nov.—(By the Associated Negro Press)—Twenty-five women, headed by Mrs. E. R. Davis representing the City Federation of Colored Women's Clubs, appeared before the City Council here late Wednesday evening to protest against alleged police brutality to members of the group.

Instances were cited where police had beaten without any reason whatever, Negroes who had been arrested. The petition urged the Council to pass on an ordinance against unnecessary use of weapons by police and also requested the employment of a larger number of Negro police, and the benefits for Negro girls of all facilities for handling juvenile delinquency.

Devoted to the interests of the Farmer, Truck Gardener Livestock and Poultry Breeder, the Home and the People.

Entered as Second Class Matter, April 10, 1929, at the Post Office at Nashville, Tenn., under act of March 3, 1879.

All contributions for publication in the Modern Farmer should be addressed to The Modern Farmer. 447 4th Avenue, North, Nashville, Tenn.

No libelous matter will be published. Unsigned articles or letters, and those written on both sides of the paper will not be used.

Subscription price $1.00 per year, payable in advance. Personal checks must be certified. Make all checks or mooey orders payable to The Modern Farmer.

Advertising rates and sworn circulation figures presented upon application.

"OUR SLOGAN"

STAY ON THE FARM IF YOU'RE ON IT! GO BACK TO THE FARM IF YOU'RE OFF IT!

THE LAW

"It is hereby declared to be the policy of Congress to promote the effective merchandising of agricultural commodities by encouraging the organization of producers into effective associations under their own control.

The Board is authorized and directed—to promote education in the principles and practices of cooperative marketing—to encourage the organization, improvement in methods, and development of effective cooperative associations." (Public—No. 10—71st Congress. Sec. 1-5.)

THE GOSPEL

"This law is predicated upon the ability of the farmer to manage his own business, once he is organized to do so. Cooperation is the key to it and only in exceptional cases can the Federal Farm Board have any dealings with a farmer who is not a member of a producer-owned and producer-controlled marketing unit." Hon. Sam'l R. McKelvie, Member, Federal Farm Board.

The National Federation of Colored Farmers believes that the Colored Farmers of America should own and control their own co-operative associations.

"Co-operation With All—Affiliation With None."

-:- Editorials -:-

God, you have been too good to me,
You don't know what you've done.
A cloud's too small to drink in all
The treasure of the sun.

Yet many thirsty lips draw near
And quaff the greater part!
There still will be too much for me
To hold in one glad heart.

—Chas. Wharton Stork.

THE THANKFUL SAMARITAN

Jesus and his disciples were on their last journey to Jerusalem. Ten lepers, standing afar off, cried unto him: "Jesus, Master, have mercy on us!" It is related that Jesus heard them and sent them on their way, cured and happy.

One of the lepers was a despised Samaritan. When this one saw that he was healed he turned back, threw himself at the feet of Jesus, and gave sincere thanks. The others went on their way and caused Jesus to ask, "Where are the nine?"

Only one of the ten realized that thankfulness is an obligation that should never be ignored! He was a poor Samaritan. But, in spite of his lowly race and station, we are sure that this one received blessings more precious and lasting than did the other nine. The one who knows how to be thankful every day, for all the blessings of life, finds the real joy that is in Thankgiving.

Colored farmers have much to be thankful for. They are better off than many of the Old World farmers who belong to the so-called enlightened races. Probably this is so because they know how to be thankful. May we continue to make every day in the year a day of Thanksgiving.

OUR NEXT PRESIDENT

In spite of all that is said during the heat of a political campaign, the man elected to the high office of President of the United States becomes president of all the citizens of the nation. He deserves the support and encouragement of all of us and is expected to serve all of us to the best of his ability.

Americans have plenty of common sense. They do not elect any "little men" presidents. We know that a little man cannot become big and great even in the president's chair. Franklin Delano Roosevelt was a good citizen—a good man—and a good Governor before he became our elected President. He was a big man already.

The Modern Farmer congratulates Mr. Roosevelt. Our sincerest wish is that his administration may be successful. We shall support any effort he may initiate that promises to add to the prosperity and happiness of the American farmer, and especially, of that most "forgotten man"—the American Colored farmer.

THE MEMPHIS CONVENTION

"We are going to succees!" "We are going to stick together!" "We are going to back up our organizations!" These expressions, heard so often, define the spirit of the annual convention of the National Federation of Colored Farmers which has just closed its session in Memphis.

The colored farmer is gaining knowledge and knowledge always has been power. As we looked at the earnest faces of those pioneers of the organization movement among our farmers, we wondered how any could be so foolish as to try to prejudice their minds against the N. F. C. F. Those who have been with the organization the past four years know the worth of it and love it. Silently and slowly, but surely, the organization has served them in many ways. Because of this fact and this fact alone, they are supporting it now and are persuading their brother-farmers to join it.

The N. F. C. F. will have a loyal membership as long as its officers and leaders forget self and work wholeheartedly for the welfare of colored farmers. This, they are doing now and we believe they will continue to do this. While working for the welfare of colored farmers they are also working for the welfare of the communities in which these farmers live. They are working for peace, prosperity and happiness. If his organization can make the colored farmer a better man and a better citizen no one should fight it or knock it. Those who do so are enemies, not only to colored farmers but also to themselves.

YOUR RED CROSS MEMBERSHIP

Colored farmers will be requested to join the Red Cross again this year and they will do so. They should do so. We wish however, to offer this suggestion.

Write to the American Red Cross, Washington, D. C., and request that a chapter for colored members be organized in your community or county.

Last year, members of nine Mississippi units of the N. F. C. F. contributed approximately a half-car of sweet potatoes to the chapter of the Red Cross at Lexington, Miss., for the flood sufferers in their own state. They received full credit for the contribution but we are inclined to think, for various reasons, that local chapters of colored members could render more service to the organization than could individuals working through outside organizations.

We hardly believe the Red Cross will object to the organization of chapters for colored members. Write and suggest it anyway.

HE WANTS AN ASSISTANT

A white farm demonstration agent in a southern county where there are three-fourth as many colored farm owners as white farm owners, is requesting the services of an assistant. Some of the rural schools of the county are desirous of launching club work and these schools do not have vocational teachers in agriculture. The agent cannot give the needed time to club work. According to his report, this agent is doing some fine work in his county and deserves commendation. But he does not state whether the colored farmers are receiving consideration and assistance the same as the white farmers. We presume they are not. During the year he attended several thousand telephone calls and visited 75 farms in connection with engineering projects. These were not "colored" farms we may be sure.

This agent may need an assistant but the colored farmers of that county should have an agent of their own. They should get their agent before the assistant gets a job. Colored farmers feel more free in discussing their problems with an agent of their own group and they can usually get him when they want him. The white agent is "too busy" nine times out of ten. Organized colored farmers should request the service of a colored county demonstration agent and they should co-operate with him and help support him after they get him. If demonstration agents are a necessity in the West they are also a necessity in the South.

INTEREST IS TOO HIGH

A colored farmer in Mississippi borrowed $665 on a second mortgage on his farm and the individual who loaned him the money charged him 25 cents on the dollar. The first mortgage on his farm is held by the New Orleans Federal Land Bank.

Recently representatives of the government, insurance companies, banks, building and loan associations, and other institutions interested in farm mortgages, met in Chicago and agreed to be as lenient as possible with debt-ridden farmers. They agreed to grant them extensions and aid them in every way possible to hold their farms.

There are some who persist in taking advantage of colored farmers and seem to be determined to rob them of all their possessions and leave them as naked as they came into the world. Every decent individual — every true American knows that 25 cents on the dollar is too high a rate of interest to charge anyone. Those who charge such interest are nothing but thieves and robbers.

We advise colored farmers to be sure and find out how much interest will be charged them when they apply for a loan from anyone or from any institution. Better yet, we advise them to join a Unit of the N. F. C. F. in their community, or organize one, so they will be in position to obtain advice and assistance from those who know. Some people will always take advantage of the ignorance of others but it is foolish for the colored farmer-borrower to remain in ignorance. Join the N. F. C. F.—ask questions and obtain facts.

"LOST ARTICLES"

Dear Friends:

I lost a folder at our Memphis convention containing addresses, convention notes, photographs and other personal matter. This folder was probably picked up by some one of our delegates and is now with his papers. I will appreciate it very much if the finder will return it to me. I would also like to hear from those who gave me their addresses and to whom I promised to write and advise relative to various matters. Remember, I lost your address, so write to me and I promise prompt consideration. Address:

LEON R. HARRIS, Secretary,
National Federation of
Colored Farmers,
Box 209,
Moline, Illinois.

PECAN GROWING GAINS IN STATES OF SOUTH

Pecan growing in southern states has become an extensive industry both in improved and seedling varieties. Georgia in an average year is credited with producing about two-fifths of the "improved" varieties. Texas and Oklahoma harvest two-thirds to four-fifths of the seedling nuts. Pecan prodnction ranges from 35 to 75 million ponnds annually.

Ah! on Thanksgiving day, when
from East and from West,
From North and South, come the
pilgrim and guest,
When the gray-haired New Englander sees round his board
The old broken links of affection
restored,
When the care wearied man seeks
his mother once more,
And the worn matron smiles where
the girl smiled before.
What moistens the lips ad what
brightens the eye?
What calls back the past, like the
rich pumpkin pie? —Whittier

The editor of the MODERN FARMER met hundreds of subscribers and readers of our paper in Memphis and never found an enemy. All told us they liked the paper and wished us well. We are resolved to do all we can to merit your appreciation and support.

INTERESTING NEWS AND NOTES

The recent presidential election campaign was the most economical one since back in the days before Mark Hanna. The Republican National Committee reported that it had collected $1,938,821 and had spent $1,960,290. The Democratic Committee reported it had collected $1,427,118 and had spent $1,261.-412. More than twice this much money was spent during the 1928 campaign.

Western farmers will use much ear corn for fuel this winter. Corn is selling at $8.00 a ton and coal at $12.50. The burning of corn however is found to be not generally practical because the common type of stove or furnace is designed for coal or wood and not for quick burning ear corn.

Tift county, Georgia, is one of the leading agricultural counties in that state and the farmers say they succeed so well because they have at least one farm crop to sell each month in the year. The county's four leading products are cotton, tobacco, pea nuts and watermelons. In January, February and March they sell cabbage and onion plants,— in April and May they sell potato plants,— in June it is string beans and garden truck and late June and July is watermelon time. Tobacco sells from July to November. Cotton and peanuts are sold also in October and November and in December they sell cotton, syrup, velvet beans, sweet potatoes, pecans and corn. There are many well-to do and prosperous colored farmers in this county. No wonder.

A quarantine has been placed on six north Florida counties to prevent spread of the pink bollworm an insect that is more damaging to cotton than the boll weevil. This pest is a native of India and chiefly attacks the seed, leaving them of light weight and poor grade. It has been known to live from twelve to thirty-one months in stored seed . Colored farmers should keep a sharp lookout for this pest and if one is found they should report it to state agricultural authorities or to the main office of the N. F. C. F.

The members of the Baptist church at Cleburne, Texas, decided to pick cotton this year to secure funds to pay off the debt of the church. Men, women and children went to the cotton fields together. The church is only 14 months old but has property worth $4,500.00.

A twelve year old boy in Hanford, Calif., grew a beard so thick his father had to take him to a barber shop for a shave.

A family of German farmers consisting of five men and a woman, had a pitched battle in a hayfield. They fought with the scythes they were using. Three were killed and a fourth was severely injured.

United Air Lines report that over 100,000 meals were served in airplanes this past year. Eating in the sky has become a big business. A few colored cooks and waiters are now employed on planes.

There are 427 colored farmers in the state of Michigan, a decrease of 122 since 1920. Of this number 337 are owners, 5 are managers and 85 are tenants. Owners possess 23m 952 acres and the value of their land and buildings is $1,401,728.

Malt Lewis, one of several white men charged with attempting to assassinate colored firemen on the Illinois Central railroad, pleaded guilty before the court at Brookhaven, Miss., to "assault and battery with a deadly weapon with intent to kill and murder" and was sentenced to a year in county jail. The judge provided that half the sentence would be suspended pending good behavior. Six colored firemen have been killed. The light sentence meted out to Lewis has caused considerable comment from Mississippi colored citizens. A. Negro in his position would have in all probability been sentenced to hang or to life imprisonment.

GARDEN TOPICS

By Floyd Bralliar

Over and over again we are asked about pruning roses, shrubs, and what-not this fall. In general we always say that it is better to wait till early spring to prune roses, and till the plants are in full bloom to prune shrubs.

There are two reasons for this. First, the wood that will later be cut away will protect the interior of the plant over winter. Should we prune roses in the fall there is no time for the wounds to heal before winter and they are almost sure to winterkill back further. This necessitates pruning again in the spring. Often they will kill back further than we desire to have them, while if left unpruned they will only kill at the tips and only wood that should be removed any way dies.

Of course if a rose has too much top to make it possible to protect it over winter and if we desire to give it protection we may do our pruning when we are ready to protect tht plant.

The other reason applies to shrubs rather than to roses. All wood on the plant has now set its bloom buds. It will not grow any more till after it blooms or if it grows more it will be very little. If the shrub has not been a nuisance till now it will not be till after it blooms. We usually like to cut flowers freely, and we might just as well allow any surplus wood on a shrub to bloom and cut it for decorative purposes as to throw it away now and get no benefit from it.

Most shrubs bloom best on their outer twigs and if pruned heavily at present are almost sure to present an unsatisfactory appearance in the spring. Of course if we desire to mulch them and if they have some straggling branches that are in our way we may cut them off.

Use Care in Pruning

If we have but few trees to prune the ideal time to do this is just before the sap starts in the spring. That means after the first of January and before the middle of January with most trees. The reason for this is that the wounds will not have to wait for month before they begin healing.

Of course if we have much pruning to do or if for some reason we are in a hurry to get the job done we can prune trees any time. In fact there seems to be time in the year when trees may not be pruned with safety. Even if the work is done at a time when they will bleed no appreciable damage seems to result.

But in pruning trees we must always use care to cut the branches back very close to the trunk. If we leave a short stub it is sure to die rather than heal over and the dead wood soon penetrates to the heart of the tree and we have lost a tree that might have been saved. The closer a cut is made to the trunk the better. True the scar will heal more quickly than the smaller scar made further out, if indeed the smaller scar heals at all.

It is well to spray shrubbery however just as soon as all the leaves fall. If they seem to be heavily infested with scale it is well to spray in December and again in January. Of course there is no need of this under ordinary conditions.

We have been especially impressed with the beauty of the hardy chrysanthemums recently. There are no better fall flowers for the border and the cutting garden. This is a good time to locate varieties you especially like and either get them now or arrange for them for setting in the early spring. The latter is really the better time to set the plants but we cannot always be sure of getting them at that time and if they are set now and are mulched a bit to prevent the frost heaving them out of the ground during the winter they will do equally as well as those set in the spring.

Seedlings

We have been growing a good many seedlings the past few years and from these we get a good many that are really fine. Most of these are single but this is no weakness as they bloom even more graceful..

All of your seedlings from any seed will not be hardy but most of them will be and as they grow as easily as any other flower seeds and as they bloom freely the first year from seed there is no reason why we should not have them in abundance.

It is always better to mulch chrysanthemums late in December with leaves.

INTERESTING FACTS FOR N. F. C. F. MEMBERS

The department of agriculture has agreed to grant extension on crop production loans made to cotton farmers.

The department also announced it would accept cotton as collateral loans on a basis of nine cents a pound. The basis for the nine cents' figure will be middling seven-eights cotton. Differentials will be prepared to prove premiums for staples longer than seven-eights inches and grades better than middling, and like discounts for shorter staples and lower grades. As we understand it, if you have a seed and production loan with the department, you can pay this loan with your cotton, and they will allow you nine cents per pound for it based on 7-8ths middling grade, and where you have better grades the price will be better than nine cents.

All members who desire to take advantage of this liberalized provision, will be required to deliver their cotton to the Cotton Co-operative Association or to any federal bonded warehouse and send the receipt in to the seed loan office.

By this method you can get at least 2 1-2 to 3 ecnts per pound more for your cotton — based on the present market quotations.

Farmers who have seed and production loans and unable to pay on account of short crops and other conditions beyond their control, have the option of paying only one fourth of the amount now but they will have to make satisfactory arrangements for the balance.

Dr. J. R. A. Crossland has appointed by the government to look after all loans to be made to our race farmers. Members who need money to redeem their farms as a result of having been sold for taxes, mortgages etc., should write him at once. Members who wish to secure a loan on their livestock should also write him at once members who have farm products in large quantities are also eligible to file for loans thru his department.

His address is Dr. J. R. A. Crossland, Farmers Seed Loan Office, St. Louis, Mo.

Through an act of Congress the American Red Cross Society has been given a quantity of flour and cloth to distribute to those who are in destitute circumstances. If you are refused by your local Red Cross chapter, we suggest that you write a letter to the American Red Rross Society Washington, D. C.

"CHI" OMEGAS LAUNCH ACHIEVEMENT WEEK

Chicago, Nov.—(By the Associated Negor Press)—What the Negro has achieved in every direction has been stressed throughout the country this week by representatives of the eighty-four chapters of the Omega Psi Phi fraternity in the annual observance of "Negro Achievement Week" sponsored by the organization. Programs were held at various institutions and in practically every city of the country.

Tuskegee Institute, Alabama

JULIAN HUXLEY SPEAKS ON 'AFRICA' DURING VISIT AT TUSKEGEE INSTITUTE

Tuskegeo Institute, Ala., Nov. — Dr. Julian Huxley, grandson of Thomas Henry Huxley, one of the world's greatest scientists, shook hands with one of Alabama's greatest scientists, Dr. George Washington Carver, in the latter's laboratory at Tuskegee Institute. Dr. Huxley addressed the student faculty and friends, on Africa, where he recently spent several months studying native education in the British possessions.

"Of course the traveler in Africa," said the speaker, "is impressed first of all with the remarkable animals seen against the background of wonderful science beauty. Then too, he is fascinated by contrast with so many different tribes hardly touched by civilization. But unquestionably Africa's strongest appeal lies in the thought that here is a whole continent whose destiny is undecided."

Dr. Huxloy was presented by Mr. Owen Hobson Murfee, of Pratville, who will be the official host during the stay o fthe lecturer in AAlabama. A visit with Dr. Carver, research chemist of Tuskegee Institute, and the inspection of Dr. Carver's laboratory, occupied the visitors a part of the afternoon. Afterward a tour of the campus, including a visit to the grave of Booker T. Washington, was made preceding the lecture.

Dr. Huzley believes that with the exception of a comparatively small portion, Africa is, and must be, a black man's continent. Unlike China and India, Africa still has vast unpopulated spaces. Many of the tribes are of low culturo, not from the standpoint of their art or tribal development, but in the sociological sense that they have produced no written language. No written history was available until the middle of the last century.

According to the observations of Dr. Huxley, four roads lead to Africa's desting. The first, that of commercial exploitation, carries with it the danger that native labor will disintegrate into a great prole-t ariat. However, the medical serrvice can do much to lower the appalingly high rate of morality which is perilous to a country already underpopulated, and further that scientific studies will make it possible for medical aid to wipe out almost universal chronic hook worm, malaria, etc., that have for centuries sapped up the energy of the nature. Another way is to make Africa a black imitation of a white country. Dr. Huxley was emphatic in his condemnation of this method, and the method of making Africa a reservior of military force.

"The logical way," he insisted, "is to try to build on tho foundation already there. The tribal forms, developed as they have been through the centuries to a very high degree, contain many valuable social ideas.

One great danger of civilization is that as it develops, the cohesion of the group decays with the aggrandizment of the individual. With white civilization on the danger line of disintegration some thing new has great value. This something new may be found in the strong cohesive quality of the African tribes."

"already a sense of geographic unity has arisen in Africa. It is inevitable that political unity will follow. This political unity, far from being a menace to the other nations of the world, will be a benefit if the best of our western culture can be grafted upon the many assets of the tribal forms which Africa has already developed to such a high degree."

In an informal round tablo discussion with members of the faculty after tho lecture, Dr. Huxley stated that the African problem were more social than racial, that a standardization of native schools and the adoption of a common language were necessary factors in deciding the destiny of the country Some of the most effective work that has been done, he concluded, has been done by the Jeanes teachers.

Friends in Alabama will remember that the Jeanes work was under the direction of the late James L. Sibley, who worked for so long with the educational agencies of this State.

Dr. Moton, because of an engagement to speak at the 30th anniversary of the Okolono Industrial School in Mississippi, had to leave before Dr. Huxley arrived. Acting Principal R. C. Atkins, Dr. Monroe N. Work, of the Negro Year Book, and Director A. Heningburg, extened the courtesies of the Institution.

Tuskegee Institute Has Welding Demonstration

Tuskegee Institute, Ala., Nov.— The Annual Welding Conference. made possible by the Air Reduction Co. through Mr. J. P. Flood (Supervisor of Applied Engineering) was held at Tuskegee Institute this week. Three men, Mr. Flood, Eng., Mr. Wm. L. Pool Asst. Sales Mgr., and Mr. M. G Wicker. spent two very busy days

1st day, demonstration of Safe methods of Oxyacetylene Welding —Mr. Flood.

Demonstration of Mechanical cutting of metal— Mr. Flood

Demonstration of Hard surfacing of farm machinery —Mr. Flood

Evening demonstration of Uses of liquid air is made, (slides)

Motion picture "Oxygen the Wonder Worker— Mr. Pool and Electrical Division.

2nd day demonstration of welding in the Sheet Metal Industry— Mr. Flood.

Demonstration of Cutting and beveling pipes with Airco crank propelled pipe beveling machine— Mr. Flood and Mr. Wicker.

Fabricating of pipe fiittings, using Airco welding methods and templates, Pipe welding using Airco welding methods— Mr. Flood.

The meetings were very well attended, 525 attended, and very interesting and instructive. The experts were brought here through the efforts of Mr. Edward Frazier, Instructor, Welding Division, and Mr. Chas. Gibson, Jr., Supervisor of Teacher Training-Trade Technical Courses. Mr. J. P. Flood had charge of the conference.

Board of Trustees Elected New Members
